The Japanese Crown Prince might very well have replied to King George's frank confessions of domestic trouble by a similar confession on behalf of Japan. The present Ministry, headed by Premier Hara, still bears the brunt of the attacks of the Kenseikai, or Opposition Party, which have rained upon the Cabinet for months. The Kenseikai on April 8 passed a resolution declaring that the Hara Ministry had precipitated the empire into a political crisis "that has never been more dangerous" and had pursued a

HIROHITO SHINNO

*Crown Prince of Japan, whose visit to England is unprecedented in Japanese annals*  
(Times Wide World Photos)

"retrogressive and disgraceful diplomatic policy, which has caused a complete loss of national prestige abroad, and a loose and injudicious internal policy, which has brought about popular unrest at home." Many cases of official corruption and irregularities were charged, and the Government was subjected to a new attack for its Siberian policy.

With regard to the difficulties with America, the Japanese Government has adopted a waiting policy. The whole matter of Japanese immigration and civic rights will come again to the fore when the new immigration treaty with the United States is completed and published. As for the dispute over the Island of Yap, the Diplomatic Advisory Council on April 22 approved the attitude of the Cabinet on the whole mandate question. According to the *Nichi-Nichi*, the Cabinet had decided to stand firm on its policy that as the Allies themselves had

allocated Yap to Japan her rights were beyond question. Discussions were still continuing between the United States and the Allies on America's objections to this mandate. Meanwhile the Cabinet decided on April 27 to place Yap—as well as the other former German islands given to Japan—under a civil administration, subject, however, to the control of the Ministry of Marine. Through April and May many official and semi-official personages took occasion to disclaim the charge that Japan entertained any warlike intentions. The navy increase was attributed merely to Japan's need of adequate defense, in view of Japan's new position as an island power in the Pacific. Official information was received in Washington toward the end of April that the Japanese conscription laws had been made more rigid and had been extended to Japanese residents in the Philippines, the East Indies and the South Sea.

## MEXICO'S PROSPECTS OF RECOGNITION

*President Obregon's policy opposed by the Mexican Congress and Supreme Court, the hitch being over the constitutional article limiting subsoil rights of foreigners—Overwhelming predominance of trade with United States*

[PERIOD ENDED MAY 15, 1921]

IT was announced in Washington on May 10 that the Administration's Mexican policy had been determined, but that the President and Secretary Hughes were not ready to make it public. The indications were that there would be an exchange of notes, serving as a basis for recognition, in which Mexico would acknowledge its intention to satisfy international obligations and protect American rights and interests. There will be no demand for a treaty containing guarantees to alter Article XXVII. of the Mexican Constitution, such as Secretary Fall desired.

George T. Summerlin, American Chargé d'Affaires in Mexico City, was summoned to Washington by the State Department, and arrived there on April 18, to confer regarding the situation. President Obregon has shown a disposition to reconcile differences, but the Mexican Congress apparently is in no hurry to follow his lead. It is considering the amendment or interpretation of Ar-

ticle XXVII. of the Constitution, relating to subsoil rights of aliens, under which American oil companies fear confiscation, and there is an appeal before the Mexican Supreme Court by American interests growing out of Carranza's virtual seizure of certain oil properties under the authority of Article XXVII. But President Obregon cannot coerce either Congress or the Supreme Court unless he sets up as a dictator.

Great Britain's position was explained in the House of Commons on May 5 by Cecil Harmsworth, in reply to Major Christopher Lowther, who urged recognition on the ground that Mexico would never become stable until it was granted. Mr. Harmsworth admitted that recognition would be an advantage both to Mexico and to Great Britain, but regretted to say that reports reaching the Government of the lack of security and stability still existing in Mexico rendered it impossible. The Foreign Office, he added, fully realized the disadvantage

of the present position, and would gladly accord recognition to Mexico whenever that became possible. It was officially announced at Mexico City on May 11 that Austria had formally recognized the Obregon Government.

Señor Urquidi, in charge of the Mexican Legation in London, on April 19 gave out a statement on the authority of President Obregon concerning Mexico's foreign policy. Its principal points were: A hearty welcome to all business men, restitution of property commandeered by previous Governments, guarantees for the protection of Mexicans and foreigners against attacks on their lives and property, and a series of extra sessions of Congress to inaugurate legal reforms. With reference to oil, it was stated to be the intention of the Government that the new regulations should not embody anything of a confiscatory nature, and that they should not receive a retroactive interpretation.

One of the consequences of delayed recognition is a revival of revolutionary talk, and of incipient uprisings which had been quickly suppressed. General Murguia succeeded in crossing the border with twenty-two men, and was completely routed. Benjamin Garza, his second in command, surrendered after being wounded in a fight. Esteban Cantu, who was removed a few months ago from his position as Governor of Lower California, invaded Tia Juana with a small band of followers early on the morning of May 3, firing volleys at the jail and several buildings, but no one was wounded.

President Obregon's orders to show no mercy to rebels are being carried out. Sanchez de Castillo faced a firing squad on April 28 at Monterey, after conviction by court-martial, and José Moreno and Antonio Alderete were shot on April 29, following their capture near Nuevo Loredo by Federal forces operating in the State of Tamaulipas. Troops were pursuing a small rebel band headed by Daniel Ruiz, which raided the village of Villapuato, in the State of Michoacan, on April 24.

Fifteen Mexican bandits held up officials of the Atlantic Gulf and West Indies Oil Company and obtained about 130,000 pesos in Mexican gold near Tampico on April 21, according to advices from that city. Ten persons were killed, including two of the bandits. The money, intended for payment

of employes, was being taken in an automobile for transport to the southern fields in charge of the assistant paymaster, Salvador Davalos, and his brother, Trinidad, guarded by six Mexican soldiers. Two miles from Tampico the party was stopped by a wagon blocking the road, and the bandits opened fire from ambush. Trinidad Davalos, five soldiers, two chauffeurs and two bandits were killed. The paymaster, the remaining soldier and two bandits were wounded. Federal troops were sent in pursuit of the dozen robbers, who fled.

Linn Gale, the American agitator and draft evader, who was deported to Guatemala on account of his Bolshevist activities, is in the hands of the United States authorities. Guatemala had refused to receive him, so the Mexican officials sent him back to Laredo, Texas, where he arrived on April 22, and was turned over by immigration officials to the military authorities at Fort McIntosh. Another agitator, James Clifton, said to be an American, was expelled from Mexico on April 29 as a "pernicious foreigner."

Despite political uprisings and predatory crimes, President Obregon is making honest efforts to rehabilitate Mexico in the eyes of the world by arranging to pay the interest on Mexico's foreign debt, preparatory to refunding the principal. To that end representatives of foreign banking houses were invited, on April 16, to go to Mexico and offer advice and suggestions how this is to be done. President Obregon is said to have assumed personal charge of this phase of the financial situation, but his efforts, according to Wall Street reports, were coldly received by New York financiers.

Mexico's external debts aggregate some \$125,000,000, divided as follows: Five per cents. of 1899, outstanding, \$46,448,000, defaulted July 1, 1914, accumulated interest, 31¼ per cent.; 4 per cents. of 1904, outstanding, \$37,037,500, defaulted June 1, 1914, accumulated interest 26 per cent., and the consolidated 3 per cent. silver bonds of 1886, outstanding, \$42,915,825, defaulted June 30, 1914, accumulated interest 19½ per cent. Besides these there are \$96,615,100 outstanding in 5 per cent. internal redeemable bonds and the following bonds of the National Railways of Mexico: Prior lien, 4½ per cents., \$84,804,115; sinking fund gold 5s,

\$50,748,575; prior lien gold 4½ per cents., \$23,000,000, and consolidated gold 4 per cents., \$27,740,000. All the latter also defaulted in 1914.

The total direct indebtedness of the Mexican Government is thus about \$500,000,000, including defaulted interest of about \$100,000,000. In addition to the report that payment of this interest would begin very soon, it was also stated that the Mexican Government was about to start purchases of railroad equipment for the use of its State line, the National Railways of Mexico. An order for ninety-one locomotives for immediate delivery was placed in the United States.

Another evidence of President Obregon's good-will is his executive order, made public on April 28, for the return of all properties seized by former Governments in the States of Coahuila, Chihuahua, Nuevo Leon and Tamaulipas. His only conditions were that irrigation and land development projects under way when the properties were abandoned be resumed, and that Mexican labor be employed. The properties owned by the Mormons in the State of Chihuahua were to be returned at once. Other Americans will receive their land on proof of ownership. The Mexican Investment Company announced that it would begin immediately

the development of its property. The company previously had derived its sole income from royalties from land which it had leased. Simultaneously with this order, President Obregon directed final payment of 500,000 pesos to the former owners of the ranch, in the State of Durango, presented to Francisco Villa on his retirement from a career of banditry.

Mexico's reconstructive measures have naturally had a great effect on her foreign trade. With the country quiet, except the minor disturbances in the north already mentioned, Mexicans have been able to buy more from abroad, and it is estimated that during the present fiscal year exports from the United States will have more than doubled, reaching a probable total of \$280,000,000. Imports into the United States from Mexico have also gained, rising from about \$75,000,000 a year before 1918 to about \$170,000,000 at present. Petroleum is the biggest factor of Mexico's exports, and the advantage to the United States is seen in her enormous purchases of machinery and materials for that industry. The United States now supplies 85 per cent. of Mexico's imports and takes 95 per cent. of her exports. Every effort is being made to hold and extend this large trade.

## PANAMA STILL HOSTILE TO COSTA RICA

*United States insists on settlement of the boundary dispute on the basis of the White award—Nicaragua withdraws from the League of Nations*

[PERIOD ENDED MAY 15, 1921]

**W**AR between Panama and Costa Rica would not be tolerated by the United States, it was authoritatively asserted in Washington on April 18; both Governments had been informed that Panama's refusal to accept the White award must not be made the basis for a renewal of hostilities. This was followed on May 2 by the presentation of a note from Secretary Hughes to the Government of Panama, stating that unless Panama took steps promptly to settle the Costa Rican boundary dispute in strict accordance with the White and Loubat awards, the United States would take such steps as were necessary to give effect to the physical establishment of the boundary line. The

note was a virtual ultimatum, but set no time limit.

The theory of the State Department is that, as the United States is bound by treaty to protect the independence and territorial integrity of Panama, it must not permit Panama to stir up trouble by arbitrarily extending sovereignty over territory in the possession of which the United States would by no means be bound to protect her. The protecting Government cannot guarantee the integrity of a country with a shifting boundary line depending upon the caprice of the Government protected.

President Porras, on May 3, stated that Secretary Hughes's note had not changed

the attitude of Panama, which still refused to accede to the American ultimatum demanding acceptance of the White award within a reasonable time. A reply was received in Washington on May 7, but not of a nature to change the situation. It was indicated on May 9 that the United States might be compelled to use force to restore to Costa Rica the territory occupied by Panama in defiance of the White award.

It was authoritatively indicated at Washington on May 12, however, that Panama would be given a reasonable time in which to act voluntarily in accordance with her treaty agreements, and that no action would be taken by the United States Government on May 16, the day marking the expiration of two weeks after Secretary Hughes's formal warning.

Tomas A. Le Breton, Argentine Ambassador to the United States, has been authorized to accept appointment as arbitrator of financial claims pending between American citizens and the Government of Panama, according to a dispatch from Buenos Aires, of April 27.

#### COSTA RICA

The United States, on April 19, sent a note to Great Britain denying that it had directed the American Consul at San José to have Costa Rica cancel the Amory oil concession several months before it was annulled. The State Department, it was asserted, had never recognized any concession granted by the usurping Tinoco régime. The note sent to London is reported to have added this declaration:

Nevertheless, it is difficult to perceive how any such action during the period prior to annulment of the concession would furnish

necessarily an occasion for justifiable criticism on the part of his Majesty's Government.

The fact that British capital was invested in the concession, though it was reputed to be American, was not known until just before it was annulled.

The first discovery of natural gas in Central America was reported on May 10 from territory near Puerto Limon, on the east coast. Natural gas was said to be escaping from the earth in large quantities at Cahuita, where drilling for oil was in progress.

#### NICARAGUA

A dispatch from Managua, April 23, stated that Nicaragua had given up its membership in the League of Nations, owing to the expense involved. The Nicaraguan Government was indebted \$47,000 for a year's membership.

A new Atlantic port was opened on May 1 for the export of cattle to Cuba. There has recently been a large increase in Nicaragua in the breeding of cattle for export.

#### GUATEMALA

Guadalupe Cabrera, the 18-year-old daughter of former President Cabrera, was reported on May 9 to have killed herself by shooting, in order to call the world's attention to the fact that the Guatemalan Government had not fulfilled its pledge, signed at the American Legation, guaranteeing Cabrera's life, liberty and property. The facts were cabled to Washington, where it was stated on May 9 that the Harding Administration was taking steps to obtain the release of the former Guatemalan dictator.

#### BELGIUM'S QUEEN AS A VOTER

QUEEN ELIZABETH stood in line and voted at the municipal election in Brussels on April 24, and women voted for the first time generally throughout Belgium. The Clericals made considerable progress in the big cities, such as Brussels, Antwerp and Ghent, at the expense of the Socialists.

The latter held their own in the industrial

districts, and the Liberals remained stationary. The number of women who registered exceeded the men by 700,000, but there were only a few women candidates. Burgomaster Max was re-elected in Brussels. He was designated by the Council of Ministers to head a Belgian delegation to Washington to congratulate the President upon his election.

# SOUTH AMERICA TURNING AGAIN TO EUROPE

*Great Britain taking over the South American passenger trade which the United States had held through the war years—Heavy German migration to Brazil—Vast project of the Krupps in Chile—Argentina compels port workers to unload an American vessel*

[PERIOD ENDED MAY 15, 1921]

**S**OUTH AMERICAN passenger trade, which during the war fell into American hands through acquiring German vessels, has been recovered in large part by Great Britain, according to Sir Owen Philipps, head of the British shipping trust. This, he says, is because the German ships taken over, though fast, were constructed for North Atlantic trade and were unfit for service in hot climates. Another reason was the severity of the American prohibition laws, which cause Latin Americans to prefer British lines. As long as such conditions exist, he declares, there is no prospect that the United States will recover supremacy in the South American passenger trade.

Great Britain is also reaffirming her hold on a land where British interests control more than 15,000 miles of railroads. On the eight systems concerned net profits during 1920 exceeded those of 1919, despite large increases in wages.

## ARGENTINA

For forty days an American vessel, the Shipping Board steamer *Martha Washington*, chartered by the Munson Line, was held up in the port of Buenos Aires by a boycott of union port workers, who refused to allow the ship to be unloaded. The union had demanded the discharge of fourteen firemen on the ground of illness, but the company declined, refusing to recognize the union's right to interfere. Then the boycott began, which involved the Argentine Foreign Office, the American Consul and Ambassador, and finally the State Department at Washington. The United States held the Argentine Government responsible. The Ambassador demanded that Argentina either require the union to unload the vessel or afford protection to free labor to do it. He said the *Martha Washington* would remain ten, twenty or thirty

years in port before the United States would yield to the demand of a labor union which had no right to intervene in a controversy between the Captain of an American ship and its crew. Meanwhile European lines protested against the exactions of the port workers, and threats were made to drop Buenos Aires as a port of call. The United States refused to join in such a move or to accept the offer of an organization of employers to furnish non-union labor which, under armed protection, would unload the vessel. Washington refused to join private interests, throwing the entire settlement on Argentina.

On May 9 the port workers struck and said they would not return until assurances had been given that the Labor Protective Association of Employers would not be permitted to work. The police and Argentine marines took charge of the docks and maintained a lockout of both union and non-union men. After three days the unions yielded and agreed to lift the boycott on the *Martha Washington*, thus ending the international incident.

Two bombs were thrown in Buenos Aires on May Day in an attempt to blow up a railway bridge. Anarchists charged a patriotic parade in the province of Entre Rios, which caused a riot, five persons being killed and twenty wounded.

Argentina on May 12 sent an official communication to the Secretariat of the League of Nations on amendments offered last November by Honorio Pueyrredon, the Argentine Foreign Minister, showing that Argentina continues to consider herself a member of the League.

## BOLIVIA

A contract has been signed with an American firm for the construction of a railway from La Quiaca, on the Argentine border, to Otocha, completing the link

needed to give La Paz an all-rail route to Buenos Aires.

A new Bolivian Cabinet took office on May 13, with the following personnel:

Foreign Minister.....Alberto Gutierrez  
 Minister of Interior.....Abdon Saavedra  
 Minister of Finance.....Jose Estensoro  
 Minister of Public Instruction..Jaime Freyre  
 Minister of Public Works.....Roman Pan  
 Minister of War.....Pastorbal Divieso

Dr. Gutierrez is a diplomat of long experience. In 1903 he was Secretary of the Bolivian Legation in Washington for a short time. He has been twice Minister from his Government to Chile. He has also been Minister of Bolivia to Brazil, Ecuador, Colombia and Venezuela. In 1915-1916 he was the official delegate from Bolivia to the second Pan-American Scientific Congress at Washington, and became Minister of Foreign Relations of Bolivia Dec. 17, 1918, resigning from that post on March 15, 1919. He has traveled extensively in Europe.

#### BRAZIL

The centenary of Brazilian independence will be celebrated on Sept. 7, 1922, and preparations are being made for it. Americans resident in Brazil propose to construct a memorial building as the gift of the United States. The Brazilian Automobile Association proposes to hold an automobile exhibition at the same time.

A Brazilian-American Chamber of Commerce has been formed in New York to include business men and diplomatists interested in Brazilian trades. Brazil's Congress opened on May 3 with a downward revision of the tariff as the chief subject to be considered. A loan for \$25,000,000 floated in the United States is intended to be used to electrify about 225 kilometers of the state railway in the direction of Sao Paulo. In a tiny glass cylinder inserted in one of lead 357 milligrams of radium were shipped to Brazil by the Radio Chemical Corporation early in May as part of an order for 557 milligrams, or slightly more than half a gram. The shipment was valued at \$65,000.

Brazil is anticipating a great influx of immigrants this year, among them 30,000 Italians. Germans also are arriving in large numbers. Recently the steamship Pocone arrived from Hamburg with 1,149 passengers, practically all immigrants.

#### CHILE

Profiteering by owners of nitrate fields in Chile was so extensive during the war and their desire to maintain prices was so tenacious that the natural result of a falling off in orders has followed. As a consequence there has been stagnation in trade in the northern district, unemployment among the nitrate workers, strikes among the longshoremen and heavy losses to steamship companies. It is even feared that Antofagasta may lose most of its shipping business. President Alessandri in a message to Congress urged the nationalization of sales of nitrate, which the State intends to sell abroad, paying the cost of freights and dividing the profits with the producers, suppressing the export duty. He also suggested a progressive tax on rents, increased taxes on luxuries and the introduction of new labor legislation.

Details of the Krupps concession in Chile show that it is much more extensive than supposed, consisting of nearly 500,000 acres of virgin forest land in the Province of Llanquihue, covered with gigantic trees. In addition the Krupps purchased from Enrique Gonzalez his great Pleito and Zapallo mines in the Provinces of Coquimbo and Atacama for the sum of \$10,000,000, according to Santiago newspapers. The Krupps propose to establish at the foot of the Calbuco Volcano their principal works, which will dwarf those at Essen. Here they may evade the provision in the Versailles Treaty against the manufacture of arms in Germany by carrying it on abroad. Many Chileans have already protested against the alienation of much territory and against the purposes for which it will be used by a concern so closely affiliated with the German Government.

President Alessandri of Chile has accepted the resignations of Señor Carlos Silva Cruz, Minister of War, and Señor Daniel Martner, Minister of Finance, and has appointed to succeed them Señor Enrique Balmaceda and Señor Enrique Oyarzun, Chairman of the Committee on War and Finance of the Chamber of Deputies. Señor Silva Cruz resigned from the post of Minister of War because of his poor health.

#### COLOMBIA

By a vote of 69 to 19 the United States Senate on April 20 ratified the Colombian

treaty, agreeing to pay \$25,000,000 for the loss of Panama and giving Colombia free passage through the Panama Canal. The debate, which lasted several days, was very bitter. President Harding himself and many Republicans who supported his request for ratification had opposed it when President Wilson asked for it, and some ingenuity was needed by the Administration to give an explanation of the altered policy. In 1917 Senators Lodge, McCumber, Brandegee, Fall and Borah called the treaty a "blackmail document." It was charged during the debate that oil interests, expecting concessions in Colombia, were back of the ratification. It was stated that the fight would be renewed when Congress is asked to appropriate the \$25,000,000 authorized. [The text of the treaty, with further details, will be found on Pages 541-3.]

The Swiss Federal Council, on May 10, agreed to arbitrate the long-standing boundary dispute between Colombia and Venezuela. Swiss engineers are to visit South America and make surveys in both countries.

#### PARAGUAY

Protests have been made to La Paz by the Government of Paraguay against the recent erection of forts by Bolivia and the garrisoning of troops near the territory known as the Paraguayan Grand Chaco, the boundaries of which have long been a subject of dispute between the two countries. The disputed territory is nearly as large as California, and oil is said to have been recently discovered there. The Bolivian Chargé d'Affaires in Buenos Aires denies any threat is intended. He says the forts are 150 miles from the disputed zone and the garrisons are for police duty.

#### PERU

President Leguia of Peru is reported to have set up a dictatorship and deported many political opponents of his policy since his seizure of the Presidency in July, 1919. He is said to have insisted on "revising" decisions of the Supreme Court and to have imprisoned Senators, Deputies, newspaper men, army officers and others on San Lorenzo Island. The San Marcos University was closed in March and many students were wounded in a pitched battle with the police in the streets of Lima. The Prensa,

which reported the trouble, was seized and turned into a Government organ, strict censorship on telegraph and mail prevented the news from getting out. On May 11 several prominent Peruvians, who had been detained for political reasons, were placed aboard the Peruvian line steamship Paita at Callao for deportation. Among them were General Oscar Benavides, former President of the republic; Senator Miguel Grau, two former Cabinet members and several former Deputies.

The Marconi Wireless Telegraph Company, Ltd., of London, on May 1, took over the Peruvian wireless, postal and telegraphic services. The concession was for twenty-five years. The Marconi Company agrees to advance the funds for the reorganization of the services, which had been operated at a loss. The State Department made the award the basis for representations, according to a Washington dispatch of May 14, but their nature was not disclosed.

#### URUGUAY

A decree was published on April 6, prohibiting the landing of animals in Uruguay that have been exported from the United States and brought by steamers that have called at Brazilian ports, owing to reported cases of cattle plague in Brazil. This was extended to cattle coming from Europe, particularly France, Belgium and Holland. The quarantine is very strict, as one instance shows: Miss Muriel Corneille of New York arrived at Montevideo on April 26 with a pet dog, which the authorities ordered killed; she saved its life by returning without leaving the vessel.

#### VENEZUELA

Esteban Gil Borges, Foreign Minister of Venezuela, arrived in New York on April 11 at the head of a mission to present a statue of Simon Bolivar, South American liberator, to the City of New York, which was unveiled in Central Park on April 18. President Harding made an address favoring closer relations between the United States and Latin America, the evident sincerity of which was commented upon favorably by the South American newspapers. The delegates gave a reception to Secretary and Mrs. Hughes in Washington on April 22. Georgetown University conferred the degree of Doctor of Laws on Dr. Gil Borges.

Petroleum possibilities of Venezuela are described in the South American Journal, of London, which says that the Caribbean coast from the mouth of the Magdalena to the great lagoon of Maracaibo is an undoubtedly promising oil field, practically a virgin territory. Two American companies have acquired large concessions there. The Maracaibo Oil Exploration Corporation has

approximately 1,000,000 acres of leaseholds and has entered into a working agreement with the Standard Oil Company of New Jersey to finance and superintend the development of its properties for one-half interest.

Caracas, the Venezuelan capital, has a population of 92,212 according to the census of 1920.

## EVENTS IN THE WEST INDIES

*The Cuban Presidency dispute settled—Personnel of the new Cabinet—Protest from Haitians—Santo Domingo's New Governor—Spanish protests against American occupation—In the British West Indies*

[PERIOD ENDED MAY 15, 1921]

GENERAL JOSE MIGUEL having abandoned his ambition to be President of Cuba after a talk with Secretary Hughes in Washington on April 14, there remained little doubt that Dr. Alfredo Zayas would be inaugurated on the day set, May 20. The followers of Gomez in Congress ceased their opposition, and President Menocal, who was supposed to favor Gomez, made arrangements for an extended tour in Europe, accompanied by his wife and daughter, immediately after his term ends.

Dr. Zayas on May 10 announced his selections for the new Cabinet as follows: Secretary of the Presidency, Dr. José Manuel Cortina; Secretary of State, Dr. Rafael Montoro; Government, Dr. Francisco Martínez Lufriu; Treasury, Sebastien Gelabert; Sanitation, Dr. Juan Guiteras; Public Works, Orlando Freyre; Justice, Dr. Erasmo Regueiferos; Public Instruction, Dr. Francisco Zayas y Alfonso, a brother of the President-elect, and War and Navy, Dr. Demetrio Castillo Duany. The post of Secretary of Agriculture had not at that time been filled. Dr. Guiteras, head of the Health Department, is well known in the United States for his medical research work. Señor Gelabert is a financier and banker who has not been active in politics.

It was stated that Dr. Zayas was intending on taking office to begin negotiations for the modification of the commercial treaty with the United States.

Antonio C. Gonzalez, one of the early

Cuban patriots, died in New York on April 25. He was born in 1844 and when 21 years old gave liberty to the slaves which his father had left him. As a result, the Spanish Government confiscated his property and sentenced him to death. He was smuggled into the United States, studied law and was admitted to the bar in 1880.

Cuban conditions have been rapidly improving and there is a gradual restoration of confidence. A clearing house was organized and began business on April 25. All the solvent Cuban banks joined as well as various foreign branches. Arrangements for assisting in financing the Cuban sugar crop have been completed by two New York banks and one Canadian, and acceptances for more than \$500,000 have been drawn, secured by sugar in Cuban warehouses. Exports to the United States in April and May were largely increased in anticipation of the proposed American tariff. Government mediators succeeded in settling a serious strike on the Cuban railway companies' lines in the eastern part of the island by a compromise, and traffic was resumed on May 8.

Chess players the world over have been watching with interest the series of games played in Havana between José Capablanca, the youthful Cuban, and Emanuel Lasker, the aged German master, which ended on April 26 in four games won by Capablanca and ten drawn, out of the proposed series of 24, Lasker declining to finish and conced-

ing to his opponent the title of chess champion of the world. Lasker sailed for Spain on April 30.

#### HAITI

Three Haitian delegates in Washington on May 8 made public a memorial to be presented to President Harding, the State Department and Congress, demanding the withdrawal of the United States military forces. They charge a long series of atrocities by American marines and the native gendarmerie, including administration of the "water cure" and other tortures by Americans and the commission of numberless abominable crimes, of which 25 cases with names and dates are given in the memorial. It is charged that \$500,000 of Haitian Government funds were carried off to New York, to cripple the Treasury; that the Legislature was dispersed by a body of marines; that ratification of the Constitution of 1918 was obtained by duress and that 9,475 Haitians died in American prison camps in three years. The accusations are practically a repetition of the charges made by General Barnett and other officials and made public by the National Association for the Advancement of Colored People. They were investigated last year by a naval court, which found that they were "ill-considered and regrettable." The controversy was published in detail in *CURRENT HISTORY* for November, December, January and February. The Haitian delegates characterize the naval inquiry as a joke. Secretary of the Navy Denby, who visited Haiti to see for himself, characterized the Haitians' complaints as "the same old rot."

#### SANTO DOMINGO

From Spain on April 15 came a protest against continued occupation of Santo Domingo by United States troops. It was addressed to President Harding and was signed by the former Premier, Count Romanones; the former Minister of Public Works, Francisco Cambon; Professor Miguel Unanuno of Salamanca University, and others. Argentina and most of the Latin-American republics also were understood to be preparing protests.

Announcement was made in Washington on April 15 that the United States was seeking an orderly and careful method of

withdrawing its marines from Santo Domingo which would satisfy the nationalists and at the same time protect the interests of the United States and other foreign Governments.

Read Admiral S. S. Robison, commanding the Boston Navy Yard and Station, was detailed May 13 to be Military Governor of Santo Domingo. He will relieve Rear Admiral Thomas Snowden, who reaches retirement age this Summer. Captain George Brown Jr., Supply Corps, Navy Department, was ordered on duty as fleet paymaster, Atlantic fleet.

#### PORTO RICO

E. Mont Reily, a Kansas City business man, was nominated by President Harding May 6 and confirmed May 11 by the Senate to be Governor of Porto Rico. Mr. Reily has been active in Missouri politics during several campaigns. In 1912 he was a supporter of the Roosevelt Progressive Party and during the pre-convention campaign last year was an active worker for the nomination of Mr. Harding.

#### BRITISH WEST INDIES

A dispatch from Kingston, dated May 4, said that discussion was continuing there on the suggestion of the annexation of the British West Indies to the United States in settlement of the war debt of Great Britain. It is stated that the British islands have not made as much industrial progress as those under care of the United States. West Indian federation was being suggested as an alternative to American annexation. The latter has very little support either in the West Indies or in Great Britain. One of its most vigorous opponents is the Prince of Wales, who is expected to express himself at the annual banquet in June of the West India Committee, an association of persons interested in West Indian trade which is 200 years old but was only incorporated in 1904.

#### BAHAMAS

Development of the harbor of Nassau has been authorized by the Bahamas Legislature at an estimated cost of \$1,250,000, half of which will be raised by a loan. The project calls for a depth of 35 feet and a channel 300 feet wide to the inner harbor.

## BARBADOS

The trade of Barbados with the United States more than tripled in 1920, amounting to \$2,107,513, as compared with \$681,263 in the previous year, owing to the shipment of 8,488,000 pounds of sugar.

## BERMUDA

Renewed efforts have been made in the

Bermuda Assembly to permit the use of automobiles in the islands. One was imported in the early days of motoring, but the Legislature declared it to be dangerous, passed a law forbidding the importation of any more, bought the offending machine from its owner and deported it. As the islands have little more than nineteen square miles of area, visitors do not regard automobiles as necessary.

## THE COLOMBIAN TREATY RATIFIED

THE treaty by which the United States granted to Colombia \$25,000,000 damages for the Panama Canal episode was ratified by the Senate on April 20, 1921, by a vote of 69 to 19. Only fifty-seven votes were required to cover the prescribed two-thirds of all votes cast. The opposition vote was recorded by fifteen Republican Senators and four Democrats. The treaty as ratified was practically the same as the draft submitted to the Senate by President Wilson in 1914, except for the elimination of the article expressing regret that anything should have occurred to mar the cordial relations between the United States and Colombia, and a few minor amendments. The main differences brought by the latter are as follows:

When submitted by President Wilson the treaty called for the payment of the entire \$25,000,000 agreed to by the United States as compensation for the loss of Panama within six months following the exchange of ratifications. As amended, \$5,000,000 will be paid in six months, and the remaining \$20,000,000 in four annual instalments of \$5,000,000 each.

The same rights are accorded to Colombia in respect to the interoceanic canal and the Panama Railway as in the original treaty, with the exception that an amendment was incorporated in the treaty as passed proclaiming that the title of the Panama Railway and of the Canal is now "vested entirely in the United States of America without any encumbrances or indemnities whatsoever."

All Colombian products and mails passing through the canal are to be exempt from duties other than those to which the products and mills of the United States are subject. Colombian cattle, provisions and salt are to be admitted to the Canal Zone on an equality basis with those of American ownership. Colombian citizens are ex-

empted from all tolls, taxes and duties on an equality basis with citizens of the United States. Colombia receives the same right to transport troops, war materials, products of the soil and mails over the lines of the Panama Railway as that now enjoyed by the United States. The clause added in the original treaty, "even in case of war between Colombia and another country," was eliminated from the treaty as ratified. Colombia recognizes formally for the first time the complete independence of the Republic of Panama.

Some idea of the efforts required to achieve this treaty's ultimate passage may be derived from the following record:

April 6, 1914—Signed at Bogota.

June 16, 1914—Transmitted to the Senate for ratification by President Wilson. Referred to the Committee on Foreign Relations.

June 18, 1914—Injunction of secrecy removed.

July 15, 1914—Resolution for public hearings introduced by Senator Borah.

Dec. 16, 1915—Again referred to Committee on Foreign Relations.

Feb. 3, 1916—Again reported to the Senate.

March 8, 1917—Again referred to Committee on Foreign Relations.

March 14, 1917—Reported by Senator Stone with amendments.

March 15, 1917—Motion to consider in open session defeated.

March 16, 1917—Further consideration postponed.

April 16, 1917—Called for consideration and again postponed.

May 29, 1919—Again referred to the Committee on Foreign Relations.

July 2, 1919—Reported with amendments.

Aug. 7, 1919—Motion of Senator Lodge referred back to the Committee on Foreign Relations.

Aug. 8, 1919—Referred to subcommittee.

June 3, 1920—Reported to the Senate and ordered printed.

March 9, 1921—President Harding, in a message, urged ratification.

April 20, 1921—Ratified by the Senate by vote of 69 to 19.

The most active opponent was Senator Borah, who declared that ratification of the treaty, in its present form, would be notice to the world that the Senate admitted and confirmed the charge "that Theodore Roosevelt stole Panama." The payment of this \$25,000,000, declared Senator Borah, meant that Roosevelt and John Hay, in consummating this "brilliant achievement," had "acted iniquitously." On this basis the Senator from Idaho refused to vote for ratification, and insisted on the inclusion of an amendment explicitly stating as follows:

That neither said payment nor anything contained in this treaty shall be taken or regarded as an admission that the secession of Panama in November, 1903, was in any way aided or abetted by the United States of America, its agents or representatives, or that said Government in any way violated its obligations to Colombia.

After a bitter fight, this amendment, like several urged by Senator Ransdell, was rejected.

The text of the treaty as passed is given herewith:

*The United States of America and the Republic of Colombia, being desirous to remove all the misunderstandings growing out of the political events in Panama in November, 1903; to restore the cordial friendship that formerly characterized the relations between the two countries, and also to define and regulate their rights and interests in respect of the interoceanic canal, which the Government of the United States has constructed across the Isthmus of Panama, have resolved for this purpose to conclude a treaty, and have accordingly appointed as their plenipotentiaries:*

\* \* \* \* \*

*Who, after communicating to each other their respective full powers, which were found to be in due and proper form, have agreed upon the following:*

**ARTICLE I.**—The Republic of Colombia shall enjoy the following rights in respect to the interoceanic canal and the Panama Railway, the title to which is now vested entirely and absolutely in the United States of America, without any encumbrances or indemnities whatever:

1. The Republic of Colombia shall be at liberty at all times to transport through the interoceanic canal its troops, materials of war and ships of war, without paying any charges to the United States.

2. The products of the soil and industry of Colombia passing through the canal, as well as the Colombian mails, shall be exempt from any charge or duty other than those in which the products and mails of

the United States may be subject. The products of the soil and industry of Colombia, such as cattle, salt and provisions, shall be admitted to entry in the Canal Zone, and likewise in the islands and mainland occupied by the United States as auxiliary and accessory thereto, without paying other duties or charges than those payable by similar products of the United States.

3. Colombian citizens crossing the Canal Zone shall, upon production of paper proof of their nationality, be exempt from every toll, tax or duty to which citizens of the United States are not subject.

4. Whenever traffic by the Canal is interrupted or whenever it shall be necessary for any other reason to use the railway, the troops, materials of war, products and mails of the Republic of Colombia, as above mentioned, shall be transported on the railway between Ancon and Cristobal or on any other railway substituted therefor, paying only the same charges and duties as are imposed upon the troops, materials of war, products and mails of the United States. The officers, agents and employes of the Government of Colombia shall, upon production of proper proof of their official character or their employment, also be entitled to passage on the said railway on the same terms as officers, agents and employes of the Government of the United States.

5. Coal, petroleum and sea salt, being the products of Colombia, for Colombian consumption, passing from the Atlantic Coast of Colombia to any Colombian port on the Pacific Coast, and vice versa, shall, whenever traffic by the canal is interrupted, be transported over the aforesaid railway free of any charge except the actual cost of handling and transportation, which shall not in any case exceed one-half of the ordinary freight charges levied upon similar products of the United States passing over the railway and in transit from one port to another of the United States.

**ARTICLE II.**—The Government of the United States of America agrees to pay to the City of Washington to the Republic of Colombia the sum of twenty-five million dollars, gold, United States money, as follows: The sum of five million dollars shall be paid within six months after the exchange of ratifications of the present treaty, and reckoning from the date of that payment, the remaining twenty million dollars shall be paid in four annual instalments of five million dollars each.

**ARTICLE III.**—The Republic of Colombia recognizes Panama as an independent nation and taking as a basis the Colombian law of June 9, 1855, agrees that the boundary shall be the following: From Cape Tiburon to the headwaters of the Rio de la Miel and following the mountain chain by the ridge of Gandi to the Sierra de Chugargun and that of Mali going down by the ridges of Nigue to the heights of Aspave and from thence to a

point on the Pacific half way between Co-calito and La Arvita.

In consideration of this recognition, the Government of the United States will, immediately after the exchange of the ratifications of the present treaty, take the necessary steps in order to obtain from the Government of Panama the dispatch of a duly accredited agent to negotiate and conclude with the Government of Colombia a Treaty of Peace and Friendship with a view to bring about both the establishment of regular diplomatic relations between Colombia and Panama and the adjustment of all questions of

pecuniary liability as between the two countries, in accordance with recognized principles of law and precedents.

**ARTICLE IV.**—The present treaty shall be approved and ratified by the high contracting parties in conformity with their respective laws, and the ratifications thereof shall be exchanged in the City of Bogota as soon as may be possible.

In faith whereof, the said plenipotentiaries have signed the present treaty in duplicate and have hereunto affixed their respective seals.

## SWEDEN AND THE ALAND AWARD

*The Aland Islands to have home rule under Finnish suzerainty, with guarantees for Swedish interests, according to a recommendation of the Aland Commission of the League of Nations—Sweden refuses to consider the judgment as final*

[PERIOD ENDED MAY 15, 1921]

**G**REAT excitement was manifested in all the Swedish press over the announcement from Geneva, on May 10, that the commission appointed by the League of Nations to examine the question whether the Aland Islands in the Baltic should belong to Sweden or Finland had found for the latter country. Keen disappointment and indignation greeted the report everywhere, with expression of the hope that the League would refuse to adopt the recommendation. Should it sanction the report, according to Tidningen (Stockholm), it would deal the deathblow to Sweden's confidence in the will of the League and its power to uphold justice in the world. The Swedish Government was said not to consider the commission's report as of decisive importance in the ultimate solution of the Aland question, and would energetically urge the League Council to let the Alanders decide their nationality by a plebiscite.

In the course of its 36,000-word report the commission stated that the Aland Islands form a part of the self-governing State of Finland, and that, though a plebiscite there would undoubtedly favor Sweden, it is questionable whether any one had the right to take them away from Finland. The desire of the Alanders to join Sweden was found to be mainly due to their anxiety to maintain their Swedish language and

culture. As Finland is ready to grant satisfactory guarantees to the Alanders, the commission urged that it would be unjust to deprive Finland of the islands. Furthermore, the Aland population is too small to stand alone, and the islands are in other ways hardly capable of surviving as an independent State.

Therefore, the commission recommends that the Alands remain under Finland, but that Finland grant certain linguistic, cultural and trade guarantees to the Swedish population of the archipelago. Instruction is to be given only in Swedish in the primary and technical schools. The Alanders must have the right of redemption in case lands are purchased by any foreign person or company. Owing to the value of the shipping and harbor advantages, Finnish companies will surely wish to establish shipbuilding yards in the islands. In the unlikely case that Finland should refuse to grant these guarantees, and to protect the Alanders against the Fennoman movement, the commission thinks the only possible solution would be a separation of the islands from Finland by means of a plebiscite. This solution, however, the commission desires to avoid.

The commission recommends that the Alanders should have the right to present to the Finnish Government a list of three

candidates for Governor of the islands, and that the Governor be chosen from this list.

The report ends the procedure begun in July, 1920, when Swedo-Finnish relations over the Aland question became acute, and Earl Curzon referred the question to the League of Nations. On Sept. 18, 1920, it was announced that both Sweden and Finland had accepted the intervention of the League to settle the dispute. The League Council referred the question to three international judges, and the present report of the Aland Islands Commission is based on investigations by Mr. Elkus, former United States Ambassador to Constantinople; M. Calonder, former President of the Swiss Confederation, and Baron Beyens of Belgium.

The report states that of the 25,000 population of the islands, 96 per cent. are Swedish speaking, while 320,000, or 11 per cent., of the population of Finland are Swedes. Eighty of the islands are inhabited, and there are many uninhabited islets in the group, which form the "Skerry Garth" between the larger islands and the Finnish mainland. Impartial people are quoted as holding that it would be an exceedingly difficult matter to draw a frontier line through the Skerries, even if Sweden had a stronger case.

Guarding the entrance to the Gulf of Bothnia, it was the strategic importance of these islands that made the question of their possession a matter of European concern. Until 1808 Finland formed a part of Sweden. Then Russia acquired the Alands, along with the Finnish provinces of Sweden. The Swedes base their claim to the Alands on the fact that in 1917, about four months before Finland declared her complete independence of Russia, the Alanders met and expressed a wish to be reunited with Sweden, with virtual unanimity.

The League acts on the question under Articles III. and XI. of the Covenant, which the three international judges decided authorized the League to intervene. When the general import of the commission's report became known on April 20, M. Kersjantseff, the head of the Soviet Trade Delegation at Stockholm, declared in a newspaper article that the Soviet Government would acknowledge no settlement to which it was not a party. He stated that, although the Soviet Government claimed jurisdiction

over both the Alands and the rest of Finland as parts of Imperial Russia, it was disposed to surrender the islands to Sweden provided a suitable arrangement could be made with Stockholm.

#### DANISH COLONY IN GREENLAND

An event of romantic interest is the coming visit of the King Christian and Queen Alexandrine to Godhaab, Greenland, for the bicentenary celebration of the Danish Colony in Greenland by the missionary, Hans Egede. Never has a European sovereign visited this part of Danish America. Descendants of the Norse Viking colonists settled there in the eleventh century under Eric the Red—whose son, Leif the Lucky, discovered the North American Continent—and were exterminated by Eskimos in the sixteenth century. But in 1721 Hans Egede, with his wife, children, and forty followers, founded the Danish mission settlement at Godhaab, which has continued in being to this day. In 1774, by statute, the Greenland trade became a monopoly of the Danish crown, which took the mission under its protection, and the same system remains in force. The trade consists mostly of produce gathered by the natives at their hunting and fishing stations: blubber, whalebone, narwhal horns, walrus tusks, sealskins, bearskins, feathers, eiderdown, and dried cod. An Eskimo grand opera has recently been produced on the Copenhagen stage. Godhaab was visited in October, 1888, by Dr. Nansen and Otto Sveddrup when they completed the first crossing of Greenland after an adventurous journey by sledge and a tiny willow canoe.

#### NORWEGIAN SHIPS

The Legation of Norway at Washington has pointed out an inaccuracy in a statement in CURRENT HISTORY for May regarding the Norwegian claim against the United States Shipping Board. The amount offered by the board as compensation to the owners of the fifteen Norwegian vessels, which were under construction in American shipyards in 1917 and were requisitioned by the United States Government, was not \$14,000,000, but approximately \$2,600,000. The first named amount is the sum claimed by the Norwegian owners. The Legation states also that the Shipping Board has never placed a valuation of \$100 a ton on the ships.

# EUROPE'S FINANCIAL SITUATION IN VIEW OF GERMANY'S INDEMNITY CAPITULATION

GERMANY'S complete compliance with the reparation demand of the allied Governments is, by long odds, the event of most vital importance, economically and financially, since the signing of the Armistice. It detracts from its significance no whit that the world had come to a firm determination that Germany must pay, sooner or later. Acceptance by her of the Allies' terms was received by the other nations with a metaphorical sigh of relief and the world's judgment of the value of her submission was recorded by rising exchanges, here and in London.

It is significant that there was no overwhelming enthusiasm at the news, either in London or in Paris. Each received it with a quiet satisfaction but, too, with a degree of reservation which disclosed each nation as wholly cognizant of the difficulties still ahead. As yet the German surrender has had a psychological value, but only a psychological one. It was like a legacy to a spendthrift, not unexpected to be sure, but arriving when he was at the end of his resources and nearly hopeless of the future.

It may be conceded unfair to reckon either France or England as at the end of its resources. They were most certainly not at that point, but it is a fact, nevertheless, that France, practically since the Armistice, has computed two budgets each year: one her regular budget offset by taxation, and the other an extraordinary budget against which was balanced nothing more tangible than the payments she meant some day to obtain from Germany. Now these payments are actually in sight and the sense of relief is accordingly great, although, at the moment, no plans have been devised for transforming Germany's acknowledgment of her debt and her promise to pay it into the actual gold coin which is all that can really help France, or England, for that matter.

Assumption that Germany will enter upon the series of payments laid down for

her by her conquerors is, probably, justified, although there is nothing like assurance felt that some alteration will not be effected before Germany shall have paid the last of the 132,000,000,000 gold marks now set as the total payment. The London newspaper comments reflected this the morning after news was received of Germany's acceptance of the terms. Thus the Daily Telegraph commented:

"We see no reason to doubt that Wirth and his colleagues are speaking and are willing to act in good faith, but we cannot allow ourselves to forget that a German signature is not always final. Germany has signed agreements before and then has tranquilly proceeded to violate their vital clauses. There must be no opening this time for exhibition of the same complaisant morality. We do not wish to suggest that Wirth and his colleagues have any desire to deceive us, but, in their own interests and those of their successors, it is as well that all possibility of deception should be eliminated."

The Daily Chronicle declared: "We shall next have to see that the new German Government performs what it has undertaken," and notes that the Reichstag carried the decision to accept the ultimatum by a majority of only 40 and that the whole of the Nationalist, or Military Party, and the Stinnes, or Big Business Group, voted against acceptance. It adds:

"With these uncompromising opponents representing forces normally dominant in Germany, and with many lukewarm elements among its temporary supporters, the Wirth Government will have great difficulty in performing its promises to us, and the only way for us to help it is to keep a firm attitude and leave the recalcitrants in no doubt that attempts to break the conditions will annul the effect of their acceptance. The same pressure which has tardily brought Germany back to the path of loyalty will be needed to keep her from straying out of it back to the Abdul Hamid diplomacy of the past eighteen months."

But with the threat of French occupation of the Ruhr still present—it will be recalled that General Degoutte, in transmitting the order to his troops, did not say the invasion had been abandoned but “postponed”—Germany may be counted on at least to begin carrying out the terms of the ultimatum. These include payment within twenty-five days after acceptance of the ultimatum of 1,000,000,000 marks in gold, or paper redeemable in gold, and the subsequent issue, on July 1 and Nov. 1, respectively, of bonds in the amount of 12,000,000,000 and 38,000,000,000 gold marks, which shall be bearer bonds secured by the whole assets of the German Empire and the German States, the interest on and the redemption of which are provided for by annual payments of 2,000,000,000 marks gold by Germany and 26 per cent. of the value of her exports as from last May 1, or, alternatively, an equivalent amount as fixed in accordance with any other index proposed by Germany and accepted by the Reparation Commission. In addition, bonds for 82,000,000,000 marks gold are to be handed to the Reparation Commission on Nov. 1 to be issued by the commission when it is deemed the interest and redemption can be provided for by the payments Germany is to make annually.

France's share of the indemnity is to be 52 per cent. So that, on the proposed basis, the most France can look for this year is 52 per cent. of 50,000,000,000 marks gold; in bonds, however, and not in cash. These 26,000,000,000 gold mark bonds would yield her, at 5 per cent., the coupon value of the bonds, an income of 1,300,000,000 marks gold, roughly equal, at present exchange rates, to 3,900,000,000 francs paper. This is a tremendous addition to France's income, certainly, but is it enough to accomplish the reconstruction plans which France has in contemplation and which she must effect if the country is to be brought back to the state of economic efficiency which existed before the German invasion? Recent official estimates fix the annual sum to be expended on reconstruction for the next ten years at 8,000,000,000 francs, pensions at 4,000,000,000 and the interest on loans already incurred for reconstruction, 2,000,000,000, a total of 14,000,000,000 francs absolutely necessary for the next ten years at least. The pensions continue, of

course, after that period. Now 3,900,000,000 francs is a long way from 14,000,000,000 francs, and the supposition is justified that France must seek to capitalize her share of the indemnity at once. And to capitalize it she must offer her bonds for sale in this market.

Three methods are open to her and none holds promise of more than moderate success. She may offer the bonds as she receives them for what they will bring; she may add the guarantee of the French Government, or she may issue a French Government bond with the German bonds as collateral security. In any of these events it is hard to see where she could offer them outside of the United States, and it is problematical in the extreme as to how any of these issues would fare here.

France, Belgium and Switzerland have lately been borrowing here on an 8 per cent. basis, so it may be put down as fact at once that no German bonds can hope to obtain better terms. Their coupons, however, are for 5 per cent., so an assumption that seems warranted is that the bonds could not sell here at that rate in any quantity at a better price than 60. Assuming that the whole block could be so disposed of, a thing which bankers here scarcely conceive imaginable, France would obtain for her 26,000,000,000 gold mark bonds this year only about 47,000,000,000 francs paper, a sum large enough in itself, to be sure, but not quite so large when measured in the light of France's needs and expectations. Certainly it is hard to see how France is to be relieved entirely of the financial embarrassment into which the war forced her.

But that is not to say that France will not regain her old place in the world, with her income once more adequate to meet her expenses and her money exchangeable for the moneys of other countries at a rate closely approaching the old par of exchange. France has banked heavily on the payments which Germany must make to her and now it seems that these payments are to be inadequate to defray the expenses which France has contemplated and must make, yet France's regeneration must be regarded as assured.

The assertion is heard often, in discussion of the financial relations between the Allies and the United States, that France

and England are nearly bankrupt, that there is little hope of their ever paying the interest on their debts to us, let alone the principal, and that the loans must ultimately be marked off the books as worthless. It is a commentary upon the economic knowledge of such critics that they nearly always denounce as subterfuge any statement on the part of Germany that she cannot pay the Allies the sums demanded.

It is a source of constant wonder how assurance can be felt of Germany's ability not only to recover from the effects of the war but also to make huge payments to the victors while doubt remains as to the capacity of England and France to regain their financial equilibrium. If Germany can pay off 132,000,000,000 marks gold, as she has now contracted to do, and at the same time regain a place among the commercial nations of the world, can it be doubted that England and France, who are to receive this reimbursement for damage done, are not equally capable of recovering from the ravages of the war?

Neither England nor France feels the slightest doubt of its ability so to do nor yet of the ability of Germany to fulfill the contract she has now entered into. In fact, to the faith that Germany will recover, and will recover quickly, may be attributed the disinclination of the French to see Upper Silesia return to German hands. The French dread the recrudescence of power in Germany, and they foresee a quick return with both the Ruhr and Upper Silesia in German hands. The mineral resources of these sections are sufficient to make Germany again powerful, and power in Germany is always a threat to France.

The figures on trade recently at hand support the French view. There is given below a summary of the foreign trade of France for the first two months of this year, which shows that Germany is sending more and more of her products into French territory. See accompanying table.

It will be seen that Germany is supplying an increasing part of the materials which France buys abroad. In the last twelve months imports from Germany more than doubled while imports from other countries except the French colonies were dropping to half their 1920 value. Germany is very clearly getting upon her feet commercially and the cry has already been raised in France that her ancient enemy is dumping her products on French soil. Figures for the first three months of the year, not yet available by places of origin and destination, show that French trade has fallen 23 per cent. from the same period of last year, imports having amounted to 5,359 million francs, as against more than 9 million in 1920, and exports having risen from 4½ million in 1920 to 5,458 million this year. Imports have fallen below exports, giving France the balance of trade which it is necessary for her to attain if her foreign debts are ever to be paid, but it is to be noted that importation of raw materials has fallen off tremendously due to the inertia in manufacturing, so that the true balance would probably be against France if her factories were in fuller operation.

The latest available figures for British trade show a similar reduction in value, but since imports have been reduced more than exports, the position of the country is slightly improved. Here are the figures for

For the twelve past months the monthly excess of imports, after allowing for imported merchandise re-exported, compares as follows:

	1921.	1920.	1919.
April	£21,610,000	£40,495,198	£40,236,953
March	18,044,688	56,916,777	43,695,209
Feb.	20,747,677	61,866,607	54,655,263
Jan.	14,339,568	51,998,602	82,643,136
Dec.	33,455,666	52,584,473	74,848,636
Nov.	11,780,330	38,168,261	70,634,051
Oct.	21,460,193	54,797,840	72,690,437
Sept.	21,885,818	66,339,266	56,114,317
Aug.	23,897,577	58,133,102	64,397,929
July	8,041,968	75,992,955	63,472,534
June	34,014,952	46,347,975	54,403,711
May	26,754,316	50,772,504	77,539,855

The British foreign trade in April makes the following comparison with April of 1914:

	April, 1921.	April, 1914.
Exports of British prod'ts.	£59,860,000	£39,946,822
Re-exports of foreign goods	8,520,000	10,789,244
Total exports	£68,380,000	£50,736,066
Imports	89,990,000	61,626,830
Excess of imports	£21,610,000	£10,890,764

The last figures show that England is still far from the position she occupied before the outbreak of the war. It is not so much that her excess of imports is now twice what it was in 1914 as that the relation of imports to exports has altered. In 1914 imports were only about 22 per cent. in excess of exports. Now they are nearly 32 per cent. greater.

Detailed figures for Germany are not available now, but a German view of the Teutonic trade and economic situation is contained in a pamphlet recently issued by the Bank für Handel Und Industrie of Berlin, which has a curious interest in the light of Germany's recent acquiescence to the demands of the Allies. In part it says:

"The outstanding features of Germany's political economy in 1920 were the incessant grave shortage of food and other necessities of life, as well as of important industrial raw materials, a lasting depreciation of currency, powerful rise in prices, continuous strikes and unrest among the working classes and, above all, the almost unbearable pressure exerted by the Peace of Versailles, which renders economic convalescence impossible, and the manner in which it is interpreted by the signatory powers.

"Every impartial political economist throughout the world is aware that the Peace Treaty in its present shape and interpretation is to serve two wholly contradictory ends. The indemnities demanded from Germany by far surpass, and this is even realized in various places in France today, the limit of Germany's economic ability. Even were the reparation claims greatly reduced, fulfillment would only be possible if Germany were enabled to attain her very highest standard of economic production by careful husbanding of her economic resources and their widest rational exploitation. For alone by the fruits of such application can the demands of the allied powers be regularly satisfied, whilst catering to the most moderate demands of the German people and presupposing a marked revival to set in for agriculture, cattle-breeding, the speeding-up of industrial productiveness, trade and commerce and, last but by no means least, saner conditions for the nation's finances. The throttling and crossing of the only proper

policy to be followed, viz., Germany's economic reconstruction, by our opponents, which would seem to be so opposed to their own interests, must certainly lead to the utter ruin of the economic foundations of the nation and the entire impoverishment of the people, traces of which are already noticeable. This would, however, not only strip the Entente of all chances of collecting the indemnity, but also would seriously affect the whole world, as has so often been pointed out by experts both here and abroad. The indemnities Germany has been forced to pay hitherto according to the peace provisos amid general disregard of her capabilities only too plainly prove where an adherence to these methods will lead to. Germany's trade balance has deteriorated, owing to these payments, which were only possible under huge financial losses, in a truly alarming manner, and this deterioration has resulted in gigantic inflation, huge depreciation in currency, rise in prices, which in turn have led to a disastrous increase of the indebtedness of the country, in other words of the people. If, on the other hand, the indemnifications were brought into line with the economic possibilities on a basis of a thorough reorganization of German economics from the very foundations upward, as has been impossible up to the present, that is, from the viewpoint of sufficient food and clothing for the general public down to a straightening of the State finances, then a steady improvement may set in for the rate of exchange, accompanied by a sinking tendency of prices and wages, as well as an increase in Germany's buying powers of foreign products, such as cotton, wool, coffee, and of all industrial and agricultural raw materials, products and food supplies.

"The determining factor consists in Germany's inability to at present and in future produce even a tithe of what is needed to render existence on a modest scale possible for her population and at the same time to satisfy the claims of the Peace Treaty and the supplementary agreements.

"The increase in capital that took place so extensively in industrial, commercial and traffic concerns during the preceding year, principally towards its end, must not be regarded as a sign of economic affluence. It is not a question of increasing financial

means resultant on a rise in production and turn-over, as these are far smaller than those of the pre-war period, but only of an enforced adaptation to the depreciation of money, which strikingly exemplifies a trade and financial balance of unparalleled unfavorableness for Germany and a gigantic rise in prices and values. Naturally, only countries whose currency has suffered powerful devaluation need counteract this feature by a proportionate increase of working capital, and it suffices to point to Italy, whose rate of exchange is incomparably better than the German, and to Austria to witness a similar state of affairs, there in a lesser, here in an equal if not even heightened degree. We repeat, it is not a sign of growing wealth, but of increasing impoverishment, if Germany, with her depreciated values, has to resort to enormous new investments of capital. The money forthcoming for this purpose is not the result of a proportionate growth of national wealth, but is proof of a steadily increasing indebtedness of the people, which is revealed by the uninterrupted swelling of the floating Federal debts and the unceasing activity of the paper-money printing press, the creation of sham values."

Whatever else may be thought of this expression of the familiar German viewpoint, it must be acknowledged that in the last sentences the nail has been struck on the head. Paper-money printing presses are at the bottom of most of Europe's difficulties. The Germans deliberately elected to fight the war with the support of a paper-money printing press, planning to exact from the defeated Allies such an indemnity as would care for all the paper money which their presses had brought into existence. This plan, fortunately, failed, and now Germany must do the best she can to digest a circulation which bears only a fictitious relation to gold. France and England did not go to the lengths by far that Germany did, but their currencies were tremendously inflated, until today they are upon a gold basis only by courtesy of the fact that they still recognize the value and necessity of a gold standard and compute their money in terms of it. Actual exchange for gold of the paper tokens which circulate in England and France is almost as impracticable as it is in Germany.

Present-day bank statements of the three countries compared with similar statements in 1914 before the world had gone to war to illustrate the fearful dilution of the currency clearly:

BANK OF ENGLAND

Great Britain's circulation is four and a half times what it was in pre-war days, France's is nearly seven times as great and Germany's is almost thirty-five times the volume of pre-war circulation.

The foreign exchange rates accurately reflect this degeneration of the circulating medium in the various countries. It is customary to regard the foreign exchange rates as a measure of the balance of trade between nations and certainly an adverse trade balance will draw gold from a country and affect the value of its money in the creditor nation. But, in the days before the war, fluctuations in exchange were within a narrow range marked by the so-called gold points which were really the points at which it became cheaper actually to transport gold from one country to another than to pay the premium on exchange. In practice little gold had to be transferred for the rates automatically adjusted themselves as these points were approached.

The war brought new influences to bear on exchange, or rather, called attention

pointedly to the reactions which exchange had always prepared to undergo but to which it had never been submitted. This was the dilution of currency and the influx of paper money. As a nation's currency lost its relation to gold, the degree of its removal from the gold basis was accurately recorded in the exchange rates between that country and a country whose currency was still readily exchangeable for gold on demand. Thus the dollar has gone to a premium in practically every country of the globe and the pound sterling, which was arbitrarily fixed close to par throughout the war, dropped heavily to a little above \$3 when support was withdrawn and the pound was enabled to seek its own level.

As long ago as March of 1920 an examination of the gold position of the leading former belligerents and the state of their exchange with the United States disclosed the interesting facts that England, with a gold cover for its circulation of about 27 per cent., found its money at a discount of 25 per cent. in New York, or exactly the proportion by which the English gold cover fell short of the gold cover here, the United States then having in gold money about 36 per cent. of its paper circulation. France, computed on the same basis, had about 60 per cent. Italy, with 7½ per cent. of our gold, found her exchange at a discount of 94 per cent.

The rule did not hold true universally, notably in some of the noncombatant countries, but its failure could be laid to the fact that these nations did not maintain a real gold market—in fact none did except the United States.

In view of this the recent rise in the exchange of London and Paris on New York must be attributed, partly to sentiment and partly to the supposition that payment by Germany will increase the gold holdings of these countries and thus strengthen their circulation, bringing their paper money in closer relation to gold. Inasmuch as this is something that cannot be brought about in a day it would not be surprising to see some softening of the exchanges which have now registered the satisfaction of the world that Germany is to make good, at least a part of the damage she wrought in the war. But if they soften they will harden again; there can be no doubt of that.

# WHY TALAAT'S ASSASSIN WAS ACQUITTED

By GEORGE R. MONTGOMERY  
 - Director, Armenia-America Society

*Official Turkish documents produced in Berlin at the trial of the young Armenian, Teilirian, proved beyond question that Talaat Pasha and other officials had ordered the wholesale extermination of the Armenians, including even little orphan children—Facsimiles of the orders*

**A**N Armenian named Teilirian was tried at Berlin on June 2-3 for the murder of Talaat Pasha, who was chief of the Young Turk Party, and who was, during the latter part of the war, Grand Vizier of the Ottoman Empire. The murder of Talaat on March 15, 1921, drew general attention to the fact that the German Government was allowing Talaat to use Berlin as a centre of Turkish Nationalist intrigue. It was expected that the known sympathy of the German Government for the Young Turks would result in the prompt conviction and execution

of the Armenian. To the surprise of the world, he was acquitted.

Teilirian and the Armenian Nation, it appeared, had found a champion in the person of Professor Lepsius, who was not only bold in bringing out unpleasant truths, but who had the evidence to make the truths irrefutable. The trial of the Armenian developed into the trial of the murdered Talaat Pasha as the greatest of the war criminals. It developed into a case against the German military authorities, who had at least allowed the massacres to continue without protest. Even

General Liman von Sanders, who had had charge of the German military forces in Turkey, was called as a witness. His testimony opened the eyes of the German people, as nothing else had yet done, to the fact of the terrible massacres and to the callousness of the German military authorities to the horrors that were going on under their eyes. Professor Lepsius produced German official reports to show that the total number of Armenians who perished as a result of the so-called deportations was over a million.

Although the technical defense of Teilirian was temporary insanity brought on by a vision of his murdered mother, the real defense was the terrible record of Talaat Pasha; so that in the eyes of Germany the acquittal of the Armenian of the charge of murder became the condemnation to death of the Turk. That such a trial and such a result occurred in Germany with Germans as jurors is particularly significant.

With respect to the present situation in the Near East, the most important phase of this dramatic trial was the ability of Professor Lepsius to produce Turkish official documents which proved the heads of the Turkish Government at Constantinople—and particularly Talaat himself—to be directly responsible for converting the deportations into shambles. Heretofore there have been defenders of the Ottomans who held that the massacres were not a plan of the Government, but were due to the brutality of those who carried out the deportation instructions. At the trial of Teilirian there were placed in evidence facsimiles and translations of signed orders from Talaat—letters and cipher telegrams which prove that the instructions to massacre originated in Constantinople. As Aleppo was the headquarters of the "Deportations Committee," the capture of Aleppo by the British made possible the securing of these official documents from the archives. This evidence directly linking the murdered Talaat with the inhuman deeds that were covered by the general term "deportation" was irrefutable and overwhelming. The documents established once and for all the fact that the purpose of the Turkish authorities was not deportation but annihilation.

The object of the present article is to

present translations—with facsimiles—of some of the Turkish official documents that created such a sensation when read into the evidence during the trial at Berlin. The first document, although not signed by Talaat, is from the committee of Young Turks of which he was the head, and, inasmuch as its contents are referred to in dispatches signed by him, was valid as evidence. It was written in the Spring of 1915, before the massacres had begun, and shows the extermination of the Armenians to have been the determined policy of the Government. Jemal, to whom the document is addressed, was the third in the triumvirate of Young Turks—Talaat, Enver and Jemal. At that time he was Governor of Adana and soon afterward became Governor of Aleppo:

March 25, 1915.

To Jemal Bey, Delegate at Adana:

It is the duty of all of us to effect on the broadest lines the realization of the noble project of wiping out of existence the well-known elements who have for centuries been constituting a barrier to the empire's progress in civilization. For this reason we must take upon ourselves the whole responsibility, saying, "come what may," and appreciating how great is the sacrifice which has enabled the Government to enter the World War, we must work so that the means adopted may lead to the desired end.

As announced in our dispatch dated Feb. 18, the Jemiet [Young Turk Committee] has decided to uproot and annihilate the various forces which have for centuries been an obstacle in its way, and to this end it is obliged to resort to very bloody methods. Be assured that we ourselves were horrified at the contemplation of these methods, but the Jemiet sees no other way of insuring the stability of its work.

Ali Riza [the committee delegate at Aleppo] criticised us and called upon us to be merciful; such simplicity is nothing short of stupidity. For those who will not co-operate with us we will find a place that will wring their delicate heartstrings.

I again recall to your memory the question of the property left. It is very important. Do not let its distribution escape your vigilance; always examine the accounts and the use made of the proceeds.

Reference to this document is contained in the following order, signed by Talaat and sent to the same Jemal. This order shows that women and children were to be included in the holocaust:

Sept. 3, 1915.

To the Prefecture of Aleppo:

We recommend that you submit the women and children also to the orders which have

دفعه پنجمه در خصوص امثال اولاد و اولاد اولاد  
مغز و مغز اولاد و اولاد

been previously prescribed as to be applied to the males of the intended persons, and to designate for these functions employes of confidence.

The Minister of the Interior, TALAAT.

اولاد بنانند که می خواهند به حاله اولاد اولاد  
ایضا که می خواهند به حاله اولاد اولاد  
دفعه پنجمه  
مغز و مغز اولاد

دفعه پنجمه  
مغز و مغز اولاد

Apparently the instructions regarding the women and children called for some reiteration, for on Sept. 16 the following cipher telegram, which showed the instructions as going back to the decision of the Jemiet, or Young Turk Committee, was sent:

[TRANSLATION]

Sept. 16.

To the Prefecture of Aleppo:

It has been previously communicated to you that the Government, by order of the Jemiet [the Young Turk Committee] has decided to destroy completely all the indicated persons living in Turkey. Those who oppose this order and decision cannot remain on the official staff of the empire. An end must be put to their existence, however tragic the measures taken may be, and no regard must be paid to either age or sex, or to conscientious scruples.

Minister of the Interior, TALAAT.

Mr. Morgenthau, the American Ambassador at Constantinople, began to exert himself in behalf of the Armenians, and the result was an official order suggesting caution:

Nov. 18, 1915.

To the Prefecture of Aleppo:

From interventions which have recently been made by the American Ambassador at Constantinople on behalf of his Government, it appears that the American Consuls are obtaining infor-

**TALAAT PASHA**

*Turkish official who ordered the massacre of Armenians, and who was assassinated by an American youth at Berlin*

nians is in truth only deportation. For this reason it is important that, to save appearances, a show of gentle dealing shall be made for a time, and the usual measures be taken in suitable places. It is recommended as very important that the people who have given such information shall be arrested and handed over to the military authorities for trial by court-martial.

*The Minister of the Interior,*  
TALAAT.

Reference to the effort of the American Consul at Aleppo, Mr. Jackson, to send information to Mr. Morgenthau is contained in the following cipher dispatch:

Dec. 11, 1915.

To the Prefecture of Aleppo:

We learn that some correspondents of Armenian journals are obtaining photographs and letters which represent tragic events, and are giving them to the American Consul

**SOLOMON TEILIRIAN**

*Young Armenian who killed Talaat Pasha, and was acquitted*

tended persons and are photographing them. I recommend you the importance of having these corpses buried at once and of not allowing them to be left near the roads.

*Minister of the Interior,*  
TALAAT.

The heartlessness of the Turks in regard to the doomed children made a deep impression on the Berlin jury. The following are some of the documents presented on this point:

Nov. 5, 1915.

To the Government of Aleppo:

We are informed that the little ones belonging to the indicated persons [Armenians] from Sivas, Mamuret-uz-Zazir, Diarbekir and Erzeroum are adopted by certain Moslem families and received as servants when they are left alone through the death of their parents. We inform you that you are to collect all such children in your province and send them to the places of deportation, and

also to give the necessary orders regarding this to the people.

*Minister of the Interior,*  
TALAAT.  
Jan. 15, 1916.

To the Government of Aleppo:

We hear that certain orphanages which have been opened received also the children of the Armenians. Whether this is done through ignorance of our real purpose, or through contempt of it, the Government will regard the feeding of such children or any attempt to prolong their lives as an act entirely opposed to its purpose, since it considers the survival of these children as detrimental. I recommend that such children should not be received into the orphanages, and no attempts are to be made to establish special orphanages for them.

*Minister of the Interior,*  
TALAAT.

The production of the following cipher telegram (No. 830) was particularly telling in its effect on the jury:

From the Ministry of the Interior to the Government of Aleppo:

Collect and keep only those orphans who cannot remember the terrors to which their parents have been subjected. Send the rest away with the caravans.

*Minister of the Interior,*  
TALAAT.

That the Moslem population was not to be held accountable for its share in the massacres was ordered in a telegram dated Oct. 8, 1915:

The reason why the sanjak of Zor was chosen as a place of deportation is explained in a secret order dated Sept. 2, 1915, No. 1,843. As all the crimes to be committed by the population along the way against the Armenians will serve to effect the ultimate purpose of the Government, there is no need for legal proceedings with regard to these. The necessary instructions have also been sent to the Governments of Zor and Ourfa.

*Minister of the Interior,*  
TALAAT.

All the evidence tends to show, with cumulative effect, that it was the pity awakened in the hearts of some of the local Turkish officials by the miseries of the Armenians which produced a certain mitigation of the heartless orders that emanated from Constantinople. A small remnant of the race survived. Talaat and his group in the Government were obliged continually to spur some of their tools on to greater severity.

## CAUSES OF THE PALESTINE RIOTS

THE investigation conducted by Sir Herbert Samuel, the British High Commissioner in Palestine, into the causes which led to the Jaffa conflict between Jews and Arabs in the first week in May caused him temporarily to curtail immigration and to subject the immigrants allowed to enter to more strict supervision.

Investigation of the Jaffa affair disclosed the fact that although certain Bolshevik agents had made their way into Palestine via Angora, the principal instigators of the trouble were among the newly arrived Russian immigrants at Jaffa. These instigators, it is alleged, found ready hearers among their fellow-immigrants, who were disappointed at the measures taken by the Zionist organizations to provide for them.

The Palestine administration debated the following alternative of action: On the one hand it was pointed out that without security for life and property there could be no development of the country, and that since the misconduct of the Arab police in

the Jaffa riots showed that Arabs were not fit to be trusted to maintain order and that the rioting was an organized attack upon the policy of the Jewish national home, the Government should organize those who could be depended on—namely, the Jews—to defend themselves and maintain order in the country. On the other hand, admitting that faults had been committed on both sides, the part played by both the Angora agents and the communist agitators was equally obscure, while the combined effect was to arouse the immigrants against the Zionist organizations and the Arabs against the immigrants, who, it was alleged, were seeking to take the place of the Arabs. This being so, it was urged that instead of the authority and responsibility of the Jews being increased both Jew and Arab should be organized to contend against the common enemy of both, namely, Russian Bolshevism as introduced by agitators among the Jewish immigrants or its Turkish phase as introduced by agents from Angora among the Arabs.

# AN INSIDE VIEW OF THE SILESIAN PERIL

BY BURNET HERSHEY

An American newspaper correspondent who has spent  
many months in Upper Silesia

*Causes of the strife and bloodshed that have torn asunder the peaceful communities of Upper Silesia and created a menace of another European war—Interviews with Korfanty and General LeRond—Conclusions of the author after hearing both sides*

UPPER Silesia today presents the picture of a people blindly seeking a way out of a political wilderness planted there by a peace treaty. An excitable mixed population of Germans and Poles, trembling under the threats of a mob, terrorized by guerrilla warfare and misled by unscrupulous propaganda, has converted the once peaceful, industrious province into such a Babel of dissension and strife that the world has been aroused to the grave menace of another war. Upper Silesia is a victim of the same illusory doctrine that has thrown all Europe into convulsion—"self-determination." The inhabitants feel that they would rather have been left alone to work out their destiny and carry on their existence without the trouble-breeding solicitude professed by both Berlin and Warsaw.

It seems strange that in the heart of Europe there should exist a region in many respects analogous to a colonial domain and that, like a colonial prize, it should form the basis of contention between two powers. Upper Silesia can be viewed as such a colony, prodigiously rich in natural resources and highly developed as an industrial machine.

Poland possessed it once when she was a chivalrous nation of cavaliers and crusaders. That was eight centuries ago. After centuries of strife, Germany acquired it, and established her authority by exploiting its resources and creating its present wealth. As a pretext for recovery, Poland is now invoking ancient historical titles, while Germany demands the rights of existing ownership and economic necessity.

Germany points to proof—only two miles away across the Polish frontier—that Poland is incapable of developing the re-

sources of Upper Silesia. The evidence is there. From a roof in Myslowitz, a border town, an observer is struck by the contrasts in landscape. In Upper Silesia, the eye greets an orderly countryside, in the distance looming the smoking stacks and rugged shafts of modern industry; in Poland, disheveled acres with clusters of squatting, rude, wood-and-mud thatched huts—a primitive colony. Yet it is virtually only a stone's throw over the boundary, which is not a natural geographical demarcation, but merely an imaginary political line. The same soil, but no mines, no factories, no mills. The wealth still is untapped.

The disputed province of Upper Silesia, designated by the Peace Convention to settle its own destiny, consists of a territory in area slightly smaller than Belgium. On March 21, 1921, the history-making plebiscite, as stipulated by the Versailles Treaty, was conducted. It failed utterly to register the true aspirations of the population, which was its object. The plebiscite proved merely a taking of the census, for the balloting broke along the lines of nationality. Although the Germans got 716,000 votes and the Poles 471,000, giving the Teutons a plurality of 57 per cent., the results of the plebiscite, considering the circumstances under which it was taken, are confusing. If anything, the returns left the situation in worse chaos than before.

Despite the fact that the Poles lost out in the majority vote, they carried seven districts, against fourteen for Germany. This result, too, is practically meaningless, for in some districts where the Poles scored victory in the rural districts they lost neighboring urban districts. The districts were the old German kreise, or voting districts,

and, because of the use of this system of districting, the areas won by the opposing factions in many instances are disconnected. Broken along the lines indicated by the plebiscite returns, the territory would represent a veritable patch quilt.

It is important to recall that the clause in the treaty relating to the Upper Silesian

disorder, of tense excitement and intimidation, the fateful plebiscite was far from being the appeal to the people originally intended.

In some places the conditions were particularly turbulent. The crack of the rifle and the bark of the machine gun punctuated the balloting. The once peace-loving population, divided into two bitter camps, went to the polling booths as if to battle. The situation was fraught with the fierce animosity of a feud. Every one was keyed up and the whole business was like an immense powder magazine awaiting a spark.

#### CREATING AN UNNATURAL ENMITY

I have watched and studied the simple, hardworking folk of Upper Silesia and have inquired into their aspirations—not those of their political chiefs or military leaders, nor even of their religious heads. It would be incorrect to say that the Germans in the province have no sympathies toward their Fatherland. It would be misleading to assert that the Poles are unfriendly to their compatriots across the frontier. Yet, when one penetrates the surface he finds not a German, nor a Pole, but an Upper Silesian, with distinct regional characteristics and customs, although ethnically there is no such thing as an Upper Silesian.

There are nearly 3,000,000 Upper Silesians, of whom more than 1,500,000 are of Polish origin. Both nationalities are so hopelessly intermingled that observers have long despaired of a solution. Were it not for the propagandist tactics of Berlin and Warsaw, appealing to a race hatred long forgotten and to a class distinction recently intensified, it is doubtful whether the phlegmatic German or the apathetic Pole would ever have responded to the national consciousness which has caused the present turmoil.

Political, religious and economic differences divide the Germans and the Poles. Having lived in amity and comfort for hundreds of years, the Polish and German population has only recently been inculcated with a sense of nationality. Up to a short time prior to the plebiscite, the Germans were regarded by the great mass of the un-Teutonic element as the best fitted and most logical administrators of the district.

Upper Silesians knew no other allegiance

#### ADALBERT KORFANTY

*Leader of the Polish Insurgents in the disputed area of Upper Silesia*

plebiscite specifically states that in the final adjudication the Allies must take into consideration the conditions under which the vote was recorded. Consequently the plebiscite returns are not final. The ultimate disposition of this heterogeneous territory depends upon the decision of the Allied Council and will be influenced largely by reports of how balloting was effected. Impartial observers who visited the province are convinced that the vote, taken under the unscrupulous menace of the Prussians on the one hand and the ferocious terrorism of the Poles on the other, is not a fair expression of the desires of the inhabitants. Taken amid scenes of violence and

than that of the existing Government. Now they are suddenly confronted with the choice of a new destiny. Caught in the whirlwind of propaganda, the inhabitants have awakened to a sense of racial antipathy. A territory satisfied and prosperous has been rudely transformed into a hotbed of open hostility.

The Upper Silesians differ on religious grounds. For the most part the Poles are Roman Catholics, and cherish intense antagonism for the Protestant Germans. The Catholic Church plays a big part in uniting the Polish element, and has contributed largely to welding the Poles into a solid force. Economic considerations have also contributed to dissension. Germans are the mine owners, the coal operators and the industrial chiefs. The Poles are the laborers, the workingmen, the tillers of the soil, so that the old socialistic arguments of capital and labor have been injected into the controversy.

The German of Upper Silesia is interested mainly in the exploitation of the mines and industries constructed by German effort and non-existent in that distant past when the province was seized as a share of territorial booty. When not a capitalist or a public functionary sent by Berlin, the German is intent only upon carrying on his business and earning his daily bread. He is usually the shopkeeper, school teacher or professional man. On the other hand, the Pole is in the mines and the field, at the forges or lathes, in the lumber mills or factories. When not harnessed by a Korfanty and subjugated to the will of Warsaw, the Pole of Upper Silesia is the most simple and unassuming individual in the world. Few arguments of politics or economics have any weight with him. What then does he desire? He wants to be left alone. He wants to be free to worship in his own way. He wants to eat his white bread and have his bowl of soup. He wants to live in the hope that his sons will rise to a higher level. He wants a share of the soil and a better wage. All the rest in his eyes is rhetoric.

Since the Treaty of Versailles, Upper Silesia has had an international Government, France, Britain and Italy jointly taking part in the administration of the province. Oppeln is the headquarters of this Government, and General Le Rond, the Frenchman, is the real head. He is the

man who wrote most of the clauses relating to Upper Silesia into the treaty. A complete Government has been established, which has been in operation for more than two years, and which has ministries and bureaus having equal representation of both Germans and Poles, but supervised by the Allied Commission.

#### LE ROND AND KORFANTY

General Le Rond, French military dictator of the district, has his headquarters at the Stadthaus in Oppeln. He is of small stature, a frail body supporting a massive head. He is distinguishable from afar by a huge mustache. He is about 60 years old, and for all his five feet one, when clothed in his horizon blue and wearing nearly every allied decoration, he presents an imposing figure. General Le Rond is a principal assistant of Marshal Foch, who considers him one of his most able collaborators. This Frenchman, who bears the burden of the ungrateful task of managing Upper Silesia, is considered one of the ablest diplomats in Europe. The General is an enthusiast concerning things American. He acted as Marshal Foch's representative at A. E. F. Headquarters, and knows American methods.

"We have done our utmost to preserve order in Upper Silesia," Le Rond told me, speaking in perfect English, "but our forces are insufficient for such a stupendous job. We have been accused of being partial to the Poles. It is always easy to accuse. This job is not only thankless, but difficult, and nobody seems to have wanted it. Therefore we French had to do it. There are only 3,000 Italian troops here, practically no British soldiers—only a handful of officers—and so the greater part of the task has fallen to us French. I have only 10,000 French troops to police this vast territory."

General Le Rond felt that some American troops from the Rhine would have prevented much friction in Upper Silesia. He explained that their presence would not only have lessened the burden, but would have left less room for criticism. "I have always kept a vacant chair in my council room," he explained, "ready for its American occupant." Then the French General added: "I have been accused of maintain-

ing an attitude of open solicitude for the Polish cause, and of permitting the wholesale smuggling of arms across the frontiers from Poland. My accusers know that as many German arms have been imported as Polish arms. Heaven knows, with the small force at my disposal, I have been unable to cover every foot of territory along the miles of frontiers. If smuggling has been going on, it was certainly not at the points where my troops were stationed."

(Photo International)

GENERAL LE ROND

*Commander of French forces in Upper Silesia*

General Le Rond furnished me with passes and the necessary facilities for exploring the frontiers myself. I traversed the greater length of the Polish-German border, discovering for myself that the frontier did not permit efficient patrolling any more than the Canadian-American border does.

The Polish leader of the insurrectionists, Wojciech (Adalbert) Korfanty, who has led his insurgents to an invasion of more than one-half of the Upper Silesian territory and caused the problem that threatens to divide the Allies, is the prototype of the Russian hetman. For twenty-five years he was the

representative of the Poles of Upper Silesia in the Reichstag and the leader of the Polish bloc. Though not endowed with real qualities of leadership, and, curiously enough, possessed of an unattractive and even repulsive personality, Korfanty has nevertheless succeeded in enthroning himself as the "czar" of the 1,500,000 Poles from whom he has drawn his rabble of an army. Except for slight skirmishes, Korfanty's advance with his mob of adherents was undisputed. The French troops refused to offer resistance, and the only troops that did resist were the Italians. Korfanty timed his coup at the psychological moment, when General Le Rond was off to Paris and when the Allies and Germans were busy trying to settle the important question of indemnities.

The rebel force of Korfanty has been compared to Zeligowsky's Vilna insurgents, who, like Korfanty's gang, invaded territory which they believed should go to Poland. The comparison is flattering. Zeligowsky's troops are really a corps d'élite compared with Korfanty's hooligan bands. Korfanty knows little of generalship, and his gang of nondescripts care less about fighting than did their compatriots before the siege of Warsaw last year.

In a conversation I had with Korfanty in the little hotel in Beuthen which served as the Polish plebiscite headquarters, he explained to me how from a mass of scattered, disinterested Poles, he has molded an enthusiastic bloc, all working in the interests of Polish freedom:

My campaign [Korfanty said] called for an effective counter-propaganda against the powerful publicity methods of Wilhelmstrass. My fellow-countrymen needed much education concerning the movement for a plebiscite. I enlisted the help of the Church, religion being the most powerful factor in the lives of the average Polish worker and peasant. It has been my most potent auxiliary. Next I organized the labor forces. Remember that the Poles here make up the toiling class, and that an appeal to class consciousness could not help but yield results.

I asked Korfanty whether he expected to remain the supreme leader of the Poles of Upper Silesia in case the Warsaw Government took possession of the greater part of the province. His response at once betrayed his insincerity. It was not difficult to see

that the insurgent dictator was nourishing a secret ambition to retain for himself the power of ruling a possible autonomous Upper Silesia and using the vast resources of the territory for his own enrichment. This Korfanty is no Kosciusko fighting for Polish freedom. He has fooled his ignorant followers into a campaign which has for its basis his personal ambition.

When I spoke to him, Korfanty failed to mention that he had organized his compatriots militarily. But he showed me how well his hotel was fortified, explaining that the measures were purely defensive. Machine gun nests with steel turrets were ranged along the cornice of the roof. Steel doors swung at every floor landing, shutting off one floor from another to repel a raid of a "Stosstruppe," or civilian band. The precautions showed that Korfanty had definitely planned for an armed struggle. He frankly admitted to me that arms were reaching the Polish inhabitants.

"Poland will fight to the last man for Upper Silesia," Korfanty told me. "The province is and always has been predominantly Polish. France is our ally and will always be ready to back our efforts against the Germans. We have no fear of the outcome."

#### VIEW OF A BRITISH OFFICER

I also had an interview with Major Ottley, who is a nephew of Lloyd George. Major Ottley said:

No matter how propaganda, whether Polish or French, tries to engow the Upper Silesian with a preponderance of pro-Polish sentiment, the facts as we British have found them—and surely we cannot be accused of partiality—are decidedly contrary to what Korfanty and General Le Rond have been continually disseminating. Upper Silesia is an industrial community first of all. Without the stimulus of capital and technical brains, the laboring community of this province might as well decide to emigrate elsewhere. Germany has supplied these requisites. Neither Poland nor her allies can furnish this needed propulsion. Besides, the Poles have proved themselves incapable of governing even their own population, to say nothing of a mixed population. Poland, least of all, can be considered qualified to govern an alien population such as are the Poles and Germans of Upper Silesia."

Major Ottley is a young officer, about 32 years old. I interviewed him in his apartment in Beuthen. More than once he has threatened to resign, but he has been kept on by his superiors in London,

who recognize in him an invaluable observer. The Major has written a comprehensive book on the subject of Upper Silesia. It is most likely that he greatly influenced his uncle, Lloyd George, and it is also largely probable that it was upon his information that the British Premier made his startling speech declaring England's stand against the Poles, which has strained relations between England and France.

An observer traveling from one town to another in Upper Silesia could not but be impressed with one of the outstanding features of the whole situation, namely, the friction that existed between members of the Interallied Commission. The feud between French and Poles, on the one hand, and British and Italians on the other, is not new. It has lasted for more than a year. British representatives in the district appeared to be the most disliked by the Poles. I remember on one occasion, at Beuthen, witnessing an attack by a mob of Polish miners on the automobile in which Major Ottley was riding. Major Ottley has been most outspoken against Polish violence, and has gone so far as to charge French toleration of some of the outbreaks against the German inhabitants. Both the Polish and French press accused him of being the tool of Germany, while the Germans never ceased to sing his praises. Shortly after the attack on the Major's car, which was rescued from the Polish mob by a detachment of German civilians, Ottley was carried through the streets of Beuthen on the shoulders of a frenzied mob of Germans. That incident was the prelude to a series of the most brutal murders ever recorded in the history of Upper Silesia.

As the observer goes over into the camp of the enemy—the Germans—the picture changes. I was prepared by the opposing side to meet a band of pirates, cutthroats and guerrillas. Instead, I met a committee of elderly professors, local physicians and bespectacled journalists. They all spoke English. One, formerly a pupil of Münsterberg at Harvard, was a member of the Psychological Department of Publicity for Upper Silesia. Another, a noted Berlin Socialist, was thrown in to carry weight with labor. At the head of the German organization was the aged Prince Hatzfeld, who resides at Oppeln. The real headquarters of the Germans, however, was

at Kattowitz. Prince Hatzfeld's seventy-one years, coupled with his indecisive manner, prevented him from being very active in the propaganda campaign, and it was his subordinates who did the work.

There was quite a contrast between the German and Polish headquarters. The Germans, in characteristic fashion, occupied the central hotel in Kattowitz, and all the work of their bureau was systematized. The whole thing was an up-to-date press agent affair, with even a photographic outfit included. Numerous colored posters were issued and distributed widely, some finding their way into Germany and even into the Ruhr Valley, where many German and Polish residents of Upper Silesia were temporarily employed.

The Poles at Beuthen occupied a rickety hotel, and one of the principal arguments was a soup kitchen. Korfanty would receive hundreds of laborers and treat them. It was a simple method, the same old political device. The Korfanty campaign made no pretense of elaborate display. Its posters were crude. But the Polish leader aimed to reach the workingman, and he did.

### THREE POSSIBLE SOLUTIONS

There are three courses open for the disposition of Upper Silesia. The Allies must decide whether to turn it over to Poland or Germany, to divide it between the two countries, or to make it an autonomous State. General Le Rond, on a recent visit to the French Premier, Briand, gave him to understand that the Interallied Commission had practically agreed on the principle of dividing the region.

Germany has all along insisted that Upper Silesia is necessary for her economic existence. The Poles under Korfanty have invaded the rich coal and mining towns, and have carried into operation their scheme of expropriation of the industries which Germany created. It is futile effort. Korfanty's undisciplined mob has already struck serious German resistance, and the British

forces, strengthened by contingents from the Rhine, are preparing to take the field and sweep the Polish insurgents over the border.

The Upper Silesian problem appears unsolvable to any one who knows this territory. Rural districts and industrial centres are haplessly thrown together. At first glance the region seems a dense mass of smokestacks. Entering the mining district, one is thrust into the midst of a roaring basin, with its smoke, its blast furnaces, its steel and molten iron. Almost, it seems, in the backyard of this twentieth century industrial centre are the farm lands with their Poles and agriculture. One steps, as it were, from a steel mill to a pasture; from a bank to a barnyard. The whole district is a patchwork of modern industry and medieval ruralism.

Rich in coal deposits, having an estimated value of over 300,000,000,000 gold marks; in mineral resources, possessing iron, copper, lead and zinc mines; in industries, boasting of steel mills, metallurgical laboratories, tool shops, paper mills, cement works; in railroads, enjoying an elaborate network of railways, huge terminals and abundance of rolling stock; in agriculture, holding some of the best arable land in Europe; in lumber, being stocked with immense forests and having lumber mills—Upper Silesia would make fine picking for Poland.

This rich province, ready made by the efficient and thorough Germans, the Poles think they can seize by force of arms. But German enterprise has made Upper Silesia the wealthy industrial State it is today. Minus it, Germany would be deprived of a vast estate she practically created, and economically it might spell Germany's ruin. The Germans will not relinquish it without a struggle. A clash of Germans and Poles, involving, at it does, differences between France and Britain, may bring on another war.

# THE POLISH REBELLION IN UPPER SILESIA

*The alarming situation created by Korfanty, and Lloyd George's plain words regarding it—How the reinforced British began to clear a neutral zone, while Hoefler's Germans remained inactive—Dangerous possibilities*

THE outbreak of the Polish inhabitants of the rich mining districts of Upper Silesia shortly after the taking of the plebiscite caused a dangerous complication in May and June. The insurgent Poles, at whose head Adalbert Korfanty, the Polish High Commissioner, hastened to place himself, were fully armed and quickly took possession of the main towns of the mining area, which had cast a majority vote for union with Poland. The ostensible cause of the revolt was an article published in a German newspaper, declaring that the Interallied Commission and the Supreme Council had decided to give Germany all the mining area, with the exception of Rybnik and Pless.

The small interallied force was helpless to drive back the victorious Poles. The Italian and British contingents found themselves in a painful position, as their ally, France, had supported the Polish claims in Upper Silesia and had openly assumed the position of protector of Poland. British and Italian officers were especially wroth with the French, who did but little fighting and who seemed inclined to let the insurgents have their way. Meanwhile the German elements in the affected districts were organizing for defense.

This was the situation when Lloyd George, before the House of Commons on May 13, made a sensational speech attacking not only Korfanty and his Polish insurgents, but also the Warsaw Government, for what had occurred. He spoke his mind in the plainest way and declared downright that if the interallied forces proved insufficient to put down the revolt it would only be fair to allow the Germans themselves to do so. Though he did not say so explicitly, his view that the French policy of favoring Poland was responsible in large measure for the Silesian situation was clearly apparent.

First of all he declared that Poland's claim to Silesia on historical grounds was

untenable, as Silesia had not been Polish for 600 years; the population argument he also dismissed on the ground that the Polish population had come to the territory only in recent times to work the mines owned by German capital. He reviewed the result of the plebiscite, which resulted in such a tangle of mingled Polish and German communes that it seemed almost impossible to decide on a solution, stating that the British and French Commissioners favored giving the regions which were overwhelmingly Polish to the Poles, those which were predominantly German to the Germans. "That was the finding of the officers representing Britain and Italy. The French took a different view." The British authorities in London, he continued, were on the point of considering this report when "the Polish population, under the leadership of Mr. Korfanty, raised an insurrection, tried to rush the position and to put us in the position of having to deal with a fait accompli."

## LLOYD GEORGE'S HOT WORDS

The British Premier then expressed his view of this action and his fears of its consequences in the following uncompromising fashion:

That is the state of the case. It is a complete defiance of the Treaty of Versailles. I think it right to speak quite plainly, because if these things are to happen and no notice is taken of them, and we do not deal with them with that stern justice which I think has generally characterized the attitude of this country in all its dealings abroad, it is going to be fatal to the peace of Europe. And if the peace of Europe is disturbed, I cannot see what is going to happen to the world, and I am alarmed—I use the word deliberately—I am frightened. Therefore I think it is essential, in the interest of the nations, that whatever our prejudices, our predilections, may be, whether we dislike this man, or dislike this other—justice has nothing to do with dislikes—we must decide fairly, sternly, according to the pact which we ourselves have signed.

Lloyd George then pointed out that it was under that treaty that Poland had regained her freedom, and declared that Poland was the last nation in the world to question or to violate its provisions, especially in view of the fact that its every phrase meant the loss of a young British life, and also of the fact that many Poles had fought to the end under Austria against Great Britain and her allies. He further made it clear

out of Fiume. The Government took steps even to the point of forcible action, for they felt that the honor of a great nation was involved. I commend that fine example to Poland.

It was both a matter of honor and a matter of safety, declared the Premier, to oust the insurgent Poles. Justice must be done, whether the terms of the treaty were in favor of the Allies, or against them: Germany, in the final reckoning, must not be given the right to say that the Allies enforced those terms only when the terms were favorable to themselves. There were only two alternatives, either to restore order by force, or to allow the Germans themselves to restore order. Great Britain stood pre-eminently for fair play. To allow the Poles to take Silesia when Germany was disarming, to forbid the Germans to protect themselves, was unthinkable:

That is discreditably. It is cowardly. It is not worthy of the honor of any land, and I am perfectly certain that would not be the attitude that the Allies would take up. \* \* \* Whatever happens, we cannot accept a fait accompli. That would be to permit a defiance which might lead to consequences of the most disastrous kind, and we do not accept it.

#### REPLIES OF POLISH LEADERS

These energetic words of the British Premier aroused a storm of hostile criticism in the French press, which charged that Lloyd George was bent on favoring the Germans at the expense of Poland and Great Britain's own ally, France. The speech was received in Warsaw with similar emotions, and M. Witos, the Polish Premier, replied to it formally before the Diet. It was the Poles, he said, who were the original settlers, and for 600 years they had suffered under the domination of the invading Germans; that, and the right of self-determination, were the basis of the Polish claim to receive back what was rightly theirs. M. Witos protested in the most emphatic way against Lloyd George's suggestion that the Germans be allowed to intervene militarily in the Silesian situation, declaring this would be a violation of the Versailles Treaty, and insisting that the only proper solution was a settlement strictly under the terms of the treaty. Having received assurance from the French Government that it would not permit Germany to send either men or ammunition

PLEBISCITE AREA OF UPPER SILESIA, WITH SHADED PORTION SHOWING REGION CLAIMED AND SEIZED BY KORFANTY'S POLISH INSURRECTIONISTS

that he believed that Korfanty's coup was not only tolerated, but encouraged by the Polish Government.

The Polish Government [Lloyd George said] repudiates responsibility. One is bound to accept the statement as representing their view, but it has happened once too often. Lithuania, by a settlement to which America was a party, as well as France and Italy and Britain, was given Vilna. Vilna was occupied by regular Polish troops in defiance of the Allies. They were asked to retire. The Polish Government said: "We have no responsibility. They went there without our wish." They are still there. The same thing is happening now, and there is the same disclaimer or responsibility, but there are arms passing from Poland, Polish officers are crossing the frontier. All this makes it very difficult to feel that these repudiations of responsibility are anything but purely verbal. Signor d'Annunzio seized Fiume in defiance of the Italian Government. The Italian nation felt that its honor was involved. Signor d'Annunzio and his men are

across the border, the Polish Government, on its part, once more summoned the insurgents, as well as the whole population of Silesia, to discontinue the insurrection and to allow the problem to be solved equitably by the allied powers.

The British Premier's speech also drew the fire of Korfanty himself, who on May 16 sent to Lloyd George from Sosnowiec, Poland, an impassioned defense of the motives of the insurgents, combined with an appeal to the British sense of fair play. To this communication Lloyd George made no reply. The storm of abuse in the French press, however, aroused him anew, and on May 18 he exploded a new bombshell, in which he repeated the statements which he had previously made, declared that they had received the complete support of the British, Italian and American press, and warned France that "the habit of treating every expression of allied opinion which does not coincide with her own as an impertinence, is fraught with mischief," adding that "such an attitude of mind, if persisted in, will be fatal to any entente."

#### BRIAND'S PRIVATE CRISIS

Immediately after his speech in Parliament, Lloyd George sent Premier Briand of France an invitation to meet him at a week-end conference in London, in order to reach an agreement on what should be done to cope with the situation. The conference, however, was postponed, as the French Premier could not take part in such a conference until he had received a vote of confidence from the French Parliament. At a session of the French Chamber, May 24, Premier Briand pleaded for two hours for moderation, declaring that the alliance with Great Britain must not be endangered, and that the German Government had pledged itself to close its Silesian frontier, to prevent the passing of German troops to reinforce the excited Germans of the invaded districts, and to disband the voluntary forces which had been forming in East Germany for the last three weeks.

The Premier won his vote of confidence at this session by 403 votes to 163; this result came after a nine-hour debate closing five days of argument, marked by the violent onslaughts of the Nationalist and Militarist factions. In frank, uncompromising fashion, M. Briand placed the issue squarely be-

fore the House, declaring that there was no middle course, and that his policy of moderation toward Germany must be either accepted or rejected. In the fiery debates that preceded the final vote, the issues of reparations and Upper Silesia became hopelessly entangled. The vote of confidence was cast in the form of two separate resolutions, that on Upper Silesia approving the Government's policy in this problem, and declaring for the strict and loyal execution of the terms of the treaty, as affecting Upper Silesia, both in letter and in spirit.

Strong in this approval, the French Premier proceeded to reach an understanding with Great Britain before taking further action. On May 28 he sent a note to Lloyd George pointing out that the Germans were continuing their operations in Upper Silesia, and urging that the interallied decision on the plebiscite should await the restoration of order with the arrival of the British troops then on their way. He further advocated, in view of the fact that the reports of the allied High Commissioners were not unanimous, that the whole question be submitted to a special commission made up of civilians, lawyers and diplomats, who would communicate their findings to the Supreme Council.

Under the British and Italian plan to give to Germany the regions which had gone German by a large majority, and to Poland the regions which voted mainly Polish, Germany would be given outright the following districts: Nesewitz, Kreutzburg, Rosenberg, Oppeln City, Oppeln country, Lublinitz, Oberplogau, Kosel, Leibschutz, Ratibor City and Ratibor country. Poland would receive under this solution only the large communes of Rybnik and Pless. The International Commission would take over the remaining ten communes: Beuthen City, Beuthen country, Kattowitz City, Kattowitz country, Königshütte, Gleiwitz, Hindenburg, Gross Strehlitz, Tost and Tarnowitz. The French Government was opposed to this scheme, and also to the desire of Lloyd George for a majority decision, but the main purpose of the French Premier was apparently to play for time. To show its good faith, the French Government joined in a severe note to Poland to close its own frontier pending a solution. Meanwhile the French leaders set to work, through a specially created commission at the Foreign

Office, to receive and tabulate all information in the case, as a basis for drawing up the complete case for Poland at the coming meeting of the Premiers.

#### SITUATION IN SILESIA

While these diplomatic exchanges were taking place the situation in the Upper Silesian territory was becoming more and more threatening. The Polish forces had given no signs of retirement and Korfanty had addressed (May 25) a proclamation to Germans in towns in the plebiscite area declaring that these towns were being more closely encircled by his troops every day and that only immediate surrender would avert disaster; he called upon them, therefore, to demand that the Interallied Commission should consent to this surrender. Attacks by the Poles were occurring in several places, accompanied by plundering. Important news came at about this time. Lieut. Gen. Hoefer, formerly a member of the German General Staff, had been made military dictator of the German part of Upper Silesia and the German population had extended to him their formal vote of confidence. All parties were represented in this vote, taken at Oberglogau, twenty-five miles northwest of Ratibor, on May 24, which delegated to General Hoefer the power "to prevent any further spread of the Polish uprising and to restore order."

Rejecting all suggestions that he negotiate with Korfanty for an armistice, General Hoefer at once developed his military operations, taking Landsberg and repulsing Polish counterattacks in the Rosenberg region. One town captured by him—Leschnitz—had been bombarded vainly by the Poles in an attempt to regain possession. The small German army under him, estimated at about 16,000, had taken the name of *Selbstschütz* (Self-Defense). Its offensive was developing slowly. It was led in some instances by British officers. East of the Oder, at Gogolin, and at Kreuzburg the Germans were steadily advancing. The Poles were yielding ground.

The danger of the situation was increased by the arrival of four battalions of British troops transferred from the Rhine. Two more battalions were on their way from England. The first battalion of Black Watch (Scotch) soldiers reached Oppeln on May 30. It received an almost delirious welcome.

Hundreds of school children met the soldiers at the station, deluging them with flowers and shouting gleefully as the bagpipes screeched the music of the march. Cavalry led and cleared the way, and the progress of the marching columns was a continuous and friendly ovation.

The sentiment of the British soldiers, like that of the Italians who were preparing to co-operate with them, was that the troops of Korfanty must be driven out at every cost. They were even ready to co-operate with the German irregulars should this prove necessary. One correspondent declared that both Germany and Poland were secretly violating the frontier promises, and that the newly arrived British soldiers had a difficult task before them. The entire industrial district at this time was in the hands of the Poles, the French troops having yielded control of Myslowitz to Korfanty and having restricted their policing of Katowitz to the centre of the town.

#### DANGER OF ANOTHER WAR

The danger of this complicated situation was that some unexpected happening would precipitate a crisis in which the French and the Poles would be driven to make common cause against the British and German forces. The British feeling was that the Germans were hoping for this, and that it must be avoided at any cost. British action was suspended, pending the arrival of Sir Harold Stuart, the new head of the British Mission, in Silesia. So tense and delicate was the crisis that the Interallied Commission on May 30 sent an appeal to the allied Premiers to avoid all public discussions of the Silesian problem, as the least misinterpretation would suffice to bring on new conflicts.

Both General Hoefer and his military commander, Major von Moltke, as well as Korfanty, had given an oral engagement not to resume fighting for the time being. It was expected that when the time was ripe the English would take the field, and that the Italians and French would garrison the towns. The Polish irregular forces were busily preparing for defense, bringing up supplies of ammunition and machine guns, and had sworn, with Korfanty, that they would never yield. Interviewed in Oberglogau on May 28, General Hoefer declared that he was prepared to act only

with allied sanction, that his own forces were inadequate to push the Poles across the frontier, and that if he went a step too far, his advance would be met by an immediate French occupation of the Ruhr.

Though the "One-armed" General claimed that he had his forces under complete control, the German troops in the outskirts of Beuthen began an attack on the Poles the very same day, precipitating a fierce conflict, in which hundreds were killed and wounded. It was stated that the whole city was in revolt against the French garrison; the German population, clamoring for food, had attacked the railway station, and the French had opened fire upon them both here and elsewhere. The Poles and the Germans fought desperately for virtually three days. Fighting also was going on at other points, and the Poles had been forced to give way at Gross Strehlitz, where they left 130 dead upon the field. The German casualties were twelve dead and thirty-one wounded.

#### BRITISH TAKE CONTROL

This was the ominous situation up to the end of May. The turn of events from the first of June to about the middle of the month showed a sudden change for the better, owing to the strong attitude of the British, who took hold of the situation again with a firm hand, the apparently moderate attitude of General Hoefer, head of the German forces in the region, and the obvious fear shown by the Polish rebels of the advancing British, the determination of whose leaders to clear a neutral zone between the Germans, on the one hand, and the Poles, on the other, even at the cost of bloodshed, was unmistakable.

The British campaign began on June 3, with the arrival at Oppeln of General Henniker, who, as General Le Rond's superior in ranking, was able to take the initiative at once. He called a conference of all the high British commanders to discuss military plans, which, it was understood, had the approval of the British Government. One main consideration was to dispose the inter-allied troops in such a way that all possibility of clashes between the Germans and the Poles, the Germans and the French, and even the British and the French, would be avoided. The British push forward, however, did not begin until June 7.

Meantime (June 4), the Interallied Commission sent to General Hoefer an ultimatum, threatening to withdraw the allied troops from the towns in the industrial region of Upper Silesia unless Hoefer withdrew his forces at once. The dangerous possibilities of such a withdrawal so impressed the German Government that it sent the British Government, through Dr. Sthamer, German Ambassador to Great Britain, a note complaining that this threat was tantamount to placing the German population of Upper Silesia at the mercy of the Polish insurgents, and made the unchaining of civil war inevitable, as the German defense forces would resist to the last, and the German Government would be unable to restrain them under the circumstances. The exposure of the German population to the brutal horror of a new Polish advance, the note declared, would be intolerable to the whole German people. A similar protest was handed to the French Foreign Office by Dr. Mayer, the Ambassador to France.

The French Government replied that the Interallied Commission had the situation well in hand, and would act according to the necessities of the situation. The French officials, however, expressed surprise that the German Government should come forward officially as the supporter of General Hoefer, and should take offense at an action necessary to restore calm and order in Upper Silesia, after assurances had been given by the German Chancellor, Dr. Wirth, that his Government was straining every effort to prevent action by German irregular forces in the disturbed territory. Dr. Mayer was asked if he desired it to be understood that his Government approved the activities of General Hoefer. Great Britain, on her part, sent word to the German Government that the British forces were now sufficient to restore order, and that it would not need any German aid to attain this end. At Earl Curzon's request, the Berlin Government sent a note to General Hoefer asking him to withdraw. This he declined to do, but promised to cease all attacks on the Poles pending British operations.

This was the status of affairs on June 7, when the British Commander, General Henniker, sent thirty-two lorry loads of the Black Watch Highlanders—more than 700 seasoned fighting men—by a surprise night

movement, to Rosenberg, twenty miles northeast of Oppeln. The Poles withdrew. Thus began a wide flanking and frontal push, devised to clear a neutral zone, and ultimately to restore the whole territory to its lawful administrators under the treaty—namely, the Interallied Plebiscite Commission. As late as June 8, however, foreign correspondents on the ground reported that the whole German male population of all ages, and even part of the female population, were streaming toward the Polish fighting front, in every kind of vehicle, garbed in every kind of uniform, armed with all descriptions of weapons. The occupation of Gleiwitz by Irish troops was announced at the same time. Before Gleiwitz, as in the case of Rosenberg, it sufficed the British forces to advance, and to deliver an ultimatum ordering the Poles to evacuate at short notice. The insurgents vanished within an hour, bag and baggage, with all arms, big and small. Fighting between the Poles and the Germans was still continuing at various points; neither side was taking any prisoners.

General Hoefler issued statements throwing the onus of small clashes between his forces and French contingents upon the French. Dr. Mayer, however, on June 9, presented a formal apology to the Paris Government for the arrest of fifteen French soldiers and the wounding of three of them, at Kalinow, near Gross-Strehlitz. M. Briand used severe language in replying, and emphasized the necessity of recalling the German forces. On June 8 Hoefler gave the British commander full assurance that he would refrain from any forward movement. The German leader was placed in a most difficult position by the actions of the Poles; this was especially the case at Ratibor, where the Poles were indulging in a fierce bombardment. The French Government, however, had only one wish—to see Hoefler withdraw, and, after due consideration of his refusal to do so, instructed its Ambassador at Berlin to notify the German Government that it must obtain this withdrawal immediately. Germany, the French protest declared, had accepted responsibility for Hoefler's acts by its formal apology in the case of the French

clash, and now it must compel his withdrawal.

#### KORFANTY'S WITHDRAWAL

On June 10, Korfanty agreed with the Inter-Allied Commission to withdraw his forces and to liquidate the insurrection on condition that the Germans also withdraw. The Poles immediately proceeded to withdraw, but complaints at once followed that the Germans were not withdrawing.

Korfanty and his Executive Committee stated in a proclamation to the German Upper Silesians that the only wish of the insurgents was properly to mobilize the economic life of the country, and that but for the presence of German provocative agents normal conditions would not have been disturbed. The proclamation added that only uniformed and organized police, composed exclusively of Upper Silesians, including German Upper Silesians, would be sent to the cities in the insurgent area, but that such Germans must promise not to be hostile toward the Polish population.

General Henniker himself was working under extreme difficulties, but was striving to limit the operations of his forces to the belligerent area, leaving the districts which would normally go under the plebiscite to either party to be policed by the Germans and the Poles respectively. All his efforts to prevent further fighting between the German and Polish populations had not succeeded up to June 12. Rosenberg was being turned over to German plebiscite police.

The British, according to preconceived plans, were very slowly pushing their advance further, but at various points were hindered by the diametrically different view held by the French. The hardest part of their work was before them when these pages went to press. Sir Harold Stuart, the new British member of the Interallied Commission, had arrived by May 9. Meanwhile the French Premier still declined to meet the British Premier for a conference on Silesia, and the British view of the seriousness of the situation remained pessimistic. It was believed that if a disaster to the peace of Europe was to be avoided, the Supreme Council must act quickly and prove that it meant to be supreme.

# GERMANY BEGINS PAYING THE PIPER

*Delivery of 1,000,000,000 gold marks to the Reparation Commission constitutes the first step toward payment of the total war indemnity of 135,000,000,000 marks—Other proofs of sincerity of Dr. Wirth's Government—Sentences of criminals and communists*

[PERIOD ENDED JUNE 10, 1921]

WITH the handing over by Dr. Mayer, the German Ambassador in Paris, of twenty three-month German Treasury notes, endorsed by German banks and equaling 840,000,000 gold marks, to the Reparation Commission on May 30, the German Government completed the first big step toward complying with the final reparation terms of the Allied Premiers accepted by the Cabinet and Reichstag on May 10.

Article 5 of the Reparation Terms [printed in full in CURRENT HISTORY for June] provided that Germany must pay 1,000,000,000 marks—in gold, approved foreign currency, foreign bills or approved German Treasury three-month notes—within twenty-five days from the date of the ultimatum (May 6), this payment to be treated as the first two quarterly instalments of the sum provided for in Article 4. Germany had placed 150,000,000 gold marks at the disposition of the Reparation Commission on May 17. This sum was transferred through the Federal Reserve Bank in New York, and the final deposits were credited to the Bank of England and the Bank of France on May 31. Dr. Mayer told the commission that he had 15,000,000 gold marks additional ready for it, and the initial big payment was completed a day ahead of time. On June 7 the Reparation Commission announced that Germany's payments so far had totaled about 1,040,000,000 gold marks, and that the surplus 40,000,000 would be applied to the amortization of the bonds. The previous day the commission had reported that Germany had taken up the first of the twenty \$10,000,000 Treasury notes by turning over its value in dollars, leaving nineteen notes to be paid by Aug. 31.

A Paris dispatch of June 8, in reporting the impending first accounting among the Allies on reparations, estimated the Ger-

man payments in money and kind, exclusive of the 1,000,000,000 gold marks mentioned above, as 8,000,000,000 gold marks since the signing of the Treaty of Versailles; from this was to be deducted about 7,000,000,000 gold marks to cover the cost of the allied occupation of Germany, leaving 1,000,000,000 to be credited to the general reparation fund. The Reichsbank announced on June 1 that it was in the market for gold coins and bars and would pay 260 paper marks for each twenty-mark gold piece and 36,000 paper marks for a kilogram (2.2 pounds) of fine gold.

In further compliance with the Entente's demands, the German Supreme Court at Leipsic began on May 23 the trial of several of the German officers and soldiers accused of atrocities during the World War, with a number of former British soldiers as witnesses for the prosecution and Sir Ernest Pollock, British Solicitor General, representing the Allies. Up to June 15, the trial had resulted in the conviction of Corporal Karl Heynen, the first man to be tried; Sergeant Robert Neumann and Captain Emil Müller—all accused of having brutally mistreated British prisoners of war—and the acquittal of Lieutenant Karl Neumann, the commander of the submarine that torpedoed the British hospital ship Dover Castle, and Max Randohr, a Leipsic student accused of having ill-treated and imprisoned Belgian children. Corporal Heynen was sentenced to ten months' imprisonment, and Sergeant Neumann and Captain Müller to six months each.

The acquittal of Lieutenant Neumann aroused unfavorable comment in England and in German Socialist and Liberal circles, but Dr. Ebermayer, the German Public Prosecutor, insisted that no other verdict could have been justly arrived at, be-

cause the submarine commander had taken no personal initiative in the matter of sinking the hospital ship, but was bound to obey the orders of his superiors. The reactionary press, headed by the Deutsche

that he doubted his ability to make the 300,000 members of the "Orgesch" (Organization Escherich, the colloquial name of the Home Guards) give up their weapons. Dr. Mayer called upon Premier Briand on June 2 and told him of the difficulties encountered by the German Government in trying to live up to the ultimatum's terms, and that they must be met on time, or "sanctions" (the technical term for penalties) would be applied, which meant the much-dreaded occupation of the Ruhr industrial district. In the meantime pressure was being exerted on the Bavarian authorities by both the Entente Governments and the German Socialists, the latter threatening to promote general strikes in Bavaria and to cut off coal supplies through action by the miners of the Rhine Valley unless the "Orgesch" was dissolved. The leaders of the Home Guards decided on June 6 to disband by June 30, and the next day Herr Nortz, the Disarmament Commissioner for that district, stated that his motor trucks were already busy picking up the 2,730 machine guns and 78 cannon held by the Guards. He admitted, however, that he hardly expected to collect the 220,000 rifles in the hands of the Guards, as half of the latter were mountaineers, and an attempt to take away their guns by force would be too costly.

Hardly had the work of disarmament been begun, however, when the Bavarian reactionaries started the usual stories about the imminent danger of a Red revolt and the storing of arms and munitions by the communists. Consequently, the activities of Herr Nortz were halted after 650 machine guns had been turned in. The murder of Herr Garies, an Independent Socialist member of the Bavarian Diet who had been leading the campaign for disarmament of the "Orgesch," by unknown persons caused a three-day protest strike in the main industrial centres of Bavaria and furnished another pretext for a refusal to give up arms. The Independent Socialists in the Reichstag then put the matter of disarmament in Bavaria up to the National Government, threatening to precipitate a new Cabinet crisis unless Berlin took active steps to do what Dr. von Kahr had thus far succeeded in dodging.

Other sections of the ultimatum note of May 17 called for the bringing of the regu-

*New German Foreign Minister, succeeding Dr. Walter Simons*

Tageszeitung, hurled insults at Chief Justice Schmidt and his six fellow-judges for allowing themselves to be used as "Entente tools" for the punishment of "German soldiers who had merely done their duty," but Vorwärts and other Socialist papers were inclined to regard the entire proceeding as a farce, and demanded that not "miserable subordinates," but the men higher up, who conceived and issued the orders for wholesale destruction and deportations, be placed in the defendants' box.

Repeated declarations were made by Dr. von Kahr, Premier of Bavaria, to the effect that he did not regard the Home Guards of his State as included in the general disarmament that must be completed by June 30, in accordance with a note sent by the Allies to Berlin on May 17; he said, furthermore,

THROG OF 30,000 ARMED BAVARIANS IN MUNICH SWEARING TO KEEP ORDER AND TO DEFEND THEIR COUNTRY AGAINST BOLSHEVISM AND REVOLUTION

lar German army of 100,000 men within the terms of the Versailles Treaty, the surrender of superfluous munitions and unauthorized fortress equipment, the limiting of the manufacture of munitions to factories listed by the Allies and the reduction of all classes of police to 150,000 by July 15. Progress in complying with the terms of this note was reported by Allied officials in Berlin. An order was issued by the German Government on May 24 prescribing a maximum fine of 100,000 marks for illegal recruiting or organizing military bodies. Other orders closed the Upper Silesian frontier. [See article on rebellion in Upper Silesia.]

German papers reported on May 22 that the first quota, amounting to 48,000 tons and 16,000 horse-power of towing capacity, of the Rhine barges and tugs awarded to the Entente (principally France) by Walker D. Hines, the American arbitrator, last January, had been turned over, and that the French had rejected some 8,000 tons because of alleged inferior quality. The second quota will amount to 160,000

tons. The delivery of 3,480 cars to Belgium and 1,605 to France, on account of reparation for captured railroad materials, was also reported. On June 13 the big dirigible airship, Nordstern, was delivered to France.

Although there was no general withdrawal of troops by the Allies from the extended zone of occupation along the Rhine, and the menace of a seizure of the Ruhr basin still remained, a more friendly feeling toward Germany became apparent in France. Premier Briand spoke favorably of the efforts being made by Dr. Wirth, the German Chancellor, to live up to Germany's pledges, and M. Loucheur, Minister for the Devastated Regions of France, expressed the hope that a way would be found to accept the German offer of 25,000 houses to be put up for the use of the victims of German ruthlessness.

Despite the lack of a real majority in the Reichstag, Dr. Wirth, by his firm tactics, succeeded in holding his "signing" Cabinet together and getting a vote of confidence on June 4, following a lengthy de-

bate on his proposed plans for raising the money needed. The vote was 213 to 77. Dr. Wirth's supporters were the Centrists,

the Majority Socialists, the Democrats and some of the Independent Socialists. The Nationalists and Communists voted against the motion and the People's Party abstained from voting. A second section of the resolution approving the Government's attitude toward the Upper Silesian question was also carried by a big majority.

In outlining his program before the Reichstag Dr. Wirth said that "restoration and reconciliation" would be the basis of the German Government's policy abroad, and that it would have the "courage to demand of the German people the utmost sacrifice, endeavor and efficiency to fulfill obligations." There could be no academic discussions about living up to the peace terms, he declared, and he then proposed increased coal taxes, increased corporation taxes, increased stock transfer taxes and higher taxes on liquor, beer and tobacco. After warning that there must be no reparation profiteering, the Chancellor called for increased production and national economy, the building up of the foreign trade balance and the introduction of the most modern methods in industry and agriculture to the end desired.

On June 10 the Minister of Economics told the National Economic Council, which was considering ways and means to raise the sum of 50,000,000,000 paper marks per year estimated as required to meet the peace terms, including occupation costs and incidentals, that taxation alone would not solve the problem and that direct Government participation in the profits of industry would probably have to be resorted to.

By the appointment of Dr. Friedrich Rosen, Minister to Holland and an old-time diplomat, to the post of Foreign Minister and of Dr. Walther Rathenau, head of the General Electric Company, as Minister of Reconstruction in place of the temporary Minister, Herr Silberschmidt, Dr. Wirth practically completed his Cabinet. The only place left open was that of Minister of Finance, whose duties were being looked after by the Chancellor himself and by Otto Bauer, Minister of the Treasury and Vice Chancellor. Dr. Heinrich Albert, Secretary of the Chancery for the last two years, resigned on May 25.

Dr. Rathenau, who during the war was the leading factor in organizing German industry as an auxiliary to the army, but who

(© Keystone View Co.)

**DR. ESCHERICH**

*The Bavarian leader who created the military organization called the "Orgesch," whose dissolution the Allies are demanding*

is generally regarded as a liberal-minded man aiming at reorganizing economic life on a more equitable basis, was severely attacked by Junkers, big business Deputies and communists when he took the floor in the Reichstag on June 2 in the debate on Dr. Wirth's program. Answering the hecklers, Dr. Rathenau said he had entered the Cabinet only because he was sure France was doing her best to come to an understanding with Germany, asserted that he was going to keep his department free from politics and profiteers and declared that the work of rebuilding the devastated zone in France was not a national, but a world problem; until that running sore on the Continent of Europe was healed, world peace was unthinkable.

Dr. Rathenau and Minister Loucheur met in Wiesbaden on June 12 and held a conference on plans for the utilization of German aid in reconstruction work. Both voiced satisfaction with the result of the meeting.

An agreement was signed in Peking on May 20 which ended the state of war between Germany and China and re-established commercial and diplomatic relations. [See China.]

Though business conditions in general showed no great change, and many banking and commercial firms were able to declare substantial dividends, the country was confronted with the anomaly that nearly 1,000,000 persons were unemployed at a time when there was a clamor for increased production and when it was estimated that the nation was short 1,200,000 dwelling houses. In Berlin alone some 120,000 heads of families were registered with the Municipal Housing Board as unable to obtain quarters. To remedy these conditions the German labor officials, representing about 10,000,000 organized workers, suggested the launching of public works and house construction on a gigantic scale, with profiteering eliminated and credit furnished by the national, State and municipal Governments.

The revenues of the National Government for the year ended March 31 amounted to 46,102,000,000 paper marks, with expenditures of about 88,000,000,000 marks. The floating indebtedness on April 30 was 189,608,000,000 marks.

The minimum cost of maintaining a family of four in Berlin fell to 281 marks per week in April, 17 marks less than in March and 94 less than in April, 1920. In April, 1914, the minimum was 28.80 marks.

The extraordinary courts established to handle the cases arising from the arrest of some 3,500 persons during the communist uprising of March continued functioning at high pressure, and by June 9 had sentenced about 400 persons to a total of 1,500 years at hard labor, 500 to a total of 800 years in jail, 8 to imprisonment at hard labor for life and 4 to death. Heinrich Brandler, Chairman of the Central Committee of the United Communist Party, which had promoted the abortive revolt, was sentenced to five years at hard labor.

Ex-Prince Eitel Friedrich, second son of Wilhelm Hohenzollern, was found guilty by a Berlin court on May 17 of sending capital out of the country in violation of the law and fined 5,000 paper marks (about \$67 at present exchange rates). He was one of a number of formerly high placed defendants accused of having smuggled many millions over the border to Holland via the Dutch banking firm of Grusser, Philipps & Co. While still Minister of Finance Dr. Wirth informed the Reichstag that the banking house had been fined 600,000 marks, and capital to the amount of 2,500,000 marks had been declared confiscated by the Government. On May 30 Eitel Friedrich reviewed the disbanded Fourth Guard Regiment of the old German Army, which had been temporarily resurrected for the occasion on the Moabit parade grounds, and was made the object of a great ovation by the 200 ex-officers and 2,000 ex-members of the guard regiment, several hundred of whom belonged to a regiment of the new regular army.

# THE MISTAKES OF FRANCE

BY ADAMANTIOS TH. POLYZOIDES

Editor of the Greek Daily, Atlantis

*An indictment of the foreign policy of the French Government, especially in the Near East, as seen from the Greek viewpoint—Ultra-nationalistic trend of the older French political leaders, contrasted with Briand's strong yet moderate policy*

THE news that France, after drifting for months so dangerously away from her allies, is seriously considering the strengthening of her relations with Great Britain, is the most welcome news from Europe in almost a year.

Such an event, if it ever materializes, will mean nothing less than the first decisive step toward the restoration of peaceful conditions in Europe and the world. It will remove the greatest obstacle that has blocked the way to peace.

For two years following the signing of the Treaty of Versailles Europe sat on the anxious seat of a political volcano. This volcano was neither Germany's trickery nor Russian communism; it was the European policy of victorious France.

The ink was not yet dry on the German treaty when French policy, not as a matter of form, but as a matter of practice, broke loose from the general policy of the great alliance. A spirit of diplomatic, political and military independence seemed to take the place of loyalty to the great purpose which stood behind that alliance. Heroic France desired to continue the heroic tradition in a newly ushered era of peace, and in doing that she little thought of respecting the feelings of her greatest and most valuable ally just across the Channel.

That there is a strong current of anti-British feeling in France no one will deny. A large section of the French public has been told repeatedly that Britain has abandoned France after getting the lion's share of the German spoils. But it is doubtful whether this opinion is entertained by the thinking people of the Republic and by those who believe that the Treaty of Versailles is chiefly and primarily an instrument for the destruction of Germany to the almost exclusive benefit of France and who know that this same treaty could never have been framed and imposed on the van-

quished Germans without the sanction and the whole-hearted support that Great Britain gave to France. The whole history of the World War, the whole record of the Peace Conference and the whole experience of the United States is at hand to prove the truth of this assertion.

It may be safe, then, to take it for granted that the recent attitude and policies of France were not dictated by a spirit of hostility to Great Britain. This spirit may be present to a certain extent; but it is not spontaneous, and is chiefly fanned by the professional propagandist without affecting the great mass of the French people.

## MILITARISTIC DIPLOMACY

What really is happening in France is that a proud nation which for almost fifty years has lived under the bitter memories of 1870 and in constant fear of German militarism has again come into her own, has felt her power and the significance of her victory. No one who has studied France and witnessed her intense suffering and her brave struggle in the great war, which came to her entirely without provocation, will condemn France for her victorious enthusiasm.

The fact remains, however, that this French enthusiasm has now reached the point where it constitutes a danger to European peace. It has passed all the safety signals and is headed toward a catastrophe. And so it becomes the duty of every friend of France, and of every friend of peace, to warn the gallant Republic of the danger toward which she has been rushing headlong under the leadership of men who have shown themselves to be excellent war makers, but who are entirely out of place at the head of a government engaged in reconstruction and the arts of peace.

The trouble with post-war France is not

that she is anti-British, or, for that matter, anti-ally. She is only intensely nationalistic, with too apparent leanings toward the Napoleonic program of militaristic imperialism. It is, in my opinion, this fiery nationalism that makes France oblivious of her allies of yesteryear and expresses itself in Joan of Arc celebrations and Napoleonic revivals. The Treaty of Versailles was expected to bring back the France of 1870; but it becomes daily more evident that what we see today is the France of Louis XIV. and Napoleon I. That the Treaty of Versailles has brought France to the frontier of 1870, which was the frontier of 1815, has been more than once the object of bitter complaints in the columns of the ultra-nationalist French press. "The frontier of 1815," these papers said, "was the frontier of a defeated, not a victorious, France." Then these writers seek to prove that the least that the allies and Clemenceau ought to have done for France was to give her the frontiers of her victories, which were those under Louis XIV. and Napoleon. Another mistake, from the point of view of these same writers, is that the Versailles treaty did not disrupt German unity. "This treaty," they said, "was made between the allied and associated powers on the one hand and Germany on the other, thus leaving German unity intact." This is the point of view taken by a number of able yet altogether too chauvinistic French writers, who say in conclusion that it is for the French arms to vindicate their point.

It is in the application of this policy that France missed no opportunity and left no stone unturned in order to disrupt German unity. Her activities in the Saar Valley and more recently in the Ruhr, her efforts to create a Rhenish republic as a nucleus of a South German confederation in which Bavaria and Austria, and possibly Hungary, will be eventually united in an economic, if not in a political, sense, her bitter struggle for an abnormally large and non-Polish Poland at the expense of German Silesia and of Russia, are nothing but the various manifestations of the all absorbing French effort to dismember the German Empire.

This policy, however, cannot be of much use to France so long as beyond the eastern frontiers of Germany there lies, barely separated by Poland, the ever-mysterious

and sullen Soviet Russia. A united Germany, even defeated as she is, may be forced to work for generations to pay tribute to the victors; but she will always prefer the certainty of this servitude to the uncertainties of the Soviet régime. A dismembered Germany is another story. Then the despair of the German people will force it to any extremity, and in such a case it is not Haller or Korfanty who will prevent the amalgamation into a single Red entity of all that territory stretching from the Pacific to the Rhine and calling itself the Russo-German Soviet Republic.

#### THE LITTLE ENTENTE

French policy is too keen to underestimate this danger, much as her militarists appear to despise it. Therefore France does all in her power to create and to strengthen a large Poland. But even so, French policy does not feel safe. This brings me to a consideration of other French combinations in Central and Eastern Europe.

As long as there was an imperial Russia France felt secure from Germany, and if one remembers the first anxious days of the great war and takes into account the almost forgotten sacrifices of Russia on the altar of allied victory, one will see that French confidence was not misplaced. With imperial Russia irretrievably gone, France found herself victorious, thanks to America's taking Russia's place, but facing a defeated enemy twice her size and population. The military strength of France is more than sufficient to keep weakened and disarmed Germany within bounds. The French problem is now to prevent any possible rapprochement between Germany and Russia while carrying on the process of dismembering the former. In order to do this, French policy is creating and strengthening a new Central European Slav Empire, equally hostile to both the Germans and the Bolsheviki. The Central European Slav Empire is made up of Poland, Rumania, Czechoslovakia and Jugoslavia, with the possible additions of the non-Slavic countries of Hungary and Bulgaria. This is the Little Entente, which in close alliance with France is expected to be able to keep Bolshevik Russia at bay, pending the dismemberment of Germany into its com-

ponent parts. Forty million Frenchmen, with another 40,000,000 Slavs fully armed and occupying the strategic position in Europe, are considered by France sufficiently strong to bring about the realization of a French-made South German confederation of the Rhineland, Bavaria and Austria, which, along with the Saar and the Ruhr (the latter is already under French control) will make France the dominant power in Europe.

This bold plan is no secret. It is expounded daily in the French newspapers and magazines; it becomes the favorite thesis for professional honors; it inspires the leaders of French thought and literature; it is the theme of the most carefully written articles in the best periodicals of France.

These are the main, or continental, lines of the present French policy. They are supplemented, however, by a much vaster program of European domination. France today has the second largest colonial empire, but she thinks that her colonies are less valuable than those of Great Britain. Therefore France is still in the field for more colonies, of a financial if not a political importance. She wants those colonies as close to the Mediterranean as possible; and, in view of the fact that England has secured a predominant position in Western Asia, the statesmen of France are straining every effort to secure a firm footing in the same territory. France, since the days of Francis I., was considered the friend and protector of the Turks, in exchange for numerous privileges bestowed on French trade and propagandists by different Sultans. It was partly in continuation of this policy that Napoleon went to Syria and Egypt, and it was along the same lines that French policy has worked for years in Lebanon and Syria, and generally speaking in the Levantine countries, where her influence was supreme up to the time of the great war.

#### FRANCE'S LEVANTINE FAILURE

This influence was due in no small degree to the activities of the Catholic schools and colleges, operated by various religious orders, and richly subsidized by the French Government, which was their political protector. It is to the credit of the men in

charge of this vast propaganda that these educational institutions have always been excellently manned, in most instances even surpassing the lay schools of the French Republic in efficiency and results. On the other hand, it is indisputable that these organizations have rendered a signal service to France, by familiarizing the people of the Levant not only with the language but also with the French way of thinking. It is for this reason that long after the separation of Church and State in France, these schools of the Marist, or Ascensionist, or Saint Josephist Brethren were still working under the protection of the Tricolor, while churches and monasteries in France were forcibly closed by the civil authorities and their occupants deported to more hospitable countries.

While thus attending to the educational needs of the Christian populations of the Levant, most of which, and chiefly the Greeks, have always had first-class schools of their own, France, on the other hand, offered every assistance to the Ottoman Government in the way of financial and political support. All was well until German competition made itself felt with the Kaiser's visit to Constantinople and Palestine and his Bagdad Railway deals with Abdul Hamid. Turkey was slowly but surely succumbing to German influence under the expert handling of the famous German Ambassador, Marshal von Bieberstein, when the Young Turk revolt took place.

As the Young Turkish movement was chiefly organized in Paris, France thought the time propitious to re-establish her erstwhile prestige by advancing new credits to the revolutionary régime. The Balkan wars practically put an end to Turkish domination in Europe, and when France shortly afterward advanced 700,000,000 francs to Turkey, German diplomacy was again supreme in Constantinople, and French money was used to supply Enver's army with German guns and ammunition for the eventual war against the Entente which came in 1914.

With the Germans in Constantinople and Sofia, with the British in Mesopotamia and Palestine and the Dardanelles, and with the French-equipped and officered armies of Serbia and Rumania defeated, while the French Army of Sarrail was idly watching

the course of events from Saloniki, it is not surprising that French prestige did not fare well in the Near East during the great war.

Thus when victory finally came it was not Franchet d'Esperey's Macedonian army that brought about the result, but the troops of Pétain, Haig, Pershing and Diaz under the supreme command of Marshal Foch, while all one saw in Constantinople and throughout the Levant was the powerful British fleet, all one heard was the victories of Allenby resounding from Bagdad to Jerusalem.

#### FRENCH SUPPORT FOR TURKEY

Following the allied victory a new situation was created in the Near East, where Great Britain became the predominant factor, and this quite naturally. Great Britain bore the brunt of the Near Eastern campaigns, from the Persian Gulf to the borders of Armenia and in the Caucasus, and from the Red to the Black Sea. The Kingdom of Hedjaz was her creation, as was the autonomous Mesopotamian State and the protectorate of Palestine. It was the British fleet that took possession of Constantinople pending the final settlement of the Eastern question. All that remained for France was Syria, and there the natives have clamored for independence ever since France took possession of Beirut.

One must take all these events into account in order to explain the bitter disappointment of French policy in a territory which she considered as being firmly held in her grasp. It will then be understood how France, seeing the dismemberment of the Turkish Empire, under the supervision of Great Britain, decided to support the Turk in his preposterous claims to continue his domination over the Arab and Armenian and Syrian and Greek populations, which have all suffered grievously under his rule and which have always been superior to their master in intelligence, in culture, in morality and in human values.

This French policy was obviously so mistaken and so ill-advised that it resulted in alienating the sympathies of all the victims of Turkish oppression, who could not reconcile the liberal traditions of France with her open and undisguised support of the Turk. But once launched on this mistaken course, French policy did not stop at any-

thing. Thus France fostered the Kemalists against the Constantinople régime set there by the Allies following the armistice, to do the bidding of the victors, and she went the length of supporting the Turkish Nationalists with arms and ammunition and diplomatic assistance against the Greeks, while fighting these same Nationalists in Cilicia, in the so-called zone of French influence.

It was this mistaken policy of France that strengthened the Nationalist forces of Mustapha Kemal, while the latter was secretly negotiating his alliance with Moscow, and this policy had the effect of making France the indirect ally of the Bolsheviki themselves. It was France who organized and equipped the Wrangel Army against the Bolsheviki, and it is this same army, or rather its remnants, that France is said to have allowed to pass into the camp of Kemal, there to co-operate with the Bolshevik forces sent from Russia, by way of the Caucasus, to help the Kemalists against the Greeks.

Had it not been for this mistaken policy of France the Near East would be at peace today. The encouragement given to the Nationalist Turks, the invitation extended to them last March to attend the London conference of that month, the stubborn insistence of France on the revision of the Sèvres Treaty in favor of Turkey and at the expense of the Greeks and the Armenians, the secret treaty-making between Briand and the Kemalist emissary Bekir Samy, and the failure of it all, through Kemal's sudden conversion to Bolshevism, these are the chief points of an unfortunate policy which in two years cost French taxpayers much more than the total indemnity paid to Germany in 1870.

Whatever encouragement French policy gave to the Kemalists, was deftly used to strengthen the Bolshevik hold on Nationalist Turkey, until all of a sudden we witnessed the development of the entire Turko-Bolshevik plan, whose aim it was to take Constantinople by storm, and there establish the capital of Russo-Turkish Bolshevism. Greek vigilance and British foresight succeeded in nipping this immense plot in the bud, and France once more is face to face with one of her greatest mistakes.

It was this same policy that brought war so near in the Ruhr and in Upper Silesia; and had it not been for Aristide Briand France would be fighting that war alone. Fortunately, such a world calamity seems now to be averted, and the recently mobilized French class of 1919 is being demobilized, while the danger of France's isolation has considerably lessened in the last few weeks. The sad truth remains, however, that in the course of these political manoeuvres France lost many friends, not because the world has lost faith in the French people, but because it distrusts her militarist and imperialist leaders, who until now seem to have had the upper hand in dealing with the European policies of the republic.

It is against these leaders that Aristide Briand's common sense and manly courage seem to have won a victory. Clemenceau and Tardieu, Poincaré and Foch are men who have rendered signal services to their country during the darkest days of the great war. No one denies their ability and their patriotism; but one has to acknowledge that the days of their usefulness are numbered, not to say gone. They are all men who live in the past and who have learned nothing from the fall of Napoleon and the débâcle of Kaiserism. They seem to be under the impression that what the First Empire failed to accomplish a hundred years ago they will be able to ac-

complish in 1921, less than three years after the greatest of all wars, after the flower of the world's manhood was sacrificed in order to put an end to the system that French militarism and French nationalism is trying to revive.

It is fortunate for France and fortunate for the world that against these tendencies of a restless and bellicose group there stands a man of power and ability of the calibre of Aristide Briand. He appears today before his country and before the world with the clear vision of a statesman, who sees very plainly that it is not by following in the footsteps of Imperial Germany that France will thrive and prosper. He understands that the greatest danger threatening France today is her isolation, and her detachment from the Great Alliance which was cemented with the best blood of the nations who fought against militarism and imperialism, not only in its German, but in all its forms.

Briand, better than any other man in France today, knows that it is not by dismembering Germany and by creating a new and more aggressive Slav empire in the heart of Europe that the interests of his country will be saved and peace made secure. It is in the full consciousness of the best interests of France that he is turning toward England for the renewal and the strengthening of an alliance in which America will heartily join for the preservation of world democracy and world peace.

## ITALY'S COLONIAL RULE IN AFRICA

THE opening of the Cyrenaica Parliament at Bengazi, Italian Africa, in the first week of May, deserves some mention. It is an attempt on the part of the Italian Government to show other Governments how to treat their Moslem subjects. Here the cousin of the King, the Prince of Udine, read the speech from the throne, which was quickly translated into Arabic, before a Chamber almost entirely composed of Senussi. All but one of the sixty-nine Deputies were present. Of the total, fifty-four had been elected by a suffrage of their own

devising, seven had been appointed by the Italian Government and eight by the Grand Senussi. Of the Italian official Deputies one is the President of the Jewish community, the others are Italians; of the Senussite Deputies the most important is the Grand Senussi's cousin, Sidi Safi-Eddin, brother of the former Grand Senussi, who was defeated by the British troops in 1915 and abdicated. Of the fifty-four elected members only two are Italians. Rules of procedure and party discipline were absorbing the new Parliament at last accounts.

# THE MONTH IN THE UNITED STATES

*Congress reduces the army to 150,000, but maintains the present naval force—Disarmament problems—Commotion created by a speech of Admiral Sims—Railway wage cuts and high prices problem—Tulsa race riots and Pueblo flood—New appointments*

[PERIOD ENDED JUNE 10, 1921]

THE Senate, which on June 7 by a vote of 35 to 30 refused to reduce the army to an enlisted strength of 150,000 men, reversed itself on June 8, when by a vote of 36 to 32 it decided on an army that would not exceed that number. The enlisted strength of the army at the time the vote was taken was about 215,000 men, and the Senate vote meant that in the next six months the War Department would have to find a way to return 65,000 soldiers of the regular establishment to civilian life.

Senator Wadsworth, Chairman of the Committee on Military Affairs, declared that the bill, while fixing the number at 150,000, would as a matter of fact mean a reduction to 120,000. This he predicted would demoralize the regular army and mean the wreckage of the skeleton structure on which the country must depend in the event of war. On the other hand, Senators Borah, La Follette, Reed and Williams favored a still more radical reduction, the latter even asserting that a regular army of 50,000 men would be sufficient for the peace-time needs of the nation.

As finally passed, the bill provided an appropriation of \$113,000,000 less than was allotted last year.

## MILITARY EFFICIENCY

Secretary of War Weeks on June 5 issued orders to the heads of all branches of the army, calling for the elimination of officers who did not measure up to military standards of efficiency. Under the instructions, officers who did not give satisfaction in one branch of the service were to be tried out in some other, and those who failed to measure up to standard in any of the positions to which they might be assigned were to become subject to discharge or retirement on small pay under the provisions of a recent law.

Memorial services were held May 23 at the army piers, Hoboken, N. J., in honor of

5,212 American war dead, brought back on the transport Wheaton from the military cemeteries of France. President Harding made an address which was marked by deep emotion. Standing among the flag-draped wooden coffins, the President's voice broke as he told of "one hundred thousand sorrows touching my heart."

"It must not be again," he declared firmly. Then he stopped. His eyes filled. His voice thickened. "It must not be again," he repeated reverently, as he placed a wreath upon the coffin of the first American soldier to die in action on German soil, Private Joseph W. Guyton of Michigan, killed May 24, 1918, on the Alsace front.

## SHELL-SHOCKED MEN CURED

Forty per cent. of the 200 shell-shocked soldiers, treated at the Mendota State Hospital for the Insane in Wisconsin, were sent home cured, largely because of the work in occupational therapy started in October, 1919, under the direction of Dr. W. F. Lorenz, Professor of Neuro-Psychiatry at the University of Wisconsin. The work was begun with eight students, who were taught weaving, basketry and carpentry to draw their minds away from morbid memories. The number of patients was gradually increased, and the scope of their work was broadened when the Government suggested that automobile repairing and landscape gardening be added to their avocations. Of all the disability caused by the war, 27 per cent. was mental.

The Senate on May 24 by a vote of 45 to 23 refused to reduce the enlisted personnel of the navy from 120,000 to 100,000 men, and in subsequent votes sustained the position of the Committee on Naval Affairs on other important questions which are the subject of controversy between those who favor a radical reduction in naval expenditures and those who contend for a continu-

ance of the 1916 building program and the maintenance of the enlisted force at not fewer than 120,000 men. Party lines were forgotten, 31 Republicans and 14 Democrats voting for a navy of 120,000 men, while 13 Republicans and 10 Democrats voted for the 100,000 maximum fixed in the bill as it was passed by the House. Both Senators Lodge and Underwood, the party leaders of the Senate, supported the larger personnel.

#### NAVAL APPROPRIATION BILL

The Naval Appropriation bill, carrying \$494,000,000 for the maintenance of the sea force in the coming fiscal year and for continuing the 1916 building program, was passed by the Senate, June 1, by a vote of 54 to 17, party lines breaking, with 38 Republicans and 16 Democrats voting for and 12 Democrats and 5 Republicans voting against the bill as amended by the Senate Committee on Naval Affairs. The bill then went to the House with every prospect of a spirited fight between the conferees of the House and the Senate. The former body fixed upon a figure \$98,000,000 smaller than that provided for in the Senate measure.

#### SPEECH OF ADMIRAL SIMS

A sensation was created by a speech delivered in London, June 7, by Rear Admiral William S. Sims, in which he made caustic comment on Sinn Fein activities in this country. The Senate on June 9 passed without division a resolution introduced by Senator Harrison of Mississippi calling for an investigation of the incident, and Secretary Denby sent a cablegram to the Admiral on June 8 calling upon him to report immediately whether he was correctly quoted.

The part of the speech which evoked comment was quoted in the London newspapers as follows, after his references to movements to promote friendship and cooperation between England and America:

That involved some unpopularity with certain of our hyphenated citizens on the other side. In this connection I may remark that it has been said that I was opposed to anything Irish. The cause of that was certain articles which I published in which I told the simple, plain truth as to actions of the Sinn Fein faction in reference to our troops during the war.

They, the Sinn Feiners, had not the material equipment to attack us directly, but they attacked us indirectly and very dangerously. Forces had to be diverted from their legitimate duties to escort troops and merchant ships. That diminution of escort caused a great many ships to be sunk and a great many lives to be lost.

That is the simple statement I made in my book. I have made it on various occasions on the other side at meetings called to counteract the propaganda, and I intend to keep on making it.

We find a certain class of people on the other side who are technically American citizens. Some of them are naturalized and some of them were born there, but they are not Americans at all, because they are carrying on war against America today. They are carrying on war against you, because they are trying to hold up relations between the two countries.

I have not hesitated to say of these "Americans" and Sinn Fein sympathizers that the whole truth of the business is that there is the blood of English and American boys on their hands. They don't like that, of course. These men are two-faced. They are Americans when they want money and they are Sinn Feiners on the platform. They are like a zebra—they are either a black horse with white stripes or a white horse with black stripes—but we Americans know perfectly well that they are not horses at all, and strongly suspect that they are asses.

But note this point, please. Each one of these asses has a vote and there are a lot of them. The consequence was that American-born citizens found it necessary to cater for those votes—that was one of the inconveniences of a republic—which created a wrong impression on this side. Those who understand the situation, however, know how much importance to attach to the resolutions in favor of the Irish which were forced by those jackass votes.

The Irish question is partly an American question. Eleven years ago I made a prophecy that came true. I will venture on another now. The English-speaking peoples are coming together in the bonds of comradeship, and they are going to run this round globe. I should like to see an inter-English-speaking policy and when we have that we shall have peace and prosperity.

In his reply to Secretary Denby's cablegram the Admiral said that some parts of the speech to which objection had been taken were garbled. He stated that he had said nothing in his speech which he had not said before in his book and in addresses which he had made in the United States. He added that he was returning at once to the United States in response to the Secretary's summons. The Admiral made his farewells to numerous friends and sailed for New York on June 15.

## NEW SHIPPING BOARD

After a long effort to find the man best fitted to be the Chairman of the United States Shipping Board, the President on June 8 sent to the Senate the nomination of Albert D. Lasker of Chicago, Ill., as Chairman for a term of six years. At the same time the following six other members of the board were nominated:

O'CONNOR, T. V., of New York, for a term of five years.

CHAMBERLAIN, GEORGE E., of Oregon, for a term of four years.

PLUMMER, EDWARD C., of Maine, for a term of three years.

THOMPSON, FREDERICK I., of Alabama, for a term of two years.

LISSNER, MEYER, of California, for a term of one year.

BENSON, Admiral WILLIAM S., of Georgia, for a term of one year.

Messrs. Lasker, O'Connor, Plummer and Lissner are Republicans and the other three appointees are Democrats. Mr. Lasker is the head of the Lord & Thomas Advertising Agency of Chicago and has large interests in other important business enterprises. He is noted for unflagging energy and marked executive and administrative ability.

ALBERT D. LASKER

*Chicago advertising man who has been appointed head of the Shipping Board*

## DISARMAMENT PROBLEMS

By a vote of 74 to 0 the Senate on May 25 adopted the Borah amendment to the Naval Appropriation bill, which authorized and requested the President to ask Great Britain and Japan to hold a conference with the United States on the subject of reducing naval armaments. The amendment read:

The President is authorized and requested to invite the Governments of Great Britain and Japan to send representatives to a conference, which shall be charged with the duty of promptly entering into an understanding or agreement by which the naval expenditures and building programs of each of said Governments, to wit, the United States, Great Britain and Japan, shall be substantially reduced annually during the next five years to such an extent and upon such terms as may be agreed upon, which understanding or agreement is to be reported to the respective Governments for approval.

On June 7 the House of Representatives by a vote of 232 to 110 sent the Naval bill to conference without instructions to its

**JAMES M. BECK**  
*New Solicitor General of the United States,  
 succeeding Mr. Frierson*

conferees. Through this course the House left its conferees free to substitute the Porter disarmament resolution for the Borah amendment. It was known that President Harding objected to the limiting provisions of the Borah amendment which left him no choice to invite other nations than Great Britain and Japan to a disarmament conference or to include the limitation of armies as well as navies. The Porter resolution gave this wider latitude.

#### RIVAL PEACE RESOLUTIONS

The House of Representatives on June 13, by a vote of 305 to 61, passed the Porter resolution declaring a state of peace with Germany and the former Austro-Hungarian Empire. This resolution had been substituted by the House for the Knox resolution, which came from the Senate, and which, unlike the Porter resolution, contained a repeal of the original declaration of war. The Porter resolution was reported to the Senate on June 14. On motion of

Senator Lodge, it was disapproved, and was sent to conference. A hard fight between the two legislative branches was in prospect when these pages went to press.

#### RAIL WAGE REDUCTION.

The United States Railroad Labor Board handed down an order on June 1, to become effective July 1, cutting wages of railway employes an average of 12 per cent. The order affected members of thirty-one labor organizations employed on 104 railroads and was estimated to mean a lessening of \$400,000,000 in the annual payrolls of the roads.

The decision grants reductions varying from 5 to 13 cents an hour, or from 5 to 10 per cent., and in the case of section laborers completely wipes out the increase granted that class of employes in the \$600,000,000 wage award of July 20, 1920. For section men the reduction is approximately 18 per cent. Switchmen and shop crafts get a 9 per cent. reduction, while the train service men are cut approximately 7 per cent. Car repairers are cut about 10 per cent.

Common labor pay, over which the railroads made their hardest fight, is to be reduced 6 to 8½ cents an hour, cutting

**J. G. SCHURMAN**  
*Former President of Cornell University, now  
 United States Minister to China*

freight truckers' average monthly wages to \$97.10 and track laborers' to \$77.11. The new schedule gives section men an average daily wage of \$3.02 for an eight-hour day, although considerable testimony offered by the roads, particularly in the South, showed common labor wages as low as \$1.50 for a ten-hour day.

Shop crafts employes and train and engine service men, except those in passenger service, are reduced 8 cents an hour. Construction and section foremen are reduced 10 cents an hour.

Passengers and freight engineers who received increases of 10 to 13 cents an hour by the 1920 award are to be cut 6 and 8 cents an hour, respectively. Passenger and freight conductors, who received increases of 12½ and 13 cents in 1920, are cut 7½ and 8 cents, respectively, by the new schedule.

Train dispatchers and yardmasters, whose monthly earnings at present average \$260 to \$270, are cut 8 cents an hour.

The attitude of the railway unions toward the decreases remained to be determined. The big brotherhoods were expected to meet on July 1 to consider the board's decision and determine on their course of action.

#### MINGO COUNTY UNDER MARTIAL LAW

Mingo County, W. Va., was declared in a state of insurrection and placed under martial law in a proclamation issued May 20 by Governor Morgan of that State. On the same day Adjt. Gen. Thomas B. Davis arrived at Williamson and bearing the Governor's mandate under executive designation took supreme command of the campaign to restore a reign of law in the riot-stricken region. The proclamation did not contemplate any steps of undue harshness in enforcement of martial law, the writ of habeas corpus was not suspended, and it was especially ordered that the civil courts should continue to function.

The presence of the troops had a sobering effect, and, with the exception of some slight outbreaks, law and order were re-established and maintained.

#### UNEMPLOYMENT AND LIVING COSTS

A review of conditions made public by the Department of Labor on June 5 showed that the net increase in unemployment for

May over April was one-half of 1 per cent. A gratifying feature of the report was the statement that in spite of adverse conditions there was a prevalence of business optimism, with a marked tendency to con-

RICHARD WASHBURN CHILD  
*New American Ambassador to Italy, succeeding Thomas Nelson Page*

strue the occasional bright spots as harbingers of early and permanent improvement.

Reports to the Labor Department up to May 19 indicated that the dollar earned and spent by the average family now would buy approximately 25 per cent. more than it would a year ago. The dollar now is worth approximately 65 cents, as compared with the pre-war dollar. In May a year ago, when prices were highest, the dollar was worth relatively only 37 cents. The increase is approximately 27 per cent. in value on the basis of a year ago. On this basis the nation's factory operatives now receive nearly \$100,000,000 more purchasing power for their work, despite wage re-

ductions which most of them agreed to stand. About 12,000,000 men and women normally are employed in shops, factories and industrial plants of the United States. A review by the Federal Wage Board

Court joined. Justice McReynolds concurred only in the result.

The Court ruled that the appreciated value of the capital assets could not be construed as and added to "invested capital," and held that as such it must be considered and computed as profits of the concern, and therefore subject to taxation under the Excess Profits act. The decision disposed of the plea also made that the act was unconstitutional. The decision established a precedent which will involve the disposition of hundreds of millions of dollars' worth of invested capital.

DAVID H. BLAIR

*Of Winston-Salem, N. C., who has been Confirmed as Internal Revenue Commissioner*

showed that these were now averaging \$28.08 per week. A year ago the average was \$30.10, showing that the wage-cutting movement forced on employers by rising costs had reduced the average wage \$2.02.

#### INCREASED CAPITAL ASSETS TAXED

Through a decision of the United States Supreme Court on May 16, the contention of the Government that the increased value of any capital assets must be included in the profits of corporations when taxes are being computed was upheld. Justice Pitney handed down the decision, in which the

#### PROHIBITION ENFORCEMENT

Enforcement of prohibition received a hard blow on June 1, when the United States Supreme Court held in a unanimous decision that former internal revenue laws were supplanted by the Volstead law and that the old penalties of internal revenue taxation could not be applied in addition to the penalties under the Volstead act. It was admitted by the "dry" leaders that hereafter prosecutions would have to be brought entirely under the Volstead act, the penalties of which are not so severe as those in the old revenue laws. Under the Volstead act, liquor manufactured illegally can be taxed, but the old penalties for defrauding the Government of taxes on liquor must not be applied.

#### BERGDOLL PROPERTY SEIZED

All of the property of Grover C. Bergdoll, draft dodger and now a fugitive in Germany, was seized May 27 by Colonel Thomas W. Miller, Alien Property Custodian, under the Trading With the Enemy act, at the personal direction of President Harding. Bergdoll now stands in the eyes of the Government an "enemy without rights of American citizenship." To regain his property he must return to the United States and prove his ownership. Even then Congress must act before he can return. But the moment he sets foot on American soil and applies for his property he will be subject to arrest and must serve out his five years' sentence as a deserter, with possibly an added penalty because of his escape while ostensibly hunting for his buried "pot of gold." The value of the property seized was over \$800,000.

On June 10 Mrs. Emma C. Bergdoll, mother of the Bergdoll brothers, convicted slackers and army deserters, saved herself and four co-defendants charged with conspiracy to aid Grover C. and Erwin R. Bergdoll to evade army service from going to jail by paying \$23,000 in fines imposed by the United States District Court.

#### TULSA RACE RIOTS

A disastrous race war broke out in Tulsa, Okla., May 31, and resulted in 33 deaths, of which nine were those of white men. A negro named Rowland had been arrested, accused of attacking a white orphan girl. Rumors flew through the black belt that he was about to be lynched and several hundred negroes heavily armed assembled before the County Court House in which Rowland was held, with the avowed purpose of preventing a lynching by force of arms. The police attempted to disperse them and were met with a volley of shots. The whites began to assemble, hardware and sporting goods houses were looted of arms, and as soon as the dawn came the whites began an invasion of the negro quarter. Negro snipers maintained a harassing fire from windows and rooftops, but the whites drove them away and set fire to the houses in the section. Some thirty blocks of the district were in flames and few houses escaped. By night forces of the State militia, who had been summoned, gained control of the situation and the rioting came to an end. Martial law was proclaimed and a vigorous investigation of the matter was begun.

#### FLOODS OVERWHELM PUEBLO

Flood waters of the Arkansas River, suddenly swollen by a great cloudburst fifteen miles west of Pueblo, Col., swept into and through the city on June 3, causing a loss of at least seventy lives and property damage variously estimated at from \$10,000,000 to \$20,000,000. The entire business section was inundated to a depth of from three to eighteen feet, bridges were swept away and all connection with the outside world was broken. There were heart-rending scenes as mothers rushed frantically about looking for their children. Fire added to the horrors of the situation. Vandals sought to take advantage of conditions

and there was much looting, which was finally checked by Rangers, National Guardsmen and civilians who were recruited for rescue work and to maintain law and order. After twenty-four hours, the waters which had been augmented by the tribute from broken dams, began to recede and the stricken people commenced the work of reconstruction, aided by contributions of money and supplies that poured in upon them from all parts of the country.

#### DEATH OF CHIEF JUSTICE WHITE

The death, at the age of 75, of Chief Justice Edward Douglass White of the Supreme Court of the United States, on May 19, was a distinct loss to American jurisprudence. He had had a varied career as soldier, lawyer, legislator and jurist, and in each sphere had displayed eminent ability and won the honor and affection of his countrymen. He was born in Lafourche Parish, La., Nov. 3, 1845; received his education at Mount St. Mary's College, Maryland, and at the Jesuit College in New Orleans, and during the war served in the Confederate Army. Following the war, he studied law and was admitted to the Louisiana bar. He was State Senator in 1874, Associate Justice of the Supreme Court of Louisiana in 1878 and United States Senator from 1889 to 1894. In the latter year President Cleveland made him an Associate Justice of the United States Supreme Court. In 1910 President Taft appointed him Chief Justice of the Supreme Court, despite the fact that Justice White was a Democrat. He took part in many memorable decisions, and it was he who laid down the "rule of reason" in trust cases.

#### IMPORTANT NOMINATIONS

On May 17, President Harding sent to the Senate the nominations of Richard Washburn Child of Massachusetts to be Ambassador to Italy and Jacob Gould Schurman of New York to be Minister to China.

Mr. Child was born in Worcester, Mass., in 1881. He graduated from Harvard in 1903. In politics he has been an active Progressive. He was at one time editor of Collier's Weekly. During the war he was engaged in war finance work at Washington. He is widely known as a writer of books and a contributor to magazines of both stories and critical articles.

Dr. Schurman has been well known as President of Cornell University, from which he resigned in 1920. He served as President of the first Philippine Commission in 1899, and in 1912-13 he was Minister to Montenegro and Greece. He is prominent as an author and lecturer. He is 67 years old.

Attorney General Daugherty announced on May 19 that he had recommended the appointment of James M. Beck of New York as Solicitor General of the Department of Justice, to succeed William M. Frierson, the present incumbent. It was expected that he would assume his new duties July 1.

Mr. Beck has held public office before. He was appointed Assistant Attorney General by President McKinley and held the

same office under President Roosevelt. During the war he wrote an article entitled "In the Supreme Court of Civilization," in which he presented the case against Germany from a lawyer's standpoint. This was published in the January, 1915, issue of CURRENT HISTORY. Later on the article was published in book form under the title "The Evidence in the Case." It was translated into several languages and had a wide circulation abroad.

Following a debate in secret executive session that lasted more than four hours, the Senate on May 26 confirmed the nomination of David Blair of Winston-Salem, N. C., to be Commissioner of Internal Revenue. The vote was 59 to 15 in favor of confirmation.

## FOREIGN POLICY OF THE UNITED STATES

*The Washington Government's acceptance of the invitation to participate in interallied councils—Ambassador Harvey's address in London, explaining the American policy, gains world-wide attention—The Yap controversy*

MANY recent developments have tended to clarify the foreign policy of the United States Government. Foremost among these are the diplomatic exchanges with Japan concerning the Island of Yap, the acceptance of the allied invitation to send representatives to the Supreme Council, the Conference of Ambassadors and the Reparation Commission, and the address made by George Harvey, the Ambassador of the United States to Great Britain, at the Pilgrims' dinner in London.

The refusal of the United States to act as mediator in the matter of the German reparations had important repercussions on our foreign policy. The fact that the Washington Government had even considered taking any part in the matter was interpreted by the Allies as a departure from the former American attitude of aloofness, to which they had more or less resigned themselves after the Senate's failure to ratify the Treaty of Versailles. Hope was

reawakened of America's closer co-operation with the Allies in the readjustment of the world's affairs.

A formal invitation to this effect was extended to the United States Government on May 5 by Premier Lloyd George, as President of the Allied Conference. The following statement, embodying the invitation and the response of this Government, was made public by Secretary Hughes on May 6:

### DEPARTMENT OF STATE,

Washington, May 6, 1921.

The following message, addressed to the Government of the United States by the Right Hon. David Lloyd George, Prime Minister of Great Britain, as President of the Allied Conference now sitting in London, was delivered by the British Ambassador to the Secretary of State on May 5, 1921:

"As President of the Allied Conference, which is just completing its sittings in London, I am authorized, with the unanimous concurrence of all the powers here represented, to express to the United States Government our feeling that the settlement of the international difficulties in which the

world is still involved would be materially assisted by the co-operation of the United States; and I am, therefore, to inquire whether that Government is disposed to be represented in the future, as it was at an earlier date, at allied conferences, wherever they may meet, at the Ambassadors' Conference, which sits at Paris, and on the Reparations Commission.

"We are united in feeling that American cognizance of our proceedings and, where possible, American participation in them will be best facilitated by this."

The following reply of the Government of the United States to the above message was communicated by the Secretary of State to the British Ambassador on May 6, 1921:

"The Government of the United States has received through the British Ambassador the courteous communication in which you state that, with the unanimous concurrence of the powers represented at the Allied Conference in London, you are to inquire whether this Government is disposed to be represented in the future, as it was in the past, at allied conferences, at the Conference of Ambassadors in Paris and on the Reparations Commission.

"The Government of the United States, while maintaining the traditional policy of abstention from participation in matters of distinctly European concern, is deeply interested in the proper encouragements and in the just settlement of matters of world-wide importance which are under discussion in these conferences, and desires helpfully to co-operate in the deliberations upon these questions.

"George Harvey, appointed Ambassador to Great Britain, will be instructed on his arrival in England to take part as the representative of the President of the United States in the deliberations of the Supreme Council. The American Ambassador to France will be instructed to resume his place as unofficial observer on the Conference of Ambassadors, and Mr. Roland W. Boyden will be instructed to sit again in an unofficial capacity on the Reparation Commission.

"The Government of the United States notes with pleasure your expression of the belief of the representatives of the allied Governments assembled in London that American co-operation in the settlement of the great international questions growing out of the World War will be of material assistance."

Gratification was expressed by the allied press and in allied official circles over this decision, and when, later on, Ambassador Wallace and Mr. Boyden took their places as unofficial observers in the sessions respectively of Ambassadors and of the Reparation Commission, they received a cordial welcome.

#### CORRESPONDENCE ON YAP

The importance of the situation growing out of the controversy over the status of the former German Island of Yap in the North Pacific was emphasized by correspondence made public April 18 by Secretary of State Hughes. The documents given out included three American and two Japanese notes exchanged in the past six months. Their publication revealed that the determination with which each Government maintained its position was developing a situation of considerable tension between them.

The tone of some of the Japanese notes was curt and betrayed considerable feeling. They maintained that Japan regarded any exclusion of Yap from the Japanese mandate over North Pacific islands as a "question of grave concern to Japan," and one on which the Japanese delegation to the Peace Conference had "invariably maintained a firm attitude." They contended that as long ago as May 7, 1919, the Supreme Council of the Allies at Paris made a "final" decision to place the "whole" of the German islands north of the Equator under Japanese control, with "no reservations whatever" regarding Yap.

The United States Government was informed that "the Japanese Government would be unable to consent" to any proposition which, reversing the decision of the Supreme Council, would exclude Yap from the territory "committed to their charge." In very pointed fashion the Japanese Government called on the United States "to prove not merely the fact" that President Wilson and Secretary Lansing had made reservations concerning Yap, but also to prove that the Supreme Council had "decided in favor of such reservations."

Throughout the correspondence Japan endeavored to make the question of "fact" as to whether reservations had been made by President Wilson and Secretary Lansing a determinative one. The American stand, as revealed by the correspondence, was that the question of fact was a subordinate issue. This Government held that that question was settled, not only by the reservations claimed to have been made, but again specifically and unequivocally by President Wilson himself in his memorandum of March 3, 1921, to the State Department.

The United States therefore believed that the question of fact had been determined definitely and had no intention of entertaining any imputation of bad faith from any foreign Government. This matter, however, was brushed aside as of minor importance. The essential features of this letter appeared in May CURRENT HISTORY.

In his reply to the Japanese note of Feb. 26, Secretary Hughes laid down the fundamental principle that the right to dispose of Germany's former overseas possessions was acquired only through the victory of this country and the Allies, and that there could be no valid or effective disposition of the overseas possessions of Germany now under consideration "without the assent of the United States," which assent had never been given. This Government therefore "cannot recognize the allocation of the Island of Yap or the validity of the mandate to Japan."

It was announced at Washington on May 23 that the State Department had received a communication from the Japanese Government bearing on the Yap controversy. The text was not made public, but it was authoritatively stated that the officials of this Government were satisfied with the progress made toward a solution of the problem. The tone of the Japanese note was courteous, in marked contrast to some of its predecessors.

Statements have been issued by France and Italy indicating that they upheld the contention of the United States. The essential part of the French note was published in the May issue of CURRENT HISTORY.

#### AMBASSADOR HARVEY'S ADDRESS

George Harvey, the United States Ambassador to Great Britain, made a notable address on May 19 at a dinner given by the Pilgrims in London to welcome him to his new post. The part of his speech which attracted world-wide attention was this:

There still seems to linger in the minds of many here, as, indeed, of a few at home, the impression that in some way or other, by hook or by crook, unwittingly and surely unwillingly, the United States may be beguiled into the League of Nations. Now let me show you how utterly absurd any such notion is. I need not recall the long contest waged between the two branches of our Government over this proposal. I need hardly mention that the conflict became so sharp

that even the treaty went by the board, to the end that today, paradoxically enough, America continues to be technically at war, but actually at peace, while Europe is nominally at peace, but, according to all reports, not wholly free from the clash of arms.

Finally, as you know, the question of America's participation in the League came before the people and the people decided against it by a majority of 7,000,000 out of a total vote of 25,000,000. Prior to that election there had been much discussion of the real meaning of the word *mandate*. There has been little since a single example provided the definition. A majority of 7,000,000 clearly conveyed a mandate that could neither be misunderstood nor disregarded.

Anybody could see that it follows then inevitably and irresistibly that our present Government could not without betrayal of its creators and masters, and will not, I can assure you, have anything whatsoever to do with the League or with any commission or committee appointed by it or responsible to it, directly or indirectly, openly or furtively.

No disclaimer from President Harding or Secretary Hughes indicated that the Ambassador's views were other than those of the Administration.

#### NO INTERVENTION IN SILESIA

Through the Polish Minister in Washington, Prince Casimir Lubomirski, the Government of Poland on May 11 addressed a long communication to Secretary Hughes, reciting its arguments for the assigning of certain districts of Upper Silesia to Poland. Prince Lubomirski asked Secretary Hughes to instruct Ambassador Harvey, Ambassador Wallace and Mr. Boyden, the American representatives respectively in the allied Supreme Council, the Council of Ambassadors and the Reparation Commission, to "throw their influence in favor of the principles of justice, humanity and the rights of these masses of Polish workmen by settling the Upper Silesian problem strictly according to the Treaty of Versailles and the result of the plebiscite."

Secretary Hughes replied May 14 that the dispute was a matter "in which, in accord with the traditional policy of the United States," this Government should not become involved. Representatives of the United States in Europe have been instructed that, "as far as at present may be seen," they are to take no part in the discussions concerning Upper Silesia and "express no opinion" as to the settlement.

## DUTCH OIL FIELD NEGOTIATIONS

The State Department on May 12 made public a summary of the reply of the Netherlands Government to the latest note of Secretary Hughes insisting on equal rights for Americans in the development of oil concessions in the Dutch East Indies as a condition on which Dutch concerns would be allowed to participate in similar development of public lands in the United States.

The Dutch Government stated that when American Minister Phillips requested last January that United States companies be permitted to participate in the Djambi concessions, the law limiting this development to Dutch concerns, which since had been passed by the Second Chamber of the Dutch Parliament, already had been drafted and the question of its approval by Parliament settled. The American Minister, however, called attention to the fact that prior to the introduction of the bill he had made representations on the subject of American participation.

A statement was authorized by the State Department that equal opportunities for Americans in Dutch oil territory would be insisted upon and that, failing such equality accorded, exclusion of Dutch interests from the American oil fields would follow.

It was stated on May 31 that a new note was addressed by Secretary Hughes to the

Dutch Government embodying the foregoing views. The text was not made public.

## MONROE DOCTRINE REAFFIRMED

With fitting ceremonies the United States and the City of New York, on April 19, accepted Venezuela's gift of the statue of the South American liberator, General Simon Bolivar. The salient feature of the occasion was the declaration by President Harding, who made the unveiling address, that this country was willing to fight, if necessary, for the preservation of the Monroe Doctrine.

Speaking slowly, so that his words would gather emphasis, the President declared that much of the new world's accomplishments had been due to democracies. Then, after referring to the wilful misunderstanding of the Monroe Doctrine by older nations, he added:

"The history of the generations since that doctrine was proclaimed has proved that we never intended it selfishly; that we had no dreams of exploitation. On the other side, the history of the last decade certainly must have convinced all the world that we stand willing to fight, if necessary, to protect this continent and these sturdy young democracies from oppression and tyranny."

## THE PRESIDENT'S POWER OVER CABLES

CABLE landing permits are formally vested in the authority of the President, who has full power to grant or refuse access to the territory of the United States or its possessions by a bill finally passed by Congress on May 23. The bill was presented owing to a suit in the Supreme Court begun by the Western Union Telegraph Company to compel the authorities to permit landing of a cable from the Barbados at Miami, Fla. President Wilson had re-

fused to allow it because the company intended to connect with a British line having a monopoly of cable communication in Brazil; he objected to having an American concern linked with a monopoly, and President Harding followed his example. The Western Union brought suit in the Supreme Court, and the new law was enacted to remove any doubt of the President's power, its passage being in the nature of a race between legislation and a court decision.

VIEW OF JAFFA, PALESTINE, WITH THE BATTERY THAT FIRED THE SALUTE UPON THE ARRIVAL OF THE HIGH COMMISSIONER, SIR HERBERT SAMUEL

## A HISTORIC EVENT IN PALESTINE

BY ELIZABETH L. MCQUEEN

*An eyewitness description of the landing of Sir Herbert Samuel at Jaffa, and of the ceremonies that marked the moment when the Holy Land, so long under Moslem rule, passed under the civil sway of Great Britain through an allied mandate*

A SMALL gathering of people, furnished with special passes, witnessed the landing of Sir Herbert Samuel at Jaffa, Palestine, on June 30, 1920, to act as High Commissioner under the mandate exercised by Great Britain. The day was fine, typical of Palestine, hot and clear. The waterfront was beflagged, a carpet was laid from the landing along the beach, and a marquee had been spread on the shady side of the Custom House for the reception of the titled and distinguished Jew whom the British had sent to govern Palestine. The huddled old houses of Jaffa looked down from the hill upon the event, which bade fair to have a lasting effect on history.

It was my privilege to be one of the few witnesses of the High Commissioner's arrival. The situation at the time in Palestine was such that every military and police precaution had been taken to protect the new official, and the atmosphere was tense with expectancy, as there were many rumors afloat as to what the Arabs were going to do. The majority of them seemed to be unwilling to make any demonstration

of welcome, and were noticeably absent. Wild rumors that a plot was brewing to kill the new administrator were secretly whispered, but the military authorities knew the situation and how to handle it. For several days previous to the landing of Sir Herbert Samuel, airplanes manoeuvred over Jerusalem and Jaffa, keeping a watchful eye on the district; British military officers had been particularly busy, and several arrests had been made, which put a stop to secret plots.

On going down into the town of Jaffa on the morning of this important day, I found Indian cavalry stationed in the square in front of the Governor's House, and groups of notables awaiting their turn to proceed to the landing place to welcome Sir Herbert Samuel. I noticed particularly the patriarchal figure of a Jewish rabbi, made distinctive by a long white beard. The population of the little seaport was in holiday attire, and the streets were decorated here and there, but it would be an exaggeration to say that any special enthusiasm was being manifested, or that joy over this

event was at all general. In fact, there seemed to be a wet blanket dampening the spirits of the people. Everybody was more or less apprehensive; the Jews feared that something would happen to their new spokesman, and the Arabs feared that their liberties might be curtailed and their country taken from them. The prevailing state of mind was cleverly expressed by a person well versed in the political situation, who said that for the first month the new High Commissioner would need a body-guard to protect him against the Arabs, but that thereafter he would need a body-guard to protect him against the Jews. Those who knew him declared that he was 100 per cent. English, so that there could be no danger that equal rights would be sacrificed under his administration. Still, the outlook was not reassuring, and this was evidently the opinion of the crowd. Many Arabs, indeed, remained indoors to signify their disapproval of the whole proceeding.

Out upon the road leading to the beach I found other detachments of Indian cavalry guarding and clearing the streets. A battery of British guns clattered down to the beach and took up its position to fire the official welcome. The sea was like a mirror and of that exquisite blue which is characteristic of the Mediterranean. By contrast the yellow sands gleamed invitingly, and a gentle surf murmured up to the feet of the waiting soldiers. Peter, staying at the house of one Simon, the tanner, in this very place, somewhere among the houses overlooking the beach, could never have seen a fairer day than the one which greeted Sir Herbert Samuel. In fact, a few rods away, tanners were still busy at their trade, soaking the hides in the salt water as they must have done of old.

With swinging step the guard of honor marched to its position at the landing place, and all was attention for the expected arrival. The small harbor of Jaffa is closed to large ships

by a line of jagged rocks, so that passengers must reach their ships or the shore in rowboats. About 11 A. M. a British destroyer, gray and trim, came to anchor in the offing, and Colonel Rowland Storrs, Military Governor of Jerusalem, acting for General Bols, the retiring Chief Administrator of Palestine, was rowed out to the warship to greet the High Commissioner. Not long after, the barge bearing the New Administration was seen approaching the landing place through the narrow passage between the rocks. It was observed that Sir Herbert Samuel was dressed in white, and that he wore a purple scarf with a new decoration conferred upon him by the English King. A salute of guns was now fired by the man-of-war and the battery on the beach alternately, officially announcing the arrival. The guard of honor saluted, the band played "God Save the King," and airplanes flew overhead.

GERMAN HOSPICE ON THE MOUNT OF OLIVES, NEAR JERUSALEM, WITH THE BRITISH FLAG FLYING OVER IT FOR THE FIRST TIME. THE KAISER'S STATUE IS STILL IN THE NICHE ON THE RIGHT

A VENERABLE JEWISH RABBI, WITH INDIAN TROOPS, AWAITING THE ARRIVAL OF THE HIGH COMMISSIONER IN THE PUBLIC SQUARE AT JAFFA

(Times Wide World Photos)

SIR HERBERT SAMUEL

*High Commissioner for Palestine*

In the marquee the Mayor of Jaffa, Assem-el-Said, made the following address to his Excellency:

As President of the Jaffa Municipal Council, I beg to welcome you, and to express to you our congratulations on your safe arrival in the Holy Land. This country is in great need of a British High Commissioner, who will justly, firmly, thoroughly and ably investigate the conditions and the needs of the country in all respects. From the depths of our hearts, we desire that this town and country, with all its inhabitants, shall find happiness under the shield and protection of the British nation, the foundation of whose Governments throughout the world is based on justice, freedom and equality for all sects and denominations. May Almighty God help us all in our efforts to do what is right and peaceful. I beg to place this short address of welcome in a casket made in our beloved country, and I hope you will kindly accept it with our most profound respect.

The High Commissioner replied in appropriate terms. He then reviewed the guard of honor, and the notables of Palestine, who were present by invitation, were introduced to him by the Governor of Jerusalem. The Commissioner then walked toward the official motor car for the trip to Ludd en route to Jerusalem. At this moment Colonel Grey Donald, head of the Public Works of Palestine, took a small Union Jack from his pocket and fastened it to the front of the car. This seemingly insig-

nificant act was really momentous, for it was the first official display of the British flag in Palestine, although that country had been under a British military administration for more than two years. This as denoted that Great Britain had now assumed the mandate over Palestine—subject to formal confirmation by the League of Nations.

Escorted by Indian cavalry, the car now sped on its way toward Jerusalem, which was reached that afternoon, over a route which was changed several times from the original program to insure safety. At Ludd, Sir Herbert took a special train to Jerusalem, escorted by two airplanes. The arrival at Jerusalem was under the immediate supervision of the popular Assistant Administrator of Palestine, Colonel E. L. Popham, who was very active in all the reforms introduced by the military administration.

The new High Commissioner was met at the Jerusalem station at 3 P. M. by Colonel Popham and other officers and was introduced to members of the Jerusalem municipality. The Mayor, Nashashiby, delivered the following address:

This Holy City welcomes your Excellency, the High Commissioner, deputed by his Majesty the King of Great Britain, the greatest sovereign in the world, to represent his Majesty in the administration of this country and to bring happiness to its inhabitants, to mark the path of their progress and their prosperity, and to preserve the balance of equal justice among them, without distinction or difference. These are the aims of the Government of Great Britain in all the territories which she administers. We confidently look to the help of the British Nation, the Mother of Liberty and Peace, for the development and progress of the country. We pray the Almighty that your arrival may signify the commencement of a period of welfare and happiness. We note with pleasure the especial privileges with which the Almighty has endowed you; the capacity, cul-

ture and experience which have rendered you famous, and which are the marks of that high ability which your exalted office demands.

After the departure of Sir Herbert Samuel from Jaffa, the city again took up its daily habits as though nothing vital had occurred. The Arabs strolled down to the beach and sat on little stools drinking their coffee. The usual collection of little boys plunged into the bay and strings of orphans led by teachers marched to the water side for their daily bath. With the waning afternoon the camels brought their wares to the Custom House; a British officer rode his horse into the sea and then gave him a roll on the sand. A few fishermen were diving for sea food near the line of outer rocks, and some fishing boats returned to the beach with their day's catch. Distant sails were seen on the horizon and a glorious sunset with the serenity of the evening settled upon the Joppa of Bible times, which on this day, when the British mandate took effect in Palestine and the Union Jack flew for the first time in the Holy Land, had added a new page to its fame.

In looking back upon this experience in Jaffa, I recall the fact that I found only three Americans at this noted event, one of whom upon request sent out the official cable news of the addresses.

In the meantime, in Jerusalem, General Bols received the new High Commissioner at military headquarters on the Mount of Olives and then took his departure for England, followed by numerous other officials. The British military administration, with its notable victories, had ceased and was now replaced by a civil administration designed to carry out the Balfour resolution and to work out, if possible, through peaceful progress, the many problems confronting the Holy Land.

## THE NEW FIELD MUSEUM IN CHICAGO

THE new Field Museum on the Lake Front of Chicago, one of the handsomest of its kind in the world, was thrown open to the public on May 3, 1921. All the contents of the old Field Museum in Jackson Park, a relic of the World's Fair, were transported to their new habitat at the cost

of two years' hard labor, and an expense of between six and eight million dollars. The museum and its palatial quarters are a gift to Chicago made by the late Marshall Field. The old building in the former World's Fair grounds now becomes a recreation centre for the State of Illinois.

JERUSALEM'S NEW WATERWORKS, THIRTEEN MILES SOUTH OF THE CITY, WITH THE OLD RESERVOIR OF PONTIUS PILATE, BUILT IN THE TIME OF CHRIST. THE RESERVOIR HAS BEEN ENLARGED, AND VARIOUS SPRINGS IN THE DISTRICT NOW FILL IT CONSTANTLY WITH PURE WATER

## DRINKING FROM PONTIUS PILATE'S RESERVOIR

BY HAROLD J. SHEPSTONE

*How Jerusalem has been supplied with an abundance of pure water by British engineers who have applied modern science to cisterns and reservoirs of the time of Christ*

NOT the least of the blessings which the British occupation has conferred upon Palestine is the giving of an ample water supply to Jerusalem. Prior to this, the Holy City was dependent upon the local rainfall for its water. The rain was collected and stored in cisterns, many of which were situated under the houses or at the back of the premises. Water gathered during the rains on the flat roofs was conducted to the cisterns by pipes, and there stored until wanted.

Jeremiah speaks of these cisterns, when he represents the Lord as saying: "My people have committed two evils: they have forsaken Me, the fountain of living waters, and hewed them out cisterns, broken cisterns, that can hold no water." Many of these ancient cisterns were found by the British to be in a sad state of repair, and were breeding places of disease. The military authorities had them thoroughly renovated; some had not been cleaned for a hundred years and more.

But the cisterns were not sufficient to

supply the city's needs. So long as Jerusalem was under Turkish rule, the city suffered from the lack of a good water supply. Except for one small spring, the Virgin's Fount, so named because it is believed that it was here the Virgin washed her son's swaddling clothes, Jerusalem cannot boast of a single fountain. And even this spring is situated outside the city, in the Kedron Valley.

A year or two before the war, it is true, the Turks built a four-inch pipe which ran from the Pools of Solomon, south of Bethlehem, to the Temple area; but the water supply from this source was limited and for the most part reserved for the mosque. Even in King Solomon's days the want of water was felt, and he obtained his supplies from three reservoirs built in a valley below Bethlehem. From these pools water was brought to the city by an aqueduct.

Over and over again, engineers and others offered to repair these reservoirs and to build a modern pipe line, but the Turks rejected all proposals. Their excuse was either

the general unrest of the country, or the assertion that the conditions imposed made the scheme impracticable. The result was that Jerusalem, the largest and most important city in Palestine, was forced to depend upon the scanty rainfall.

Early in February, 1918, less than three months after the capture of Jerusalem, the Royal Engineers began to grapple with this problem. They went first to the Virgin's Fount and made an exhaustive study of this historic and interesting spring. It was found to be no ordinary intermittent spring, but rather a fountain of the character of a geyser, for the flow occurs from three to eight times a day, the output varying from 2,000 to 11,000 gallons at each spurt.

It will be recalled that it was from this spring that Hezekiah, over 2,600 years ago, conveyed water by means of a tunnel to the Pool of Siloam, famed in connection with the story of the healing of the man blind from birth. The British laid pipes from the spring, and water was pumped to tanks in the Valley of Jehoshaphat, near the northeastern corner of the city walls.

Although this was a great improvement, the supply was still found to be insufficient for the needs of the ever-growing city. An examination was then made of the Pools of Solomon, to the south of Bethlehem. In the end, however, it was decided to repair and use the old reservoir, now known as Birkett Arroub, lying a few miles south of Pools of Solomon. This reservoir was built by Pontius Pilate, and it was from here that he brought water to the city. History records how Pilate took money from the Temple treasury with which to construct a water supply.

Pilate's old reservoir has now been repaired and enlarged so that it has a capacity of 5,000,000 gallons. Galleries have been built in various directions to tap the numerous surrounding springs, including those of Ain der Dirweh, in which, it is alleged, Philip baptized the eunuch. A powerful pumping plant was installed, by which the water is now pumped to large reservoirs built on higher ground on the Hebron road, the water flowing from here by its own gravity in a one-foot iron pipe to twin pools on the hill west of the city, whence it is conducted to various standpipes in and around Jerusalem.

Pilate's aqueduct, ruins of which still dot the landscape, stretched for a distance of

forty miles, though as the crow flies the Holy City lies but thirteen miles away. This great extension was necessary in order to circumvent the intervening hills. The British pipe line, however, is but fifteen miles in total length. As one of the natives remarked to the engineer, it is driving a stream uphill. The home of the guardians of the water tanks stands on the very spot where the Turks surrendered the Holy City to the British on Dec. 9, 1917.

For the first time since the days of Solomon and of Pontius Pilate, Jerusalem now has an abundant supply of fresh water. What is more, the water is free. The only people who have complained are the water peddlers. Moreover, the death rate of the city has dropped by one-half.

In a like manner the water supply of the country towns and villages has been overhauled. Ancient Jericho now has pure water in abundance, brought by pipes from Elisha's Fountain, which lies to the west. Travelers journeying from Jerusalem to the Jordan and the Dead Sea are now assured of good drinking water in place of the fouled water that formerly came through the ditches by the roadside from the distant fountain. Elisha's Fountain is undoubtedly the source whose waters healed that prophet on his return from the memorable walk across the plain to and beyond the Jordan, which ended in his translation.

Beersheba, Palestine's most southern city, has also its own water supply, raised from one of its old wells, which was undoubtedly in existence in Abraham's time. Beersheba, in fact, means "seven wells," and they have all been identified, cleaned, repaired, and once more made to do service for man and beast.

No account of the organization of the water supply of this sacred land would be complete without a reference to the work of enclosing the pits or wells. Near every village may be found a pit, where water was caught and stored for use in the dry season. These were a real danger, as men and beasts often fell into them, sometimes with fatal results.

We read in Chronicles how Benaiah "slew a lion in the midst of a pit on a snowy day," and in the New Testament how Christ asked: "Which of you shall have an ass, or an ox, fallen into a pit, and will not straightway pull him out on the Sabbath

(Photo American Colony, Jerusalem)

(Photo American Colony, Jerusalem)

WHERE THE TURKS SURRENDERED JERUSALEM TO THE BRITISH, THE NATIVES NOW GO FOR UNLIMITED SUPPLIES OF PURE DRINKING WATER

day?" A few years ago an English medical man fell into an ancient cistern near Dothan, the mouth of which was concealed by snow. He was not hurt by the fall but the inside of the pit was as smooth as glass and it was impossible to climb out. Notwithstanding his cries for help, he was not discovered and rescued until he had spent two days and a night in the pit.

These water holes, unless on private property, are now protected and enclosed. At first the natives objected, declaring that

the pits had always been left open. With great diplomacy Colonel Storrs, the Military Governor, explained that it was no new command, and quoted Exodus xxi., 33-34, as proof: "And if a man shall open a pit, or if a man dig a pit and not cover it, and an ox or an ass fall therein, the owner of the pit shall make it good." The reasonableness of the order was admitted. All pits are now protected, and what was always a danger to both man and beast has been removed.

## FIGHTING THE TURKS AT AINTAB

BY DR. LORIN SHEPARD

*Story of the seventy days' siege of Aintab, as told by an American eyewitness—How the Armenians organized a strong defense that helped the French at last to defeat the Turkish Nationalists and prevent another wholesale massacre*

THE Turkish Nationalist movement, in its spirit, aims and personnel, is a direct heir of the Union and Progress Party, and has as its motto: "Turkey for the Turks alone." After the campaigns in Palestine by the British and Arabs, Turkey's military power was practically destroyed, and the Turks were ready to accept whatever terms the Allies might impose. The Peace Conference, however, occupied with weightier matters, kept putting off the Turkish settlement, and the old Union and Progress ring saw its opportunity to profit by the differences among the great powers. The Nationalist movement was organized for the avowed purpose of proving to Europe that Turkey was very much alive, and would not allow herself to be dismembered as a punishment for joining the Germans and for attempting annihilation of the Armenian race.

Mustapha Kemal Pasha and his satellites took it upon themselves to organize the necessary forces to bring about this result. The method of the organization was simple. Turkey is essentially a land of small villages, most of them owned by rich Beys. The plan was to arm all the men in all the villages, and instruct them to be ready at any time to respond to the call of some local leader, generally the son of one of the

Beys, or some famous outlaw or cutthroat of the region. In all places under foreign military occupation, such as Aintab, these preparations were carried out with the utmost secrecy. The arguments used to persuade the ignorant villagers to join such an organization were the old ones—the foreigner must be driven out, the Christian and Armenian exterminated—there would be abundant loot. The appeal to religious fanaticism was strengthened by wild tales of the evil intent of the occupying powers.

In personal conversations with Turkish villagers I learned that they had been told by Nationalist agents and firmly believed that the French had come with the sole purpose of ruining the country, killing the men, dishonoring the women, and that the cause of their coming was the Armenian, who always aimed to destroy the Turk. Thus, although the Nationalist program, as loudly proclaimed by Kemal at Angora, offered full protection and rights of citizenship to all races, the Nationalist movement, as organized in actual fact, menaced the very existence of the few Christians who had managed to escape the machinations of the Union and Progress gang during the war.

Early in the year 1920 the Nationalists apparently thought the time was ripe to

strike and show their power. The isolated position of some of the French garrisons in Cilicia and North Syria, combined with the inclemency of the Winter weather, was a factor in their favor. In January small groups of French troops going from Aintab to Marash—the next post to the north—were ambushed and killed. Fighting between Turks and French began in Marash on Jan. 19, and during the three weeks that elapsed before the French withdrawal two-fifths of the city was destroyed and 10,000 Armenians were butchered by the Turks. In Aintab the Turks tried to make the Armenians believe that nothing of the kind was intended, but indications to the contrary were not lacking, and a general movement of segregation began, the Armenians leaving the Turkish quarter and the Turks withdrawing to their part of town.

The actual state of affairs was clearly revealed to the Americans in Aintab by the murder of the Y. M. C. A. secretaries, Messrs. Perry and Johnson. These devoted workers were killed by Nationalists as they were coming by automobile from Killis to Aintab on Feb. 1. Strong representations were made to the Turkish authorities at Aintab, and the bodies were brought by them to Aintab, where we identified them. In order to explain away the murder, the Aintab officials sent out an investigating committee, which turned in a report, probably false, stating that the killing had been done by ordinary robbers, who in turn had been killed by Nationalists. I myself heard the statements in this report contradicted by two Nationalist chiefs, both of whom said the killing of the Americans was a "mistake." From the testimony of American wagon drivers, who overheard Turks talking in an inn on the road near the scene of the murders, we know that orders were sent out from Aintab, the day before, to kill all Christians traveling on that road and deliver their goods at the police station on the road.

#### HOW THE ARMENIANS FOUGHT

These and many similar events were sufficient incentive to the Armenians to prepare their defense, which proved to be one of the most interesting phases of the fighting at Aintab. A number of the Armenian

young men had had valuable experience. One had been a Lieutenant in the American Engineers, another in the English army in Palestine, and still another in Mesopotamia. Several others had been under-officers in the Turkish army. These men banded together and gathered around them all who had arms and were willing to fight. Plans were drawn for barricading the streets, and loopholes were secretly prepared in houses commanding the principal streets entering the Armenian quarter. Meanwhile the Turks, as we learned later from the testimony of one of them, were planning to catch the Christians unawares, to slaughter them wholesale, as had been done at Marash, to attack the French garrison, and to attempt to drive them out. Men had been designated to watch at the principal street corners, and when the signal was given, to kill all Christians returning from the Turkish quarter, where the markets are located. The Government also did all it could to prevent the segregation of the Christians and to promote a false sense of confidence among them.

The storm that had been brewing so long burst on the first day of April, 1920. A strong French column had fought its way to Aintab during the last week in March, and for a day or two the Turks thought their time had come; but, owing to the necessity for troops in other places, the column departed on April 1, leaving only a small garrison. Hardly had the column disappeared around the first turn in the road when shots were heard in the lower market, and in a few minutes our hospital and orphanage were filled with frightened people, fleeing to the Americans for protection. Before long wounded began coming in, and all that day we were in the operating room, trying to patch up as best we could the wicked work of knives and bullets. As the day wore on, it became evident that the Turks would not be able to enter the Armenian quarter, in the western end of which our American buildings were situated, by the main streets. But south of us they were strongly placed in a high minaret, about a hundred yards away, and from there the orphanage, just south of the hospital, and the hospital itself, sustained a very heavy rifle fire, in spite of the fact that the American flag

was clearly displayed on both buildings. One orphan was killed, another wounded, and two of the matrons were seriously wounded. Several of the Near East Relief workers had narrow escapes going from building to building, as every one who showed his head drew fire.

That night, however, we began to see the effects of the Armenian defense organization. During the darkness protecting walls of stone were built up wherever streets or windows were exposed to fire from the Turks, and so well was the work done that the next day, in spite of the continued rifle fire, not a single person was wounded. Within a short time the organization had grown into a regular city government. Most important among its departments, of course, was the military charged with the actual business of defense. There were very few rifles available, and little ammunition, but these difficulties were partly overcome in the arsenal, a place of intense activity, where the cleverest workmen of the city manufactured effective hand grenades, loaded cartridges, for which the powder and even the primers were made on the spot, repaired rifles, and, crowning achievement of all, put together a cannon named "The Revenge." This piece, when loaded up with plenty of powder, nails, doorknobs and iron balls from the looms, made a terrific racket, intimidating to the Turks, even if not very damaging. There was also a food commission, which took stock of all the food resources and superintended the distribution of rations. It was here that the Near East Relief came to the rescue most effectively. The heads of the three large orphanages and of the Rescue Home, who had in their care nearly 1,500 women and children, had provided supplies of food for six or eight months ahead. This large stock was made available for the use of the population and counted in with the total available supply of food. Later, when the orphans and rescued women were removed to Beirut through the assistance of the French army, the bulk of the food supply was turned over to the Armenians of the town.

In addition to the military and food commissions, there were created a police department, a health department, a housing commission, which had a very heavy prob-

lem on its hands, and even a court with the necessary complement of Judges. The whole organization was under the central committee, which acted as a sort of legislative assembly.

Thus organized, the Armenian defense carried on through 70 days of fighting. After the first few days the Turks became discouraged at their failure to penetrate the Armenian quarter, and tried to inveigle them into a truce in the hope of taking them unawares. When this failed they tried to burn the houses of the defenders, and their fire was skillfully turned against themselves. Finally they tried mining and blowing up the defenders' positions, and for days we were listening to excited tales of mines and counter mines. But through it all, the Armenians sustained few casualties, and did not lose a single position. Even when the Turks brought up artillery and pounded the Armenian houses, as well as the positions of the French, hope was not lost and the general morale was not broken. During this first period of fighting three large French convoys came to Aintab, bringing with them food to the garrison and a certain amount to the civilians, and taking away with them a large number of non-combatants. These included several thousand Armenian refugees, all the orphans cared for by the Americans and by Miss Frearson, an English lady who has had an orphanage in Aintab for many years, and many Aintab people who desired to seek a place of safety for their families. No one, however, was allowed to leave who was considered necessary for the defense.

#### A TRYING ARMISTICE PERIOD

At the end of May an armistice was arranged between the French and Mustapha Kemal's force, and hostilities at Aintab ceased for a time. By the terms of this agreement the French troops were withdrawn from the town proper, where a few small posts were placed, and were confined to the college buildings, half a mile to the west of the city. The Armenians were told that they were Turkish subjects, and that they must get along as best they could with the Turks whom they had been fighting for nearly two months. The French, however, promised to remain near the city, and to prevent a massacre of the Christians.

The Turks also had seen that the Armenians were determined to defend themselves, and had gained a wholesome respect for their ability to do it. Thus, for some time, the Turks, although taking pains to assert that they—not the Armenians—were in authority, were careful not to antagonize or frighten the Armenian element. It was a difficult period for the Christians of Aintab. They could not trust their recent enemies, the Turks, and they could not be sure the French would remain.

It would have been well for the Turks had they been content to wait quietly for the final adjustment of the peace terms, instead of beginning again to fight the French. But the individual interests of the so-called Nationalists demanded that disturbance continue. On July 28, therefore, they renewed hostilities. This time, however, they did not make the mistake of attacking the Armenians, but confined their attentions to the French. After a severe bombardment, they tried an infantry attack, which was repulsed with heavy losses. The French in turn bombarded the Turkish positions, one of the most important of which was in the Municipal Hospital, just west of our American buildings. The Armenians maintained an armed neutrality and waited. In spite of many opportunities to shoot Turkish soldiers, who were continually passing back and forth in front of their positions, the embattled Armenians never yielded to the desire for revenge.

#### LAST WEEKS OF SIEGE

This phase of the fighting was brought to an end by the arrival of a strong French column from the south on Aug. 11, and from this time till the Turks' surrender of the city in February, the French were masters of the military situation. The task of reducing the city, however, was not to be an easy one. Immediately on the arrival of the column, the town was completely surrounded, and an immediate surrender demanded. This was refused, and later we learned that although the people of the city were eager to give in and put a stop to the fighting, the Nationalist officers compelled them by force to pursue a policy of resistance. Unfortunately, it was impossible for the French at this time to assign enough men both to maintain the blockade of the town and to convoy the necessary supplies

of food and munitions, so that after a few days it became necessary to withdraw the northern part of the besieging ring. This enabled the Turks to bring in at night large supplies of food and ammunition.

The final phase of the investment of Aintab began on Nov. 20, when the arrival of large reinforcements made it possible to surround the city again. The siege continued nearly three months longer. During this period, the Turks made every effort to drive away the besiegers. They frequently outnumbered the French and brought up a considerable number of cannon, including fifteen centimeter pieces capable of great execution. Their bombardments, nevertheless, though very annoying at times, were never of great military importance. Their infantry attacks, moreover, were never formidable, and invariably broke down before accomplishing the desired result. The sole exception to this was in the month of May, when an isolated position held by Algerian troops was taken by storm after the French lieutenants in charge had been fatally wounded. Finally on Feb. 8, 1921, lack of food compelled the Turks to surrender the city.

The Turkish Nationalists undoubtedly brought to the defense of Aintab all the energy and organization they were capable of, and although their efforts failed, they attained the real object of the movement, namely, to create in Europe the impression that the Turks possessed great military resources and tremendous determination. This impression they are now using to good advantage in the attempt to secure more favorable terms of peace.

The Near East Relief played a most creditable rôle in Aintab throughout these troubled times. One of the greatest factors in its service was the moral support furnished the Armenians in their valiant self-defense. Besides this, food in large quantities was furnished the destitute; over \$30,000 of Near East Relief funds were used for this purpose alone. At the hospital, wounded of all classes received treatment. The sincerest expressions of appreciation for these Near East Relief activities have been received by the organization both from the civilian Armenian population and from the occupying French forces.

# THE COLORED FRENCH TROOPS IN GERMANY

BY J. ELLIS BARKER

*A British publicist's frank discussion of the alleged attacks of African soldiers on German women in the occupied Rhineland areas—Testimony of Maximilian Harden and of General Allen—Source of the widespread propaganda on the subject*

LAST year, at a time when Germany was being pressed for the payment of reparations, and when the surrender of arms was demanded from her, a great sensation was caused by her passionate denunciations of the black troops of France, which, we were told, had been guilty of the most horrible outrages, especially upon helpless white women. More recently the same charge was loudly repeated when Germany was trying to evade the present indemnity arrangement. Both in 1920 and in 1921 complaints about the bestiality of the French negro soldiers were made at a time when Germany hoped and asked for America's support against the claims of the Allies. The coincidence is very remarkable, and it is equally remarkable that during the first year and a half following the armistice no complaints were made about the misdeeds of the black soldiery.

It is often stated still that France, filled with implacable hatred, has deliberately quartered black troops on Germany in order to humiliate and wound the people. Are these accusations justified or not?

I happened to be in Germany in the early Summer of 1920, at the time when the outcry was at its loudest, and I spent nearly three weeks in the zone occupied by France. I did not see any evidence that France wished to humiliate the people. Such a policy would have been not only ungenerous but extremely unwise. France, as is well known, would like to obtain the German territories west of the Rhine, which are now occupied by French troops. As she did not receive these territories at the Peace Conference, as she had hoped, the French must give up their old ideal of making the Rhine their eastern frontier, an ideal which has inspired them for centuries,

unless they succeed in gaining the goodwill and the affection of the people on the Rhine. Far from wishing to outrage the inhabitants, the French are trying to reconcile them, to win them over and to bind the Rhenish Province to France with bonds of esteem and affection. The French are doing everything in their power toward that end. Both the civil and the military authorities are most careful and circumspect. Far from quartering their worst troops upon the Germans, they have sent to the Rhine their élite. Everywhere one meets only picked men and picked officers. I did not see in Germany any of those small, slouching and somewhat untidy soldiers whom one sees so often in France, and especially in Paris. The officers also seem to be high above the average.

As a matter of fact, both the French officers and the French soldiers made a far better impression, not only upon me, but also upon many of the inhabitants with whom I discussed the matter, than the German officers and soldiers whom they have replaced. The daily parades were witnessed by crowds of admiring Germans. In the hotels and restaurants, in the shops and in private families the French have become extremely popular, to the chagrin of the irreconcilable Germans of the Prussian type, and engagements and marriages between French soldiers and German girls have become very frequent. The Rhenish towns are beginning to look like a part of France. Everywhere one sees the bright French uniforms, and everywhere one hears French spoken. Many Germans, especially the girls, speak French in public, wear French clothes and pretend to be French. French banks, hotels and shops are springing up everywhere, and French books and

newspapers are bought in large quantities by the Germans.

As I had read some of the accusations made against the French soldiers in general and against the colored soldiers in particular, I kept my eyes open in order to discover evidences of French immorality. However, I found the attitude of the French troops irreproachable, and, notwithstanding all my inquiries, I did not receive a single complaint, but was told everywhere that the most rigorous discipline was enforced and that, as regards their attitude toward women, the French troops, including the colored contingent, compared favorably with the German troops. On the other hand, I received numerous complaints from Germans, and especially from elderly ladies, about the attitude of the German women and girls. I was told that not only girls of the lower classes, but even ladies belonging to the upper and middle class, both married and single, were shamelessly running after the French soldiers, and that the colored men seemed to have a particular attraction for them. All the restaurants and the benches in the parks were crowded with French soldiers and German women, to the intense indignation of the patriotic Germans, many of whom refused in disgust to enter a public park or a restaurant. In many cases I saw German girls, whose dress and fluent French indicated that they belonged to the better classes, make love to colored soldiers, and their advances bordered only too frequently upon the indecent.

Although Germans habitually denounce the immorality of the French, they have not much reason to boast of their own morality. Previous to the war Berlin was universally considered to be far more given over to vice than Paris. The morality of nations can be measured to some extent by the statistics relating to illegitimate births. In 1913, 183,976 illegitimate children were born in Germany. Of all the children 9.7 per cent. were born out of wedlock. Of late years the percentage of illegitimate births in Germany has been increasing steadily and rapidly, as follows:

Year	Per Cent.	Year	Per Cent.
1903.....	8.3	1911.....	9.2
1905.....	8.5	1913.....	9.7
1907.....	8.7	1915.....	11.2
1909.....	9.0		

The figures given show that of late years immorality has been rapidly increasing in Germany. The expansion of the illegitimate birth rate has taken place during a period of unexampled prosperity and during a time when the prevention of undesired births had become so widespread in Germany as to be generally discussed; proposals were made to stop the growing practice in the interests of the army, for it threatened to dry up the supply of recruits. Immorality and illegitimacy are particularly widespread in the great German towns and in the industrial districts. In 1913 23.6 per cent. of all the births in Berlin were illegitimate. During the same year the illegitimate birth rate of the Kingdom of Saxony stood at 16.3 per cent., in Bavaria the rate was 13.5 per cent., in Mecklenburg it stood at 14.9 per cent., in Hamburg at 14.6 per cent. One-fourth of all the children born in Berlin were illegitimate, and one-sixth of all the children born in Saxony. Looseness of morals prevailed in Germany previous to the war. During the struggle and during the years following it, immorality has fearfully increased in Germany and in other countries as well, for war destroys the bonds of discipline and continence. All over Germany I heard harrowing tales of immorality. However, while some Germans bewailed the looseness of present-day morals, others frankly approved of it, taking the view that Germany's loss in man power should be replaced as quickly as possible, and that it was a matter of indifference whether the coming generation was legitimately or illegitimately born.

#### MAXIMILIAN HARDEN'S VIEW

My impression that the French troops, both white and colored, were kept in strict order, and that the German women were chiefly to blame for their intimate relations with French colored soldiers, has been confirmed by reliable German and French evidence. The foremost German journalist is probably Maximilian Harden. He wrote in June, 1920, at the time when the outcry about outrages of the blacks on German women was particularly loud, in his journal, *Die Zukunft*, endeavoring to be strictly fair to France:

Clemenceau, Foch and Millerand have sent colored soldiers to Germany, not in order to humiliate Germany, but for other reasons.

France requires the arms of her sons for her agriculture and industry. If the French had sent 50,000 soldiers of their own to the Rhine the French Government would have been reproached for weakening the industry of the country by withdrawing from it 50,000 men and strengthening accordingly the industrial power of her enemy. Besides, it has been stated that certain regiments had threatened to revolt, should they be sent to Germany. For these reasons France has sent us negroes and soldiers from Morocco who during the war have preserved discipline in a remarkable manner. Besides, one must not mistake Moors and other north African tribes for negroes. The African negro type which one finds constantly displayed in the bitter cartoons of the German comic papers does not resemble in the slightest the type of the French Colonial soldiers. \* \* \*

Unfortunately we have seen the aberrations of the female sex every time when Hagenbeck [the German Barnum] has shown us tribes of natives. Everywhere the German women followed the black and yellow men and pestered them with love letters, flowers and presents. They were not repelled by their smell. On the contrary, they found in it a special stimulus, a special attraction. However, these natives were birds of passage. They were only too often ill-nourished and sickly. They were rarely men of fine physique. They compare unfavorably with the warriors whose jet black skin covers splendid muscles and who are clad in striking uniforms. \* \* \*

The French press has told us that society ladies have often shown a remarkable interest in the African soldiers. Every time when relations between German women and colored soldiers have had natural consequences which could not be explained away, the guilty woman has asserted that she was violated, that her misfortune was undeserved. However, it is well known that such violation is not as easy as some would believe.

Mr. Harden rightly draws attention to the fact that France sent to Germany colored soldiers rather from necessity than from choice. He is also correct in asking his readers to discriminate between African negroes and the brown soldiers belonging to the French Colonial Army. At the time when I was in Germany I saw a considerable number of brown soldiers but only a few blacks.

At present there are no negro troops on the Rhine. The last black regiments of France left the Rhenish province in the Spring of last year. These troops came from the Senegal and from the Soudan. The few negroes whom I saw were servants and invalids who took the waters, &c. The

colored troops of France quartered in Germany are mostly so lightly colored that one can easily mistake them for Southern Frenchmen. The great majority are Arabs -- Semites. They do not possess the characteristic thick lips and skull of the negro, but have a refined oval face, an aquiline nose, thin lips, and lack the woolly hair of the negro. Although these troops are well behaved, the French have greatly reduced their number in order not to wound German feelings. From May 1, 1919, to March 1, 1920, France had 35,000 colored troops in Germany. Their number was reduced in March, 1920, to 25,000, and on Jan. 30, 1921, to 20,000.

#### GERMAN WOMEN AT FAULT

Mr. Harden has stated that German women were chiefly responsible for the mingling of colored and white blood which has taken place on the Rhine. His accusation is justified. I was told that both the German police and the French authorities in the occupied districts found it very difficult to prevent the German women from pestering and pursuing the colored troops. In many cases the colored soldiers themselves complained to their officers about the shameless advances made to them by German women and frequently a military guard had to be called out to keep women from entering the barracks by the windows. General Henry T. Allen, commander of the American forces on the Rhine, stated in a report sent to the Secretary of State:

The attitude of certain classes of German women has been such as to incite trouble. On account of the very unsettled economic conditions, and for other causes growing out of the World War, prostitution is abnormally engaged in, and many German women of loose character have openly made advances to the colored soldiers, as evidenced by numerous love letters and photographs which are now on file in the official records and which have been sent by German women to colored French soldiers. Several cases have occurred of marriages of German women with French negro soldiers. One German girl of a first-class burgher family, her father a very high city functionary of a prominent city in the Rhineland, recently procured a passport to join her fiancé in Marseilles. He was a negro sergeant. Other negro soldiers have had French wives here, and the color line is not regarded either by the French or the Germans, as we regard it in America, to keep the white race pure.

At Ludwingshafen, when the seventh Tirailleurs left for Frankfurt, patrols had

to be sent out to drive away the German women from the barracks, where they were kissing the colored troops through the window gratings.

Ever since the time when I went to Germany I have received reports from the occupied zone, and I have heard nothing but praise for the French troops, both white and colored, from German inhabitants who can be relied upon. On the other hand, complaints about the immorality of the German women have been at least as great as they were a year ago, when I visited the country. Of course there have been individual crimes among the soldiers, and among these there have been crimes against morality, such as the violation of women. While nothing can excuse them, it must be stated that these crimes have only been few in numbers, and they were probably less numerous than they would have been if the country had been occupied by German troops. Crimes of immorality are unhappily exceedingly frequent in Germany. That may be seen from the criminal statistics of the country, and the German army has always been notorious for its assaults upon women. Previous to the war the country people dreaded the manoeuvres of the German army because cases of rape were exceedingly frequent, although the authorities tried their best to hush up the scandal. Many people sent their girls away when they heard that the soldiers were coming into their district.

Notwithstanding the enforcement of strict discipline the French and other troops quartered in Germany have committed a number of crimes. Desiring to make themselves popular by enforcing justice, the French have inflicted severe punishment upon all soldiers guilty of transgressing against the civil population. I have received the following official statement regarding the criminality of the French colored troops, which shows that crimes among colored soldiers were comparatively few:

Accusations brought for violation of women, crimes of violence, participation in broils, theft, etc.....	227
Number of cases in which accusations were found justified .....	72
Number of accusations, the justification of which was doubtful.....	96
Number of unjustified accusations.....	59
Total .....	227

It is noteworthy that among the seventy-two accusations which were found justified there were only nine for the violation of women. The number of French colored troops stationed in Germany was as follows:

Dec. 1, 1918, to May 1, 1919.....	10,000
May 1, 1919, to March 1, 1920.....	35,000
March 1, 1920, to June 1, 1920.....	25,000
June 1, 1920, to Jan. 30, 1921.....	20,000

If we multiply the number of French troops with the number of days they were in Germany we arrive at the figure 19,050,000. As shown in the official figures, only seventy-two accusations of colored troops were found to be justified, and of these only nine were in respect of violation of women. In accordance with the policy pursued by France, those found guilty were severely punished. At the same time it must be remembered that among the accusations of transgressions against the civil population, which numbered seventy-two, a considerable number were trivial and led only to the infliction of trivial punishments. According to the official statistics which I have received from the highest quarters, the following punishments were inflicted:

Punishments Imposed.	Colored Soldiers.
Penal servitude for life.....	1
More than 5 years' imprisonment.....	5
Less than 5 years' imprisonment.....	23
Disciplinary punishments .....	23
Trials pending or adjourned.....	20
Total .....	72

Of the nine men who were found guilty of violating women, five were condemned to more than five years' imprisonment and four to less than five years' imprisonment.

MANY FALSE CHARGES

Numerous idle and reckless accusations were brought against the French troops, partly by women who, owing to their own fault, had colored babies; partly by hysterical women or by women who wished to revenge themselves or to make mischief. Among the cases of alleged rape which had to be investigated by the French military authorities was that of an inmate of a brothel. In many cases the Germans have paraded cases, and even addressed complaints to the French authorities, without giving the names of the women who were

supposed to have been assaulted by French colored soldiers, without stating where the alleged assaults took place, without naming any witnesses, and without giving a description of the soldiers or of their uniforms, and inquiries for details on the part of the French authorities have remained unanswered.

An entire Senegalese brigade of French negroes was stationed for some considerable time at Worms and Mayence. They left Germany in June, 1920, and since that time no negro troops have been in Germany. During the whole time of their stay only a single complaint on account of crimes of violence was received, which, however, led to an acquittal. General Henry T. Allen, in his report to the Secretary of State on July 2, 1920, said:

A very violent newspaper campaign attacking the French Colonial troops, especially the negro troops, broke out simultaneously throughout Germany coincident with the time of the French evacuation of Frankfurt and Darmstadt, and has continued up to the present time. It is unquestionably a fact that many gross exaggerations were circulated in the German press concerning the conduct of the French Colonial troops. The allegations in the German press have been for the most part so indefinite as to time and place and circumstance as to leave it impracticable to verify the alleged facts or to disprove them.

After all proper allowance is made for the natural difficulties, which always are to be expected in tracing crimes of this nature, due to the shame and distress of the victims, the great mass of the articles in the German press, by the simultaneous appearance all over Germany, and by the failure to cite time, place and circumstance sufficiently in detail to enable the truth to be ascertained, give to an impartial observer the impression of an adroit political move which would tend to sow antipathy to France in the other lands of the allied and associated powers, especially in America, where the negro question is always capable of arousing feeling. \* \* \*

The wholesale atrocities by French negro Colonial troops alleged in the German press, such as the alleged abductions, followed by rape, mutilations, murder and concealment of the bodies of the victims, are false and intended for political propaganda.

A number of cases of the sort charged have occurred on the part of French negro Colonial troops in the Rhineland. These cases have been occasional and in restricted numbers, not general or widespread. The French military authorities have repressed them severely in most cases and have made a very serious effort to stamp the evil out.

The crimes, and especially the sexual crimes, of which the French colored troops were accused, were largely manufactured by the Germans in Berlin. The French discovered documents which make that point absolutely clear. The Berlin authorities no doubt hoped to cause trouble among the Allies and to divide them against one another, and their particular aim was to arouse the United States against the European powers by making use of the negro question. However, it must be doubted whether the idea came from the Germans themselves. Very possibly such a campaign was suggested to them by a non-German.

#### SOURCE OF THE PROPAGANDA

At the time when the outcry against the atrocities committed by the colored troops of France began, the world was startled by a pamphlet, "The Horror on the Rhine," by E. D. Morel, and a number of articles written by the same man, which appeared in the English and American press. Mr. Morel, who is habitually described by the German newspapers as a "patriotic and large-hearted Englishman," was born in France and is the son of a French father. He is a man of mystery, who, while claiming to be an idealist, has for many years pursued a policy which has been exceedingly harmful to the Anglo-Saxon powers and to France, and exceedingly useful to Germany. He is an effective writer and has specialized for many years on the negro question. Between 1902 and 1914 he has written an enormous number of books, pamphlets and newspaper articles on the atrocities committed in the Belgian Congo State, which separated German East Africa from the great Portuguese colony of Angola, in West Africa, adjoining German Southwest Africa.

For many years it had been Germany's aim to join her East and West African colonies, either by acquiring Rhodesia and Angola, or by obtaining the southern part of the Congo State, creating thus a connected African Empire stretching from one ocean to the other. Mr. Morel started a violent and continued agitation against the atrocities perpetrated by the Belgians on the Congo natives, an agitation which, however, was limited to England and to America. Not unnaturally the Belgians became alarmed, and, in view of the threats made

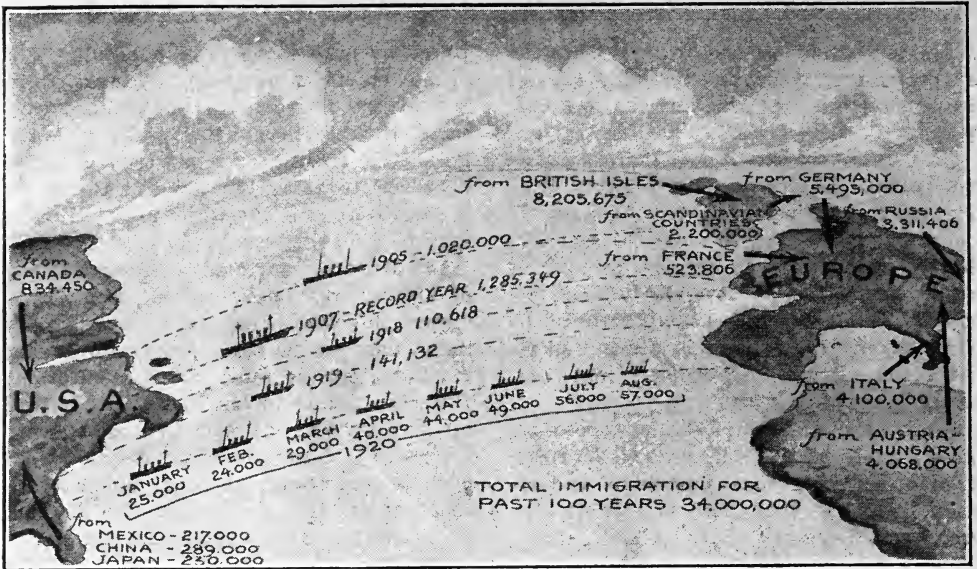

in England, they turned toward Germany for protection. Germany not only coveted the Congo State, but was anxious to secure Belgium's benevolent neutrality in case of a great European war. Mr. Morel's agitation caused Belgium to draw away from England and to incline toward Germany to the great benefit of the latter, and Mr. Morel's propaganda is largely responsible for the admiration of Germany and the distrust of England which were expressed by many leading Belgian diplomats in reports which the German Government published during the war.

During the difficulties which arose between France and Germany about Morocco, Mr. Morel wrote books, pamphlets and articles to prove that France was in the wrong and Germany in the right. Immediately after the outbreak of the World War he preached the necessity of concluding a peace by agreement without humiliating or weakening Germany. He stated unceasingly, making use of the British Socialist press, that the Allies were at least as guilty as Germany, that secret diplomacy had brought the war about, &c. Having in the past created various organizations which were likely to damage England and France, he created, or took part in creating, the Union of Democratic Control, which did the utmost mischief to the Allies during the war. However, he was careful to keep as much as possible in the background with a view to escaping legal punishment. During the war the British Government was exceedingly tolerant to cranks and others engaged in anti-national and treasonable agitation. Still, it had occasion to proceed against Mr. Morel for violating the war regulations, and he was condemned by the courts to six months' imprisonment.

Since the end of the war Mr. Morel has been busy proving that the Allies were at least as guilty as Germany, that the responsibility for the war falls principally upon the Allies; he has thus tried to undermine the Peace of Versailles, which is based upon Germany's war guilt. Besides, im-

pelled by pure idealism of a peculiar type, he has started a campaign in favor of giving to the negroes throughout the world complete freedom and the right of self-government and self-determination, and has endeavored to raise the negroes throughout the world against the white race. His aims may be gauged from his book, "The Black Man's Burden," and from numerous articles of his recently published. It seems by no means impossible that the German campaign against the colored troops of France emanated not so much from the Germans themselves as from Mr. Morel. He has certainly proved very useful to those Germans—and they form the large majority—who wish to free themselves from allied control, to disregard the stipulations of the Treaty of Versailles, and to escape the payment of reparations. The name of Morel is on every man's lips in Germany. In every bookshop there are stacks of his books and pamphlets "proving" the innocence of Germany and the wickedness of the Allies, and giving the most horrible details regarding the bestial crimes of the colored soldiers of France.

At first Germany's protests and complaints concerned only the negro soldiers. When the negro troops had been withdrawn, the same protests and complaints were made against non-negro troops—principally the light-colored Arabs from North Africa, who look like Southern Frenchmen. In addition there are in Germany a few thousand natives from Madagascar, whom the French call *Malgaches*, who are not negroes but Malays, and who have some resemblance to the Japanese. The propaganda against "The Horror on the Rhine" is purely artificial. Germany does everything in her power to nullify the Treaty of Peace, to hamper and exasperate France, to make Germany's occupation impossible, and if tomorrow all non-European troops were withdrawn the Germans would complain as loudly about atrocities perpetrated by white French troops in order to sow dissension between France and her Allies.

GRAPHIC CHART SHOWING EBB AND FLOW OF THE TIDE OF IMMIGRATION AT DIFFERENT PERIODS IN THE LAST FIFTEEN YEARS

## IMPORTANT FACTS REGARDING RECENT IMMIGRATION

BY DANIEL CHAUNCEY BREWER

*Under the new immigration law, which went into effect on June 3, 1921, only 77,206 immigrants will be allowed to enter the United States in the next year. The law limits the number to 3 per cent. of the total of each foreign nationality in the United States in 1910. From the day it went into force, the immigration authorities at American ports have been confronted with the problem of what to do with the thousands who arrive in excess of the quota allowed to each country. The necessity of deporting these disappointed pilgrims has raised anew the whole question of what is the wisest course to follow regarding immigration. Mr. Brewer's article is a constructive contribution to that subject.*

**A**LTHOUGH the new Administration has defined its immigration policy for the coming year, the major problems in this connection remain for the people to solve. To do this intelligently, they must have the facts. What have been the constituent elements of the nation in the past? What are they today, and how rapidly do they change? These are vital questions, the correct understanding and answering of which will lead to wise conclusions, give a basis for action and visualize for the inquirer the American people of 1931.

Up to the year 1820 or thereabouts, when the Government at Washington began to keep data regarding newcomers, the Republic was homogeneous. Certain of the original Thirteen Colonies had been settled by individuals from the Continent of Europe. Various races sprinkled along the Atlantic

seaboard had a part in the winning of independence, but the young nation as a whole, although it had broken loose from English suzerainty, spoke English and was more familiar with English customs and political standards than with those of other countries.

In the year 1850, or less than three-quarters of a century ago, in spite of a large Irish and German immigration, the conditions remained unchanged. The foreign-born were far outnumbered by the negroes of the South, and, if they did not speak English, were more or less familiar with American institutions. They were therefore readily assimilated.

The resurgence of business activity and enterprise that came with the years immediately succeeding the Civil War wrought no great alteration, although immigration

commenced to make its mark in industrial sections, and New York City took on a cosmopolitan complexion. The great West was offering homes, and people came to the United States to settle and throw in their lot with the young democracy. Statistics of these years show as many native persons of foreign parentage as foreign-born, but the larger part of this population was markedly American because of a fortunate environment.

In 1880, therefore, we were still homogeneous. That was only forty-odd years ago. Outside of the German stock, which had borne its part in the Civil War, only a few immigrants had reached the United States from the Continent of Europe. Naturalization went on rapidly and safely, because of an expressed love for democratic institutions.

The year 1880 marked an era in the history of the United States, and sharply defined the line between an immigration made up almost wholly of persons who came to stay and an influx of hosts of men responding to the calls of the great industries. Some of the latter class also expected to remain, but a large portion of them were and still are "job-seekers."

For more than thirty years, viz., from 1880 to 1914, this tide continued to sweep through our ports, appearing sometimes to be at its turn, because of the thousands going back to the land of their birth, and then swelling as these uncertain ones were drawn again by the magnet-call of the West. This ever-surging tide long since made us a heterogeneous people; and there are those who think that it may be causing other reactions, which are not to be discussed here.

The beginnings of the great change in the nation were, as has been stated, in or about the year 1880. At that time British and German immigration commenced to fall off; Scandinavian immigration, which followed the close of the Civil War, reached its height, and peoples in Eastern and Southern Europe, followed by recruits from Asia and Northern Africa, set their faces toward the New World.

The new currents seemed to be feeling their way at first. Italy, which up to

1877 had not contributed more than three or four thousand in any previous year, sent over 12,000 in 1880, and 30,000 in 1882. This was the vanguard of a racial group which in 1900 was shipping 100,000 a year.

Thirteen individuals entered the country in 1861 from Austria-Hungary. They were the first recorded visitors from the populous provinces of the Dual Empire. Each year thereafter brought consignments ranging from a few hundreds to a few thousands, until 1881, when nearly 28,000 Austro-Hungarians pioneered the real movement from that country to the United States. The year 1900 brought 114,000, and in 1904 over 200,000 Austro-Hungarians entered the United States.

Russian immigration moved along similar lines to that from Austria-Hungary. In 1880, some 7,191 subjects of the Czar are reported as entering our ports. That was the largest number coming in any one season up to that date. The year 1900 brought 90,787 Russians; in 1906, the Slavic influx leaped to 258,943. Analysis of the returns from Russia, as well as from Austria-Hungary, explains the presence in our industrial sections of great numbers of Jews, Poles, Bohemians and other racial groups.

#### HIGH MARK IN 1914

The above figures fairly illustrate the rapid increase in the numbers of newcomers from the three great countries referred to. Immigration from each was at its height when the war opened in 1914. In that year, 283,738 Italians, 278,152 Austro-Hungarians and 255,660 Russians entered this country.

Born under autocracies, knowing nothing of self-government, differing essentially in manners and customs, using tongues essentially different from the English, these people have strongly modified our American life by introducing problems for which the nation was totally unprepared.

No sooner had this exodus from European centres gotten well under way than its very momentum commenced to affect other nations and continents, so that, commencing with 1890, it became necessary for our immigration authorities to list outside of general and unassigned immigration the citizens of eight major countries, using languages totally different from each other—namely: China, Japan, Turkey, Greece, Bel-

gium, Portugal, Rumania and Mexico. Some of these nations are now represented in this Republic by more than 300,000 persons each.

The foregoing figures have been collated to illustrate the manner in which the population of the United States shifted from a status of homogeneity to one of heterogeneity. They should be informing, as they indicate the special strains of blood that are now found in our country.

#### THE EFFECT ON POPULATION

-The result of this recent immigration, taken together with the natural increase of the resident foreign white stock, becomes apparent from a glance at the following data:

In 1900 the whole population of the United States, excluding outlying possessions, was 75,994,575. Of this number 25,859,834 are recorded by the twelfth census as foreign stock, that is, foreign-born or of foreign parentage. In 1910 the whole population of the United States, excluding outlying possessions, was 91,972,266. Of this number 32,243,382 are recorded by the thirteenth census as foreign stock. This shows an increase of 24 7-10 per cent. in the so-called foreign population.

Returns for the fourteenth census are as yet unavailable to show the existing relation of the foreign stock to the whole population, but we know that immigration up to 1914 continued to be heavy, and we also know that though the war and subsequent conditions have sharply checked the present flow of humanity from east to west, it is a lack of shipping, not a lack of desire to emigrate, which has kept down the number of arrivals since the Fall of 1918.

It is interesting to note that although few persons are now reaching our ports from territories recently under Russian, German and Austrian control, immigration from Spanish-speaking countries, formerly nil, is becoming a decided factor in recent reports, and Mexicans have been pouring over the Rio Grande. This latter fact, taken in connection with the incoming of Orientals and persons arriving via Canada, must lead us shortly to think of immigration as something more than a tidal wave from Europe. In reality it resembles the inflow that comes over the edge of a bowl which is pressed below the surface of the water.

The fact should not be overlooked that a certain portion of our immigration is transient. Statisticians and publicists who deal with data affecting our population have been too often satisfied to refer to the last official Federal census. This has led these chroniclers, as well as those who rely upon their figures, to draw erroneous conclusions. It probably explains a failure to provide such regulatory laws as would save the nation from a thousand embarrassments. If such inquirers want all the facts, they cannot overlook the returns of the immigration authorities, and especially those which have to do with emigration, or the outgoing of aliens.

The census expert learns something of the number of foreign-born in the country at recurring ten-year periods, but he takes no account of the unregulated armies of aliens who have swarmed into our ports, taken up temporary residence among us (perhaps participating in industrial wars) and drifted out again when it suited their convenience.

Those who care to investigate this matter further will find that the reports of the Commissioner General of Immigration classify aliens under the following terms: (1) immigrant and emigrant; (2) non-immigrant and non-emigrant. "Immigrant" and "emigrant" relate to permanent arrivals and departures. "Non-immigrant" and "non-emigrant" relate to temporary arrivals and departures. Non-emigrant aliens were in excess of non-immigrant aliens from 1908 to 1917, but since 1918 there have been more temporary arrivals than temporary departures of aliens. The largest number of non-emigrant aliens in the years last referred to was recorded in 1914, when 330,467 left the country. The largest number of non-immigrant aliens for the same years was in 1913, when 229,335 such persons entered our ports.

In the thirteen years referred to, 1,967,012 aliens were at different times temporarily in the country, and 2,513,490 aliens, domiciled here, were traveling abroad. These facts disclose currents of influence moving through the alien population of the United States and the racial groups overseas. They are worthy of attention.

Let us now turn to the groups which have been characterized as "immigrant"

and "emigrant." Between the years 1908 and 1920 we received 8,312,037 aliens whose allegations indicated that they were coming here to stay, and bade farewell to 2,970,305 aliens who said they would not return. These figures indicate that one-third of all immigrants, who assert that they have come to stay, are never in the way of becoming absorbed, but are permitted to drift about among the partially assimilated racial groups without regulation or supervision.

DISTRIBUTION OF IMMIGRATION

Regarding immigrant distribution: Where have all the peoples gone who have entered our ports in the last fifty years, and how are they absorbed? For convenience, immigrants of the past may be divided into four classes:

1. The north and west of Europe group.
2. Farmers, traders and mechanics belonging to other white groups from Central, Eastern and Southern Europe.
3. Unskilled white labor.
4. Orientals.

The north and west of Europe group includes the English, Scotch and Irish, the Germans, the French-Canadians and the Scandinavians and neighboring peoples. Of these the English-speaking stock is widely distributed, has been readily amalgamated, and both in city and country is an important factor in American life. It is difficult to localize it. The Germans are in New York, Ohio, Wisconsin and Missouri. The French-Canadians are in the industrial centres of New England, and here and there along the border. The Scandinavians are in Minnesota and similar States of the Central Northwest, which are interested in farming and flour milling. While certain of these peoples cling to their own tongues, the whole group, which belongs to the earlier immigration, forms an important element of the fixed population, and gives no occasion for concern.

The second class designated, viz., farmers, traders and mechanics, will be found to come mostly from Central, Eastern and Southern Europe. It is made up of the Jews from Germany, Russia and pre-war Austria-Hungary; Greek and Italian fruit dealers, and small ware merchants of different nations; skilled laborers, whose talents are quickly utilized in the industries,

and who not infrequently make rapid progress; gardeners and farmers, like the Poles, who raise tobacco in the Connecticut Valley, the Portuguese of Cape Cod, and small agriculturists of other nations, who are found along the coast and near the great towns.

Varying in tastes, talents and accomplishments, these people are at one in seeking the cities or metropolitan neighborhoods. This limits them naturally to the New England, the Middle Atlantic and the East North-Central States. Many bring a little money with them into the country; others accumulate money by the thrift and industry required to make any headway in their callings. Such funds as they have or acquire are invested for profit, and, with the habit of independent planning, become an agency in hastening their assimilation. This group, therefore, like the one already treated, is readily absorbed.

UNSKILLED WHITE LABOR

The third division, made up of unskilled white labor, exceeds in number the classes already treated. It is apt to be illiterate and deficient in qualities which fit it to compete with the forces of American life. Although the incoming masses which make up this element appear to drift hither and thither, there is a trend of individuals toward centres which have been colonized by similar stock, and into industries which employ persons speaking the same tongue. As a result of such influences we find:

- |   |   |  |
|---|---|--|
| Italians,<br>Poles,<br>French-Canadians,<br>Lithuanians,<br>Greeks, | } | in New England, which is a centre for textiles, boots and shoes, machinery and metal working;  |
| Italians,<br>Austrians,<br>Russians,                                | } | in New York and New Jersey, which have diversified industries, including silk manufacture, clothing, copper products, foundry work, canning; |
| Russians,<br>Austro-Hungarians,                                     | } | in Pennsylvania and Illinois, which States, outside of their manufacturing interests, operate coal mines and make pig iron and steel;        |
| Bohemians,<br>Hungarians,<br>Slavs,                                 | } | in Ohio, Illinois, Michigan and adjacent States, which are engaged in manufacturing, copper mining, automobile building;                     |

Mexicans,  
Italians,  
Russians,  
Austrians,

} in Texas and California.

Although a reasonable percentage of the individuals belonging to this class of unskilled labor develop unsuspected powers, sometimes surprising their friends by the marked manner in which they grasp and utilize American ideas, the very great majority segregate themselves into colonies speaking their own language, and remain an undigested and dangerous element in the democracy. As has been seen, a considerable portion is in this country transiently. The remainder is absorbed slowly, and frequently presents aggregations of thousands of souls who, after ten years of residence, knew little English, and continue to follow customs and habits which are alien to the standards of the Republic.

There remains the fourth class, made up of Orientals. These are for the present segregated in the Pacific States, and, because of color and Asiatic origin, present a special problem, which will not be considered here. They are not among those who are readily assimilated.

#### CRIMINALITY AMONG IMMIGRANTS

In considering the locus of immigrant groups some attention has been given to the matter of absorption. It is to be regretted that the next question in importance, that which relates to the criminal record of these peoples, can only be superficially handled because of the inability of many thousands of non-English-speaking foreigners, who become the prey of criminals, to make convincing reports. Such facts as are collated by statisticians from police records are therefore incomplete, and cannot be made the basis for final and accurate conclusions in regard to the degree of criminality which should be assigned to different races.

The careful student must therefore await the opening of communications between the non-English-speaking populace and the mass of our people—a thing which is by no means impracticable of accomplishment. In the meantime we have statistics to indicate that the foreign-born and foreign-parentage population make a bad criminal return, compared to that made by native-born of native stock.

We know that the Italian people, perhaps because of temperament, show a high percentage of criminality; that the Irish and Russians have an unenviable record; and that the Germans are law-abiding. Professor Commons has made an important contribution to our knowledge by pointing out that the percentage of criminals among native-born persons of foreign parentage is far above that prevailing among the foreign born or persons of all-native stock; and we have the tabulations of Raymond Fosdick's valuable book on "American Police Systems" (recently published) to verify the current impression that the "American crime rate is greatly augmented by the presence of unassimilated or poorly-assimilated races."

What our people need now to consider is, that however bad an exhibit the foreign population makes in police records, it does not begin to reflect the real condition. The average alien lives in an Old World environment, in which he is open to impudent robbery, criminal intrigue, and exploitation. If he escapes these, it is only by good fortune. If he becomes a victim, there is no redress, because he is unacquainted with his rights, and, not knowing the English language, is unable to complain.

#### DISTRIBUTION BY STATES

It has been the purpose of this article to show the sources of immigration to the United States, the accelerated movement of the ever-increasing tide, and the distribution of the newcomers. The whole matter can hardly be dismissed without calling

State	Area, 1920	Whole Population, 1920	Foreign-born Parentage, 1920
Massachusetts ..	8,039	3,852,356	2,676,131
Rhode Island....	1,067	604,397	435,786
Connecticut .....	4,820	1,380,631	841,638
New York .....	47,654	10,384,829	7,182,721
New Jersey .....	7,514	3,155,900	1,683,762
Pennsylvania ...	44,832	8,720,017	3,864,454
Ohio .....	40,740	5,759,394	1,839,362
Indiana .....	36,045	2,930,390	543,925
Illinois .....	56,043	6,485,280	3,322,423
Michigan .....	57,480	3,668,412	1,781,633
Wisconsin .....	55,256	2,632,067	1,638,666
Minnesota .....	30,858	2,387,125	1,581,362
Iowa .....	55,586	2,404,021	948,376
		495,934	54,364,810
			28,340,239

attention to the fact that the great mass of immigrants is drawn to thirteen States of the Union. This directly interests the inhabitants of these Commonwealths, and, because of their political importance, indirectly affects the whole citizenry of the United States. Figures showing distribution among these thirteen States are given in the table at the foot of the opposite page. They are intended to show areas and populations, as given by the official 1920 census, and the estimated foreign-born and foreign-parentage population. This latter has been secured by collating data from the

Thirteenth Census and Immigration Reports.

A glance at the table shows that the foreign population of thirteen States, which comprise somewhat less than one-sixth of the total area of the United States (excluding Alaska), is more than one-quarter of the whole population of the country. The record also indicates that more than one-half of the population of the aforesaid thirteen States, which are the centres of the nation's industry, is foreign born or of foreign parentage. Here is food for reflection!

## CANADA'S ATTITUDE TOWARD IMMIGRATION

BY CHARLES W. STOKES

*The Dominion still wants agricultural immigrants, and aids them with loans, but the United States law restricting immigration complicates the whole problem—Signs that the European tide will seek to make Canada a gateway to the United States*

WHETHER or not the United States decides to prolong its new curb on immigration for two or three years, or forever, there is no sidestepping one thing—Canada will be very vitally affected. The United States is sometimes apt to think that it is the only nation in North America which participates in the vast annual movement of humanity, or that it alone has immigration problems. Canada, however, in the last ten years has received close to two and a half million immigrants—a small number, of course, compared to the million a year which the United States has received in some years, but a severer test when you remember that these two and a half million have had to be absorbed into a nine-million population. The United States, again, has never officially advertised its attractions in order to get immigrants; Canada has, for several years.

Whatever way the United States moves in regard to immigration, there will be a certain sympathetic reaction in Canada, for both nations have toward European problems an indefinable similarity of principle,

even if not always of conduct. But if the United States bars immigrants Canada must also bar them, for otherwise the human stream will merely be diverted in destination, and will find its way in at Montreal or St. John instead of at New York. The result would be disaster to Canada, in spite of her greater power of absorption, due to the thinner population. It does not want, and could not stand, the strain of adding a million a year to its population, even if they all were—which is impossible—immigrants of the only kind that Canada advertises for, namely, agricultural settlers, who are wanted to develop the vast idle lands of the Northwest.

So far Canada has been very fortunate in her immigrants. They have been drawn almost exclusively from the "Nordic" peoples (to use the up-to-date phraseology of the anti-immigrationist); the somewhat colder climate of Canada has repelled the Southern Europeans. Nearly 900,000 of the ten-year 2,500,000 were, for example, citizens of the United States, and about 800,000 were ex-residents of the British

ADAMS KING  
26 DWIGHT ST  
BOSTON

Isles. The next in order were Slavs—a very long way behind—followed by Germans and Scandinavians. Canada's last census revealed a foreign-born population of less than 11 per cent., as contrasted with the 15 per cent. of the United States.

But Canada keeps her statistics on a different basis from that of the United States. By "foreign born" she means "born outside the British Empire." Thus the Englishman, the Australian, the Maltese, the Hindu, the West Indian negro, is not foreign born, whereas the American, with a lineage going all the way back to New Amsterdam, is. To include British subjects born outside the Dominion of Canada would add another 11 per cent. to Canada's foreign born. This is Canada's peculiar immigration problem.

As a member of the British Empire Canada must always give a sentimental preference to British immigrants, especially those from the British Isles. In those isles the bulk of Canada's immigration expenditure has been made. But for several years it has been becoming daily more manifest that Great Britain can furnish the least quantity of the only class of immigrants which Canada needs—the agriculturists. The war demonstrated more forcibly than ever that Great Britain's agricultural population is so inadequate to produce enough foodstuffs that it would be politically unwise to reduce the number still further.

During and since the war agriculture has prospered in Great Britain, thereby eliminating one inducement to emigrate to a country where farming, though profitable, is still to some extent in the pioneer phase. During and since the war the proverbially underpaid British farm laborer has had his wages raised so much that the urge to emigrate from 10 shillings a week to \$60 a month has left him. Hence Canada's activities have been diverted from Great Britain to the United States, Holland, the Scandinavian countries, and, in a less degree, to Russia, where dissatisfied farmers are still to be found.

But Canada cannot prevent non-agricultural immigrants from the British Empire from seeking her shores, notwithstanding that economic conditions in the Dominion are at present almost as unsettled as those of the United States. She can discourage them by pointing to the unemployment and

the closed industries, and she can interpose certain barriers, but she cannot gainsay their right to move freely about within the British Empire. One barrier has been interposed in the form of a requirement that every non-agricultural immigrant landing in Canada must have, in addition to the railway fare to his destination, the sum of \$250; yet the Spring rush is already bringing immigrants in thousands by every boat. The British Government, at the close of the war, inaugurated an Imperial Settlement scheme whereby, under the pretense of taking his discharge in any overseas part of the British Empire, any British ex-service man could have his passage paid thither provided he were acceptable to the overseas country.

Another problem lies in the fact that the day of free land is well-nigh gone. Canadian immigration advertising was built up around the strong selling point that every able-bodied male of 18 years or over could homestead 160 acres of land in the Northwest free, upon agreeing to certain fairly easy settlement conditions. There is still a large block of this land left, but it is too remote from existing railways, and in any case the returned soldier of farming proclivities who desires to enjoy the rather generous assisted settlement scheme which the Canadian Government has projected has the first call on all homestead land. On the other hand, there are huge blocks of non-Government land for sale. In the three prairie provinces of the Northwest there are at least 30,000,000 acres of good, uncultivated land within fifteen miles of existing railways.

Canada needs population very badly. She has only about two and one-half persons to the square mile; the United States has thirty-four. Transcontinental railways have been overbuilt, and increased traffic is necessary to save them from bankruptcy; Canada has 230 persons to every mile of railway, while the United States has 400. But Canada does not want to admit the riff-raff of Southern Europe, to reproduce in her cities the east side of New York; she does not want to admit ex-enemies, or Orientals, or Hindus, or non-agriculturists.

"Unless the settlement of this country is going to be a very slow process," recently said the Hon. J. A. Calder, Canadian

Minister of Immigration, "there is only one real solution. With free land gone, the State must step in and make loans to competent farmers who lack capital."

This experiment has, in fact, been already tried by Canada in the soldier settlement scheme; it has also been tried by some Australasian countries, and by the Canadian Pacific Railway. Up to the end of 1915 New South Wales, Victoria, New Zealand and other Australian States had advanced nearly \$200,000,000 in loans to approved settlers without capital. The Canadian Pacific Railway, which is a large landowner in Western Canada, loans \$2,000 in improvements to settlers in its irrigation block in Alberta. But the most successful example is the Canadian Government's own soldier settlement scheme. This was initiated toward the end of the war as a means of palliating the anticipated economic distress by making it easy for the returned soldier to

get back to the land. It is notable because it was so ambitious, and because, out of the mirage of hot air and Utopian and saccharine-like visions that characterized the few months after the armistice, it has emerged as the only practicable and successful enterprise in the world.

By this scheme the Canadian ex-soldier (or practically any allied ex-soldier) who genuinely wants to go farming and has a reasonable chance of success is staked to everything by the Government—land, livestock and improvements—with free training, pay and subsistence allowance while training, all on the strength of a promise to pay everything back within twenty-five years. If he lives in Great Britain he can, while the imperial settlement scheme exists, obtain a free passage. Recent statistics show that 25,550 returned Canadian soldiers have been settled on the land, and that over \$80,000 in loans have been approved.

## HOW MALTA RECEIVED HER CONSTITUTION

THE greatest day in the history of the little Mediterranean island of Malta fell on April 30, 1921, when the British Governor, Lord Plumer, in the stately Hall of St. Michael and St. George in Valletta, read to the Maltese Council of State the Letters Patent granting the island self-government. The capital was gaily beflagged to celebrate the event. From an early hour the Palace Square was packed with cheering throngs. At 10 o'clock in the morning Lord Plumer entered the Council Hall with the Archbishop, Admiral de Robeck and Chief Justice Refalo. He read the Colonial Secretary's letter relative to the new Constitution, after which Lieutenant Governor Robertson, in alternation with the Chief Secretary, read the Letters Patent. This reading lasted until after midday. The ceremony was ended by Lord Plumer, who announced that the Letters Patent would come into force on May 16, and that the elections for the Legislature and Senate would be held as soon as possible.

A fanfare of trumpets from the Palace balcony announced the conclusion of the event to the waiting throngs in the square below; the guard gave a Royal salute, and the band played the national anthem. Inside the Palace the great hall was echoing

with wild shouts and plaudits for King George. The main features of the new Constitution are as follows:

Self-government regarding all local affairs, excluding the Army, the Navy and the Air Force, buildings, coinage and currency, naturalization, immigration, submarine cables, territorial waters and harbors. A local Senate and House of Representatives, elected on a basis of proportional representation. The Legislature to have power to alter the Constitution, except in matters of religious toleration and language. English, Italian and Maltese are to be the official languages. A special Imperial Maltese Government is constituted, to deal with all specifically Imperial interests.

The Letters Patent and the covering letter from the Colonial Secretary were accepted by the Council as a charter granting the Maltese all the essential rights and privileges of a free and independent people, while holding them within the framework of the British Empire. Among those who came forth from the Council Hall was a white-haired man, who was pointed out by the whispering populace as the Marquis Mattei. Over twenty years ago this venerable statesman seconded the Maltese patriot Savona's resolution for self-government for Malta; he is the only member of that council who has lived to see his hopes fulfilled.

# THE LIVING FLAME OF AMERICANISM

BY FRANKLIN K. LANE\*

*This inspiring address by the late Franklin K. Lane was delivered at Washington while he was Secretary of the Interior, just after the armistice and at the outset of the Americanization movement. His friends regard it as his greatest speech*

WE have made stintless sacrifices during this war; sacrifices of money, and blood sacrifices; sacrifices in our industries; sacrifices of time, and effort, and preferment, and prejudice. Much of that sacrifice shall be found vain if we do not prepare to draw to ourselves those later comers who are at once our opportunity and our responsibility—a responsibility which invokes and fortifies the noblest qualities of national character.

There is in every one of us, however educated and polished, a secret, selfish, arrogant ego, and there is in every one of us also a real nobility. In this war I could see that there came out immediately a finer man—a better self; that better self we must keep alive. We expect that man to seek out his immigrant neighbor and say, "I am your friend. Be mine as well. Let me share in the wisdom, and instruct me in the arts and crafts you have brought from other lands, and I shall help you to succeed here." There is no difficulty in this, if our attitude is right. Americanism is entirely an attitude of mind; it is the way we look at things that makes us Americans.

What is America? There is a physical America and there is a spiritual America. And they are so interwoven that you cannot tell where one ends and the other begins.

Some time ago I met a man who is one of the advisers of the President of China, and he told me of a novel suggestion which he thought might be adopted in that new republic—that they should have a qualifying examination for members of Congress; that every man who announced himself as a candidate should prove that he knew what his country was, who its people were, what resources it had, what its prospects were and what its relations with foreign countries had been.

If I could have my way I would say to the man in New York. "Come with me and

I will show you America," or I would say to the man in San Francisco, "Come with me and I will show you America." I would give to this man whom I wished to Americanize (after he had learned the language of this land) a knowledge of the physical America, not only to gain his admiration for its strength, for its resources, and for what it could do against the world, but to awaken his pride in this as a land of hope, as a land in which men had won out.

I would take this man across the continent. I would show him the 8,000,000 farms which went to feed Europe in her hour of need. I would take him out into Utah, and show him that mountain of copper they are tearing down at the rate of 38,000 tons per day. I would take him to the highest dam in the world, in Idaho, and I would let him see the water come tumbling down and being transformed into power, and that power being used to pump water again that spreads over the fields and makes great gardens out of what, ten years ago, was the driest of deserts.

I would take this man down South and I would show him some of its schools. I would take him up North and I would show him the cut-over lands of Wisconsin and Michigan, which are waste and idle. I would take him into New York and show him the slums and the tenements. I would show him the kind of sanitation that exists

---

\*Franklin K. Lane, former Secretary of the Interior, died after an operation in a hospital at Rochester, Minn., on May 18, 1921. He was born in 1864 on Prince Edward Island, but passed his early life in California, and was graduated from the University of California in 1886. He entered journalism and became editor of the Tacoma Daily News, but later took up law, was admitted to the California bar in 1889, and had become a national figure by 1895, when President Roosevelt appointed him to the Interstate Commerce Commission, a place which he held for eight years. In 1913 President Wilson chose him as Secretary of the Interior, and during his seven years in that position he was regarded with ever increasing esteem by the nation. The high ideals that shaped his character and his utterances were epitomized in his remark, made shortly before death, that he wished to live for the good he could do.

in some of our cities. I would show him the good and the bad. I would show him the struggle that we are making to improve the bad conditions. I would tell him, not that America is perfect, not that America is a finished country, but I would say to him, "America is an unfinished land. Its possibilities will never end, and your chance

(Harris &amp; Ewing)

FRANKLIN K. LANE

here, and the chances of your children, will always be in ratio to your zeal and ambition." I would tell him that we dare believe that America will ever remain unfinished; that no one can say when we shall have reclaimed all our lands, or found all our minerals, or made all our people as happy as they might be. But—I would add—out of our beneficent, political institutions, out of the warmth of our hearts, out of our yearning for higher intellectual accomplishment, there shall be ample space and means for the fulfillment of dreams, for further growth, for constant improvement. That is our ambition.

I would have that man see America from the reindeer ranches of Alaska to the Everglades of Florida. I would make him realize

that we have within our soil every raw product essential to the conduct of any industry. I would take him 3,000 miles from New York (where stands the greatest university in the world) to the second greatest university, where seventy years ago there was nothing but a deer pasture. I would try to show to him the great things that have been accomplished by the United States—250,000 miles of railroad, 240,000 schools and colleges, water powers, mines, furnaces, factories, the industrial life of America, the club life of America, the sports of America, the baseball game in all its glory.

And I would give to that man a knowledge of America that would make him ask the question, "How did this come to be?" And then he would discover that there was something more to our country than its material strength.

It has a history. It has a tradition. I would take that man to Plymouth Rock and I would ask, "What does that rock say to you?" I would take him down on the James River, to its ruined church, and I would ask, "What does that little church say to you?" And I would take him to Valley Forge, and point out the huts in which Washington's men lived, 3,000 of them struggling for the independence of our country. And I would ask, "What do they mean to you? What caused these colonists to suffer as they did—willingly?"

And then I would take him to the field of Gettysburg and lead him to the spot where Lincoln delivered his immortal address, and I would ask him, "What does that speech mean to you? Not how beautiful it is, but what word does it speak to your heart? How much of it do you believe?"

And then I would take him to Santiago de Cuba and I would ask, "What does that bay mean to you?" And I would take him over to the Philippines, where 10,000 native teachers every day teach 600,000 native children the English language, and I would bring him back from the Philippines to the Hawaiian Islands.

In Honolulu during the war a procession of school children passed before me and presented me with the flags of their countries. Every race was represented, from New Zealand clear along the whole western side of the Pacific. They laid at my feet twenty-six flags.

I went from there to Mauna Loa, where I

visited a school, a typical school, in which there were Filipinos, Javanese, Chinese, Japanese, Portuguese, Samoans, Australians, Americans, Koreans. I said to the pupils, "Can any one tell me why we are at war?" A little girl 13 years old, half Chinese and half Hawaiian, rose and said: "I think I can, sir." We were upon the side of the mountain, looking out over the Pacific, and the only communication with the civilized world was across that ocean. "We are in this war," the child said, "because we want to keep the seas free—because we want to help those who need help." And I have yet to hear a better answer given. I would show this man whom I wished to Americanize, finally, how these children, whether Japanese or American, no matter what their origin, stood every morning before the American flag, and raised their little hands, and pledged themselves to one language, one country, and one God.

And when I would bring him back to this country and say, "Grasp the meaning of what I have shown you and you will know then what Americanism is. It is not 110,000,000 people alone, it is 110,000,000 people who have lived through struggle, and who have arrived through struggle, and who have won through work." Let us never forget that!

There is a sentimentality which would make it appear that in some millennial day man will not work. If some such calamity ever blights us, then man will fail and fall back. God is wise. His first and His greatest gift to man was the obligation cast upon him to labor. When he was driven out of the Garden of Eden, it was the finest, the most helpful thing that could have happened to the race. For when man passed that gate, he met a world in chaos, a world that challenged his every resource; a world that, alike, beckoned him on and sought to daunt him, a world that said, "If you will think, if you will plan, if you can persist, then I will yield to you. If you are without fibre, if you are content with your ignorance, if you surrender to fear, if you succumb to doubt, I shall overwhelm you."

The march of civilization is the epic of man as a workingman, and that is the rea-

son why labor must always be held high. We have nothing previous that does not represent struggle. We have nothing of lasting value that does not represent determination. We have nothing admirable which does not represent self-sacrifice. We have no philosophy except the philosophy of confidence, of optimism, of faith in the righteousness of the contest we have made against nature.

We are to conquer this land in that spirit, and in that spirit we are to conquer other lands, for this our spirit is one that, like a living flame, goes abroad. Or I might compare it to some blessed wind—some soft, sweet wind that carries a benison across the Pacific and the Atlantic. We must keep alive in ourselves the thought that this spirit is Americanism—that it is robust, dauntless, kindly, hearty, fertile and irresistible, and that through it men win out against all adversity. That is what has made us great.

This spirit is sympathetic. It is compelling. It is revealing. It is, above all, just. The one peculiar quality in our institutions is, that not alone in our hearts, but out of our hearts, has grown a means by which man can acquire justice for himself.

That is the reason, my Russian friend, my Armenian friend, why this country is a home to you. Bring your music, bring your art, bring all your soulfulness, your ancient experience, to the melting pot, and let it enrich our mettle. We welcome every spiritual influence, every cultural urge, and in turn we want you to love America as we love it, because it is holy ground—because it serves the world.

Our boys went across the water—never let us hesitate to speak their glorious names in pride—our boys went across the water, because they were filled with the spirit that has made America; a spirit that meets challenge; a spirit that wants to help. Combine these two qualities and you have the essence of Americanism—a spirit symbolized by the Washington Monument; that clean, straight arm lifted to Heaven in eternal pledge that our land shall always be independent and free.

GILDED CONTAINER FOR THE GRAM OF RADIUM WHICH PRESIDENT HARDING PRESENTED TO MME. CURIE FOR THE WOMEN OF AMERICA. THE \$100,000 WORTH OF RADIUM IS IN THE TEN LITTLE GLASS TUBES, WHICH ARE SEEN IN THE TRAY, BUT WHICH ARE KEPT IN THE TEN HOLES IN THE HEAVY LEADEN CONTAINER AT THE LEFT, AND THE CONTAINER IS SECURED BY THE COMBINATION LOCK SHOWN ON THE RIGHT.

## HONORS FOR THE DISCOVERER OF RADIUM

**E**XTRAORDINARY honors, including degrees from many universities, were showered upon Mme. Marie Curie, the discoverer of radium, during the weeks of her visit to the United States. These tributes culminated in an impressive ceremony at the White House on May 20, 1921, when President Harding presented to the visitor a gram of radium purchased for her by American women at a cost of \$100,000. The radium—1,006 milligrams by careful measurement—was enclosed in a mahogany and lead container that weighed 110 pounds and cost \$2,700. The ceremony was attended by many distinguished diplomats and scientists. After M. Jusserand, the French Ambassador, had formally introduced Mme. Curie, President Harding said to her:

We greet you as foremost among scientists in the age of science, as leader among women in the generation which sees woman come tardily into her own. \* \* \* It has been your fortune, Mme. Curie, to accomplish an immortal work for humanity. We bring to you the meed of honor which is due to pre-eminence in science, scholarship, research and humanitarianism. But with it all we bring something more. We lay at your feet the testimony of that love which all the gen-

erations of men have been wont to bestow upon the noble woman, the unselfish wife, the devoted mother.

In testimony of the affection of the American people, of their confidence in your scientific work and of their earnest wish that your genius and energy may receive all encouragement to carry forward your efforts for the advance of science and conquest of disease, I have been commissioned to present to you these phials of radium. To you we owe our knowledge, and possession of it, and so to you we give it, confident that in your possession it will be the means further to unveil the fascinating secrets of nature, to widen the field of useful knowledge, to alleviate suffering among the children of man. It betokens the affection of one great people for another.

Mme. Curie replied briefly and felicitously, thanking the President and the American people—in the name of France and of her native Poland—for honoring her “as no woman had ever been honored in America before”; she accepted the gift, she said, “in the hope that I may make it serve mankind.”

Among later tributes paid to Mme. Curie was that of the American Museum of Natural History, New York, which elected her an honorary life member.

# THE WORLD'S HOUSING SHORTAGE

BY GUSTAVUS MYERS

*Why four million families are inadequately housed in the cities of the United States—The enormous increase of rents, and what is being done to correct the situation—A brief survey of the situation in England and continental Europe*

ONE of the most serious consequences of the World War is the housing situation in many countries. Some of the events of the war are gradually being relegated to the domain of memories, and the peoples of the world have become accustomed to some of the changes it wrought. But the housing shortage is present and acute, affecting not only nations that were in the war, but those that were not. Its magnitude is such that a period of intense application to the subject will be necessary before the populations of the various countries can be assured of adequate housing accommodations.

During the war the nations were wholly absorbed in the great conflict. Millions of men were withdrawn from industry and sent to the front, and vast numbers of others had to leave their normal occupations to work in industries essential to the prosecution of the war. The consequence was that operations which did not contribute to the war were almost suspended. The building of houses was practically at a standstill. A host of workers in the building trades either went into the national armies, or their skill was utilized in the construction of ships, especially in the United States, which had to improvise a great new merchant marine. The use of pneumatic drills and other modern apparatus made the process of turning house builders into shipbuilders fairly easy.

The effect upon housing in the United States became sharply noticeable after the war. For a number of years before the war, there were built in the United States, it is estimated, between 350,000 and 400,000 family dwellings every year, including private homes and apartment houses. The war swelled the populations of cities and towns. Many rural residents went there to work, attracted by the high wages in war industries, while numerous relatives

of those drafted into the army, not caring to stay alone in the country, sought quarters in the cities. When the soldiers returned from Europe, many, instead of going back to the country districts, stayed in the cities. Meanwhile the natural increase of resident population was going on. There was the greatest demand for housing, and rents precipitately rose, yet in 1919 only about 70,000 houses were built throughout the United States.

The extent of the housing shortage in this country may be judged from the results of recent investigations. In an article published this year in *The American Contractor*, containing an estimate based on building permit statistics for fourteen large cities, it was estimated that the accumulated deficit by the beginning of 1921 amounted to about 147 per cent. of the normal annual building program, and that, therefore, the United States faced a demand equivalent to a normal output of two and a half years. After a careful examination, John Ihlder, manager of the Civic Department of the United States of Commerce, reported to the National Council of that body early in 1921 that the nation needed 1,250,000 new homes, and that 4,000,000 families lacked adequate housing. The report declared that many families were forced to "double up" in a single house or apartment, or to take in lodgers, and that this condition, if continued, might have serious effects upon morals and the spread of infectious diseases. The report further pointed out that those most affected by the housing shortage were the wage earners and small-salaried professions.

In New York City alone, according to a careful survey made by Health Commissioner Royal S. Copeland from the records of the Tenement House Department, living accommodations are required for about

100,000 families. This is in addition to the normal growth of the city, which requires accommodations for about 30,000 families annually. In many other cities the demand for housing is proportionately urgent.

#### THE INCREASE IN RENTS

The housing shortage has caused rents to increase enormously. A recent compilation by the United States Department of Labor on the average cost of living in the United States, from 1913 to the end of 1920, based upon investigation in thirty-two cities, gives the percentages. Up to December, 1917, rents had not risen 3 per cent. over the 1913 figure. By the end of 1918 they had increased 9.2 per cent. over 1913. By June, 1919, the percentage was 14.2. In the next six months it rose to 25.3, and to 34.9 by June, 1920. By December, 1920, it was 51.1 per cent. over the 1913 figures, and was still rising. The table shows that while rents have been making deeper and deeper inroads into the average family's budget, the prices of food, clothing and other goods have been going down. During and immediately after the war, it was the high prices demanded for commodities and merchandise that most engaged public attention. But now it is high rents that are causing general concern.

In every city there have been notably large increases in rents. How these specifically have risen is shown by other tables of the United States Department of Labor on the costs of living as compared with 1914. Usually, the percentage of increase from that year to the end of 1917 was slight. In New York rents increased an average of nearly 36 per cent., and about the same in Philadelphia from December, 1917, to December, 1920. In the same period they rose more than 47 per cent. in Chicago, nearly 25 per cent. in Boston and 46.5 per cent. in Baltimore.

The increase in rents in Cincinnati before 1917 was negligible, but from the close of that year rents began rising and the increase was 25 per cent. by December, 1920. In Indianapolis the increase was only 1.6 per cent. before 1918; by December, 1920, it reached 32.9 per cent. Likewise in Minneapolis the rent increase by the end of 1920 was 36.8 per cent., practically all of which took place after 1918.

The same conditions applied to New Or-

leans, the rent increase of which from 1918 to 1920 was 39.7 per cent., and to Memphis, Tenn., where the rent increase in three years was 66.2 per cent. Before 1918 St. Louis' rent increase was less than 3 per cent., but by December, 1920, it reached 42.4 per cent. Kansas City had a small rent increase of 5.4 per cent. before 1918; by December, 1920, it rose to 63.9 per cent.

In a number of cities considerable rent increases were made both before and after 1918. Detroit, a highly industrial city, the population of which was suddenly swelled, had a rent increase of 32.6 per cent. from 1914 to the end of 1917, from which figure it went up to 108 per cent. in December, 1920. Washington, D. C., overflowing with an influx of persons assisting in war activities, had a rent increase of 24.9 per cent. before 1918; by December, 1920, rents had increased a total of 68 per cent. Cleveland's rent increase from 1914 to 1917 was 11.3 per cent., rising to 80 per cent. in December, 1920. Norfolk, Va., the shipbuilding activities of which brought a quick growth of population, had to face by December, 1920, a rent increase of 90.8 per cent., nearly all of which came after 1917. Portland, Ore., also a shipbuilding port, had a 22.2 per cent. rent increase before 1918, after which it rose to 36.9 per cent.

Buffalo's rent increase was 9.4 per cent. before 1918; it then rose to 48.5 per cent. by December, 1920. Atlanta's rent increase went up from 14 per cent. in December, 1918, to 73.1 per cent. in December, 1920; Birmingham's from 8.1 to 68.5, Pittsburgh's from 7.6 to 35, Denver's from 12.8 to 69.8, and Richmond, Va., from 1 to 25.9 per cent. in the same period. The two cities in the list having the lowest percentage of rent increases are San Francisco and Oakland, Cal., with a total rent increase from 1914 to December, 1920, of only 15 per cent., and Scranton, Pa., with a rent increase of 18.5 per cent. in the same period.

#### LAWS TO ENCOURAGE BUILDING

Rents are still mounting, even in the States where remedial laws have been passed. Legislation designed to stop rent profiteering does not prevent landlords from raising rents, if they can produce proof that their costs justify the increases.

To encourage home building, some Legislatures, such as those of New York and

New Jersey, have passed laws allowing cities to grant tax exemption for varying periods. The New York City ordinance exempts for ten years new buildings, the construction of which is begun before April 1, 1922, up to \$5,000 for a one-family house, and \$10,000 for a two-family house, or at a rate of \$1,000 per room, not to exceed \$5,000 per apartment, for multi-family houses. In New Jersey a five-year exemption from taxation is allowed. These measures are stimulating the building of moderate-priced homes and apartments. The President of the Borough of Manhattan published figures on May 1, 1921, showing that the building of apartments in the five boroughs of New York City had increased more than 450 per cent. since the tax-exemption ordinance went into effect, as compared with the same period a year ago. In various parts of the United States house-building operations are energetically going on. The Federal Reserve Bank of Dallas, Texas, for instance, reported in March, 1921, a 50 per cent. increase in building activity in that district, as compared with the previous month.

The contention of builders has been that of all the items of expense in house building the largest has been the cost of labor, which comprises more than two-thirds of the cost of building a house. Extreme labor union rules, they assert, have greatly added to this cost; for example, where a few years ago a brick mason laid from 1,500 to 2,000 bricks a day, he has in recent years laid only half that number, and at double the wages that he formerly received. On the other hand, the building trades unions say that they had to adopt their rules in self-defense against gross abuses by unscrupulous contractors. That combinations have existed to keep up the price of certain building materials was shown by the report of the Federal Trade Commission and by the recent investigation in New York City, which brought convictions in the criminal courts. Collusion between labor leaders and contractors, and the use of the strike by labor leaders to extort money from builders, was shown by investigations in New York and Chicago; in New York, early in April, Robert P. Brindell, long head of the Building Trades Council, was taken to Sing Sing Prison to serve a sentence of from five to

ten years for extorting \$5,000 for calling off a strike.

Recently, however, the prices of building materials have declined somewhat from the excessive point reached last year. In some cities, building trades labor unions refused to accept a reduction in wages, but in others, notably in Chicago, such reductions were favorably considered, showing that building trades unions were beginning to realize that if housing relief is to come they also must do their part.

Meanwhile, the United States Senate Committee on Reconstruction and Housing, of which William M. Calder of New York is Chairman, has reported ten recommendations urging the Government to take some action for the erection of homes throughout the country. Two of its proposals for legislation deal with the gathering of data on construction methods, costs and designs, and the regular publication of these facts by Government agencies. Another recommendation concerns the speedy transportation of building materials. Still others would allow the Federal Reserve Board to lend money on long-time loans for home building, would put in operation various other financial functions, and would permit a certain tax exemption in order to encourage home-building throughout the nation.

#### ENGLAND'S LACK OF HOUSES

In England the housing situation is acute, and is felt most severely by the working classes. In general, a laborer's house was one which, before the war, could be built with a fair return on the money invested at an annual rental of £20. Previous to the war, about 60,000 to 100,000 of these types of houses were annually built; the average yearly construction from 1900 to 1910 was 80,000. During the war the building of houses practically ceased. It was estimated that by the end of 1918 there was a shortage of from 300,000 to 400,000 working-class houses. During the war almost nothing was done to repair old houses or to efface slum buildings.

J. J. Clarke, in his book, "The Housing Problem," published in London in 1920, estimated that there were at least 70,000 houses virtually unfit for habitation, and a further 300,000 which were seriously defective. But people had to continue living in these until better quarters were provided.

About 3,000,000 people were living in overcrowded conditions, which meant more than two in a room. An investigation by the London County Council showed that, in the area covered by its inquiry, 758,000 people were living in the most congested conditions.

After the war private building operations in England were greatly impeded by prohibitive building costs. In March, 1919, the Government took action. A bill was passed giving new and wider powers to the Ministry of Health, and another act in December, 1919, still further increased these powers. Housing action by local authorities was made compulsory.

England and Wales were divided into eleven districts, each of which was given a Housing Commissioner responsible to the central staff of the Housing Department to work in co-operation with the local authorities. The local officials were required to make a survey of housing needs, and to submit to the Ministry of Health a scheme for meeting all or some of them. Building could be begun without waiting for the completion of the survey. Local authorities were ordered by the law to raise the money to carry out these projects. In small districts, however, where the taxable value was low, the Ministry of Health was empowered, under certain conditions, to make a loan for building purposes. Special subsidies were also offered to public utility societies, and direct grants to private persons building houses of approved types which would help in relieving the housing shortage.

No time was lost in establishing the administrative machinery to carry out these projects. Preliminary surveys showed the urgent need of at least 800,000 houses. Other estimates put the figure at 500,000 houses. In February, 1920, Dr. Addison, Minister of Health, estimated that if building labor were available, 100,000 houses might be completed by the end of 1920 and 200,000 in 1921.

These expectations, it turned out, were oversanguine. In answer to a question in the House of Commons on Oct. 20, 1920, Dr. Addison reported that only 10,042 houses had been completed; of these, 7,448 were provided by local authorities and public utility societies under the Housing act and the other 2,594 by private persons under the

subsidy scheme. In addition to these completed houses, there were under construction on Oct. 1, 1920, 59,520 houses, which were mostly being built by local authorities and private utility societies. The number of houses covered by signed contracts by the beginning of 1921 totaled 133,000. Tenders had been approved for 148,158 houses.

For these disappointing results different reasons have been given. There have been charges and countercharges of red tape, of holding up of supplies by profiteers, of restriction of output by workers, of trade union opposition to the open shop and other explanations. Of one thing there is no doubt: the ranks of the building workers were sadly shorn by the war. Figures show the war's havoc in reducing the number of bricklayers, joiners, masons and others. Sixty local guilds of building workers have, however, been formed sufficiently to bid for housing contracts.

Whatever the estimated housing needs of England, whether the conservative figure of 500,000 dwellings or the larger one of 800,000 dwellings is accepted, the fact remains that only a very small number, reported to be about 60,000, had been begun and about 12,000 completed by the end of 1920. Although further progress has been made in 1921, the housing shortage is still a huge problem. In some districts the people's dire needs have led to the seizure of unoccupied houses or public buildings, and in a number of sections the huts used by the army camps during the war have been used for temporary dwellings. A bill was recently introduced in Parliament authorizing the commandeering of unoccupied houses suitable for working-class dwellings and their use in relieving the emergency.

Scotland, with a population less than that of New York City, was confronted, after the war, with a shortage of about 150,000 houses. Popular solicitude over the situation resulted in mass meetings throughout the country. The outcome was that a Government Committee of Inquiry Into the High Cost of Building Working-Class Houses was appointed; the Scottish Board of Health gave its attention to the problem; and local official bodies pressed practical demands for remedial action. The consequence was the granting of State aid for housing. By the end of February, 1920, contracts had been let for the construction

of 19,137 houses to cost £17,968,966, or a little more than \$70,000,000 at current rates of exchange.

As in England, the concrete results in Scotland have been disappointing. A report of meetings of the Government Committee of Inquiry in Edinburgh, presented by J. L. Jack, Director of Housing under the Scotch Board of Health, declared that although land was cheaper than five years ago, the Government's aid project had inflated land values. It accused contractors in many instances of profiteering, and asserted that the cost of materials had increased 25 per cent. since 1919, giving specific facts to prove the charge. The report also said that labor was not giving adequate work, thus largely increasing construction costs. According to the report a survey by local authorities in December, 1920, indicated a shortage in Scotland of 131,000 houses, of which the local authorities proposed to provide 115,000. Mr. Jack reported that the local authorities' estimate of housing shortage was, in his opinion, too conservative. The Scottish people have been so aroused over housing conditions and so insistent upon a remedy that a Scottish Housing and Town Planning Congress was held in Edinburgh on April 19 and 20, 1921. One of its objects was to urge the Scottish Members of Parliament to carry out their pledges in obtaining full measures to relieve the housing shortage.

#### FRANCE AND OTHER COUNTRIES

Although Paris and some other French cities are overcrowded and rents have greatly increased, the problem of the French people is concerned first of all with restoring the districts so frightfully devastated by the Germans in the north of France. By February, 1921, more than 2,000 co-operative societies of reconstruction had been formed and were in active operation. Through the *Crédit National* the Government is assisting them by subventions and advances. Construction of houses for workmen has been facilitated by funds advanced to industrial enterprises and to various societies formed for the purpose of building model dwellings. In addition, special corporations have been authorized to construct such dwellings.

Holland is one of the countries which kept out of the war, yet it, too, has a pressing shortage. The demand for houses both

for workers and for the general public is so great that for the first time in its history Holland has consented to the erection of wooden houses. Hitherto, because of climatic conditions, the high cost of wood, and the traditional building policy of the authorities, practically all buildings for permanent occupancy have been constructed of brick, stone or concrete. The wooden houses now being built are for permanent use and are portable, so that they can be transferred from one industrial plant to another, as necessity requires. Each house is for a single family and costs about 3,300 florins, which is about \$1,800 at present exchange rates.

Switzerland, though not involved in the war, has been filled with political refugees who have added to its population. There the housing shortage has been such that rents have hugely increased and in many cases are now more than double what they were in 1914.

In all the larger cities of Hungary the need of more houses is urgent. Budapest is the greatest sufferer; its population is estimated to be 50 per cent. greater than before the war. Building construction was entirely stopped by the war and people have crowded into the city from the country districts. There has also been a great influx of people who left the territories of pre-war Hungary now occupied by Czechoslovaks, Rumanians and Jugoslavs. Since late in 1919 many of these refugees have been existing in freight cars standing on switches of the principal railway stations at Budapest and in many other parts of the country. Others of the homeless have been assigned quarters by the authorities, who have commandeered all space considered to be in excess of the requirements of the occupier. Recently it was announced that the Hungarian Government was to take measures for the construction of houses in the congested districts.

In Germany, it is estimated, fully 1,000,000 dwellings are desperately needed, but no building whatever is going on, largely because of the general lack of materials and their prohibitive cost when obtainable. The Housing Commission has requisitioned all unoccupied dwellings and assigned families to live in them. Rich occupants having more room in their mansions than

they need have been compelled to take in any lodgers that the Government sends.

Faced by a large deficiency in dwellings, Italy has enacted drastic rent restriction laws, effective until July 1, 1922. The increases of rent are restricted in the case of well-to-do tenants to 40 per cent., and are graduated on a scale that does not permit more than a 10 per cent. increase to working people. But, as an inducement to investors to build, these rent restrictions do not apply to new houses constructed within a certain period.

#### CANADA AND AUSTRALIA

Canada, too, is wrestling with the housing problem, which is occupying the attention of many of its cities. Winnipeg is an example of the large decrease in house construction before and after the war. During the two years before the war, 3,392 houses and 149 apartments were built. In the five years from 1915 to 1919, only 258 houses and 11 inferior apartments were constructed, and in 1920 only 262 houses and 11 small converted apartments were built in Winnipeg. In view of the house famine there and the sudden increase in rents, the Manitoba Council of Industry recently made an inquiry to determine whether there was any basis for the charge that the landlord was profiteering. It reported that costs including taxes had so increased that landlords were not receiving an excessive return upon their investment.

In Australia, according to a recent resolution of the Master Builders' Federal Convention, one of the main causes of the lack of dwellings is the scarcity and high cost of materials, due to the dislocation of industry and the lessened production resulting from

the war; other causes are the loss of mechanics killed or incapacitated during the war, leading to scarcity of labor; the lessened output due to shortening of hours and general decrease of efficiency and the moving of men out of industry into the agricultural regions. The convention recommended that vocational classes be made available for training unskilled men for the building trades. It further urged that the erection of other than residential buildings be limited. The State of Victoria, Australia, has been putting into effect comprehensive home-building plans for returned soldiers and sailors. The War Service Homes Commissioner has bought large areas and is having them laid out in accordance with the latest town planning ideas. In the city of Melbourne provision has been made for 1,115 dwellings.

In various parts of New Zealand the demand for workingmen's homes has far exceeded the supply. There, as elsewhere, costs of construction are high. In addition, there has been a scarcity of building materials, and private capital has been timid in making investments in private houses. To relieve the acute housing shortage the New Zealand Parliament recently appropriated \$3,742,900 for the building of workers' homes in different centres of the country during 1921.

Thus the available data on the subject show that the situation so acutely felt in the United States extends to the whole civilized world and amounts in the aggregate to a shortage of many millions of dwellings. It is evident that a long and trying period must intervene before the people of the various countries can again have anything like the number of homes they really need.

## THE WAR'S HARVEST OF THE UNBORN

THE world is now familiar enough with the statistics of life-loss during the war. It has remained for Dr. Richard P. Strong, a Professor of Tropical Medicine at the Harvard Medical School, to estimate the potential loss of life entailed in the untimely cutting off of the nations' manhood in its flower. According to the estimates of Dr. Strong, the loss in the world's population, both actual and potential,

reaches at a conservative estimate the staggering total of 43,000,000 people. It will take France—the chief sufferer—70 years to recover her former population, thinks Dr. Strong. He further estimates the direct financial cost of the struggle at the sum of \$84,000,000,000, and the cost to all nations together, directly or indirectly concerned, at the gigantic total of \$348,000,000,000.

# THE TREND OF DEMOCRACY IN EUROPE

BY FRANK BOHN, PH. D.

*How the pathway of democratic government has been blocked by the old ideals of kingship since the close of the World War—The political drift in Central Europe—Momentous importance of the ultimate decision of Germany and Russia*

**A**FTER the revolution in Central and Eastern Europe, the next event on the schedule is the counter-revolution. What are the plans, what the hopes of the exiled monarchs and aristocrats? What thoughts of loyalty and love for their deposed rulers still animate the minds of the common people in the revolutionary countries?

In April, 1915, I paused momentarily to join a crowd in one of the famous resident streets of Berlin. The crowd included perhaps a hundred people, workmen, tradespeople, common soldiers and servant girls. My doubt as to the motive for the gathering did not last long. The nearest house door swung open. A liveried lackey appeared upon the steps. An automobile drew up before the gate. At the door appeared one of the younger Princes of the House of Hohenzollern and his Princess. The men in the crowd uncovered. As royalty passed by, an awed whisper came from many lips: "God prosper you!"

The feeling here expressed was undeniably religious. In the mind of aristocrat and peasant alike, loyalty to the sovereign under the old régime has partaken of the nature of religious worship. All democratic revolutions in the last four centuries, the French Revolution not excepted, have begun with the overthrow in the individual mind of this deep-seated religious postulate. But Americans do not pause to reflect that the ancient way of thinking in this matter has been the norm. Our own attitude is exceptional, and has been but recently developed. Considered as biological evolution, modern democracy is still an adventure, to which human nature, generally, may or may not finally adjust itself.

There is only one first-class nation in the world which has made a purely republican

form of government succeed for more than half a century, and that is our own. The French Revolution itself has given France, after eighty-two years of monarchy mixed with turmoil, exactly fifty years of the Third Republic. In the whole of Europe, the mountain fastness of Switzerland, 16,000 square miles in extent, alone upholds the banner of a republicanism toward which there is turned no jealous monarchial eye. A consideration of these facts is disconcerting, to say the least, to the partisans of democracy universal. Thrones have toppled. The incumbents have been shaken off. But the thrones are still standing, and their late occupants are anxious to reassure power.

Constantine has already been returned to the throne amid the acclamations of the vast majority of the Greek people. Neither aristocracy nor property interests could have consummated this counter-revolution against the will of a popular majority. "Nevertheless, the people refused to obey the voice of Samuel; and they said, Nay; but we will have a King over us." (I. Samuel, viii., 19.) The Hebrews demanded a King despite the voice of Providence, and the Greeks have reinstated theirs contrary to the united demand of France, Britain and Italy.

During the last seven years democracy has been making its real birth struggle as a world force. Let it not be forgotten that from the Protestant Revolution until 1910 democracy evolved a social order only on the western fringes of Europe and in America. If we place before ourselves a map of the Eastern Hemisphere, we quickly see how insignificant were the areas recreated by the revolutions in England and France. The primary fact in the history of this last decade has been not the war, but the

revolutions which followed the war. Since 1910 revolution has burst forth from the Rhine to Kamchatka and from the Baltic to the China Sea. It is rending the British Empire in Ireland, Egypt and India. In each of these dependencies the fundamental appeal is being made in terms of democracy and republicanism. The Chinese revolution is, in itself, far too stupendous a fact to be comprehended, as yet, by the Western mind. Taken as a whole, this revolutionary event may well be considered by the future as the most important in the history of our age. But the mind of our Western world has been obsessed by war, and our activities have centred around the making of war and the making of peace. Meanwhile the immediate outcome of the revolutions has apparently ceased to interest the leading members of the Government of the United States. And yet it is a primary determining factor as regards the essentials of world civilization for all time to come.

#### IN HUNGARY AND AUSTRIA

What is the present political trend, either for democracy or away from it, in the recently arisen Central European States organized or reorganized as republics? In Greece, Hungary, Austria, Poland and Czechoslovakia—above all, in the new Germany?

Greece has chosen to return to monarchy, and the former King was able to regain his throne without a struggle. But what was so easy for Greece has proved at least temporarily impossible for Hungary; the future may have a different result to show. Hungary, more than any other revolutionary country in Europe, represents the logical outcome of failure and despair. The four years and four months of war, with the Hungarian conscience but half enlisted; the defeat, with territorial disruption and national isolation; a few months of a struggling, impossible democracy, and then Bolshevism for over four months; renewed war upon Rumania with a second defeat and the capture and sacking of Budapest—these disastrous events left but one thing to do—to return to tyranny. Such a return is exemplified by the present régime of Admiral Horthy.

The coup attempted by the late Emperor Charles in Hungary gives to the American public its first intimation of the realities

of monarchial reaction. The never-ending intrigues—the fishing in troubled waters; ceaseless preparation of local conditions by the monarchial elements; the constant throwing of the international politics of Europe into turmoil and confusion—all this is foreshadowed by the visit which Charles has made to the shrunken remains of the Hungary over which he once ruled. But this is not 1815. Charles is backed by no Holy Alliance. On the contrary, the members of the Little Entente, each of which has prospered territorially at the expense of Hungary, threatened to invade, and Charles withdrew. He has lost the first round. But he and his heirs will come again, and again, and still again. The people, if not the present Government of Hungary, desire the return of Charles. If the question were placed before the Hungarian people, with the ballot boxes open to all, Charles would today be elected, as was Constantine, by a comfortable majority.

The Hungarian peasantry has not been in the slightest degree revolutionary, though the Calvinist element quietly accepted the republic and would continue their support if others would furnish the initiative. The sturdy and powerful Hungarian junkers vie with their Prussian colleagues in clearness of purpose and striking power. How long will the Kings of Jugoslavia and Rumania be so agreeably disposed toward the Republic of Czechoslovakia that they will join hands with it against their brother monarch?

Republican prospects in Austria are much fairer than in Hungary, and for three reasons, one far from satisfying to the friends of democracy. The first lies in the nature of Austrian society. We have here an educated and intelligent peasantry, as the peasant populations of Europe go. The Austrians resemble not the Prussians, but the South Germans. The entire population was profoundly affected by 1848—much more so than the population of Prussia. The second reason lies in the present sad state of the Austrian people. They are starving and hopeless. If they are to live they must eat out of the hand of the great allied powers. The various Socialist elements are, temporarily, in complete domination of the Austrian Government, and are likely to remain so indefinitely. The Austrian junkers

correspond neither in power nor in point of view to those of Prussia or Hungary. Today their landed estates are being rapidly expropriated. Finally, the basic purpose of Austrian policy is and will be union with Germany, with which country their future is bound up. At present the Austrians want no Hapsburg in the way of their salvation.

#### DEMOCRACY IN POLAND

Monarchy in Poland brings sad memories to mind. The Polish Nation was disrupted and divided by Prussia, Austria and Russia in the eighteenth century, because the aristocracy could not agree upon the election of a King. There is no Polish royal house to furnish heirs to legitimacy. No doubt the mass of the Polish people, peasantry and urban dwellers alike, are still as unfitted for a successful democracy as the Prussians. Yet the national tendency will be to worry along. There is, of course, the recent example of the Balkan nations, Serbia, Rumania and Bulgaria, each of which in turn, as it was liberated from the thralldom of the Turk, selected a King and hastily assembled the trappings of royalty. If the Polish people should fail utterly in their democratic effort, it is conceivable that they might do as their neighbors have done. At present, however, Poland, by her strong alliance with France and her conclusion of peace with Soviet Russia, offers fair prospects of stability, and there are sound reasons for hoping that the Government's efforts toward economic reconstruction will complete the work of making Poland "safe for democracy."

In Czechoslovakia conditions are basically different from those of any other country of Central Europe. In each nation under discussion the question we have set before us must be reviewed in terms of history, both recent and remote. Bohemia was the "first fruits" of modern democracy in Europe. Seventy years before America was discovered, a generation following the rebellion of the bold Wat Tyler in England, democratic Bohemia was rising desperately against the banded tyrants of Church and State in Europe. Her good fight of that time, renewed during the Protestant Reformation and the Thirty Years' War, only to be lost again, has left in Czechoslovakia a profound tradition of democracy. Of all the republics east of the Rhine, that of Czecho-

slovakia has today the best chance of survival in its present form. In 1919 there was real danger of Bolshevism. The débâcle in Russia has now removed this threat. Barring foreign domination, the republican form of government may be considered as permanent here as in France or Switzerland.

So complex are the forces at work in Germany, so involved in foreign politics are all interior policies, that definite conclusions regarding that country are impossible at the present time. The mass of the peasantry in all parts of Germany would, no doubt, join the junkers in welcoming back the petty monarchs and the Kaiser. In East and West Prussia, the peasantry are as yet little removed from serfdom. The so-called German revolution of November, 1918, was in reality no revolution at all. As I wrote somewhat later, in *The New York Times*, the coup d'état of Nov. 9 was arranged for by the Imperial Government. Actual invasion by the Allies would no doubt have led to a real democratic uprising. The junker coup d'état, by which Ebert and Scheidemann remained, temporarily, the depositaries of power, was the most successful piece of political camouflage in the history of the world. "Peace with honor" meant that the internal situation could perhaps be saved.

#### AIMS OF GERMAN JUNKERS

Just what was it that the imperial power sought to keep through the period of defeat and political disintegration? The answer is simplicity itself. The junkers feared nothing so much as the forcible seizure and division of their landed estates. Before their very eyes, literally, and wandering from pillar to post, were the exiled and starving aristocrats of Russia. The Russian landed estates had been seized and parceled out during the Spring of 1918. The German junkers temporarily surrendered political power, but kept their estates. In this they were greatly aided by the Spartacist rebellion of January, 1919, headed by Liebknecht and Rosa Luxemburg. Landed property was never so valuable in Germany as it is today. Potatoes, grain and meat are at a premium. Compared with other elements of the German population, the junkers were never before so rich.

This, then, is not the time to talk about the junkers' sudden demise. Never before

was the world so full of revolution and counter-revolution. Changes are kaleidoscopic. The junkerdom coolly calculates that the whirligig of time must, of itself, bring it again into full possession of political power. It looks at the pigmies who lead the various elements of the German Socialist movement, and wonders how they can last from morning to night. The junkers are one of the most efficient and purposeful groups of men produced by the history of modern Europe. This class carries its self-esteem to the point of fanaticism. It will play any game and make or break any rules to serve its purpose.

#### THE GERMAN WORKING CLASS

What about the mind and purpose of the German working class? I have touched upon the fact that the peasantry is essentially undemocratic. In Brandenburg, Pomerania, and East and West Prussia, the Protestant peasantry still votes for the candidates of the junker party as it did in the time of Bismarck.

In South Germany, however, the peasantry forms the foundation of the Catholic Party, and the "Blacks" and the "Blues" are today estranged. The leaders of the Catholic Party have seemingly accepted the republic with faith and good-will. We can understand this when we reflect that the peasants of German-speaking Alsace, though Catholic, are politically French and republican. Catholic South Germany, like Alsace-Lorraine and the Rhineland, fell under the liberating influence of the French Revolution during the Napoleonic régime. Its peasantry, also, because of fundamental racial characteristics, is more like the French than the North Germans. North Germany is Nordic or Teutonic. South Germany, like Central and Eastern France, is Alpine (sometimes wrongly called Celtic) in racial stock. This fact has never been sufficiently emphasized in Central European history. The South German and Austrian peasants have never been militarized.

The Centrist Party, with the regular Social Democratic Party and the Democrats, forms the middle-class bulwark against the extremes of right and left. The recent election for the Prussian Assembly, like the national election of a year ago, furnished an indication of this tendency, which will go still further. The parties of

the middle class lost heavily both to the right and the left. We are driven to the conclusion that no party in Germany today can make the people accept fully the reparations program which France has demanded and succeeded in getting her allies to sanction. If a national election were held today, the parties of the middle would suffer further diminution of power. The tendency, more and more, is for South German peasantry and Rhenish province Catholic worker and small shopkeeper to turn in desperation, not to the junkers, but to the party of the great industrialists.

The Social Democratic rank and file, on the other hand, is being pulled apart and drawn toward the right and left. Similarly the Independents are being disintegrated and driven in two directions. A year ago we were calculating, because of the results in the national elections, that the Independents would absorb half the regulars. Time has changed all this. The Independent Socialist Party, broken in halves by the recent Communist crisis in its party congress, is now chaotic. The whole situation seethes, and the elements are being thrown hither and thither. While the majority Socialists lost thirty votes in the Prussian election of Feb. 20, the Independents gained a paltry five.

The recent communist rebellion, which suddenly flared up and as quickly died down, represents a deep underlying agitation. A few weeks before the outbreak a communist paper in Munich boldly appealed to the junker students of the universities to join with them and prepare for the day of the new liberation war of Germany against the Allies. Both the ruling Socialist bloc and the Independent Socialists, meanwhile, are battered about by exterior forces. Allied pressure of all sorts tends to embarrass any whose present or past action makes them responsible. While Bolshevism remains dominant in Russia, neither the Independent Socialists nor the German Communists can possibly settle upon a continuing internal policy.

The tragedy of middle-class power as represented by the present Government lies in the fact that, whether its enemies to the right and left unite or remain divided, the danger to the present order is almost equally great. During the recent communist rebellion the junkers hid from sight, and no

doubt cherished many secret hopes. Should another junker uprising occur like the Kapp "putsch" of last Spring, the Communists will not be nearly so ready to execute the present strike orders of the Government. Their tendency will be to wait and see the junkers temporarily seated in power, with the understanding that they will strike on their own initiative and for their own purposes.

#### THE INDUSTRIALIST GROUP

I have never been able to understand why the allied Governments—especially Great Britain under the leadership of Lloyd George—have not realized the possibility of bracing the present Government of Germany. This could be done through stimulating German industries, furnishing raw materials on credit and finding foreign markets. Of all possible Governments in Germany, the one which holds power at present, despite the midwifery attending its long-delayed birth, is most likely to maintain internal peace, develop toward a sound democracy, and pay the reparations bill recently agreed upon.

One phenomenon which will undoubtedly have its influence in that development, however, is the rise to power of the great German industrialists. It should be noted that war and the aftermath of war have made for the complete political disintegration of the lesser bourgeoisie, which, in the recent Prussian elections, sent only 26 members to the Assembly, as compared with 92 for the Centrists and 114 for the majority Socialists. The great industrialist group, however, is a horse of a totally different color. The stupendous forces which went into the making of the German imperialism of 1914 could never have been assembled or organized without the industrialists' willing help. From first to last the former Kaiser exerted himself to win the complete sympathy and support of this class. Its leaders were men to conjure with. Such were the Krupps and Albert Ballin, and, today, Hugo Stinnes. Despite all socialistic camouflage, this is the dominant class in Germany today. The total failure of the Socialist politicians to make even a beginning in the socialization of German industries has more than ever before thrown economic power into their hands. Since the armistice, the Government has not only refused to socialize new industries, but has steadily loosened its

hold upon all the important state-owned and state-managed industries of the pre-war period. Every failure of the Government in the economic sphere has meant the rise to greater authority of the "captain of industry." Germany is now rapidly developing a laissez-faire economic system. Supposedly, this is balanced by the shop councils. In reality, the shop councils in Germany are moribund, and are likely to remain so for a long time. The Rockefellers and Morgans of Germany are coming to dominate her political as well as her economic life.

If the 60,000,000 of German people are to eat and wear clothes, they must regain their foreign trade. Otherwise there is room in Germany for only 40,000,000, living at a low standard. The present wabbling and inefficient German State furnishes no effective direction. So actual power naturally gravitates to two classes, the junkers and the great industrialists, with the latter dominant.

The degree to which the military help of the junkers may be used depends upon the degree of unemployment and starvation which will make revolutions and counter-revolutions possible. Prophecies have little value, yet I may venture the suggestion that the junkers will wish, as before the war, to league themselves with the great industrialists. Under conditions of revolutionary threat, a very possible and efficient bloc could be made up of junkers, industrialists and the Catholic Party. Of 428 seats in the Prussian Assembly, these three parties, in the election of Feb. 20, won a total of 225. In a national election they would now do quite as well. A further drift of the Socialists to the left would drive the Centrists to the right.

#### CHANCES OF THE HOHENZOLLERNS

And yet, as regards Germany, I would say—and this, despite the statement of German friends for whose opinion I have very great regard, and despite all the facts above cited—that there is no real danger of the return of the Hohenzollerns and the lesser royalties to power. If the junkers still hold a large measure of power, it is because of the value and importance of their landed estates. Elsewhere they have lost. The economic system they built during their mighty past, under the leadership of Bismarck and Wilhelm—the régime of monar-

chial State socialism—is breaking down at every point. Meanwhile the masses of the people, in city and country, are being driven by the existing conditions to accept the leadership of those who, all agree, are best fitted to guide the wreck of Germany away from the rocks and the whirlpools. This suggests that the Government of Germany during the transition period will resolve itself into some form of oligarchy. Only time will tell.

Not only in Germany, but in every country of Central Europe and the Balkans the chances of democracy may be affected largely by conditions in Russia. He who conceives of Bolshevism primarily as an economic system has but a superficial view of the Bolshevist régime. Bolshevism may be compared, psychologically, to Mohammedanism. Barbaric and fanatical, Bolshevism is a reactionary phase of crowd psychology during the war and post-war periods. It has dominated Russia and permeated Central Europe as a result of the unutterable despair of a seemingly endless and terribly destructive war.

The hope of the Western democracies that the Russia of 1917 could find her way to a republican form of government was all too

soon dispelled. With the revolution of March, 1917, the small democratic group of European-trained democratic intellectuals tried to substitute themselves for the monarchy. The Bolshevist clique ruthlessly snatched power from them, and has held it ever since by simply murdering its opponents by the thousands. From 80 to 90 per cent. illiterate, resembling in all their mentality and mode of life more the people of China and India than those of Western Europe, the Russian masses now stoically await the coming of a kindlier rule. The final determination of Russia's form of government may have a far-reaching effect on the history of the new nations.

The hectic two and a half years which have followed the end of the World War have obstructed, but we hope not permanently, the way of democracy in Europe. Some of us thought in December, 1918, some of us still think today, that Europe cannot save herself. A truly democratic and comprehensive League of Nations alone could have brought freedom and order to her broken peoples within a reasonable time. Meanwhile, as the days and years pass, the exiled monarchs and the advocates of democracy alike sit without, buoyed up by hope, and watch the witches' caldron boil.

## JAPANESE "CULTURE" PEARLS

**J**EWELERS in London have been greatly perturbed over a new type of "culture" pearls, which is said to be so perfect that it cannot be distinguished from the natural article. Prominent pearl merchants met on May 5, 1921, to discuss measures of self-protection. The Japanese firm of K. Mikimoto, which has developed this business, explained through its London representatives that its founder had been experimenting with the artificial cultivation of pearls since 1879. The process developed by Mr. Mikimoto is exactly like the natural process: an irritant is introduced into the living oyster, causing the secretion of nacre, which gradually covers the foreign particle until it has grown into a symmetrical pearl. At first this semi-artificial product was more or less defective, but at last it has come to be so completely like a natural pearl that not even an expert can tell the difference. The process is thus described:

A tiny round core of mother of pearl is introduced into the liver of the oyster. The oysters are then "parked" in one of our seabed farms, and after some six years the shells are re-examined, and perfect pearls are found to have been produced, the only difference being that man, instead of nature, had introduced the irritant. It is quite impossible to tell the natural pearl from the cultured pearl, and the life and lustre of both are identical. Our contention is that in beauty and real value there is nothing to choose between the two varieties. \* \* \* Everybody in the trade knows that our pearls are cultured, and we sell them as such. \* \* \* It is, of course, quite impossible to trace their later history, and it is possible that their real origin may be lost sight of.

The dealers declared that they would find means to protect the legitimate trade. Some of them contended that the culture pearls had "a glassy, bluey look," and that nothing had been produced to give the appearance of the finest product, such as the Indian pearl.

# JUGOSLAVIA'S CONSTITUTIONAL PROBLEMS

BY DR. IVAN SCHVEGEL

Late Member of the Yugoslav Parliament, Belgrade

*Chief points of the basic law under which the new triple kingdom will soon be pursuing its career—Conflict of parties over certain features—Centralization versus Federation*

THE political and economic consolidation of the Kingdom of the Serbs, Croats and Slovenes is making fast and permanent progress. The crisis under which Europe is still suffering—and not Europe alone, but the whole world, including the countries not directly affected by the war—naturally also reacts upon Yugoslavia, and delays the settlement of many important questions, otherwise her progress would be even more apparent. But good observers will realize that incidents of secondary importance, though they may appear large for the moment, cannot have any considerable influence upon the national development of a great and rich country—with an area as large as Italy's—inhabited by 14,000,000 diligent and patriotic people, chiefly agricultural, and led by a progressive and far-sighted Government.

After the terrible devastation of Serbia and the great suffering and disorder in the other provinces, caused by the war, order and security have now been established. The new Constitution of the Yugoslav Kingdom now being framed by the Constituent Assembly will in a few months be a reality under the leadership of Serbia's veteran statesman, Nicola Pashitch. After a lifelong experience as a leader in his own Serbia, M. Pashitch has now shown marked ability and patience in dealing with the greater and more complex problems of united Yugoslavia.

Upon his return from the Peace Conference, where he headed the Yugoslav delegation, he again assumed the Presidency of the Belgrade Government after the last elections, and, for the purpose of securing the passage of the constitutional laws, managed to form a working majority of the two largest parties, the Radicals and the Democrats, to whom were later added the

Mohammedan Party and a fraction of the Farmers' Party, representing in all a bloc of 240 members.

There remain in the opposition the Communists, the Catholic Party, the Republicans, the National Club, the Raditch Party of Croatia—the latter controlling half the mandates from Croatia—the Socialists and the majority of the Farmers' Party. The latter two, however, though outside of the Government, are not expected to obstruct the Government policy, while the other opposition forces, opposing the Government each on its own special grounds, lack coherence, and cannot at this time form a general policy and Government of their own. Therein lies the strength of Mr. Pashitch's present combination.

The following is a short résumé of the eighty-six articles of the Constitution as submitted to Parliament by the Government:

The Kingdom of the Serbs, Croats and Slovenes is a constitutional, parliamentary, hereditary monarchy. The official language is the Serbo-Croat, and in Slovenia also the Slovenian dialect of that language. Laws and citizenship are uniform for the whole kingdom. Titles of nobility are abolished. Personal liberty, private property, freedom of conscience and worship, freedom of the press and of assemblage are guaranteed.

The legislative power is shared by the sovereign and the Parliament. The King appoints army and Government officers and represents the country in its relations with foreign countries. He declares war and concludes peace, but in cases where Yugoslavia is not actually attacked by another country the declaration of war is dependent on the consent of Parliament. The King convokes Parliament, and can also

dissolve it, in which case new elections must take place within three months. No act of the sovereign is valid without countersignature by the proper Minister. The King becomes of age at 18 years. The reigning dynasty is the house of Karageorgevitch.

Parliament, whose members enjoy personal immunity, was to consist of two houses, the House of Commons and the Senate; the former, with 300 members, to be chosen by general, equal and secret ballot, for a term of four years; every citizen who has reached the twenty-first year to have the right to vote, except officers and soldiers in active service. The Senate, according to the Government proposal, was intended to consist of 100 members, not less than 40 years old, with at least high school education. It could not be dissolved. Senators were to be elected for nine years, one-third every third year. Laws to be passed by the House of Commons and forwarded to the Senate, which would either accept or return them with counter-proposals. If the Commons refused to assent to changes by the Senate and the latter persisted in them, the law, after one month, would come up again before the lower house, and become valid if passed by a qualified majority. This procedure has become unnecessary by the fact recently reported in cable dispatches, that the Constituent Assembly in its final vote has decided to drop the entire Senate proposition and to adhere to the old Serbian principle of a single House (Skupshtina).

The executive powers are exercised by the King through the Ministerial Cabinet. For executive purposes the country is divided into provinces, districts and townships. The provinces shall not exceed thirty-five; they will enjoy considerable self-government in provincial assemblies and provincial committees, elected on the same principle as the central Parliament. The State Council will act as the highest administrative tribunal for settling conflicts between the various administrative authorities. Half of its members will be elected by the people, half named by the King. The obligation for military service and taxes is general. Taxes can be introduced only by law. A special chapter deals with the independence of courts and jurisdiction. Changes can be introduced into the Constitution only by a two-thirds majority of the Representatives in the Skupshtina.

This is the Constitution proposed by the Government as the result of the Radical-Democratic compromise; with some modifications it will probably be accepted. At least five other drafts, differing more or less, were submitted by the parties according to their political programs. The Farmers placed particular insistence on agrarian questions and reforms, while the Socialists demanded far-reaching social legislation. The Government met their requests by adding to the Constitution an entire chapter on social and economic regulations, which, to a great extent, only emphasizes and broadens its own proposals.

It remains to be seen if, in these days of changing reforms, a detailed social program should be introduced into a Constitution. Some points, however, will be of great importance; for instance, State workmen's insurance, obligatory intervention of the State to prevent or settle social conflicts, and the stipulation that whenever private property must be expropriated, this cannot be done without just compensation to the owner. This rule will help to promote order and safety and to secure our commercial and economic relations with foreign countries. A so-called Economic Council, composed of representatives of all producing elements of the country, will be created to propose, discuss and elaborate all economic legislation before it is presented to Parliament for final acceptance.

The most difficult part of the internal economic problems of Jugoslavia, as well as of other European countries, is the agrarian question, dealing with the partition and distribution of the large estates and privately owned forest lands, and compensation of the owners. In Czechoslovakia, for instance, it is intended that not more than 250 hectares of forest and 150 hectares of agricultural land shall be owned by one individual. [A hectare is equivalent to 2.47 acres.] The fact that the Yugoslav Mohammedan Party, representing the large proprietors of Bosnia, whose possession dates from the days of the Turkish conquest, has accepted membership in the same Cabinet with some of the small Farmers' partisans who advocate reform, is proof that a compromise of a similar character has also been arrived at in Jugoslavia. It is said that the Mohammedan Begs in Bos-

nia will receive a compensation of 250,000,000 crowns in return for the estates (begluk) which they will have to surrender. In other parts of the country this problem is less acute; in Serbia it does not exist at all.

Since I am myself materially interested in this matter I can speak of it only with caution, but it is safe to say that too radical a reform would not only be an injustice, but also an impossibility in a country like Yugoslavia, which still lacks intensive agricultural development and internal colonization. Complete reform can be achieved only in time, after careful study, with good organization and large financial means. All these are still wanting to the necessary extent. A compromise solution will therefore be enacted which will not completely satisfy anybody, but will divide dissatisfaction among all concerned.

The other objections to the proposed Constitution, based upon the differing party programs of the Republicans, the Raditch Party, the National Club of Croatia and the Catholic Party of Slovenia, exhibit a more fundamental difference from the Government's stand in what is really the main issue of the constitutional controversy, the question between centralization and federalism. They ask for the division of the country into autonomous provinces. The Republicans demand a plebiscite to decide the matter. The National Club proposes the establishment of the following provinces—on a historical rather than on a practical basis: Serbia and Macedonia, Croatia-Slavonia-Dalmatia, Bosnia-Herzegovina, Slovenia, Medjumurje, Istria, with Islands and Montenegro. They would give large legislative authority to the Provincial Legislatures, leaving to the Central Parliament only foreign affairs, currency, part of the finances, army, Post Offices and Federal administration. Schools and matters of public health, for instance, would go to the provinces.

Mr. Protitch, the former Prime Minister, who as a result of the difference of opinions resigned his seat in the Assembly, was prepared to make greater concessions to the autonomist program; and in his draft proposed nine provinces instead of the more

than thirty of the Government version. In a pamphlet recently issued he defends his policy on the grounds that too drastic changes are inadvisable and that, at least in the beginning, historical creations must be somewhat respected. To those who point to the centralist Constitution of Italy as an example, he answers that the Italian administration is the slowest and most bureaucratic in Europe; and that bureaucracy as the outcome of centralism weakens the best nation and destroys independent thinking. He draws attention to the example of England, where the limits of the historic counties have not been changed for 700 years.

The answer that might be made to the esteemed veteran statesman is that fundamental conditions in England, or even in the United States, are different from those governing the Constitution and safety of the countries of Central Europe, which are surrounded by hostile nations and naturally need a greater amount of centralism to protect them against aggression in peace or war and to insure their permanent prosperity. On the other hand, also the Democrats, as the most pronounced exponents of so-called centralism, admit that their policies cannot be ruthlessly carried into effect, and that centralized administration must be consistent with a large amount of self-government.

As a matter of fact, there is among the leading men less difference of opinion than of programs, and perhaps too much insistence on words and political theories. The common people know that the real character of a Constitution depends on its future working, on the men to whose care it will be entrusted and on the national spirit which not even the best laws can command.

In the course of time such differences, as today seem hardly surmountable, will fade away and lose practical interest in the eyes of a new generation, which will be confronted by hundreds of other pressing problems that will have to be solved by the Yugoslav Nation in the process of realizing that social, cultural and economic growth and unity for which its people have fought and suffered.

# BULGARIA'S CRIMES AGAINST SERBIA

*Why Serbians have no sympathy with the Bulgarian plea for easier treaty terms—Statement of a correspondent who witnessed the effects of Bulgarian occupation during the World War*

*To the Editor of Current History:*

THE plea for Bulgaria made by P. M. Mattheeff in the May issue of CURRENT HISTORY is correctly described in the headline as a "passionate" protest. This it certainly is, and in his case passion seems to have completely obscured reason. It is an example of special pleading, an appeal *pro domo sua*, which could not deceive any student of Balkan politics who had even an elementary knowledge of the facts.

M. Mattheeff's point of view is indicated in his opening sentence, in which he refers to Bulgaria as the State which "led" the other allies in the Balkan war of 1912. There was no question of leadership in that war. Greece and Serbia came into it as the allies and equals of Bulgaria, not as vassal States following a superior. Later developments, however, showed that Bulgaria intended to make them such, and it is curious that at this late hour the impression of Bulgaria's "leadership" should still persist in M. Mattheeff's mind. He seems to forget the fact that Bulgaria, far from "leading," was unable to finish up her share of the war on her own territory by the capture of Adrianople, until the Serbs sent down their heavy artillery to break the Turkish resistance.

If one were to adopt M. Mattheeff's point of view, one would regard the Bulgarians as a brave and loyal people, led astray by their wicked King and forced by him to oppose the Allies in the World War. This is the argument employed *ad nauseam* by the Bulgarians and their supporters in other countries.

But what are the facts? To obtain these we must examine Bulgaria's record. This begins with the treason of 1913. In 1912 the Balkan States achieved what had long been regarded as impossible—the formation of a league against the common enemy,

Turkey. In September of that year they mobilized their forces and declared war on the Sultan. By May, 1913, they had won a complete victory. Turkey was practically driven out of the Balkans, the allies seizing all her territory right up to Tchataldja, a few short miles from Constantinople.

This success was not received with unmixed satisfaction by all the great powers. Germany and Austria saw their dream of the domination of the Balkans shattered by the interposition of a Confederation of Balkan States. They saw that it would have to be broken up. They at once began to intrigue, to sow dissension among the Balkan allies by awakening appetites and desires which could be realized only at the expense of the common peace.

They found a favorable terrain at Sofia. The Bulgarian nation, intoxicated by its victory, lent a willing ear to the insidious counsels of the Ballplatz, and put forward excessive claims for territorial concessions in the conquered Turkish Provinces. These were resisted by the Serbs, who took their stand on the Serbo-Bulgarian Treaty of Alliance, in which the main principles of the division of the conquered territory had already been laid down. It was further provided in that treaty that in case of disagreement the points in dispute should be submitted to the arbitration of the Czar of Russia, whose decision both sides agreed to accept.

## BETRAYAL OF HER ALLIES

It soon became clear that Bulgaria had no intention of fulfilling this part of her treaty obligations. During the negotiations her representatives raised difficulty after difficulty. All this time she was secretly massing her troops so as to be in a position of superiority, should there be an appeal to armed force.

Then came the crowning act of treason.

During the night of June 29-30, 1913, the Bulgarian Army, without the slightest warning, made a sudden attack on its Serbian and Greek allies. Fortunately for Serbia, her soldiers come of a sturdy race, and, the first moment of surprise past, they defended themselves with vigor. The Bulgarians were driven from position after position. Bulgaria's difficulties became her enemies' opportunity. Rumania, which had long demanded a rectification of her frontier with Bulgaria and the cession of the Dobrudja Province, took advantage of her neighbor's embarrassments to press her claims, and when these were resisted she also mobilized her army, forcibly seized the province in dispute, and marched on Sofia. Turkey, too, seeing a chance of avenging at least a part of her defeat, invaded the territory she had just lost and recaptured Adrianople. Bulgaria was forced to sue for peace, and on Aug. 6, 1913, the Treaty of Bucharest was signed.

That Bulgaria was forced to sign the Treaty of Bucharest was nobody's fault but her own. It was the direct result of her disgraceful act of treachery against her allies. But this M. Mattheff does not admit, and he informs us that "Bulgaria's joining the Central Powers was an unavoidable consequence" of this treaty.

Such was Bulgaria's first act of treason, for which she paid by losing nearly all the fruits of her victory against the Turks. Her second act of treachery had much more terrible consequences. In 1913 she alone suffered for her crimes. In 1915 all Europe was a victim of her treason.

In the Spring of that year the World War had reached its most crucial point, and Germany and Austria had been driven on the defensive. A ring of trenches, such as the world had never before seen, ran from the North Sea to the Adriatic, and from the Adriatic to the Baltic. The Central Powers were completely surrounded by a circle of steel, on which bristled 10,000,000 bayonets. But Turkey had been brought into the war and had closed the Dardanelles, thereby completely isolating Russia from her allies. An allied army had been landed at Gallipoli, but was held in check by the Turkish Army. Turkey, however, being isolated in her turn, was in danger of collapse for want of munitions, which she could procure only from Germany. It was,

therefore, for Germany a life-and-death question to drive through the Balkans to join hands with her. This she could succeed in doing only if Bulgaria threw her weight into the scale against the Entente Powers. The fate of Europe came, therefore, to Sofia for decision. If Bulgaria joined the Entente and marched on Constantinople, the end of the war was in sight. If she betrayed the Allies and turned against them, their plight became a desperate one.

And Bulgaria committed a fresh act of treason. She joined the Central Powers. But this she kept secret to the last moment. Acting on instructions from Berlin, M. Radoslavoff, the Bulgarian Premier, assured the Entente Powers that Bulgaria was coming in on their side. Even when she mobilized her army she gave London, Paris and Petrograd to understand that this was done to resist, not to aid, Germany. It was only when Germany had completed her preparations for the attack on Serbia that Bulgaria threw off the mask and hurled her forces against Serbia's eastern frontier. No more cynical act of treachery is recorded in history than Bulgaria's action vis-à-vis the Entente. As a direct result of it hundreds of thousands of French, British, Russian, Italian and American soldiers are lying dead in Europe today. Bulgaria saved Germany from destruction in 1915 and prolonged the war by three years. This the world may one day forgive, if the criminal shows sincere repentance, but it can never forget it.

M. Mattheff declares: "Bulgaria failed because she blundered in choosing sides. The conquerors have declared that in doing so Bulgaria transgressed. So be it! But is there no limit to the punishment for such transgression?"

#### CRIMES DURING OCCUPATION

The limit of punishment is generally measured by the repentance of the criminal. But Bulgaria has not only the perfidy and treason of her Government on her conscience. She has three years of nameless cruelty and oppression in occupied Serbia to answer for. I maintain, without fear of disproof, that the Bulgarian people deliberately started out to exterminate a whole race. Serbia was swept clean of everything portable — plows, harrows, agricultural

implements, cattle, horses, sheep, household furniture—in a word, everything that could be taken was appropriated and the people left to starve. Thousands were murdered in cold blood. The National Library in Belgrade was carried off to Sofia and its priceless volumes and manuscripts reduced to pulp. Every book in Serbian that could be found was destroyed, Serbian schools and churches were replaced by Bulgarian ones, priests and teachers were taken off to starve to death in concentration camps. Railway locomotives and rolling stock were carried off wholesale.

I do not state these things from hearsay. After the Bulgarian Army was driven from Serbian Macedonia I rode with Professor Reiss of Lausanne University from one Serbian village to another, only to hear the same monotonous tale of murder, rape, incendiarism and plunder. Priests and teachers had been hanged and shot and hundreds of peasants deported. War, I know, always brings horror in its train, but in no other part of Europe were such atrocities committed as in that part of Serbia under Bulgarian occupation. In the circumstances, as long as human nature is what it is, the fact that "the Serbian mind is poisoned against everything Bulgarian" may excite surprise in the mind of M. Mattheeff, but

I doubt if his feelings will be generally shared.

But hardly was the armistice signed than Bulgaria began to flood Europe with appeals in *miser cordia*, declaring that she was more sinned against than sinning. Justice, I know, should be passionless, not vindictive. But in view of Bulgaria's crimes and treasons there is no measure of reparation in the Treaty of Neuilly that is not justly due.

Instead of acknowledging this the Bulgarians imitate their former allies in their attempts to evade fulfillment of the treaty obligations. M. Mattheeff complains that the institution of obligatory personal labor—in lieu of obligatory military service—has been objected to by the Belgrade Government, and that at its request the Supreme Council of the Allies has demanded the repeal of the law. But M. Mattheeff omits to state that the Belgrade Government has proof that the so-called labor recruits have been lodged in barracks, have been clothed in uniform and are subjected to military drill. In other words, it is not a labor organization, but merely a camouflaged military force.

GORDON GORDON-SMITH.

Washington, D. C., May 17, 1921.

## ALBANIA'S CONFLICT WITH SERBIA\*

To the Editor of *Current History*:

Official Albanian reports announce that the Serbian authorities are deporting great masses of the Albanians of Kosova, with a view to populating this region with Russian refugees. In order to explain this unlawful measure it will be necessary to throw some light on recent Serbo-Albanian relations, as well as to sketch the sufferings of the people of Kosova and Dibra, who, by the decisions of the London Conference of 1913, were separated from their mother country, Albania, and were ceded to Serbia and Montenegro as the result of diplomatic compromises.

By Aug. 20, 1920, just after the difficulties between the Italians and Albanians were done away with, the Albanian Government was confronted with a new trouble, namely, the conflict with Serbia. Ever

since the armistice, the Serbs had been occupying territory belonging to political Albania, i. e., the Albania of 1913, which lay in both the Scutari and the Dibra regions, in North and Northeastern Albania. Encouraged by the peaceful attitude of the Albanians, and dissatisfied with the strip of Albanian territory already under their control, the Serbs were making daily inroads into the interior of Albania. In both the Scutari and Dibra districts, however, they were repulsed with great success by the people; the Albanian Government had no part in this situation. The people of the Dibra region finally drove the Serbian sol-

\*Mr. A. B. Sula, the writer of this letter, is an Albanian graduate of Robert College, Constantinople, and until recently was Chief Clerk of the Albanian Ministry of the Interior. He came to this country on the advice of the Albanian Government to prepare himself for a diplomatic career in his home land.—EDITOR.

diers back to the boundary of 1913, and even forced the evacuation of the City of Dibra itself. The Albanians did not attempt to occupy this city, although not a single Serb lives there, in view of the fact that it was assigned to Serbia by the London Conference of 1913, and also through fear that some undesirable international complications might arise.

The Albanians supposed that as a result of their wise and moderate policy they would be left alone to live a prosperous and independent life. This, however, was not the plan of the Serbs, who returned with a huge army, passed the Albanian frontiers near Dibra, and laid waste 142 Albanian villages, massacring the unfortunate population—women, children and old men—who were not able to flee with the rest of the inhabitants of the devastated region. (This has been confirmed by the Serbian press.) After having completed this carnage, which is beyond any description, the Serbs marched toward the Albanian capital and attempted to threaten the Albanian Government. Thanks to the patriotic efforts displayed by the whole Albanian people, the advance of the Serbs toward the Albanian capital was checked.

The Albanian Government shortly after this entered into negotiations with the Serbian Government. The parleys, however, led to no result, because the Serbs did not want to evacuate the territory they had lately invaded, and so a deadlock in Serbo-Albanian relations followed. The Albanian Government has recently sent an official note to Belgrade asking the evacuation of the strip of Albanian territory which ever since the armistice has been under Serbian occupation, giving notice that, in case Serbia fails to comply with this demand, the matter will be submitted to the League of Nations, of which both parties are members. Furthermore, the Albanian Government has declared its intention to send a delegation to Belgrade, with a view to settling the matters in dispute between the two countries.

Not content with Kosova, Dibra and other territory which they are holding in their possession, together with almost one million unhappy Albanians, contrary to the principle of self-determination of nations, the Serbs are coveting even more Albanian territory. And how is this insatiable greed ex-

pressed? By laying waste the most flourishing localities, and by deporting or exterminating the Albanian population, which was living in these localities before any other Balkan nation had come into existence.

According to recent dispatches, which are also confirmed by the liberal Serbian Press, the Serbian atrocities and acts of oppression among the Albanians of Kosova and Dibra are increasing day by day; massacres and executions of every kind are committed by order of the Serbian authorities, without due process of law.

The Serbs, seeing clearly that they cannot assimilate the stout-hearted people of Kosova, Dibra, &c., have decided to annihilate them. This is the Serbian interpretation of the "self-determination of nations," and of the theory "The Balkans for the Balkan Peoples." The people of Dibra are to be especially pitied, inasmuch as this is the second time they have been reduced to such an extremity. Their first subjection came when they rose against the Serbs in 1914, in protest against the decisions of the London conference of 1913, which assigned to Serbia this entirely Albanian-populated city. Similar protests have been made by the Albanians of Kosova against the Serbian occupation, but their protests have brought them only persecution, deportation and extermination, and have made them subject to the maximum of obligations without even the minimum of privileges.

When Mr. Trumbitch was the Minister for Foreign Affairs of Serbia, he made certain semi-official declarations regarding the restoration to the Albanian State of some portions of the Kosova and Dibra territories, but since his resignation these declarations have been ignored. In addition to this, even more territory belonging to the Albanian State, as fixed by the London conference of 1913, is being held by the Serbs, who seem to have forgotten the fact that if the Albanians had not granted right of way to the Serbian army while it was being pursued by the Austro-Bulgarian armies the destiny of the present Serb-Croat-Slovene State would have been different. Mr. Pashitch, at least, who was an eye-witness of Albania's hospitality and her peace-abiding attitude toward the defeated Serbian army, ought not to maintain an unfavorable policy toward Albania.

A. B. SULA.

# RUMANIA IN THE NEW EUROPE

*To the Editor of Current History:*

Under the above caption, Prince Antoine Bibesco, Rumanian Minister to the United States, in an article contributed to *CURRENT HISTORY* for May, has attempted to answer what he calls the anti-Rumanian propaganda in this country. This propaganda, according to Prince Bibesco, consists of the following accusations: that Rumania politically and culturally is a backward country, ruled by a corrupt oligarchy; that she oppresses racial minorities, such as the Jews and Magyars, and that she persecutes religious dissenters.

In reply to the first charge, Prince Bibesco asserts that it is not true. His basis for this denial is some agrarian reforms, recently introduced, which assign to the peasants 2,000,000 hectares of land, carved out of estates exceeding 500 hectares. Considering that Rumania before the war had a large peasant population without land of its own, and practically serfs to the Tchokois, or big landed proprietors, the recent agrarian reforms will no doubt bring a certain improvement in the hard lot of the peasants. Whether the reforms are such as to make Rumania a truly democratic country, like Serbia and Bulgaria, whose peasantry consists of small landowners, is another question. The annexation of Transylvania, Bukowina, the Banat and Bessarabia will most probably limit the power which the Rumanian aristocracy exerted upon the Government; but whether it will put a stop to the corrupt practices for which Rumanian administration has been, and is, notorious remains to be seen. This corruption evidently still exists. The proof of this is found in the quotations from a Rumanian newspaper, given on page 220 of the *CURRENT HISTORY* number in which Prince Bibesco's article is published. According to this newspaper, "boundless corruption" pervades the administration; no reconstruction work is done, and a Czech Ministerial Councilor is quoted as having declared that he was "constantly receiving incontrovertible testimony of acts disgraceful to Rumanian reputation." This is corroborated by the testimony of Charles H. Grasty, the well-

known correspondent of The New York Times, who, in a letter from Bucharest a few weeks ago, spoke of the prevalent "graft" system, so impudently practiced by officials both high and low.

In answer to the accusation that Rumania has oppressed racial minorities, such as the Jews and Magyars, Prince Bibesco points to the Rumanian laws insuring equal rights and equal legal treatment to all citizens. In confirmation of this he tells us that there is a chair for the Magyar language and history at the University of Bucharest, and that Magyar teachers receive from the Government higher salaries than Rumanian teachers do. In order to clinch the argument, he asserts that the political and social emancipation of the Rumanian Jews is complete.

Unfortunately for Prince Bibesco, we find again a complete disproof of his assertions in regard to the Magyars on page 220 of *CURRENT HISTORY* above referred to. There we are told that Magyar children are forced to attend Rumanian schools, especially "in the district of Csik, where there are 125,888 Magyars and only 18,032 Rumanians." In another district all public servants have been notified that if they send their children to Hungarian schools the act, "if persisted in, will render them liable to prosecution before the Military Court for treason." This, then, is the freedom and "equality of rights" enjoyed by a Magyar under Rumanian rule: he is to be tried by a court-martial if he dares to send his child to a Hungarian and not to a Rumanian school. If additional proof were wanted of how racial minorities are faring in Rumania, and how far Jews have really been emancipated, we may quote the following statements made by Paul Scott Mowrer in his recent book, "Balkanized Europe." Mowrer, for many years correspondent of The Chicago Daily News, writes from personal knowledge and investigation conducted during his travels through Europe. Speaking of Rumania and her new territorial acquisitions, he says (p. 226):

All the new provinces are under military occupation, and in all a strong hand is being used. Minorities, on one pretext or another, are being expropriated in favor of Ru-

manians. New and incompetent officials are making a reputation for themselves similar to that earned by the Northern "carpet-baggers" in the South, after the American Civil War. Arrests, expulsions and even disorders are not infrequent.

In regard to the law about the Jews, he says that it gives the right to vote and to own property to all Jews who can prove they were born in Rumania, and then he adds:

This is well enough for the more highly cultured Sephardic Jews of the old Spanish-speaking stock; but the majority of Rumanian Jews are of the Ashkenazic or Yiddish speaking German strain, who have fled into Rumania out of Russia and Poland, and many of whom have no family papers. A generation will have to elapse before they can take advantage of the somewhat equivocal reforms.

It is evidently too early yet to declare that "the political and social emancipation of the Rumanian Jews is complete," as Prince Bibesco affirms.

The testimony of independent and impartial writers about the status of racial minorities in Rumania, which I have cited, applies equally well to the condition of the Bulgarians in Southern Dobrudja, who have been put under Rumanian rule by the Paris Peace Conference. In this province, where out of a total population of almost 275,000 inhabitants, the overwhelming majority of whom is composed of Bulgarians and Turks, with less than 7,000 Rumanians, the same Rumanian oppression obtains. Under one pretext or another, expropriations, arrests, expulsions, closing of schools and churches, and military and civil corruption are the order of the day. Those of your readers who remember how in 1913 Rumania, by stabbing Bulgaria in the back, obtained possession of Southern Dobrudja will certainly smile at Prince Bibesco's assertion that "Rumania has never since its foundation cherished plans of aggression." Is it possible that he is unaware of the fact that highly placed political men and eminent writers in Europe and elsewhere qualified Rumania's conduct in 1913 as "an act of robbery and brigandage"?

Prince Bibesco concludes his article with the boast that "Rumania stands out as a European outpost of Westernism, amid surroundings sunk back to a barbarian level." If by "Westernism" he means a veneer of civilization, the introduction of luxury and dissipation and the spread of vice and immorality, Rumania certainly leads the way among nations of the Near East. Its capital, Bucharest, has long since prided itself on being "Little Paris," and in some social respects it goes ahead of Paris. If, however, by "Westernism" he means culture, education, purity of family life and social morality, a Rumanian should be the last man to throw stones at his neighbors. In the matter of popular education, for example, Bulgaria in 1910 occupied by the literacy of the army recruits the tenth place among the European powers, standing ahead of Hungary, Italy and Russia, and in the first place among the Balkan States. Three years later only 5 per cent. of the recruits in Bulgaria were illiterate, while in Rumania and Greece the proportion was 41 per cent. and 30 per cent., respectively. In 1914 illiteracy among the non-Moslem population of Bulgaria was 35 per cent., in Rumania 65 per cent., in Serbia 63 per cent., in Greece 57 per cent. The number of pupils per 1,000 inhabitants in Bulgaria in 1908 was 121, in Rumania 88, in Serbia 51; in Greece from 1910-11 it was 116. Bulgaria has one school to every 788 inhabitants, Greece to 691, Rumania to 1,291, Serbia to 2,065. These figures are more remarkable when one takes into consideration that Rumania has always been more or less a country possessing home rule, while Serbia and Greece had already been self-governed countries for half a century before Bulgaria in 1879 began its political life, untrammelled by the shackles of Turkish misrule and tyranny.

Such, in brief, is the moral and cultural status of Rumania today.

THEODORE VLADIMIROFF.

# KORFANTY AND THE SILESIA PLEBISCITE

*To the Editor of Current History:*

In the June issue of *CURRENT HISTORY* I note, in the article entitled "The Silesian Crisis and Korfanty," a number of inaccurate statements, to which I am sure you will appreciate having your attention called.

In the summary printed in italics (Page 389) you speak of an "invasion of armed Polish bands, under Polish agitator." The word "invasion" is borne out in the context by the following sentence: "The irruption across the Polish frontier into Silesia of a large Polish force, directed by Adalbert Korfanty." Korfanty's uprising was one of native elements under a native leader, and there was no invasion or irruption of any kind. Indeed, later on you speak of the general strike declared early in May by "the Polish workmen who form the population of the mining districts of Rybnik and Pless. This was followed by news that lawless Polish bands had appeared and were terrorizing the country. These uprisings \* \* \*." The strike, which you speak of as having occurred "early in May," was really the beginning of the uprising, and the talk of "lawless Polish bands" was the German description of the Polish native insurgents.

Elsewhere you speak of the result of the plebiscite as "a victory for the Germans. Fully two-thirds of the districts had elected to remain with Germany." The result of the plebiscite, according to the Peace Treaty (Article 88), was to be determined by communes, and it was the wishes of the "inhabitants" that were to be taken into consideration. Whether the very technical interpretation of the Peace Treaty, which allowed imported outvoters to vote on equal terms with the resident natives, was a fair one may be a matter of opinion. I do wish, however, to point out that the figures as ultimately announced gave a total vote for Germany of 716,408 and for Poland of 471,-

406 (New York Times, March 23, 1921). I think you will see these figures are far from giving Germany two-thirds of the total vote cast in the plebiscite. What is more, in the total counted for Germany are included some 65,000 votes cast in Leobschutz, a district which was to decide its allegiance as between Germany and Czechoslovakia, and not between Germany and Poland. In that district only 300 voted for Czechoslovakia. How these 65,000 votes can possibly be counted as for Germany against Poland I am not able to understand.

The result was to be computed by communes, and you will see from the Peace Treaty (Article 88) that there was to be a partition of Silesia according to the results of the plebiscite. As a matter of history, you probably know that Germany insists on the indivisibility of Upper Silesia, contrary to the provisions of the treaty. From the point of view of the interpretation of the treaty, it appears to be a matter of little concern who got the majority of the total vote (including the emigrant voters, who, by the way, were told to clear out by the 15th of April under the threat of arrest or fine), and therefore, even apart from the actual majority in the total plebiscite area, it cannot be said with historic correctness that "the result \* \* \* was a victory for the Germans."

Fully realizing the importance of *CURRENT HISTORY* as a record of present-day events and of their background, I have no doubt, in view of the scholarly liking for accuracy and the general tone of fairness which characterizes your magazine, that you will prefer to have your attention drawn to anything which will, I believe, not be to the future historian true and explainable facts.

LUDWIK EHRLICH, Director.

# LORD READING'S ENEMIES IN INDIA

*How Mr. Gandhi and his Moslem ally, Mohammed Ali, are working against British rule, supplementing open sedition with secret and subtle propaganda—The new Viceroy's gigantic task*

LORD READING, the new Viceroy to India, attacked his formidable task with an act that was bound to have a clarifying effect. He had a long talk on May 13 with Mr. Gandhi, the head and front of the nationalist movement that is trying to overthrow British rule in India. He listened to Gandhi's views with the deepest attention, and in return set forth his own policy. What went on between the Hindu mahatma and the man who was formerly the Supreme Justice of England has not yet been told, but that it was a momentous interview there can be no question. The mystical Gandhi, however, represents only the Hindus; the Mohammedans also must be reckoned with. Mohammed Ali, the Moslem leader, is preaching the doctrine of his prophet and namesake—the verdict of the sword. The bold disloyalty of his utterances is sufficiently illustrated by a recent speech at Madras.

We have been made slaves once [said Mohammed Ali]; we do not want to be made slaves again; but if the Emir of Kabul does not enslave India, and does not want to subjugate the people of India, who have never done any harm, and who do not mean to do the slightest harm to the people of Afghanistan or elsewhere, and if he comes to fight against those who have always had an eye on his country, who wanted to subjugate his people, who hold the holy places of Islam, who want to crush Islam in their hostile grip, who want to destroy the Moslem faith, and who are bent on destroying the Khalfate, then not only shall we assist, but it will be our duty and the duty of every man who calls himself a Mussulman to gird up his loins and fight the good fight of Islam.

The truth seems to be, judging from Mohammed Ali's own words on various occasions, that he does not feel certain what attitude Mr. Gandhi's non-co-operators would take in the event of another Afghan invasion. At Allahabad he asserted that no non-co-operator would ever desire an Afghan invasion. It was better, he said, to remain in hell than to go to heaven with the aid of a foreign power, but if any foreign power waged war to make India free, the

non-co-operators would not render any aid to the Government, but would simply watch the fight. He denied that he had had correspondence with the Emir of Afghanistan. Mohammed Ali further declared that if the people of India followed the advice of Mr. Gandhi they would have freedom and home rule within a year.

Despite the favorable opening of the new Indian Legislature at Delhi, and the attitude of the new Indian members, who came out for election in defiance of the Gandhi orders, and who, during their short tenure of office, have shown an amazing moderation and desire to co-operate with the British members, sedition flames through the land—sedition skillfully and shrewdly disseminated. The Indian agitators are no tyros. To that Lord Chelmsford, the predecessor of Lord Reading, testified on May 20 in a public address in London, when he said:

It is common knowledge that there has been for many years considerable political agitation in India. It is equally well known that the Indian political agitator has little to learn with regard to methods of agitation. He has drunk deeply from the experience of agitators, whether in England or in Ireland, and he has not been unmindful of the greater subtleties of women agitators, and these methods have been applied with great skill in India. The aim has been to create discontent with British rule, and to bring discredit on the Government of India, and it is not always easy for the Government to know how to deal with the subtle methods that are adopted. I recollect that shortly before the Duke of Connaught's visit I was anxious that the people of Delhi should see the fort and palace illuminated, with the fountains playing, and I directed that it should be opened at a low fee. For two or three days the people went in by thousands; then one day not a soul came, and I found that the rumor had been spread abroad that a thousand women had gone into the fort and not one had come out again. But when, later, the people of Delhi found that none of their relatives were missing, they returned in their hundreds. The aim of the agitator was to get people to refuse the gifts that the Government offered.

How will the new Viceroy deal with the skillful propaganda of rebellion that en-

velops him night and day? The Afghanistan danger is real, as the explanations made before the new Legislature in connection with the large budget eloquently admitted. Afghanistan has made a treaty of alliance with Moscow, and the Emir, heartened by the Bolshevik agitators who are everywhere in Afghanistan, is making defiant and impossible demands. The economic unrest of India is great, and many strikes testify to the strength of the Gandhi-Mohammed Ali propaganda. The poverty of the people; the discontent of the Indian merchants, who faced bankruptcy, owing to the worldwide commercial stagnation that has followed the war; the old religious racial hatreds—all these are being fused by a magnetic leader into one united revolt against the Government of the British, and their "satanic" civilization, which must be destroyed to enable the people to revert to the primitive ways of the old Vedas and the simple, homely, free and idyllic life which underlay them. This is the teaching which the Hindu people are absorbing rapidly, and to this the Moslem agitators are adding the menace of the sword. What will be the outcome of it all?

How much of Gandhi's teachings have contributed to the results of the March census, which show an amazingly small increase in population since the last census, it is impossible to determine. The figures show that during the decade 1911-1921 the population of the country, including both British India and the native States, increased only from 315,150,000 to 319,000,000—or at a rate of only 1.27 per cent. for the whole decade. The increases noted since 1872 had been on an ever-rising scale, and even between 1901 and 1911, when the census area was approaching fixity, the increase was 7.1 per cent. It was generally believed that the census just taken would show a population of at least 340,000,000. The influenza plague of 1918, which took a toll of approximately 6,000,000 people, should be duly considered. It is also stated that the method of taking the census was defective, the census takers being arbitrarily assigned their task, with no pay. It should not be forgotten, however, that Gandhi has carried his fanatic teaching so far as to forbid his followers to have children until India has gained independence.

## IN DEFENSE OF KING CONSTANTINE

*To the Editor of Current History:*

I have been very much interested in reading the article in your May issue on "What the Greeks Are Fighting For." I am writing at once to express my appreciation of it and of the attitude you have taken in presenting the true side of the Greek question, even though that side is the unpopular side in this country. I am myself a Greek, and as such have more closely at heart the interests of Greece—with a more thorough knowledge of the conditions existing there—than the American press can have. Therefore I am rejoiced to see this fair and scholarly presentation of the situation in my country.

I hope that this article may do much toward disabusing the minds of the American public of the utterly false idea that King Constantine is or ever was pro-German. He was not. If he was not pro-German, however, it was not because of

anything the Allies did, as any Greek knows who is familiar with the intimate facts of Greek politics during the early years of the war, and who is not blinded by personal devotion to Venizelos; for the allied powers continually antagonized him and forced him into a friendship with his brother-in-law, the Kaiser, which he did not feel.

And why cannot the American public be persuaded of King Constantine's entire devotion and loyalty to his country and his people by the results of the November elections? Who is to judge whether Constantine is the well-beloved of his people, if it is not the Greek people themselves? And the overwhelming majority which was returned for him at the polls should be a proof to the American public that they have been fed on propaganda when they have been assured that Constantine is the arch enemy of the Greek people. I wish that

your article, or Mr. Hibben's article, to be exact, had said even more about this. I want the American people to understand and believe it.

I, and I am sure all Americans and Greeks who have seen this article, will read your magazine with increased interest and confidence now that we have seen that you

dared to print what is the real truth. Captain Paxton Hibben's disinterested and high-minded friendship for Greece is, of course, known to all Greeks, and you are fortunate to have had one so well informed to write the article for you.

D. J. THEOPHILATOS.

59 Pearl Street, New York, May 31, 1921.

## WHAT JAPAN IS DOING TO CHINA

*To the Editor of Current History:*

I have read with great interest the article by Sidney C. Graves, entitled "Japanese Aggression in Siberia," which appeared in the May issue of CURRENT HISTORY. As indicated by this writer, Manchuria is almost entirely dominated by the Japanese.

The interpretation of Japan's activities in China is comparatively easy for those who know what is actually occurring on the other side of the Pacific. Prominent men of various nationalities, who have a first-hand knowledge of both China and Japan, have repeatedly called the attention of the world to those activities. And yet, as a whole, Japan may plume herself on having blinded the great powers, as well as the smaller nations of the world, to her aggressive and unlawful conduct in the Orient. What she has overlooked is that the time is bound to come when the world will know and understand her better. She has also failed to learn the great lesson of the war and has continued her wrongful and imperialistic policy, oblivious to the fate that overtook German imperialism.

I should like to bring before your readers a few of the Japanese practices in China which I personally witnessed when I returned home in 1919. The more obvious cases of Japanese aggression—in Korea, Manchuria, Mongolia, Formosa and Shantung—the world now knows. But there are other misdeeds, of the greatest menace to China's future, which the world knows nothing about. A few of these are listed below:

### THE OPIUM TRAFFIC

China has suffered greatly from the opium scourge, and has officially done away with it. The Japanese, however, who, so far as human words hold, have claimed to be China's friends, are doing all they can to

keep the opium traffic alive. Taking advantage of the extra-territorial rights of foreigners in China, Japan has assured her nationals in China protection in carrying on the traffic on a large scale. That traffic is in full swing today in certain provinces, in Foochow and other cities of Manchuria and Mongolia. Japanese steamship lines, and even the Post Offices, are used for the transmission of the drug, which is sold on guaranteed delivery. I may refer in passing to the scarcity concealed maintenance of Japanese opium-smoking houses.

[Mr. Pelham Hung, editor of the Peking and Tientsin Times, while attending in Tokio a conference of Chinese and Japanese journalists held in April, declared in a public interview with the representative of the Kokusai that "97 per cent. of the morphine smugglers in China are Japanese subjects." To suppress this nefarious trade, said Mr. Hung, was China's greatest need today. "I believe," he added, "that the majority of the Japanese people are ignorant that their countrymen are largely responsible for the business that is ruining the bodies and souls of over 100,000 Chinese men, women and children every year. Their officials, however, cannot pretend ignorance. \* \* \* A Sino-Japanese entente can never come until Japanese nationals stop smuggling morphine." Mr. Hung recalled the fact that the Japanese Consul General in Tientsin promised in 1919 to "punish severely all Japanese nationals found engaged in this vile trade," but "today matters are as bad as when the promise was first given." Though Mr. Hung did not charge that the Japanese authorities officially encouraged the traffic, he showed clearly that they tolerated it. Great Britain, he pointed out, forbade the exportation of opium to China in 1917, and neither the British nor other European countries are now indulging in the sale of opium or other narcotics in China.—EDITOR.]

### GAMBLING AND PROSTITUTION

Gambling, like opium smoking, is penalized by law, but one who has been in China,

especially in the regions referred to above, has seen many gambling houses openly doing business along the city streets. Foreigners believe that these houses are run by Chinese. If one will only take the trouble to pause and gaze upward at the sign, one will see the words, "Japanese merchant." This means that, alike in the case of opium smoking and gambling, the Chinese authorities have no right of entrance and search without previously notifying the Japanese Consul. If, finally, a search is decided on, it must be undertaken jointly. It is well known to the Chinese that, when such raids are planned, the Japanese engaged in such nefarious business are almost always warned from the consulate before the police reach the field of operations.

The Japanese also take advantage of poor Chinese who are in need of ready money to make small loans at a good profit. The Japanese lender requires no security, but depends wholly on the support of the Japanese Consul to collect his money. Only those who have seen the Japanese process of collection know what this means.

Wherever there are Japanese, there is Japanese prostitution, which is not only encouraged but legalized by the Japanese Government. The extension of the system to China is but a part of the deliberate Japanese policy to ruin, both physically and morally, the nations with which they are brought into close contact. This deliberate policy will have the most serious consequences in Korea.

The law of China prohibits the sale of arms and munitions to individuals or to private concerns. Yet in various places one always sees armed bands of rebels roaming about, bearing modern rifles and making trouble for the good citizens of China. Such arms and munitions come from Japan, the only country in the world at present which undertakes to endanger the peace of other nations, the only country which has no sense of international law.

#### JAPANESE "NAME-LETTING"

"Name-letting" is something of which Americans have no knowledge, and I have been unable to find any one who has not lived in China who has ever heard of it. The merit of this invention belongs wholly to the Japanese. In the last few years, China has increased her taxes, and these have become a heavy burden to the people. Some of the lower class, who lack a sense of nationalism, seek to avoid the payment of these taxes. This is where the "always-ready-to-be-your-friend" Japanese comes in and says: "Let us list your business and property under our own name, collecting therefor a commission far smaller in amount than the sum which you will have to pay to the tax officials." Undoubtedly the Japanese by this device have aided many of the poorer class to dodge their taxes. The consequences of this business have sometimes been disastrous for the Chinese, for in some cases the Japanese "name-lender" flees to escape his accumulated debts; the Japanese Consul then steps in and takes possession of all goods listed under the said debtor's name, regardless of their true ownership.

The arbitrary character of the Japanese is seen in the matter of the Chinese boycott of all Japanese goods. The Chinese people, in view of the Shantung award particularly, will not buy Japanese manufactures of any kind. The Chinese authorities cannot force the Chinese people to buy, and yet the Japanese dare to demand that these authorities, whom they deem responsible, shall be dismissed! How do the Japanese know that the Chinese public does not like American or English goods better?

I have given above only a few examples of what the Japanese are doing in China. As to what Japan is doing through diplomatic channels, the world is informed daily through the press. Whatever the field, the Japanese policy never changes.

GARDNER KUOPING LIU.

*University of Chicago, May 17, 1921.*

# GERMANY'S TRADE TREATY WITH RUSSIA

**T**HE Russian Soviet Government, after successfully concluding its negotiations for a trade agreement with Great Britain, bent all its efforts to obtaining a similar agreement with Germany, a country considered by Leonid Krassin, the London negotiator, as even more important. The discussions were long protracted, and it was not until May 6 that the German and Bolshevik representatives in Berlin succeeded in bringing the negotiations to a satisfactory end.

This agreement, though only preliminary, indicated a mutual desire to establish solid economic and political relations between the two countries. It was signed for Germany by Gustav Behrendt and Freiherr (Baron) von Maltzen; for Soviet Russia by Aaron Scheinmann and M. Gans. The compact

gave full diplomatic immunity to the respective political and trade delegations to be exchanged, as well as the full consular powers necessary to legalize contracts and facilitate business; granted to merchant ships of either party the usual privileges relative to territorial waters, and authorized the reopening of all radio, telegraph and postal communications. Each delegation was empowered to protect the rights of war prisoners and interned civilians and to facilitate the departure of its nationals from the other country. Both parties bound themselves not to permit their respective delegations to conduct propaganda while resident in the other country.

The full text of this agreement, translated into English from the Prager Press of May 10, is as follows:

## TEXT OF THE AGREEMENT

*The German Government and the Russian Socialist Federative Soviet Republic, moved by the desire to serve the cause of peace between Germany and Russia and to promote the prosperity of both peoples in mutual good-will, conclude the following provisional agreement:*

**ARTICLE 1**—The sphere of activity of the Delegations for the Care of Prisoners of War already existing shall be enlarged so that they may be entrusted with the duty of protecting the interests of all their nationals. Trade Delegations shall be attached to both these Delegations, in order to promote economic relations between their countries. Until normal relations are fully restored, the Delegations shall be known as "The German Delegation in Russia" and "The Delegation of the Russian Socialist Federative Soviet Republic in Germany." The Delegations shall have their headquarters in Moscow and Berlin respectively. The Delegation of the Russian Socialist Federative Soviet Republic in Germany shall be regarded as the only body representing the Russian State in Germany.

**ARTICLE 2**—The head of the Delegation shall enjoy the privileges and immunities of the principals of accredited missions. Until otherwise agreed, seven members of the Delegation shall further enjoy the privileges and immunities of members of accredited Missions, in so far as they are not citizens of the State in which they are residing.

With regard to those persons employed in

the Delegations who are not citizens of the State in which they are residing, both Governments engage to take such steps as will be necessary to ensure:

1. That their houses shall be searched only after the Ministry for Foreign Affairs of the State in which they are residing has been given notice, and in so far as delay does not involve risk, in the presence of a representative of that authority and a representative of the Delegation.

2. That cases of imprisonment and arrest shall be communicated immediately to the central authority for Foreign Affairs of the State where the persons concerned are residing, and that authority shall inform the head of the Delegation within a period not exceeding 24 hours after the imprisonment or arrest.

3. That these persons and the members of their families shall be exempt from all obligations to perform State labor of any kind, and from military service and all obligations connected with war.

**ARTICLE 3**—Each Government engages to secure suitable offices for the Delegation of the other party, and to see that the head and the personnel receive suitable living accommodation. They further engage to give every assistance in procuring the necessary materials for the work of the Delegation.

**ARTICLE 4**—The German Delegation in Rus-

sia shall be entitled to import free of tariff and duty the materials necessary to carry on its official duties and to keep its quarters in repair, as well as the food and other necessities required by the German personnel up to 40 kilograms per month per person. The import permit shall be issued by the Russian Delegation in the country of origin on production of a covering list which must be authenticated in Germany by the Foreign Office, and in other countries by the German representatives there.

**ARTICLE 5**—The heads of the delegations shall be accredited to the central authority for Foreign Affairs of the State where they are residing. The delegations shall deal with that authority, and in trade matters directly with the other central authorities as well.

**ARTICLE 6**—The Delegations shall be given the following consular powers:

1. To protect the interests of their nationals in accordance with the traditions of international law.

2. To issue passports, identification papers and visés.

3. To receive, certify and attest documents.

Both contracting parties engage to enter into immediate negotiations for the conclusion of an agreement concerning the keeping of a register of births, deaths and marriages, and data concerning marriage contracts.

**ARTICLE 7**—Each Delegation shall have the right to use the wireless stations and public postal facilities, to hold uninterrupted official communication with its Government, and with the representatives of its Government in other countries, either openly or in code, and further to communicate by courier in accordance with a special agreement.

**ARTICLE 8**—Until a treaty is concluded which shall determine on principle the rights of the citizens of both parties, the following provisions shall hold good:

1. The provisions of the agreement of April 19, 1920, the supplementary agreement of July 7, 1920, and the supplementary agreement of today's date shall apply to the Russian war prisoners and interned civilians in Germany. Otherwise Russian citizens in Germany shall be treated in respect to their persons and property in accordance with international law and the general laws of Germany.

2. German citizens within the territory of the Russian Socialist Federative Soviet Republic at the time of the conclusion of this agreement shall retain the rights stipulated in the supplementary agreement of today's date as former war prisoners or interned civilians.

3. To German citizens who go to the territory of the other party for trade purposes in accordance with this agreement and who comply with the passport regulations, the Russian Socialist Federative Soviet Republic guarantees the inviolability of their property, whether brought with them or acquired in Russia, in so far as it is acquired and used

in accordance with the special agreements made with the competent organs of the Russian Socialist Federative Soviet Republic. Special letters of safe conduct from the Russian Socialist Federative Soviet Republic shall ensure the inviolability of this property, except in so far as claims can be made against the holder of the letter of safe conduct on the ground of legal transactions into which he has entered with the Russian Socialist Federative Soviet Republic after the conclusion of this agreement.

**ARTICLE 9**—The Russian Government shall permit persons who have been German citizens, but have lost their nationality, as well as their wives and children, to leave the country if it can be proved that this is for the purpose of emigrating to Germany.

**ARTICLE 10**—The German Government guarantees to Russian ships, and the Russian Government to German ships, in their respective territorial waters and ports, treatment in accordance with the usages of international law. In so far as Russian ships serving trade purposes are granted special privileges in the matter of shipping dues, in accordance with this stipulation, as ships belonging to the State, the Russian Government guarantees to grant similar privileges to German merchantmen. In every case, however, a ship belonging to either contracting party in the ports of the other party may be held liable for such charges as are directly connected with the said ship, such as, for example, harbor dues, cost of repairs, or claims for compensation in cases of collision.

**ARTICLE 11**—Both Governments shall immediately take all steps to make possible the speedy resumption of postal, telegraphic and wireless communication, and to guarantee these communications by means of special agreements.

**ARTICLE 12**—The German Delegation in Russia shall protect the economic interests of the German realm and its citizens through its trade delegation.

The Russian Trade Delegation in Germany, as the State Trade Bureau for legal transactions in German territory, shall be regarded as the legitimate representative of the Russian Government. The latter shall recognize as binding all legal transactions undertaken either by the head of the Delegation, or by the head of the Trade Delegation, or, finally, by any authorized agent of either of these.

**ARTICLE 13**—The Russian Government engages to include an arbitration clause in all legal contracts with German citizens, German firms and German juridical persons entered into upon the territory of the Russian Socialist Federative Soviet Republic and of States united with it in a State scheme of imports and exports. In the case of legal contracts entered into in Germany and their economic results, the Russian Government shall submit to German law, and in the case of civil obligations to German courts and execution, but only in so far as the obligations in question arise from legal transactions entered into with German citizens,

German firms, and German juridical persons after the conclusion of this agreement. The right of the Russian Government to include the arbitration clause also in transactions concluded in Germany shall remain intact. Otherwise the property of the Russian Government in Germany shall enjoy the protection customary under international law. In particular it shall not be subject to German jurisdiction and execution in any cases other than those specified under Paragraph 1.

**ARTICLE 14**—Both Delegations shall be entitled to engage the experts necessary for the accomplishment of their economic duties. Requests for the admission of experts, to be accompanied by detailed explanations, shall be made by the central authority to the representatives of the other party, and shall be dealt with immediately.

**ARTICLE 15**—Both Delegations and the persons employed by them shall confine themselves in their activities strictly to the duties accorded them under this agreement. In particular they shall be under the obligation to refrain from any agitation or propaganda against the Government or State institutions of the country where they are residing.

**ARTICLE 16**—Until a future trade agreement

shall be concluded, this agreement shall form the basis of the economic relations between the two countries, and shall be interpreted in a spirit of reciprocal good-will with a view to the promotion of economic relations.

**ARTICLE 17**—This agreement shall come into force on the day on which it is signed. The agreement may be denounced by either side with three months' notice.

If the agreement, when denounced, shall not be replaced by another agreement, each of the contracting parties shall be entitled, after the expiration of the period of notice, to appoint a commission of five members in order to wind up the transactions already entered into. The members of this commission shall have the position of agents without diplomatic privileges, and shall complete the winding up of business within a period not exceeding six months after the expiration of this treaty.

## WHY BUSINESS IS DEPRESSED

A SHORT but illuminating tabulation showing the comparative depreciation of European currencies since the war was given by Edward A. Filene, a Boston business man who has traveled over all Europe since the war, in an address delivered before the World Alliance for International Friendship Through the Churches on May 18, 1921. Mr. Filene's aim was to show that one of the chief causes of business depression and unemployment in the United States was the country's inability to dispose of its surplus products, owing to Europe's great economic and financial distress. To obtain the food products and raw materials necessary for its existence, Europe must be granted long-term credits, said Mr. Filene. But, he pointed out, such credits could not be given until conditions in Europe were more or less permanently settled, and this demanded co-operation of the American Government with the Governments of the struggling countries of the Old World. To understand the state to which those countries have come financially, said Mr. Filene, one must survey the situation in figures:

At the rate of exchange on May 8, for instance [he said], compared with the normal value and in terms of our money, the quantity of food, or cotton, or copper, that could be bought here for \$100, cost

In England ...	\$122.19	In Austria ..	\$7,660.38
In France .....	233.02	In Germany ..	1,570.95
In Italy .....	375.85	In Poland ..	20,255.32
In Belgium ...	233.09	In Czechoslovakia .....	1,460.43

These figures speak for themselves. The desperate financial situation of Austria has been exposed by the Austrian Chancellor before the Supreme Council. The enormous depreciation shown for Poland has been explained by the Poles on the ground that the Germans, by refusing trade and by other devices, had deliberately forced down the value of the Polish mark for reasons of their own, prominent among which was the alleged wish to induce the Poles of Upper Silesia to abandon Poland and to vote for union with Germany. From this tabulation it is seen that although the financial situation of the Entente countries is unfavorable that of Germany and the new republic of Czechoslovakia is far worse, while Austria is facing bankruptcy and Poland stands on the verge of financial ruin.

—Il 420, Florence.

## [American Cartoons]

## "I Ain't the Man I Used to Be!"

The excess profits tax was for three years one of the chief reliances of the Government in raising money to meet its current needs. During that period prices were high, there was an orgy of spending and the profits of large corporations were beyond all precedent. Now, however, deflation is in full swing, the "consumers' strike" shows few signs of being broken, and the excess profits have so shrunken that the yield from the tax will be comparatively small.

## "He's Pulling Leather!"

The cost of living is steadily decreasing in the United States, although the reduction is more notable in wholesale than in retail lines. A recent report of the Federal Reserve Board emphasized the fact that, while from January to May there had been a reduction of 11 per cent. in the price of raw materials, there had been a reduction of only 3 per cent. to the consumer. The reluctance of the retailer to fall in line with the wholesaler is one of the most important factors hindering business revival.

### Now "Step On 'Er!"

—Tacoma News-Tribune.

The resumption of world trade and the opening of a new era of prosperity have been waiting on the settlement of the question of German reparations. Now that a definite sum has been stated by the Allies and agreed to by Germany, the greatest element of doubt has been removed, and the consensus of opinion among financiers is that a trade revival all over the world may be confidently expected.

What our streets would look like, if the mind of the individual were the same as the mind of nations.

# LETTERS OF AN UKRAINIAN SOLDIER

*These thrilling letters were written by Lieutenant Omilan Tarnavsky of the Ukrainian Army to his father, the Rev. Philemon Tarnavsky, pastor of the Ukrainian Greek Catholic Church of St. Peter and St. Paul at Cleveland, Ohio. They were translated from the original Ukrainian by Father Tarnavsky and Mrs. Eleanor E. Ledbetter of the Cleveland Public Library, who is Chairman of the American Library Association's Committee on Work With the Foreign Born. The father, as Mrs. Ledbetter explains, came to America in 1909, "having reached the limit of endurance of political persecution in his native Galicia." His oldest daughter died the next year; in 1913 he was joined by two sons. His wife and other daughter were at Przemysl when the war broke out, and he heard nothing of them for four long years. In 1914 his remaining son, Omilan, was to come to America for a vacation visit before entering the University of Lemberg, but he delayed his trip and was caught in the vortex and summoned to service in the Austrian Army. His father heard from him in 1916, when he lay in a hospital, threatened with the amputation of a leg. For the next two years Father Tarnavsky pictured the boy as a cripple, destitute and suffering, and when the armistice still brought no word he gave him up for dead. Then suddenly came these letters, bringing joy to the members of the family in America. Aside from their human interest, they give a vivid picture of the sufferings endured by those who were caught in the South Russian maelstrom after the great war.*

*Bohdan, Czechoslovakia, Sept. 2, 1920.*

**D**EAREST FATHER: I am writing to tell you the complete story of my Odyssey. I found myself this morning in Bohemia. I rub my eyes to see if I am awake or dreaming. I cannot realize that I am really in some European country where a person feels free, where the people wear hats and ties.

I came here with an army unit which refused to obey General Pavlenko, whom the Poles called rebels and traitors. We had joined and served in General Pavlenko's army only because we thought we could take advantage of the situation to regain our western Ukrainian Republic. Seeing that we were not able to accomplish this, we decided by force of arms to break our way through the Polish lines from the Dniester into Bohemia; in this we succeeded, breaking the Polish line at Kosov, and so we got out from the enchanted ring in which we had been for one year and a half.

Now I want to describe to you my person. Don't think, father, that I am going to indulge any boasting. I hope my description will interest you, and that I may serve as a typical illustration of the boys who sacrificed everything for the good of the cause, and who, finding themselves unable to accomplish their aim, after various adventures landed here. I will begin with

my outward appearance. My mental disposition I leave to your own judgment. I will only tell you that my views of life are now far different from those of the cultured world; so, you see, I am changed beyond recognition.

In am 25 years old now, and I can tell you that I am looking very old. My hair became thinner and thinner, and left a small bald spot, and this explains why, though I was in the Ukrainian Army of Petlura, I could not raise a scalp lock.\* My hair, to my great regret, became gray, but I do not mourn. It is the result of physical and moral suffering. My teeth are spoiled and need very badly to be put in order, but I cannot afford it. As the result of being on different fronts and eating from different filthy kitchens, I acquired catarrh of the stomach, but I don't worry about it, knowing that there is no remedy. Otherwise I am healthy. I am in good spirits, and have the moral satisfaction of knowing that I have acted rightly, that I did not betray my ideal and did not derive any personal gain out of the war. The best proof of this is that I am naked and barefoot. My outer covering, or so-called uniform, consists of

---

\*The Ukrainian Cossacks of the old period shaved their heads close, leaving only one lock hanging from the side.

the seven parts described below, and acquired at different times:

1. An old cap from Denikin's army, riddled with bullets.
2. A Polish coat, with the Polish eagle on the buttons.
3. Leather trousers which once upon a time belonged to some "combrig"—this is the name by which the Bolsheviks call the commander of a brigade—and which I captured in some fighting with the Bolsheviks near Kiev.
4. Shoes of which I became the possessor in the last adventure, but which I have already burned at an unlucky bonfire while crossing the mountains of Cernahora.
5. A Bolshevik overcoat, very light and poor, in connection with which is a long and very tragic story which I do not want to tell you now.
6. One torn-to-pieces shirt.
7. A scrap of underwear.

As to my belongings, they consist of a knapsack and what it contains, namely, a towel, a piece of soap and a shoe brush, which I use very seldom, even to clean my uniform. I also possess some live stock in the shape of a little dog, of a Pomeranian breed, which I captured from a Polish officer in the battle at Lemberg on Dec. 27, 1918, and which, in hope of victory, I named Nika. This little dog shared with me good and bad fortune; on several occasions it saved my life. On April 20, 1919, it was severely wounded in a battle near Bodnariwka, and I took it out from the front line on my shoulder. This is all that I possess, adding only 25 Soviet rubles, which I must carry with me as a remembrance, and also because I cannot buy with them so much as a package of matches.

Now you know how I look; and all my comrades who have suffered look the same. I hope, with your help, to become somewhat more civilized in appearance, so that I can show myself among people, because in my uniform as I now look I would be arrested at the first occasion as a tramp. I am very sorry that my financial condition does not permit me to perpetuate my appearance by taking a picture of myself.

Lately I received a letter from mother and uncle, from which I learned that mother and sister are safe and living in M—, which news made me very happy. I was very much surprised to see they thought I had some money, which I never expect to have. This idea they based upon my expression of determination and strong desire to reach Bohemia and then America.

I wrote them thus, knowing from my war experiences that money is not needed for travel. I found out during the war that a person can live without a shirt, without shoes; that one can sleep not only on a soft bed, but also in trenches or on the bare ground; that one can get along very nicely without collar and tie; that it is not necessary to eat breakfast, dinner and supper; that one meal is enough, and that even without one you can live, and that for moving from place to place, Nature has provided good means in the shape of two feet. Basing my views on these convictions, I wrote to mother about my plan. Now that I have arrived here, I am hoping that you, father, will help me a little to accomplish this plan.

As you see, I have become a great philosopher since the war, and an ardent disciple of Diogenes. The truth is that I have no objection to putting an end to this gypsy existence and to starting some real life, but I am now beginning to realize that it will be very difficult. Perhaps if I once get back into the civilized world I can change my way of living, although I have no present means to accomplish this. I do not even know how to begin it. You know what I want first—rest, rest, rest, rest. I would not object even if the Czechs put me into prison, for there I could rest, both physically and mentally.

Now I want to describe for you my *curriculum vitae*. You know everything up to 1916. After I graduated from the military academy, well versed in military lore, I was commissioned a Lieutenant and sent to the eastern front, where I was very severely wounded in 1916. My leg was almost shattered by shrapnel. The surgeons wanted to amputate it, but I said I would rather die with two legs than live with one. They managed to put it together in some way, so that after six months I returned to duty and was sent to the Italian front. There I took part in the bloody battles on the Brenta and Piave until the outbreak of revolution in Austria in November, 1918. Then I made my way by foot from Italy over the Alpine peaks to the Tyrol, where I reached Bozen, and by the valley of the River Drava to the Carpathian mountains, where I arrived at the Galician border. Having the conviction that I could serve our cause best at the front, I

had no time to visit with mother, much less to get rid of my Italian cooties, but re-enlisted at once and went with the Ukrainian Army to Lemberg. I took part in the Winter campaign near Lemberg. Then came the very sad retreat from Galicia. During our offensive I was wounded again at the battle of Chartkoff, but the wound healed very soon, and after one month I was able to serve again at the front.

On July 16 the Ukrainian Army crossed the River Zbruch, and I considered at the time that we were crossing the limits of Europe, for Russia and the Great Ukraine I count as Asia. We crossed, not to return, and here began our terrible suffering. Different political changes and, above all, the ravages of typhoid fever annihilated our army. Nearly 30,000 officers and men died of typhoid. The epidemic was terrible; we had no nurses, no physicians, no medicines, not even a field hospital. It was a heavy task to bury the dead, both those behind the lines and those killed at the front. All the young men of our family, all my cousins, all the boys among our kindred, lawyers, physicians, students—all have been killed or died of disease. I alone am left. Alex, who was an artillery Lieutenant, blew out his brains in typhoid delirium. Aunt still looks for his return, and I cannot tell her what his fate actually was. Dr. Konstanty K., a young physician, died of typhoid at Kaminiec-Podolsk. Young Joann C. also died of typhoid. My cousin Victor was shot by the Bolsheviks at Kiev. Victor P. was killed in the battle at Lemberg. Michael T. was killed on the Russian front. Andrew G. was killed on the Italian front; Michael C. on the western front; Myron B. at Lemberg. Peter B. was missing on the Polish battlefield, and Stefan B. was killed on the Piave. So you see, father, that I am now the only young man left in our whole family.

This is a very sad picture I have drawn. You can imagine how we suffered and how terrible the epidemic was. There were only 5 per cent. of boys like myself who survived. I will give you more details in my next letter.

Now I want to tell you what wars we fought. I served as follows:

1. With the Ukrainians against the Bolsheviks.
2. With the Ukrainians against Denikin.
3. With the army of Denikin against the

Bolsheviks. [After Denikin had promised liberty to Ukraina.] Then, when Denikin failed to keep his promise to establish an independent Ukrainian Republic, we went over to the Bolsheviks and fought.

4. Against Denikin.
5. With the Bolsheviks against the Poles. After parting with the Bolsheviks we joined—
6. With the Poles and Petlura against the Bolsheviks. In this last war we did not take any active part; every one tried to be neutral.

Now, father, tell me, do you know any other army that has fought so many wars? I don't believe you do. It seems to me that we made a record. Through them all we were never false to our ideal, and never betrayed our Ukrainian flag.

Our last adventure was breaking through the Polish lines into Czechoslovakia. We organized and decided in this way to protest against the Polish rule in Galicia, not having strength enough to clear this region of the Polish invaders. I must add that many of us—including myself—fought a guerrilla war in Ukraina, particularly after we left the Bolsheviks.

Well, you see my situation. As I said, I would like to gain some repose of mind, even in a Czech prison. I write you this letter from the village of Bohdan, on the border line of Galicia and Rusinia. At the first opportunity I will mail it. Perhaps you may get a cablegram before you get this letter, if I should be able to get some few crowns to pay for it. I hope in this way to communicate with you and get some help. I cannot give you my address, as I do not know where I will be tomorrow.

How does it seem to you, father, to look at this European turmoil from America! I read in some papers that our Ukrainian people in America have turned Bolshevik. Is this true? Have they joined the Third International? I want to tell you that the time I was with the Bolsheviks will be a black page in the history of my life. They are bandits; their hands are red with blood.

I must close now. I hope that the mail connections I have with you now will not be interrupted. Forgive me for my poor writing; I am not used to such a civilized job. For years I have not written anything besides signing army orders. I kiss you.

OMILAN.

*Liberec, Czechoslovakia, Sept. 12, 1920.*

Dearest Father: I write you this second

letter from exile. I do not know whether you received my first letter or not. I have reached my temporary destination and I am interned in camp. The Czechs treat us very sympathetically and give us plenty of freedom, but I cannot make use of it on account of my outward appearance and my physical condition. I am barefooted and naked, and in my pockets is a *vacuum Torricelli*. They give us something to eat, but what they give is insufficient and unsatisfactory for a man of any refinement. However, I do not mind this, for I have been used to a life like this for a long time. The worst thing is the lack of tobacco, and I beg of you, if possible, to send me some tobacco or cigars, for it is impossible to obtain them here even at high prices.

I would like you, so far as you find it possible—for I have no other source to improve my condition—to provide me with some clothing, so that I can dress myself again like a civilized man. Things are very expensive here. It costs in Czech money about 2,000 kronen to get a suit and overcoat, without shoes.

I do not expect to get better meals and better accommodations, although I need these greatly to improve my physical health, which is very badly shattered by different adventures and wars; but one needs plenty of money for that purpose. I would also like to have my teeth put in order, so I beg you, father, to send me a little money as soon as possible; if you can, send it by cable. I myself would like to cable, but I cannot afford it. I can hardly get money to put the stamp on the letter.

When I become again a civilized man I am going to study English, for I think I will need it in the future. It will be the easiest thing I can do, because I do not feel strong enough to start the study of any specialty. I imagine my future as the entrance to a tunnel; it seems like a black opening without any bottom. I have not thought seriously about it before, because I have been living in a condition where I never thought further than one day. It was always possible that the next day I might not be alive, and sometimes I rather hoped I would not be. I was always in danger of death. Now, at least, my life is safe. Though the Poles and Bolsheviki; with whom I always fought and against whom—from their viewpoint—I

have sinned greatly, are very anxious to catch me, they cannot do me any harm now.

Here in Czechoslovakia they have divided our Ukrainian unit, with which I landed here, into laborers' divisions. To such a division I belong myself; I am ranked as commander. Some of my old acquaintances are here. One of them has a father in America; perhaps you know his address. He is Nicholas N., from the village of B—, and his father is Peter N.\* Write me if you know his address, for Nicholas needs help as well as I. I have met a few boys here who were prisoners of war in Italy, and from them I learned that my best friend, Stephen, was still alive, that he was an Italian prisoner of war; I was given his address. It made me very happy to learn that my friend was alive also. [Stephen was a theological student just ready for ordination when the war began in 1914.] There is a rumor that my uncle [an officer of high rank], who was captured by the Poles, has escaped from his Polish prison and is here, but I am not sure. My condition now does not seem very enviable, but I expect it will change very soon for the better, and I am not discontented with what I have now.

\* \* \*

I have not seen mother for many years, and now I hear the Bolsheviki are in Galicia, so I cannot gain any communication with her now. They must be in misery. When the Muscovite ruffians come there will be bad doings. I know them too well.

I wait impatiently for a letter, dearest father, after so many years of separation. I am sorry you are so far, and that the communication is so poor that one has to wait so long for an answer.

I must close now. I kiss you.

OMILAN.

---

\*Peter N— was a peasant who had devoted his life to the education of his son Nicholas; as it was impossible for him to secure sufficient money to accomplish this in Galicia, he came to America for that express purpose. The boy had graduated from the *gymnasium* (high school), in 1914, and his father had never heard from him since the war began. Mr. T— was able, upon inquiry among his countrymen, to learn Peter's address, and wrote him: "Your son and mine are both alive; they are in Czechoslovakia, and are in need of help." The next Saturday at close of work, Peter took the train and traveled 700 miles to the home of Mr. T—, where the two fathers talked from noon until 11 o'clock at night about their sons, so long mourned as dead, and so miraculously restored to life.—TRANSLATOR.

*Terezin, Czechoslovakia, Sept. 24, 1920.*

Dearest Father: Did you get my letters? I have written you three times. Now I write you from another place. I expect to stay here for some time. We are engaged in service here and receive 3 crowns daily. It is about enough for a letter and stamp. Everything is very expensive; you can get all necessities here, but you have to pay terrible prices. I sit in the barracks and do not go out on account of my so-called uniform. If this state of affairs lasts much longer I fear I shall go insane.

I thought I would write some recollections from Great Ukraine, but I am in such a queer mood now that at times I am not able to write a letter, much less my recollections, so I put it off. I am, however, beginning to recover my normal poise, though very slowly; I think it will be a long time before I will be as before. Some man has said that the most complete moral rest is in prison, and this seems to me to be true, for my present life differs but little from prison life. Such a life has good and bad aspects for me. It is rest that I need, and yet rest wears on me, for I was used to a free life in the Great Ukrainian steppes, where, in spite of wars and enemies, there is some sweep and plenty of motion and space such as you would not find in any civilized country.

Culture has made very slow progress in the Ukraine. I can truthfully say that from the sixteenth century it has remained in the same level. You can meet the same Zaporogian Cossacks as those of the old time. In General Pavlenko's army there is a Zaporogian unit, whose members do not differ in any respect from their ancestors of old—the same adventurers and cut-throats. Among them I met some Hejduk; the same as those who captured Uman. [A historical episode of the sixteenth century]. To cut the throat of a Jew is to them the same as to kill a fly. I have had a chance to be with them—I would not say I have had the pleasure. I was with them, I lived with them and I fought in their ranks. It is true that I would not wish to be with them again. But, anyway, after this life in Great Ukraine, to be shut up in barracks in Czechoslovakia is rather hard on me. I need it, however, to strengthen my nerves—if I have any nerves left.

I got my first letter from Stephen and I

was very happy and glad that at least I can communicate with one of my friends. It seems that our Ukrainian boys have been scattered over the face of the whole world. I have just heard of 300 who have long been war prisoners of the British on the Island of Madagascar, and who now, after circumnavigating the Continent of Africa, have arrived also in Czechoslovakia.

I must close now. I kiss you.

OMILAN.

*Terezin, Czechoslovakia, Oct. 18, 1920.*

Dearest Father:

It is almost seven weeks now since I wrote you. It seems a very long time, but I think the trouble is with the communication. I received two letters from mother. They are all well.

One thing worries me very much. Mother wrote me that you are in poor financial condition;\* and I felt very uncomfortable over having asked for help without knowing the conditions. Now I see you will not be able to fulfill my requests, so I beg you don't heed these lamentations of Jeremiah. Put all my letters into the waste basket. If you want to help me, send what few pennies you have left over, but do not deny yourself. If I had known the conditions, I would have refrained from making a request for help. I am accustomed to misery now, so I do not consider it as a misfortune, but as a necessity. I adapt myself now to a new condition like a chameleon, or, rather, as the ox adapts itself to the yoke.

I do not leave my barracks; I do not suffer from the cold because I do not go out. I am happy because I am not alone. There are at least 1,000 officers and several thousand Ukrainian soldiers in Terezin. Where I am now there are 12 officers and 300 Ukrainian soldiers, and in company you cannot feel bad. You know the gypsy hung himself for company. So I ask you once more, don't heed my letters. Perhaps I put you in some unpleasant position by my request. I can get along very well myself, and the war can get along very well with-

\*This was a misunderstanding by the young officer of a letter sent by his father to his mother, explaining that he was unable to send funds for all the Ukrainian refugees mentioned by her as being in need of assistance. Immediately on receipt of the first letter, the father cabled money to the Governor of Rusinia for the son's passage to America; and upon receipt of the second letter another sum was sent directly to the young man. The money, however, was long in reaching its destination.

out me. I have wandered all over Europe for six years. It seems to me already far too long, and yet I don't know what the future has in store for me. Perhaps I must wander six years longer. If there should be no new adventure in the Spring, I will try to get some physical labor. Now I am not able to, because very many people are out of work, and in addition it is very cold. Perhaps it will not be necessary, because our diplomats say that our cause is progressing favorably now, and perhaps we will get back to our country without any new adventure, though I fear this is a vain hope. At present I must be satisfied with 3 kronen daily and two cups of black coffee, one in the morning and one in the evening.

The worst thing is my clothing. It is now increased by one shirt, which I received as a gift from a comrade, God bless him. He had three and I had only one. Now we each have two. With my shoes there is some improvement also. I received from the Czechs a pair of old army shoes, which I am very sorry I cannot wear on account of their dimensions. Our Ukrainian Government and our diplomats forget us, and the strangers do not care much about us. In the beginning they made us happy by telling us that we would get the same wages as Czech officers. This would happen, they said, within a fortnight, but from Nov. 15 they put it off *ad kalendas Graecas in infinitum*.

I am going now to arm myself with patience and to wait until Spring. In the Spring perhaps we will start some adventure, or try to get some physical labor, or I do not know myself what. Perhaps I will enlist in some foreign legion. I cannot live as I live now. It is true that I did live in worse conditions than now, but that was due to war and to iron necessity. It was something quite different—trenches, grenades, mines, shrapnel, cannon balls, hunger; cold, cooties and different things. Here, on the contrary, everything is normal. The people are peaceful, and I, ragged and torn, am without a penny in my pocket, without any aim, without any tomorrow, like a dog. But, father, I don't mind. One must wait; some day, maybe, "the sunshine into our windows will come."

Did you see any one in America from my birthplace? I passed it in 1918, but I could not locate the place where the church

was. There was not even a post left of the whole village. How the people there must have suffered! You are lucky, father, that you did not see anything that was going on there.

I beg you once more to pardon my letters of request and to write me a very nice long letter. I kiss you. OMILAN.

*Terezin, Czechoslovakia, Nov. 8, 1920.*

Dearest Father:

For three days I have been receiving letters from you, two written to Terezin and one to Liberec, with priceless news for me. The last letter even enclosed \$2. There was no limit to my happiness when I got these letters, and I did not dare to believe that a way could be open for me to America. It was like a temple of India opening for me, revealing a god of gold within, who would help me to get out of this enchanted ring.

I expect some difficulties, because I have to get a passport and a discharge or furlough from the army of the West Ukrainian Republic. Our dictator has ordered the mobilization of all Ukrainians belonging to West Ukraine and living in Czechoslovakia, so you see, father, it looks very bad for me. In the office of our Secretary of War I have a friend with whom I made all the old Ukrainian campaigns. If they do not remove him I can count on a speedy and satisfactory fulfillment of my request. It will be very sad for me to leave my comrades, and to play no part in the coming events. Perhaps they will have to fight again with the Polish brigands, and my palms will itch to fight them; but the desire to see my father and my brothers is worth something, too.

I am afraid I cannot get along with the money you sent me if they keep postponing the passports. I have no information as to what it costs from Liberec to Rotterdam. but, any way, I will try to get along, and I am determined to go to America, even if I have to be lodged on the smokestack.

I wonder that you cannot communicate with mother. I have good communication with her now, and receive letters every six days. It would be good for mother and sister to come with me to America, and you must write them urging them to join me. I will let them know when I am ready to leave, and in case they are coming I can wait for them here in Czechoslovakia, or they can meet me in Germany. I cannot go

to Galicia; if I did, the Poles would hang me immediately. So think it over, father, and let me know by cable what you decide. My trip will be delayed by that, but I would be glad to come together with them.

Irene wrote me that she got \$5 with your letter, and that before that they got 10,000 crowns.\* This seems to me a very large amount. I did not get any money from you yet except the \$2, which means 184 crowns. An American dollar gleams like gold here. One dollar is worth 384 Polish marks and 400 Austrian crowns, but Polish and Austrian money is of no value here. It is like the dust you empty in the ashbin.

The first thing I shall do when I receive the money will be to buy a suit and to get what other things I need for the trip. I think I will go to Prague to our Ukrainian Ambassador, to ask him to clear the difficulties from my way. Then I must wait for your letter about mother and Irene.

I am in Terezin now, but I expect to be transferred very soon to Liberec, so write the next letter to that town. I have no special news for you. I stay in the barracks and blow on my hands to keep them warm, and I warm my heart with hope for the future. I thank Ivan for sending the tobacco, but I did not get it. I am an unhappy boy without tobacco.

My dog is with me, and if it does not cost

too much I think I will take him with me to America. I would cry if I had to leave him in the old country, because he has been with me in good and bad fortune and shared my meals and my home under the blue sky. But if I cannot get enough money to take the dog with me, then I will have to leave him with my best comrade.

I asked how much the steamship ticket cost, and it looks as though it will be very high, but I think I will get better information. Today with the \$2 you sent me I shall have a banquet in the shape of some sausage and a glass of beer—a treat which I have not had for a very long time; my little dog will enjoy the feast with me. I shall be happy, and I will praise the Lord in heaven that I have a father in America. I kiss you. OMILAN.

[The young man finally received the money to pay his way to America, but, the translator states, he is still eating out his heart in Czechoslovakia, as our Government officials do not see their way to viséing his passport unless he goes back to the Polish authorities in Galicia for credentials. The irony of this lies in the fact that if he goes to Galicia the authorities will hang him, because he fought against the Poles.]

\*This remittance was more than seven months on the way.

## THE GREAT NAPOLEON'S GRANDDAUGHTER

PARIS observed the centenary of Napoleon Bonaparte's death with elaborate ceremonies on May 5. Amid all the pomp in honor of the one-time arbiter of Europe, another figure stood out in contrast—that of a woman of 50, dressed in black, with a fine, open face, lined by sorrow and the incessant effort to eke out a livelihood, a teacher in an ordinary elementary school near the Boulevard St. Michel. This poor teacher, now living in a tiny apartment, with her cat and a few meagre possessions, is the granddaughter of Napoleon I. Her father was the illegitimate son of Napoleon and Eleonore de la Plaigne, a maid of honor to Caroline Marat. Napoleon gave the boy the title of Count Léon. Born in 1806, "Count Léon" died in 1881, after an exciting and feverish life, into which he crowded excessive gambling,

many duels and love affairs, and some mystical meditations. The Count married and had three sons; two of these are now dead, the other is living quietly in the Vosges. The Count's only daughter, Charlotte Léon, the subject of this paragraph, was born when her father was 60 years old. She began life as a teacher in Algeria to support her widowed mother, to whom the Count had left but small means of subsistence. After hard years of struggle on a pittance she finally went to Paris, where she married a M. Mesnard, taking the name of Mme. Mesnard-Léon. Her husband is now dead, and she lives alone, barely removed from want, meditating on the strange destiny of her grandfather, the great Emperor, of her father's wild and stormy life—and of her only son, who died for France at Rheims during the war.

# THE TRAGEDY OF CHILD LIFE UNDER BOLSHEVISM

BY DR. BORIS SOKOLOV\*

*How the fanatical purpose of the Soviet leaders to "nationalize" the children of Russia and educate them as communists is causing their death by thousands—Mothers forced to send infants to Government "nurseries," where they perish of neglect*

VERY little has thus far been said about the children and the tears they have been shedding most copiously in Soviet Russia. It is as if the worries of the adults, their trials and tribulations, had altogether pushed aside the problems of the children. We adults are really great egoists. Suffering ourselves, we pass by the tears of our children lightly and carelessly.

Speaking at the Pirogoff Medical Congress in August, 1920, Doctor Horn said:

I am prepared to forgive the Bolsheviki a great many things, almost everything. \* \* \* But one thing there is which I can not and will not forgive them, namely, those experiments, positively criminal and worthy of the most savage tribes of the African jungle, which the Bolsheviki have been making all this time with our young generation, with our children! This crime knows no parallel throughout the history of the world! They have destroyed, morally as well as physically, a whole Russian generation; they have destroyed it irretrievably, and, alas, beyond remedy!

Among the first to come under the suspicion of the Bolsheviki and to be subjected to all manner of persecution and reprisals were the Russian pedagogues. Not only the teachers of high schools and elementary schools, but also the women teachers in the kindergartens, nurseries and other institutions for children.

At the conference on Public Education held in 1918, the Bolshevik Commissary Lilina said:

We have to create out of the young generation a generation of communists. We must make real, good communists of the children, for they, like wax, are easily molded. And when we shall have grown tired and step aside, our places will be taken by our new communists who will have been brought up from childhood in the ideas of communism. Therefore we must at once, without procrastination, commence the train-

ing of the children. This, however, requires, first of all, that we sweep from the schools and institutions, as with a broom, all this bourgeois tuft-hunting crowd, all these pedagogues and teachers who are thoroughly permeated with the poison of the bourgeois philosophy of life.

We must remove the children from the pernicious influence of the family. We must register the children, or, let us speak plainly, nationalize them. Thus they will from the very start remain under the beneficial influence of communist kindergartens and schools. Here they will absorb the alphabet of communism. Here they will grow up to be real communists. To compel the mother to surrender her child to us, to the Soviet State, that is the practical task before us. (Reported in the official journal of the Commissariat of Public Education, *Narodnoye Prosvieshenie*, No. 4.)

In accordance with this "idée fixe," the Bolshevik power set out in 1918 to inaugurate its "childhood measures." These were definite, drastic measures, devoid of all foresight, and, of course, bringing altogether unexpected results for the Bolsheviki. The persecution of the teachers and educators by the Bolshevik authorities forced the most efficient and ideal elements among the pedagogical staffs to abandon their class rooms and to seek other employment. Their places were taken by communists who not only lacked in experience, but were total strangers in the field of pedagogy and—this was the worst of all—openly hostile to it.

Carrying out its scheme of nationalizing the children, bent on tearing them away

---

\*Dr. Sokolov is a leading member of the Socialist-Revolutionist Party, and was a delegate to the first All-Russian Constituent Assembly. Like most of those delegates, he is now an exile from Russia. His article was written for the *Volia Rossii*, the organ of the Russian Constituent group, published in Prague, Czechoslovakia, and appeared in the issue of Feb. 16, 1921. The translation here presented is that of the Russian Information Bulletin, New York City.

from their families, the Soviet Government allowed very little food to be distributed on children's ration tickets, insisting that every infant above the age of one year should be turned over to the Bolshevist nurseries. This the population, i. e., the mothers, positively refused to do. That they were right may be seen, among other evidence, from the report of the Soviet Inspection for February, 1920, where we find the following annihilating criticism of those institutions:

The thoroughgoing inspection of sixteen children's nurseries in the City of Petrograd has revealed a criminal and disgraceful treatment of the young generation at the hands of the responsible persons. So we found the Rozdestvenskia Nursery, where more than 100 children, ranging in age from 1 to 4 years, were maintained (and most of them children of workers) in a condition which demanded its immediate closing. The children, left to their own devices, under the supervision of inexperienced and rough-spoken nurses, with filthy clothing, pale from lack of sufficient nourishment, made a painful impression. The place itself, unventilated and poorly heated, fostered all manner of diseases and contributed to the exceedingly high rate of mortality among the children. In the course of three months the child population of that institution renewed itself to an extent of 90 per cent. In other words, nearly all of them were sent to the hospital, or, having failed even to reach the hospital, they perished while still at the nursery.

The well-known physician, Doctor N. Petrov, spoke of the impressions he had gained from a visit to several nurseries for children from 1 to 5 years of age in Petrograd and Moscow, before a meeting of the Society of Children's Specialists:

The Vyborg Nursery was once considered almost a model for others. I, therefore, visited it in the first place.

The broad staircase is filthy and untidy, and from the distance I hear already the children crying and weeping desperately. The Superintendent, M-va, now a communist, formerly a schoolmistress in a country school, reluctantly and hesitatingly gave me permission to look over the nursery. And—just as reluctantly—she came along with me on my inspection.

"Why do the children cry like this?" I asked her.

M-va frowned, answering:

"Oh, you know, it is really impossible to do anything with these children!"

The large room, crowded with little beds, was literally filled with the moans of crying and weeping children. Some were without underwear, others—in dirty little shirts turned black with filth, and most of them without bed sheets and pillow slips. Thus

were lying in their beds—sometimes two in one—little children ranging in age from 1 to 5 years.

A woman, evidently one of the nurses, wearing an apron and cap, was going from one bed to another and quieting the loudest criers by vigorous little spankings. My particular attention was attracted by one child crying more bitterly than the rest. I went over to the bed. A pretty little three-year-old girl it was. Notwithstanding all the spankings from the nurse, she did not stop crying loudly and with somewhat unusual plaintiveness.

"But listen," said I to M-va, "this little girl is ill. She has fever. And, look here, there is even a rash here. She is undoubtedly suffering from the measles!"

"Yes, yes, that may be," replied the Superintendent rather indifferently and betraying no surprise at all; "we have many sick children, but there is no place to send them to. In Petrograd the children's hospitals are overcrowded."

As for the other Soviet nurseries, they present exactly the same picture, in the capital as well as in the provincial towns. Thus we read in the report of the Congress on Kindergarten Training, held in July, 1920:

The Joint Inspection Committee of the People's Commissariats of Education and Public Health has demanded the immediate closing of nurseries in five provincial capitals along the Volga, owing to the abominable manner in which the children's training is carried on there, and also because of the disproportionately large number of cases of sickness.

The critical state of this official "guardianship" of little children was still further aggravated by the fact that the Bolshevist Government did not countenance, and does not suffer to this very day, any private initiative in this matter. The numerous, and often model, institutions for the care of children which came into existence especially after the March revolution of 1917, were either closed or transferred to official Bolshevist management. Even against the Children's Defense League, the only organization working hard for the protection of the children, the Bolsheviks are fighting incessantly. The President of this league, the well-known Doctor Kishkin, complained to me:

In spite of the fact that the children's problem is very critical, and notwithstanding that our league, the only remaining independent organization of its kind in Russia, renders a great amount of help to the Government in this work, we are still treated as outcasts. We have been forced during

these two years to spend more strength and energy on our self-preservation than, alas, on serving the cause of the children. The Bolsheviks tolerate nothing which is not of the Soviet, even though it be a beneficial and necessary thing for the Russian people.

#### TRAGEDY OF RUSSIAN MOTHERHOOD

Of private nurseries, a few have survived through some miracle. There remain two or more in Moscow and about as many in Petrograd. The Superintendent of one of these (The Lesshaft Nurseries in Torgovaia Street, 25) spoke at length to me about the tragedy of Russian motherhood. She said:

The Russian mother is now living through a deep tragedy, indeed. Just look at the women you pass on the street; you will at once be able to point out a mother of an infant among them. She is the one with the pale, wan, careworn face. You can imagine what it means: the Soviet Government insistently demanding that the mother turn over her children to the official nurseries, when you have seen for yourself what a horror they are! And they are such horrors because they have been intrusted to people who do not love that work and who are perfect strangers to it. As a matter of fact, the death rate among the nursery children is appalling, and to send your child there is almost certain death. So Russian mothers, even the most desperately poor and most unfortunate, do not care to surrender their children to the Soviet nurseries. But here comes a new tragedy. The earnings of the husband are so triflingly small in Soviet Russia that it compels the wife, especially the workingman's wife, to seek outside employment by all means.

This is the reason why mothers are compelled to leave at home, without any attendance, their one-year-old, and frequently even younger infants. But that is only one side of the tragedy. On the other side, the Soviet Government, anxious to drive every child into its official nurseries, only reluctantly and very meagrely allows food on children's ration tickets. Very seldom it furnishes milk and very irregularly other foodstuffs.

Thus there stands again before the Russian mother the spectre of death threatening her little one. For free commerce is suppressed, and there is no place where she can buy milk.

In 1920 the few remaining private nurseries, which were really model institutions, suddenly became objects of special attention on the part of the Bolsheviks. But this solicitude of the Soviet Government turned out to have a sinister motive behind it. These private nurseries (Lesshaft, Dietskoi and Solodovnikov nurseries), notwithstanding that they have been left in the

hands of private individuals, have been called by the Bolshevik authorities "Soviet Model Nurseries" and are now being shown to all foreign visitors and delegations as such.

Having suffered defeat in its scheme to take the children away from their mothers and to nationalize them; having met a categorical refusal on the part of the mothers to turn over their children to the Soviet nurseries, or, as they are popularly known in Petrograd, "morilki" (starvation houses), the Soviet Government, nevertheless, did not give up its intention, but shifted the struggle to the field of public feeding of children. "One way or another, we shall force the mothers to agree to have the children nationalized"—this utterance of Commissary Badaiev was reflected in his policy of child nourishment. The struggle raging around the food allowances for children has its past history as well as its present, and is in brief as follows:

In the beginning (1918), as long as there was still a certain degree of free commerce, the mothers in the cities paid scant attention to the official rations. Milk they obtained in more or less sufficient quantities in the markets, just as other needed articles of food for their children. Gradually, however, the ring about free commerce began to grow tighter and tighter, in Petrograd more so than in Moscow. Then the problem of public feeding of the children became particularly pressing.

Special "children's centres" were then established in various city districts, and the mothers were also permitted to take part in this work. But here two viewpoints became apparent: that of the Soviet Government, which demanded peremptorily that little children be fed at Soviet restaurants (for children), and that of the mothers, who were equally categorical in demanding a special children's food allowance to be given to the mothers at home. The mothers were pointing out that it was utterly absurd to demand that little children between 1 and 4 years of age should be fed at Soviet restaurants, even though these be specially provided for children, since the preparation of the food there was so far below the most elementary requirements of child hygiene that "it would be a crime for mothers to feed their children in Soviet restau-

rant." (Report of Conference of Petrograd Mothers, July, 1920.)

In this struggle, which lasted all through 1919 and through the first few months of 1920, the mothers came out victorious in the end. A children's ratio was established and is being given to the mothers at home, although with great delays and irregularity.

APPALLING INFANT MORTALITY

The results of this criminal policy of the Bolsheviki began to tell already in 1919. The city children born within the period from 1917 to 1920 have shown themselves entirely unfit to survive. They have furnished an appalling rate of mortality, they are extremely sickly and weak and bear the marks of degeneracy. Thus we cannot help agreeing with the opinion of the Pirogov Medical Congress and the Children's Defense League when they say:

The Soviet Government has done practically nothing to alleviate the condition of the children. On the contrary, it has with its stupid measures frequently prevented private initiative from saving the newly born citizens of Soviet Russia. By driving out experienced pedagogues and turning this work over to communists who, although they may be idealists, understand nothing about the raising of children, the Soviet Government has from the very first steps in the development of the children contributed an element of disintegration and degeneration.

Cold, objective figures, too, show plainly the present condition of young urban Russia. Thus the official Bolshevik Public Health organ, the *Izvestia Zdravookhranenia*, No. 11, cites the following figures for the City of Moscow, particularly significant because the population of Moscow has almost remained stationary:

Marriages in—		Births in—	
1914.....	12,000	1913.....	54,000
1916.....	7,500	1915.....	49,700
1917.....	9,900	1916.....	57,375
1919.....	18,784	1918.....	31,500
1920.....	20,000	1919.....	26,676
		1920.....	23,000

Mortality of children up to the age of 16 years per 10,000 inhabitants:

1913.....	81	1919.....	372
1915.....	78	1920.....	400
1918.....	100		

In other words, along with an increase of marriages, the number of births has gone down sharply. But the newly born infants also turn out to be unfit for survival. There are as many children dying as there are born.

"To us it is plain," said the Society of Child Specialists on this occasion, "that so high a mortality rate among the children and such a marked decline in the birth rate is directly connected with the measures taken by the Government, which is doing everything in its power to destroy the family and to nationalize the children, beginning with one-year-old infants. We have to note with sorrow that the young generation of this period does not exist for Russia."

Such are the facts, such is the reality. A sea of children's tears, heaps of little children's corpses strew the path of the Soviet power.

EDITORIAL NOTE—A tendency of the Soviet Government to modify its policy in this field as in others was indicated at the beginning of May by a statement made in London by Arthur Watts of the Friends' Emergency War Relief Committee, one of the two Quaker workers who have been granted full permission by the Russian Government to carry on relief activities among children. After ten months' labors in Russia Mr. Watts said: "We are now responsible for the daily feeding of 16,000 children in Moscow, having been given complete freedom by the Soviet authorities, after we had made clear that our action was not to be taken as approval of the political régime, but as an act of humanity. The supplies are distributed through the Departments of Public Health and Public Instruction, which are run in the interests of the children. They are devoid of political coloring, as is evident from the fact that Lunacharsky employs in prominent positions leading Mensheviks, who, although they oppose the Government, are working loyally for them on behalf of the children. Conditions regarding bread and fuel are better just now, but those in respect of fats and milk are more serious than ever, owing to failure of last season's fodder crops and the drought. Till recently only 3,000 of the 16,000 children were able to be supplied with the free milk to which they were entitled from the welfare centres, but we are steadily increasing this total. Last year the £35,000 we were able to spend in medicines, milk and clothing almost all came from England, but this year we have received £180,000 through the American Friends' Service Committee from the Hoover and other funds, besides help from the Save-the-Children Fund in England."

# THE TRUTH ABOUT KOLCHAK

BY SIDNEY C. GRAVES

Former Staff Major and Assistant to Chief of Staff of  
the American Expeditionary Force in Siberia

*Mr. Graves, who writes as an eyewitness, gives an interesting picture of the process by which Kolchak's republic degenerated into a despotism, and his rule into an organized system of terrorism which alienated the whole Siberian population. An important part of the article is the account of the friction which arose between the American Chief of Staff and the Omsk authorities from the arbitrary acts of the Kolchak Generals, Semenov and Kalmikov, and also because of the anti-American campaign of insult and abuse which was waged by the Kolchak partisans in the Vladivostok Russian press.*

WHAT was the real cause of the defeat of Kolchak by the Bolsheviki? Of the numerical superiority of the Reds there can be no doubt, but that the efficient functioning of these forces was due solely to their leadership by coerced Russian officers of the old régime is manifestly absurd, although this factor has been repeatedly assigned as one of the principal reasons for the success of the Soviet armies over Kolchak, as over Denikin and Wrangel.

In Siberia the fall of Kolchak was attributed to failure of allied support—particularly American support—and General Graves, commanding, was openly accused of active opposition to the Kolchak Government, not only by Russians, but by many misinformed people in the United States. The fault, however, lay within that Government itself, for its political character and the conduct of its agents was such as to alienate completely the confidence and support of the masses and to drive a large per cent. of the population into support of Bolshevism as an alternative to escape the reactionary terror to which they were subjected. Many allied observers with Kolchak, Denikin and Wrangel declared emphatically that the reactionary character of these ventures contributed largely to their failure. The failure of Kolchak was typical.

Consider the auspicious circumstances under which the Omsk Government was ushered into power. The efforts of the heroic Czechs had cleared all Central Siberia of the Bolsheviki, so that Kolchak was able to set up his allegedly liberal government at Ufa, directed from Omsk, without let or hindrance. The people hailed the new democratic régime with joy, and prepared to give it their wholehearted support. But on Nov. 18, 1918, only about one week after the birth of the new republic, Kolchak,

aided at least in part by allied support of his contention that only a strongly centralized Government would have power to overthrow the Bolsheviki, renounced this republic and assumed the rôle of dictator. The people were filled with doubt and uneasiness, yet they acquiesced, in view of Kolchak's protestations that he would lay down his dictatorship the moment the object sought was accomplished—in view of the fact that the Kolchak officials had not yet begun to abuse their authority. These factors were reinforced by the capture of Perm by General Gaida, a Czech, who had resigned his command of the Czechoslovak forces to lead the Kolchak troops.

Belief in the eventual success of Kolchak was still widespread. But the military situation, at first so favorable, went from bad to worse. Gaida, Kolchak's one efficient and honest General, was pursued from the start by jealousy and persecution from Omsk, and the strategical blunder of his chief of staff, General Bogoslavsky, during the Bolshevik offensive of June, 1919, which cost Kolchak the lives of some 25,000 much needed men, contributed to force his dismissal. He was succeeded by General Dietricks, whose régime was marked by gross corruption, dishonesty and abuse of power. Dietricks's counter-offensive during September and October of 1919 at first gave promise of success, but the support of the people was going, if not already gone, and the restoration of class privilege and the reactionary reign of terror incident thereto, drove civilian and soldier alike into the ranks of Bolshevism. Dietricks's retreat became a rout; Omsk was threatened, and General Sakharov, his successor, failed to make good his boast that he could defend it.

Military opposition to the Soviet forces may be said to have ceased with the fall of Omsk and the destruction of the remnants of the army, about the middle of November, as Dietricks had prophesied. In this attempted defense of the city Kolchak lost approximately 40,000 men, and complete trainloads of supplies fell into the hands of the Bolsheviki.

#### THE INTERALLIED ATTITUDE

Before considering in detail the extremes of the Omsk Government, which underlay the military failure, a brief understanding of the divergent participation of the various allies is advisable.

The British, represented by a mission, at the head of which was General Knox, continued to the last to support Admiral Kolchak, and through him a considerable quantity of arms and equipment was furnished Kolchak's troops. Every effort was made to obtain American recognition and support, and in this General Knox was strongly seconded by Mr. Soukine, the Minister of Foreign Affairs of the Omsk Government, who believed that the moral backing and supplies which could be furnished by the United States were essential to success.

The French were in complete accord with the British, but were mainly concerned with instruction and liaison work, and for this purpose furnished advisory officers with each Siberian unit and opened schools for Russian officers. General Janin, who came to Siberia with the hope of assuming the field command and who was in charge of the French Military Mission, and technically also in charge of all Polish, Czech and Yugo-Slav forces, became greatly incensed at the extremes of the Kolchak Government, and was bitterly condemned in Russian circles because he failed to prohibit the issuance of a Czech memorandum setting forth in detail the atrocities of the Omsk forces.

The Japanese, for their part, issued proclamations of neutrality and non-interference in the internal affairs of the Russian people. Their objects and mode of operation were covered by me in an article appearing in *CURRENT HISTORY* for May, and it is sufficient to state here that their activities were confined to Eastern Siberia, that they seized every opportunity to foster

or instigate anti-Americanism, and that they subsidized various factions, one against the other, with an apparent inconsistency readily explained by their paramount endeavor—namely to foment discord to such an extent as to make their continued occupation of Southeastern Siberia a necessity.

The orders given General Graves, the American commander, were those of strict neutrality, and fortunately these instructions were not changed from Washington nor deviated from by the American Expeditionary Force during the entire period of occupation. The failure of our forces actively to support Kolchak and to condone the actions of his agents, and other semi-independent Cossack leaders in the Far East, led to a bitter anti-American campaign in an endeavor to force a change of policy where persuasion, seconded by General Knox and the British, had failed. This activity was mainly confined to propaganda in the press, instigated by such men as General Kretichinsky, who on one occasion sent a messenger to see General Graves with the statement that he would stop all offensive articles if he were paid \$20,000 a month, and that it would be to General Graves's advantage to reply before 7 P. M.

A considerable number of rifles were purchased by part payment in the United States and forwarded General Graves for delivery to Omsk, but the first shipment was held at Chita by Ataman Semenov, who gave the lieutenant in charge a few hours to deliver or be attacked. This the American officer refused to do, and Semenov failed to make good his threat, but the hostile attitude of this Cossack leader and of Kalmikov, further east, led to the following telegram, for which General Graves was criticised in the United States by misinformed people, who credited him solely with refusing to furnish Omsk with needed rifles and consequently aiding the Bolsheviki. To quote:

In view of the anti-American declarations of Kalmikov and actions of General Rozanov in doing nothing to stop Kalmikov, and in view of the fact that Semenov has told Kalmikov that he will assist him in case of trouble against the United States, I have informed the War Department and have recommended no sale of military supplies to Admiral Kolchak for the Government so long as his agents in the East are threatening to declare war on the United States. Please tell the Foreign Minister the above and say to

him that I have refused to give up rifles now here as long as the above conditions continue. The Golos Rodini is publishing libelous, insulting and disgusting lies about the Americans and Rozanov failed to take action. Tell the Foreign Minister that unless action is taken at once I shall close the paper and arrest the editors. This will be done because there is practically no authority here willing to act in protecting American soldiers from these insults.

An occasion of open rupture finally occurred with Semenov's troops, but the fall of the Omsk Government and the resultant revolution which spread over the Far East eliminated the Kolchak agents as well as American unpopularity.

In addition to the force of 8,500 troops, the United States sent to Siberia a group of railway experts, in charge of J. F. Stevens, who were to assist in the restoration of the Trans-Siberian railways. When the inter-allied railway agreement was promulgated in February, 1919, the employment of this technical advice was provided for, and an attempt was made to co-ordinate the widely different functions of the Allies.

By virtue of this plan an Interallied Railway Committee was provided to superintend a Military Transportation Board, which co-ordinated the transportation of allied troops, and a Technical Committee for expert advice in the operation of the railway systems and shops. The road was to be guarded in sectors by Chinese, Japanese, and American troops, while all the allies represented were to share in the expense of this arrangement and pay for the movement of their soldiers. This cost the United States over \$4,500,000 and we were the only power to fulfill our financial agreement. China made a small payment, Japan a larger proportional part, and the other allies practically nothing.

It was intended that the Trans-Siberian should function for the benefit of the entire population without reference to the Omsk Government or other political affiliations, but by means of station commandants and regional boards, the Russians retained control of the cars and, from the terminals, regulated the character and destination of shipments. As a result, only commodities for Kolchak, or the Cossack leaders in the east, were permitted, and where private enterprise was concerned the officials prospered in the sale of space. The American railway officials could give advice, but no

measures were ever taken at Omsk to assure that it would be acted upon, and what little our so-called Russian Railway Service accomplished in Siberia is due entirely to the perseverance and ability of its members in the face of almost open opposition by the official class.

The conversion of the railway into a line of supply for the Kolchak army brought allied troops into conflict with the peasants of Eastern Siberia, who became increasingly bitter against the Omsk Government, and in order to assist in its downfall attempted, with some success, to destroy the road under American and Japanese protection. It is regrettable that American troops should have been forced to take the field in defense of the interallied railway agreement, and that such of our soldiers who lost their lives did so indirectly in defense of the Kolchak Government—a Government representing nothing for which America stands.

#### KOLCHAK'S REACTIONARY EXTREMES

The political character of the Omsk Government remains to be considered. Even had Kolchak's armies been of the most efficient character, his success would have been impossible in view of the wave of opposition which finally swept over the entire population of Siberia, and the reasons for this sentiment against Kolchak furnish the fundamental explanation for his failure.

After the *coup d'état* in November, 1918, when Admiral Kolchak assumed the powers of dictator, the officials returning to office took up their duties almost with timidity, as the revolution had engendered a fear of the people in their hearts. The peasant was willing to send his sons to fight against the Bolsheviki, as he was convinced that the new Government meant an end to the forced requisition, murder and brutal treatment which he had suffered during the temporary administration of the Soviets. Had these conditions continued and the protestations of democratic policy been fulfilled, both by the protection of private rights and the recognition of suffrage under the Kerensky law, the support of the people would have been retained with probable success against the Red Government.

As they became more firmly established, however, the army and official class began to exercise their functions in an arbitrary

manner without reference to law, justice, or anything except their personal inclinations. In the beginning those of other political groups than the Omsk Government were permitted to live in Omsk and in the rear of the lines, but in a very short time these persons were arrested and disappeared without any record of trial or even of the arrest. Property rights were absolutely disregarded and requisition became a byword for pillage and personal gain by officers in charge of small detachments.

The brutalities of General Rozanov, who was in charge of the Krasnoyarsk district, and who later assumed command of the Kolchak forces in the Far East, furnish a striking example of the atrocities practiced under the guise of fighting Bolshevism. In pacifying this district, which was generally anti-Kolchak in sympathy, General Rozanov's troops, on entering a village, would demand the name and residence of every partisan, the location of hostile bands and a guide to lead them in a surprise attack. Failing to secure this information, every house was burned, and in the event that the demands were not complied with, every fifth malé was shot regardless of age. These practices were by no means confined to this locality, and within 300 versts of Omsk an expedition in charge of a Colonel Francke, who had been interpreter for Colonel Ward, British member of Parliament and lecturer in Siberia, devastated entire villages. On this occasion innumerable girls were raped and one woman, after being made to witness the execution of her father and brother, was stripped of her clothing, tied across a barrel and whipped to such an extent as to necessitate her removal to a hospital; and all this because a male member of the household was suspected of having been implicated in an uprising. In the eastern part of Siberia American offi-

cers examined bodies which bore mute testimony of having had their tongues and finger nails pulled out, and of having been victims of other unspeakable tortures inflicted before death in an endeavor to procure information or to enforce the draft edict of Kolchak. A pogrom against the Jews was carried out in Ekaterinburg in the middle of July, 1919, and anti-Semitic reports place the minimum number of killed at 2,000.

These few examples show the justification for a memorandum published by the Czechs in November, in which the atrocities of the Omsk Government were enumerated and condemned. This document is the more convincing in having emanated from Czech sources, as the Czechs, in their early struggles with the Bolsheviki, acted with the utmost severity, but always in accordance with their regulations, and if property was seized or persons arrested, the order authorizing the action and setting forth the reasons therefor was published.

The Omsk Government relied solely on a military success, and no criticism for their failure to retain the support of a people liberated from the Soviet yoke can be too severe. Recognition of Admiral Kolchak by the Allies would have accomplished nothing unless the powers in so doing placed an army in Central Siberia to maintain his authority—an army which would have been forced to operate, with a precarious line of communications, against practically the entire population of Siberia struggling to achieve the personal liberty which is their right.

It is to be hoped that a true democratic movement will arise in Russia, uniting all elements in a mutual endeavor of sacrifice, and guaranteeing the rights of all classes. Until that time the Soviet Government will prevail.

# THE SOVIET PRISONS

By LEO PASVOLSKY

*How the Russian Government fills its prisons with the Czar's former rebels—Its treatment of men who belong to other parties and the working of the "hostage" system—Starvation, violence and death the penalties paid for not agreeing with Bolshevist doctrine*

THE Red Terror, always mentioned so prominently in all discussions of the Soviet régime, represents the most spectacular of the punitive measures of which the Communist masters of Russia avail themselves, but it is not the most important one. Overwhelmingly gruesome as it is, the Red Terror, nevertheless, is sporadic; at different periods it reaches greater or lesser intensity. But there is one kind of punitive activity which goes on all the time; it is the work of the Soviet prisons.

Under the Soviet system there are two sets of institutions charged with the repression and the punishment of offenders against the Government; both of these make use of the prisons in the course of their work. The first, working on a quasi-judicial basis, is represented by the Supreme Revolutionary Tribunal in Moscow and by the various local tribunals. The second, working entirely on the basis of arbitrary administrative rule, is represented by the "All-Russia Extraordinary Commission for Combating the Counter-Revolution," and by the various local extraordinary commissions.

In the general scheme of Soviet "justice" these two systems are supposed to be quite different and distinct. The tribunals are intended to be permanent and to have charge mostly of criminal cases. The commissions are, theoretically, intended to be temporary institutions, brought into being for the purpose of eradicating any form of activity that may endanger the existence of the Soviet régime. But the work of the two systems, naturally, overlaps very considerably, and in this overlapping of the jurisdiction and the actual work of the revolutionary tribunals and the extraordinary commissions, the latter have by far the greater importance of the two.

In actual practice, the extraordinary com-

missions hear both the criminal and the political cases of any considerable importance; or rather, they often dispose of such cases without even a pretense of a trial. Acquittal by the revolutionary tribunal seldom constitutes immunity from the long arm of the extraordinary commission. In Russia's everyday life the word "Tche-kah" (an abbreviation of the words "Tchrezvychaynaya Kommissia," the Russian equivalent for the words "extraordinary commission") has already acquired a significance of unprecedented dread and horror; it is a nightmare of Russian life, the memory of which will, undoubtedly, long outlive that of the whole Soviet régime and the rest of its work.

## BLOODY WORK OF THE "TCHE-KAH"

The "Tche-kah" is the instrument of the Red Terror, which is a system of executions, without any process of law or even a perfunctory procedure of a trial. Persons arrested on suspicion of counter-revolutionary activity, in most cases as a result of denunciation, and thrown into the prisons controlled by the "Tche-kah," are usually considered by those about them as practically doomed. Their liberation from the clutches of the "Tche-kah" is regarded as almost a miracle; so few escape death at the hands of the hangmen.

The extraordinary commissions were organized early in the existence of the Soviet régime, and their bloody work has proceeded uninterrupted ever since. The direction of this work, in its larger ramifications, is in the hands of the President of the All-Russian Commission, a Pole named Felix Dzerzhinsky, and of his two principal assistants, Peters and Latsis, both Letts. These names are now universally known throughout the country, and have become symbols of cruelty and ruthlessness. Besides these, each local extraordinary com-

mission has its own little Dzerzhinsky or Latsis.

Capital punishment, the "supreme penalty" in the terminology of Soviet jurisprudence, was introduced in Soviet Russia early in 1918. It continued in existence officially, in the form of ordinary process of "law," and particularly in the form of the Red Terror, until February, 1920, when it was temporarily suspended. In a report published at that time, the "Tche-kah" announced the number of executions during the years 1918 and 1919 as 9,641. This figure covers the activities of only the All-Russian Extraordinary Commission. How many persons were destroyed in the sinister shadows of the local commissions no one knows and, most probably, no one will ever know.

#### TREACHEROUS EXECUTIONS

Whatever the statistics of the Red Terror during the period of its greatest intensity, on Feb. 15, 1920, capital punishment was officially suspended. But the night of Feb. 15-16 was truly a night of St. Batholomew for most of the "Tche-kah" prisons. Boris Sokolov, a prominent revolutionist, who recently escaped from Russia, states that on that night "all the prisons of Soviet Russia were flushed with blood. On the wall of a special "Tche-kah" prison, when he was incarcerated there, Sokolov read an inscription that ran as follows: "The night of the suspension of capital punishment became a night of blood."

A statement of the prisoners kept in the Moscow prison of Butyrki, dated May 5, 1920, reads: "On the night following the issuing of the suspension decree seventy-two persons were shot in our prison." The number of victims in Petrograd that night is estimated at 400. A letter from the Saratov prison, dated June 5, 1920, states: "It was a frightful night. From midnight on the whole prison reverberated with the shrieks and wails of the women who were led out to execution. And the most fearful part of it was that we all knew about the decree. Altogether fifty-two persons were shot that night."

#### CAPITAL PUNISHMENT

But these treacherous executions were not the only feature of the activities of the "Tche-kah" after the official suspension of

the death penalty. According to the suspension decree, capital punishment was abolished for all of Soviet Russia, except the war zone. And so on April 15, 1920, the following circular order, signed by the Chairman of the Special Division of the All-Russian Commission, Yagoza, was sent to all the Presidents of extraordinary commissions:

Secret. Circular. To Presidents of Extraordinary Commissions, Special Divisions: In view of the suspension of capital punishment, you are instructed to transfer all persons held for crimes which call for the supreme penalty to the war zone, since the suspension decree does not affect that territory.

This arrangement, however cumbersome and difficult at best because of the lack of transportation facilities, soon became unnecessary. A short time after this order was issued practically the whole of Soviet Russia (twenty-nine provinces, including that of Moscow) was declared under military law, and the decree suspending capital punishment became a dead letter. The death penalty was re-established on May 24. The Moscow *Izvestiya* in its issue No. 115 reported that from Jan. 17 to May 20, i. e., during the period of the suspension of the "supreme penalty," the number of executions was 521. Toward the end of the year 1920 the Red Terror became more and more intense. During the first ten days of 1921 (Jan. 1 to 10) the number of executions officially reported was 347; the actual number, again, cannot be known.

So much for the executions and the Red Terror proper. But, as stated above, the ruthless deeds of these extraordinary commissions, alike in Moscow and in the provinces, are sporadic and are not the incubus that weighs most heavily on the lives of the Russian people. The maladministration of the prison system is far more serious.

#### SOVIET PRISONS CROWDED

The Soviet régime is not only using all the prisons existing under the Czar, but has found it necessary to utilize for prison purposes such buildings as empty factories, and even schools. The number of persons kept in prison by the punitive and repressive agencies of the Soviet Government is greater than ever before in Russia's history. If a future historian seeks for evidence of

the Soviet régime's lack of popularity in Russia, he will find excellent indications of it in the fact that the Soviet rulers have been compelled not only to fill beyond their utmost capacity the prison buildings of the imperial régime, but to seek space elsewhere for a huge overflow of prisoners. The imperial Government, symbolized by the Czar and his bureaucracy, who frankly arrayed themselves against the people, never had so many enemies and never required so many places of incarceration for their victims as the Soviet Government of today, symbolized by the communist leaders, who arrogate to themselves the supreme privilege of being the only spokesmen for the Russian people.

The Soviet régime has far ousted its imperial predecessor, not only in the extent of its prison activities, but also in the frightfulness of the conditions under which the prisoners are forced to live. Many of Lenin's victims, incarcerated as enemies of his régime, had precisely the same status with regard to the Czar's régime, and, until the revolution of March, 1917, were inmates of the imperial prisons. Their testimony, as well as other documentary evidence, is now available to give a more or less connected picture of the system of prison administration that exists in Soviet Russia today.

#### SUFFERINGS OF PRISONERS

According to well authenticated data, during the third year of the Soviet régime alone 145,000 persons were arrested and imprisoned, an average of nearly 12,000 a month. What are the conditions of life for them in the Soviet prisons?

The most important of the political prisons in Soviet Russia is the Butyrski prison in Moscow, famous under the imperial régime. It is filled to capacity, and most of those confined there are well-known Socialist, labor and anarchist leaders. A group of anarchists imprisoned there recently addressed a declaration to the anarchists of Europe, in which they state that no Government on earth has ever treated anarchists so inhumanly as does the Soviet Government. Men are arrested merely for their convictions; in prison they are beaten, insulted, often shot without any provocation whatever. The declaration is signed by sixty-one prisoners.

On May 1, 1920, a group of 212 Socialists and anarchists, all prisoners in the Butyrski

prison, addressed a statement to Socialists of the world, in which they said:

We protest against the insolent deception which the Bolshevik attempt to foist on the proletariat of Western Europe. \* \* \* They do in prisons what the Czar's Government never did, but just before the arrival of foreign delegations in March most of the Socialists in the Butyrski prison were transferred to Siberia in irons.

This is the system in the Moscow prison; in the provinces it is infinitely worse. In the prison of Samara anarchist prisoners were beaten unmercifully, put in irons, &c., for the slightest trace of insubordination. A man who had been incarcerated in the Odessa "Tche-kah" prison, in a recently published pamphlet gave a shocking description of the things he saw there. The Odessa prisons were already overcrowded, and the "Tche-kah" was using a school building for its purposes. The most important personage in this prison was a Lett named Abash, a former sailor, who was in command of the "garrison," and personally did the work of the executions. Whenever he was drunk or under the influence of cocaine, at which times he was particularly noisy and overbearing, the whole prison knew that he was preparing for his work, which he performed in the cellar of one of the outbuildings.

#### A CRY FROM THE HEART

K. Alenin, the author of this pamphlet, tells the following incident, which is extremely characteristic of the prison situation. Among those in the "Tche-kah" prison at that time were two prominent local labor leaders, who had been arrested for agitation against the Soviet régime. Even the dreaded "Tche-kah" did not dare to execute these two men, but merely kept them behind bars, while its agents made daily overtures to them to set them free, provided they promised to desist from their agitation. Both refused. One day, hearing from other prisoners the stories which Abash, when partly under the influence of liquor or cocaine, was fond of telling concerning the secrets of his cellar, the elder of the two labor leaders exclaimed:

And the worst of it is that all this is done in the name of Socialism! And we, the old militants for the people's freedom, who spent the best years of our lives in the struggle, who gave up our families, our personal happiness, everything, did all that in order to

behold now this communist paradise! \* \* \* What have they given the workmen? Bread? No! Work? No! They have crowded all sorts of thieves into their institutions of government, and they steal everything on which they can lay their hands, wear diamond rings, squander huge sums of money for their carousals. They are the

from Mrs. Clare Sheridan's recent bust*

builders, they are the teachers. And I, who have suffered for thirty years in the struggle for the happiness of men, I am a "counter-revolutionist!" Abash is a Socialist, and I am a counter-revolutionist! But, of course, I am a counter-revolutionist. We don't want such a revolution as this. May it be accursed, this revolution of yours!

**THE "HOSTAGE" SYSTEM**

A set of documents, similarly descriptive of another Soviet prison, that of Yaroslavl, was recently published by the Central Committee of the Socialist-Revolutionist Party. These documents are concerned with the condition of sixty-three prominent members of that party, incarcerated in the Yaroslavl Central Prison, also made famous under the imperial régime as one of the important political prisons. Six of these prisoners had done penal servitude under the imperial régime; fifteen had been exiled to Siberia by the Czar's Government. One of them escaped from Siberia in 1914 in order to enlist in the army, but was caught in Moscow and sent back to Siberia to a prison there, from which he was released only by the

March revolution. Another had seen imprisonment in five of the most terrible of the imperial prisons. Six of these prisoners are members of the Russian Constituent Assembly, dispersed by the Bolsheviki.

Most of these prisoners do not even know why they were arrested or how long they will remain in prison. In response to their inquiries on this score some of them were told that they would remain in prison "until the end of the civil war"; some "until the end of the war with Poland." Some were even told that they would be kept in prison "until the arrest of Victor Chernov." [See below.] In reality, they are kept in prison because they are members of the Socialist-Revolutionist Party, the most formidable opponent of the Soviet régime. Most of them are kept as hostages in the struggle which this régime conducts against its enemies.

The wives of several of the prisoners were offered the position of agents of the extraordinary commissions and the reward promised for this was the liberation of their husbands. In many cases the prisoners' relatives are arrested, tortured for information and held as hostages. The mention of Chernov's name in connection with these prisoners has reference to an incident of this kind.

**THE CASE OF CHERNOV**

Victor Chernov, one of the most prominent leaders of the Socialist-Revolutionist Party, was the President of the Constituent Assembly. Until the beginning of 1920 he was working in disguise in many parts of Russia. At the time when the British labor delegation visited Moscow Chernov appeared at a meeting of the Moscow printers, called in honor of the British guests, and, disguised as an old man, delivered a scathing attack against the Soviet régime. His identity was discovered, but he succeeded in making his escape. Failing to find Chernov, whose arrest was of course immediately ordered, the agents of the "Tche-kah" arrested his wife and his two daughters, aged 17 and 12. During their search for Chernov the agents were informed that he would appear at a certain meeting. They took his younger daughter to this meeting and tried to intimidate her into finding her father for them.

Chernov is now in Paris, and the state-

ment that his family will be kept prisoners in the Yaroslavl prison until his arrest is an apt illustration of the "Tche-kah" methods.

#### PUNISHMENT BY STARVATION

Until Aug. 12, 1920, most of these prisoners were kept in the Moscow Butyrski prison, some as long as eighteen months. Late in July they began to demand from the agents of the "Tche-kah" that a group of other Socialist-Revolutionists, held in appalling conditions of life in a prison attached to the Special Division of the Extraordinary Commission, be transferred to the Butyrki. Their demand was refused and on Aug. 11 they declared a hunger strike, to begin the following morning. But on the evening of Aug. 11 a detachment of special troops, consisting of Magyars and Letts, appeared in the prison, and it was announced to the prisoners that all the Socialists would be transferred to other prisons. They were ordered to pack their things immediately. The prisoners refused to obey the order, demanding first an interview with a special agent of the "Tche-kah." But the agent refused to appear, and the prisoners were taken out by force. They resisted, but were overwhelmed. Even those among them who were patients at the hospital were dragged out of bed and taken to the Yaroslavl prison.

When brought to Yaroslavl, a series of punitive measures was applied to them. In a statement sent by these prisoners to the All-Russian Central Executive Committee of Soviets, as well as to the Central Committees of all the Socialist and Communist Parties and of the Third International, under date of Sept. 23, 1920, these punitive measures were enumerated as follows:

They were forbidden to receive visits from their relatives. Until Sept. 20 they were not permitted to communicate with their relatives. Only once were they permitted to receive packages of food and clothing from their relatives, but very few of these relatives were informed of the time when the packages would be transmitted, and only a small number of prisoners received help from the outside. These packages were transmitted by a representative of the Political Red Cross on Sept. 8; after that date he was allowed access to the prison.

The prisoners were refused permission to receive any newspapers or books. Most prisoners were kept in solitary confinement; in some cases two men were placed in a cell designed for solitary confinement. They were not permitted to communicate with

each other, and for some time, during their short walks in the prison yard, were kept five steps apart all the time. They were not permitted to go to the toilets, but special receptacles were provided in the cells. The air in the cells was sickening, but prisoners were not permitted to approach the windows, as the guards had orders to shoot any one looking out of the windows.

The food given to the prisoners was in smaller quantities than in Moscow and was utterly insufficient for nutrition. Prevented from obtaining assistance from the outside, the prisoners were doomed to slow starvation. They were placed in a situation in which they could not buy anything for themselves. As one of the punishments for the "obstruction" during the transfer from the Moscow prison, they were fined 100,000 rubles, and all the money they had was taken away from them.

#### REPROACH FOR COMMUNISTS

In connection with this statement, the Central Committee of the Socialist-Revolutionist Party addressed an open letter to the Central Committee of the Communist Party, which read as follows:

Your party is in power. You do not conceal this fact, but, on the contrary, do everything in your power to emphasize it in the work of all the institutions of the Soviet régime. This means that you bear full responsibility for everything that is done in the name and by the will of the Soviet Government. At the present time, in the city of Yaroslavl, in the Soviet House for the Deprivation of Liberty, over the gates of which there is a sign that reads "The Russian Socialist Federated Soviet Republic," while above it is the old sign, "The Yaroslavl Penal Prison"—in this Socialist prison over sixty persons are tortured by means of starvation, all of them imprisoned for precisely the same reason for which they suffered imprisonment under the imperial régime, viz., the mere fact of being members of the Socialist-Revolutionist Party. \* \* \*

But if the insults and acts of violence, the deprivation of light and air, the orders to fire on the windows of the cells are a repetition, perhaps in a more accentuated form, of the methods used by the prison wardens of the Czar's régime, the torture by means of starvation is, surely, an innovation of the Socialist prison.

The amount of food received by the prisoners in Yaroslavl is less than the norms which your own food supply institutions have established as starvation norms. \* \* \* You will, perhaps, explain this by the difficulties experienced by you because of the food crisis. But if this were so, then your political police would not prevent the relatives and friends of the prisoners from sending them assistance. At the price of huge sacrifices, the relatives of the prisoners have organized assistance for them, but the agents

of your extraordinary commission have arranged the conditions of the deliveries in such a way that packages were delivered only on two occasions in two months. An attempt was made to send the prisoners money to enable them to purchase the things they need, but the prison administration chose to accept only a certain amount, which was immediately confiscated in order to cover the alleged cost of the damages caused during the transfer of the prisoners to Yaroslavl. \* \* \*

Why do you need all this? Do not justify yourselves on the ground that you do not know of this. You do know, you cannot but know what is done in Yaroslavl in the glory of your name. The President of the Council of People's Commissaries, Lenin; the President of the Central Executive Committee of Soviets, Kallinin, and many others among you were personally informed of this.

With the hands of your hangmen in the Communist torture chamber of your Yaroslavl

prison you are making efforts to finish secretly the work that was left undone by the henchmen of the Czar, to destroy through torture of starvation the old militants for Socialism and the revolution.

We demand from you consistency and courage. If you decline responsibility for the torture by starvation in the Yaroslavl prison, then put an end to it. But if you have decided to carry it to its logical end, then have the courage to admit openly that in your Soviet prisons, under the guise of imprisonment, you practice a system of slow and inhumanly painful murder.

When such are the measures of self-preservation that the Soviet régime utilizes, is there any wonder that the hatred of it on the part of the Russian people is so intense as to be almost frenzied, and that the numberless thousands of its foes swell so appallingly the ranks of its victims?

## LENIN'S FIGHT FOR SOVIET RUSSIA

*How the Moscow dictator obtained a de facto recognition of the Bolshevist Government from Great Britain—Confirmed by the English Courts—Domestic reforms in Soviet policy pushed through despite all opposition*

[PERIOD ENDED JUNE 10, 1921]

SOVIET RUSSIA'S triumph in obtaining a trade treaty with Great Britain was considerably enhanced in May by a decision of the British Court of Appeals recognizing as legal the Bolshevist Government's confiscation of private property in Russia. After Great Britain's removal of restrictions on exports to Russia, large English firms immediately began to reach out tentatively for Russian trade. The crucial test, however, was yet to come. In the Russo-British Trade Agreement, signed in London on March 16, Article 13 gave the Moscow Government the right to terminate the agreement summarily in the event that the British courts decided adversely regarding its right of confiscation. Underlying this paragraph was the contention of the Soviet Government that it could not do business with Great Britain if its deposits of gold, transferred to cover its commercial transactions, remained subject to attachment by the creditors of Russia, or similarly if its right to dispose of any confiscated

property should not be upheld by the British courts.

The test case chosen to decide the issue was that entitled "Luther vs. Sagor." Suit had been brought by A. M. Luther as the English representative of a Russian company which owned a veneer factory at Staraja, in the Government of Novgorod. Soviet agents confiscated the mill, and finished the products under the 1918 decree, and in 1920 Krassin's delegation in London sold some of the veneer, or plywood, to James Sagor & Co. Luther then sued the Sagor firm to recover for his principals both the plywood and damages.

This case was decided on May 12 in favor of the Soviet Government. The Court of Appeals held that the Soviet Government—by virtue of the trade treaty—was now recognized by the British Government as the de facto Government of Russia, and that in consequence the English courts had no authority to interfere with the Bolshevist confiscatory decrees.

The court decision made it clear that two main issues must be decided—whether the Government whose property rights were contested was recognized as a sovereign Government by the British Government, and whether such rights could be contested on moral grounds, as incompatible with the moral and political principles upheld by the United Kingdom. The salient passages of the decision on these points are given below:

Further, the courts in deciding the question whether a particular person is a sovereign, must be guided only by the statement of the sovereign on whose behalf they exercise jurisdiction. As was said by this court in the case of *Mighell vs. Sultan of Johore*, "Whenever there is the authoritative certificate of the King through his Minister of State as to the status of another sovereign, that in the courts of this country is decisive." In the present case we have from the Foreign Office a recognition of the Soviet Republic in 1921 as the *de facto* Government, and a statement that in 1917 the Soviet authorities expelled the previous Government recognized by his Majesty. It appears to me that this binds us to recognize the decree of 1918 by a department of the Soviet Government, and the sale in 1920 by the Soviet Republic of property claimed by them to be theirs under that decree, as acts of a sovereign State, the validity of which cannot be questioned by the courts of this country unless it is possible to do so for the second reason argued before us—incompatibility with the moral and political policy of the United Kingdom. \* \* \*

Regarding this second argument, the Court expressed its views as follows:

It remains to consider the argument that the English courts should refuse to recognize the Soviet legislation and titles derived under it as confiscatory and unjust. \* \* \* But it appears a serious breach of international comity if a State is recognized as a sovereign independent State to postulate that its legislation is "contrary to essential principles of justice and morality." Such an allegation might well, with a susceptible foreign Government, become a *casus belli*, and should in my view be the action of the sovereign through his Ministers and not of the Judges in reference to a State which their sovereign has recognized.

This decision, based on these salient features, and backed by an imposing documentation of legal precedents, was hailed by Moscow with jubilation, as it not only upheld the Soviet rights in the case in question, but provided security for the future in all similar cases. The Bolsheviki also made capital out of the British court's con-

firmation of their status as a recognized *de facto* Government. With this legal impediment removed, the Moscow Government found its way open to the full resumption of commercial relations with Great Britain, though from certain statements made by Leonid Krassin, the Russian who negotiated the treaty, it had no immediate hope of much trade. Krassin late in May was in Berlin, arranging detailed plans for the resumption of trade with Germany, which he declared to be much more important for Russia's prosperity than that which would follow the agreement with Great Britain.

Although Krassin reported trade progress with Belgian, Dutch and Scandinavian interests, the one great country to whose trade potentialities the Moscow dictators looked with a longing eye—the United States—still remained outside the enchanted ring of Bolshevist persuasion. Krassin, it is true, declared that 600,000 pairs of boots had been bought privately in America at a price only slightly exceeding \$3 a pair; also an unspecified amount of coal and some 2,000 tons of rope. The American Government, however, after the advent of the new Administration, showed itself as averse to any step toward recognition as the Wilson régime had been. Copies of the Soviet official organ, *Izvestia*, received in this country on May 16, showed the extent of the Moscow Government's disappointment. One article said in part:

The essence of the Washington answer is that the resumption of commerce with Russia will be possible only after we have returned to a bourgeois régime. This is pure nonsense. The English bourgeoisie who have signed a trade agreement with us did not consider this change necessary. We did not propose to the Americans to change their capitalistic régime for a communistic one.

After various speculations regarding the real reasons behind Secretary Hughes's inflexible letter of refusal, the article concluded thus: "Little by little the industrial interests of America will predominate and will force the Government of the United States to change its policy toward Soviet Russia."

Intimately connected with the Soviet's plans for reopening trade relations with the world was Lenin's scheme for giving concessions in Russia to foreign enterprises willing to exploit and develop the country's vast economic resources. No con-

cessions have yet been actually given—not even those for which Mr. Washington B. Vanderlip, the American promoter, is negotiating. The rebuff of the Soviet by Secretary Hughes apparently had an unfavorable influence not only on Mr. Vanderlip's pending concessions in Kamchatka, but also on a new project to obtain 10,000,000 acres of timber land in the Archangel district.

Meanwhile Lenin continued his own plans for Soviet reform. He won complete approval for his new policies at the final session of the All-Russian Trade Union Congress held in Moscow on May 27. At his behest the Central Council of Labor and Defense was empowered to name a committee for the execution of the reforms outlined, notable among which was the return to capitalistic methods in the free exchange of goods, with other measures devised to satisfy the discontented peasants. Especially important was the fact that Lenin conceded the Labor Unions' right to co-operate in naming this committee, which will work out details with the Labor Council. This recognition by Lenin of the influence of the trade unions in Russia had the effect of bringing into power a body of Socialists who have rejected the extreme communism of the Third International and who are closely allied in theory with the International Trade Union Federation, whose headquarters are in Amsterdam. Only last Summer Lenin denounced this group and its activities, but large numbers of workmen in Russia are said to be supporting it and demanding a share in the control of industrial affairs of the country.

The new decrees sanctioning free trade had no visible effect in overcoming the food shortage, which was reported as serious, especially in Moscow. Soviet papers continued to complain of rampant speculation and jobbery under free trade. This was especially noticeable on the streets of Petrograd. The trains also were packed with speculators bringing back large quantities of food, and riding without ticket or without leave. The Soviet leaders were becoming more and more convinced that the situation could be served only by a system of exchange based on co-operation. The peasants were holding on to their grain for seed purposes, and governmental commis-

sions sent to the villages outside Moscow had returned empty handed. The Government's hope that it might secure a supply of flour from the Caucasus ended in disappointment, as several million poods of corn had been destroyed by rebellious elements in that region.

Unmoved by these setbacks, Lenin, supported strongly by his chief lieutenant, Milutin, the Soviet Secretary of Agriculture, pushed through his whole program of reform at the congress of the Communist Party, which closed its sessions in Moscow on May 31. Zinoviev, the Soviet Governor of Petrograd, and head of the faction opposed to reforms, accepted the new plans in grim silence. The policy outlined by Lenin and Milutin consisted of the following salient features:

The peasants to pay one-third of their grain to the Government as a State tax. They are empowered to dispose of the remaining two-thirds through the newly restored co-operative societies. All forcible requisitions of peasant grain to cease.

The largest industries, such as the leather, salt and textile industries, as well as the means of transportation, to remain in the hands of the Government. The factories to be speeded up to supply the peasants' needs and the workmen to be stimulated to greater productivity by a bonus system. The trade unions to supervise the work of these industries and to fix the wage scale.

The co-operative societies and private industries to be aided and encouraged by the Government in every way by financial subsidies, by the leasing of factories to the smaller industries, and by strict holding of the Government officials in charge to efficient administration. The trade unions to fix the wage scale also for these smaller industries. The Government to have the right of inspection.

The co-operative societies to be similarly stimulated and encouraged. All hindrances to free trade to be removed.

By no means reassuring to the agriculturists was the requisition for 1921, under the guise of a "tax in kind," of 2,200,000 poods (36,000 tons) of butter, all of which must be delivered by Nov. 1, under penalty of prosecution.

Neither the success of the Government in securing a trade agreement with Great Britain nor its theoretical sanction of concessions, nor its announcement of reforms at home, had any effect in placating the conservative Russian elements abroad. A congress of Russian manufacturers and business men which closed its sessions in

Paris on May 24 passed thirteen resolutions attacking the Soviet régime bitterly as an undemocratic and unrepresentative Government, denouncing the trade agreement as an instrument of further depletion of Russian gold, and warning all foreign capitalists that concessions granted by Lenin would not be recognized by the future legitimate Government of Russia.

Lenin and Trotzky also have active enemies nearer home, as indicated by their systematic drive against the anarchists. There is a grim irony in a document sent to German syndicalists by the Russian anarchists, headed by Emma Goldman and Alexander Berkman, both of whom the United States deported to Russia, denouncing the Soviet régime in violent terms, com-

plaining that Lenin had declared bitter war upon them, and was throwing them into prison by the hundreds, and appealing to their German comrades to publish the Soviet's misdeeds in all anarchist journals. All the anarchists who signed this appeal, with the exception of Goldman, Berkman, and one other, were in prison at the time the document was sent. The disillusion of the ex-Americans with the Soviet Government, which before their deportation they extolled in unmeasured terms, has long been known.

Recent events in Siberia, notably the seizure of Vladivostok by the forces of the late General Kappel, a former Kolchak leader, will be treated more fully in these pages next month.

## FINLAND AS LEADER OF THE BALTIC STATES

*Steady, prosperous and full of youthful energy, she calls herself the "Resolute Outpost of Western Civilization"—Lithuania still at swords' points with Poland over Vilna*

[PERIOD ENDED JUNE 10, 1921]

WHAT Finland is today," said the Finnish Minister of Foreign Affairs not long ago, "the Baltic States will be fifty years from now." Esthonia, Latvia and Lithuania are still enmeshed in the economic and political difficulties of the war's aftermath. With envious eyes the little Baltic States look across the water at the big and prosperous democracy established by Finland, which, after enjoying practically fifty years of freedom under the lax rule of the Russian Dukes, won her independence soon after the outbreak of the Russian revolution, had that independence as a sovereign State early confirmed by the allied powers, and was thus enabled to devote her energies to the task of developing her resources.

Across the deep blue waters of the Baltic the Finns can still see the great bulk of Kronstadt rising dimly on the horizon line, with the smoke from the crippled Soviet factories; but the long line of Summer villas, once filled with Summer residents from Petrograd, is now almost deserted.

Only a few villas are inhabited by the Russians, who have lost their all in the great overturn; the rest are closed and forlorn. At night those who live by the shore can hear the booming of the Kronstadt sunset guns—a sound of ominous import, especially to the 4,000 interned Russian refugees from Kronstadt, who fled across the ice when Trotzky's force took the citadel and crushed the rebellion of the sailors there.

Dr. John Finley, an American educator, who has been making an extended tour of the Baltic States, especially Finland, and who has sent from there a series of thoughtful and illuminative articles, noted in Finland a native energy and progressiveness which made him think of America. Dr. Finley wrote in May:

What strikes surprisingly and impressively a stranger, who has a schoolbook association between Finns and slant-eyed Lapps, is that Finland, for a century and more a part of Russia and separated from her physically by only a crooked imaginary line, is, after all, markedly and progressively Western.

She calls herself the "resolute outpost of western civilization," and it is somewhat humiliating that the United States was not the first to recognize her political independence.

Yet Finland is eager to resume her old economic friendship with Russia, for the present interrupted. The bridge over the Sestrariekka is literally and metaphorically out of repair. And Finland is suffering from this fact; for before the war she got her grain largely from Russia, while Russia came to her for lumber and paper. So Finland has had to find other markets, but under greatest hardships because of the rate of exchange.

Finland has, however, the pulse and what the doctors would call the "blood pressure" of youth. There is no coal in Finland, but there is a splendid circulatory system of rivers and lakes (about 35,000) with an available horse power of 3,000,000, that is, approximately one horse power per person. It is expected that before long all the railroads will be electrified, using water power.

Finland was temperate even before prohibition was enacted. The Minister of Foreign Affairs told me that the consumption before the war was only one liter per person per year. Ninety per cent. of the land area is covered by trees, and the State owns a large share of all the forest land (32,000,000 of the nearly 50,000,000 acres).

The people are many of them tall, straight and lithe, as if they had come out of their forests of tall, straight pines. They are still what James Lane Allen would call forest-bodied and forest-minded. Their system of education is such that there is a smaller percentage of illiterates in Finland than in any other country of the world except possibly Denmark. And the education of the children and youth includes physical, musical and vocational training. In visiting the schools I found that studies had been made of our methods of physical and health education in the United States and especially in New York, and also of our plans for school buildings.

The Government makes conventions in support of the theatre and opera, and censors moving pictures and forbids cabarets. It gives special scholarships for advanced study in music, art, architecture, the drama and other subjects. It maintains a university with 3,000 students and is about to establish another university. It has the enterprise of a Middle Western State; and when one enters the harbors or the "Grand Central Station" of its capital, Helsingfors, one can easily imagine one's self in Minneapolis, St. Paul or Kansas City. Only Helsingfors is cleaner than any American city that I have seen of its size.

Finland is leading a movement to draw the Baltic nations together. It has already established close contact with Latvia, which sent to Finland early in May a special

delegation of members of the Lettish Constituent Assembly. The project of a Baltic union, which Finland strongly favors, was enthusiastically discussed both privately and in the Finnish press. The other Baltic States, with this view, are also drawing together, and even Poland has evinced a desire to draw closer to her sister republics on the Baltic. That the Baltic States are serious in this project of alliance is indicated by the recent announcement of a conference of the Foreign Ministers of Esthonia, Latvia and Lithuania, to be held at Riga (Latvia) before the end of June.

One dissonant note in the general Baltic harmony was the dispute between Lithuania and Poland over the disputed territory of Vilna. Both the Poles and the Lithuanians are unshakable in their respective claims, and the conferences initiated at Brussels, under the Presidency of M. Paul Hymans, gave no sign as they went on that a solution would be found. The Lithuanians were convinced that they were the natural and rightful inheritors of the territory now held by the Polish insurgent leader, General Zeligowski, the legitimate heirs of the Lithuanian Grand Dukes of the fourteenth and fifteenth centuries. The majority of Poles, not only those resident in Vilna, but those of Poland, refused to admit that Lithuania had any rights, and insisted that Vilna, with its large number of Polish inhabitants, should be annexed to Poland. The Lithuanian and Polish delegates in Brussels naturally reflected this attitude, and from the beginning of the negotiations, late in April, it was only too evident that the two disputing parties held wholly irreconcilable views. The Poles rejected all solutions which implied Lithuania's possession of Vilna. Lithuania presented a formal series of proposals at the session of May 20. These proposals may be summarized as follows:

Poland recognizes the sovereignty of the democratic Republic of Lithuania over Vilna and its territory.

Should the principal allied and associated powers decide to assign the territory of Memel to Lithuania, Poland agrees to recognize the sovereignty of Lithuania over the said territory.

In order to guarantee the cultural autonomy of the Polish-speaking Lithuanian citizens of the territory of Vilna, Lithuania agrees to conclude a treaty with the principal allied and associated powers on the basis of

the principles contained in the treaty of June 28, 1919, between those powers and Poland.

Lithuania assures Poland free access to the sea by all railways and waterways, and to this end undertakes to conclude a transit agreement with Poland.

Lithuania and Poland agree to be guided in their reciprocal relations by the principles contained in the Covenant of the League of Nations or established subsequently to that Covenant by the said League.

These proposals were rejected by the Polish delegates, who opposed all solutions implying the possession of Vilna by the Lithuanians. Seeing that the views of the delegations were irreconcilable, M. Hymans, as President of the sessions, presented a plan of his own, devised to solve not only the boundary questions, but also the political, military and economic relations between the two countries. The intervention of M. Hymans brought some new hope, but on June 2 the note of discouragement and reserve sounded by Professor Askenazy, head of the Polish delegation, proved itself to be based on realities, for on that date the Lithuanian representative in Washington announced officially that the negotiations had been broken off. His advice alleged that the Poles were to blame for this rupture, which had been caused by the Polish insistence that the conference should be attended by delegates from Vilna

itself, who should have equal rights with the other delegates. The Lithuanians refused to consider this proposal, saying that as Vilna was under the domination of Zeligowski, any delegates sent by him would inevitably vote for Poland, and the Lithuanian delegates would be outnumbered. The Lithuanians were preparing to lay the whole issue before the Council of the League of Nations.

Two of the Baltic republics, Esthonia and Latvia, have been recognized *de jure* by the allied powers. Lithuania is still clamoring for such recognition, and considers herself unjustly treated in that such recognition is still withheld. It is unlikely that her national aspirations will be granted until her boundary dispute with Poland has been settled. The United States Government, so far, has declined to recognize any of the Baltic States except Finland. A strong movement in the United States tending toward such recognition was evidenced on May 16, when Representative Walter M. Chandler of New York presented to Secretary of State Hughes a memorandum embodying vigorous arguments in favor of the recognition of all three States. A special appeal was submitted to President Harding on May 31, signed by more than 1,000,000 names, many of them those of men of national and official prominence.

## HINDENBURG'S STATUE FOR FIREWOOD

**A**BOUT a year ago the colossal wooden statue of Germany's military idol, General von Hindenburg, disappeared overnight from its place at the end of Berlin's famous Siegesallee (Avenue of Victory) in the Thiergarten. The day before it had towered, grotesquely impressive in its bigness and its bristling armor of nails, every one of which it had cost some Hindenburg admirer a certain number of pfennige to drive home, the united proceeds going to war charities. The next morning Berlin citizens rubbed their eyes; the Hindenburg statue had disappeared. No one knew what had become of it; there was no official explanation, and this strange disappearance became one of the wonders of the day. Berliners, however, shed no tears over the loss,

for in the days of defeat this grim, ungainly effigy, the most tragic of all reminders, had become an eyesore.

An extraordinary sequel followed toward the end of May, 1921, when an advertisement appeared in a Berlin paper offering the statue for sale, in whole or in part, as firewood. This inglorious ending of the "Iron Hindenburg" seemed to have an almost symbolical fitness. And yet it may be misleading, for many evidences indicate that General von Hindenburg still retains a part of the nimbus which once encircled his massive head, and the new republicans looked with no happy eye on the applause that greeted the General as he marched in the funeral cortège of the late Empress at Potsdam.

# NORWAY'S INDUSTRIAL CRISIS

*Community Aid, battling with a Bolshevik-led general strike, keeps the chief industries going—Bolshevist plots in Sweden and Denmark—Rapprochement between France and Scandinavian countries.*

[PERIOD ENDED JUNE 10, 1921]

**S**YMPOMATIC of the industrial condition which has prevailed in Norway ever since the seamen's strike, which began on May 9 and which turned into a general strike two days later, was the arrival of a Norwegian-American Line steamship at Hoboken on June 6 bringing back a 200-ton cargo which the strike had made it impossible to unload in Christiania. The steamer was manned by a volunteer crew which included a millionaire, five captains, fourteen mates and several college students and business men of Norway. These represented the effort of the Community Aid organization to keep necessary industries going in the face of great strikes.

Community Aid had broken the railroad workers' strike, nullifying all efforts to make it general, but it had not been strong enough to prevent the present crisis, though it has gained ground by furnishing more and more social workers.

Before the World War the Norwegian merchant marine was said to operate more cheaply than that of any other nation, and the Norwegian ship owners tried in May to return to their antebellum economies, beginning with a cut in seamen's wages. This started the seamen's strike, and the trade unions of the national labor organization called a general strike in sympathy with the sailors, excepting only the workers of the railroads, telegraphs, postal service, hospitals and the union co-operative concerns. Nearly all newspapers were stopped except the Socialist and Syndicalist journals. The latter, especially the Christiania daily, *Klassekampen*, continued urging the workmen to revolutionary action, although the labor leaders alleged that the strike was not political.

In the districts of Christiania, Stavanger and Bergen the strikers joined in violent rioting in an attempt to prevent the necessary transportation. Social workers of the Community Aid came forward, volunteering

for service under the protection of the police, who rapidly restored order in each of the three cities named, making many arrests of ringleaders and others. The social workers manned some of the coastwise vessels, but many of the larger craft were so short-handed that motorboats were extensively used to supplement the railroads. Especially in Nordland and other northern provinces, where railroads are lacking, the motorboats were used very effectively for distribution of provisions and other necessary supplies. Here, and in some other provinces, unions refused to join the strike and social workers were numerous.

The dispatch of goods by motorboats was bitterly but vainly opposed by the strikers in Christiania. Social workers manned the harbor industries there, and by the end of May were supplying the population with bread, which hitherto had been made only by the workmen's co-operative concerns for their own use. Strikers attacked the Christiania electrical works, but were dispersed. Early in June social workers were keeping up all the necessary work in Christiania, and, though the strike continued, its effects were not strongly felt there. Off-shore shipping, however, was tied up by a lack of hands.

**S**WEDEN—The arrest on June 9 of a well-known Bolshevik leader in Kiruna, in the iron-mining district, where a communist organization was discovered, resulted in uncovering what the Stockholm newspapers considered as a sensational and widespread plot for a Bolshevik revolution in Sweden. Several arrests were made in Stockholm in the same connection. The documents discovered were reported to show that this plot was to start a Bolshevik revolution simultaneously in Sweden, Finland and Norway, and to implicate 400 foreign Bolsheviks staying in Sweden. It was expected, at last advices, that these would be arrested

and expelled from the country. Five Finns arrested in Stockholm were found by police records to be former members of the Finnish "Red Guard." One Swede was also arrested.

A rapprochement between France and the Scandinavian countries was foreshadowed by the visit in the latter part of May of a delegation of city councilors of Paris to Stockholm, Christiania, and Copenhagen, to study the municipal institutions of the three Scandinavian capitals. Both the French and Scandinavian press made much of this official visit. The delegation consisted of the President of the Municipal Council of Paris, M. Le Corbeiller, and fourteen representatives of different Paris institutions. Special efforts were made by the Scandinavian authorities to do them honor. On the first day of the week's visit in Stockholm, the city gave a reception and luncheon, and the Grand Governor of Stockholm, acting as host, gave the guests an elaborate speech of welcome. M. Le Corbeiller, in his reply, appealed to Sweden to continue to extend her hand to France for the peace and prosperity of the world. The King gave an afternoon tea in honor of his French guests.

Count Wrangel, the Swedish Foreign Minister, when asked his opinion of the French delegation's visit by a correspondent of *Le Temps*, declared that the Swedish Government had expressed in its reception the friendship felt by all classes of the Swedish people for France. Sweden, he said, had been forced to maintain neutrality in the war, owing to her geographical position. Questioned as to Sweden's actual policy toward Soviet Russia, Count Wrangel answered:

We are trying, as far as possible, to establish commercial relations with Russia. We have not yet concluded a treaty like the Anglo-Russian, but we have no objection to seeing our commercial men establish trade relations with agents here. Before extending such relations we wish to see the results of private negotiations between our merchants and the agents. Our geographical position is different from England's, and it is necessary for us to be more careful about the propaganda of communism.

The Swedish press continued to show excitement over the report of the Aland Islands Commission. Nearly all the papers declared that the document violates all considerations of justice. *Aftonbladet* (Stockholm) headed an article: "Finland's Guar-

antee Worth Nothing—A Slap in the Face, Say the Alanders—Future Will Show What Aland Is Exposed To." *Tidningen*: "This lamentable document surpasses all that could have been believed possible in abandonment of juridical principles in favor of political opportunism. \* \* \*" Other papers declared that the report does not give the last word, and contrasted it with the report of the three Judges, who "recognized the solid basis of the Swedish thesis."

Sweden's recent abolition of capital punishment goes further than Norway's similar legislation fifteen years ago, which reserved the death penalty for Cabinet Ministers, as a guarantee against their recklessly committing offenses against the State, such as embroiling it in a bloody war unjustly.

M. Hammarskjold, the Swedish Minister of Defense, resigned in the middle of May, because the *Riksdag* passed a bill limiting the period of military service to 165 days instead of 225 days, as he proposed.

**DENMARK**—Danish Syndicalists decided in May to affiliate themselves with the Third International, as a result of Bolshevik intrigues in Denmark. Social-Democraten (Copenhagen) published new documents proving that all directors of the Syndicalist movement were lavishly subsidized by the Soviet Government of Russia. In the last year the Bolsheviki covered the deficit of a Bolshevik newspaper in Denmark amounting to 312,000 Danish crowns, and expended half a million crowns in Denmark to hold together the Danish adherents to Moscow. The Danish Bolshevik Party, numbering 2,000 adherents, and enjoying no other revenue, has set aside this year 220,000 crowns for propaganda, and also found means to buy a house in the centre of Copenhagen. The Russian Reds have disbursed in all more than 1,500,000 crowns to sustain the Danish opposition.

Great honors were extended to the Indian poet, Rabindranath Tagore, when he arrived in Copenhagen on May 21. About a thousand people received him at the station. The next day he was entertained at the Danish Students' Club, where he gave a reading from his poems to a large audience. Later in the evening the students organized a torchlight procession in his honor. At the invitation of the university, he gave a public lecture on India, and afterward left for Stockholm.

# HOW FRANCE CELEBRATED THE NAPOLEON CENTENARY

*Premier Briand's successful fight for a vote of confidence is strangely linked up with the nation's mental attitude at the centenary of Napoleon's death*

THE vote of confidence given to M. Briand, the Premier, by the French Senate at the session of May 31, was an earnest of the nation's mood to insist on reasonable measures regarding German reparations. M. Briand, who for eight days had fought his opponents face to face and delivered his defense with telling effect, had declared to the Senate his belief that the new German Premier, Dr. Wirth, was absolutely sincere in his desire to live up to the accepted conditions, and that it behoved France, by pursuing a policy of moderation, to aid him to do so. This was the first time since the war that a French Premier had publicly praised the sincerity of a German Government leader. That M. Briand's words were convincing was proved by the fact that after all the attacks only eight Senators dropped the white card of disapproval into the urns, while 269 others dropped in the blue card of approval.

Though M. Briand thus won the Senaté's support of his Rhine policy and of his plan of complete co-operation with the interallied nations in Upper Silesia, the general French fear that Germany, after all, was playing a double game and would yet work to make her promises valueless, persisted in the minds of many leaders. War Minister Barthou, it is true, on his return early in June from a tour of inspection of the Rhine armies, declared that he had found the training of the 1921 recruits so far advanced that he looked forward to demobilizing the class of 1919 by the end of June. He added, however: "That is my conviction, provided always that Germany continues to show good-will."

The prevailing uneasiness was reflected in the official speeches at the centenary of Napoleon Bonaparte, which was celebrated in Paris on May 4 and 5. Amid the sombre splendor of Notre Dame, where the great Corsican crowned himself Emperor in 1805, the brilliant ceremonies of the 4th were wit-

nessed by a dense throng of the nation's notables, all gazing up at the throne on which sat the Cardinal Archbishop of Paris in robes of bright scarlet, which blazed out vividly against the dark background. The Abbé Henocque, wearing on his black cassock the symbol of the Legion of Honor and the Croix de Guerre, delivered an eloquent sermon lauding Napoleon as the restorer of religion, and struck the note which was repeated throughout the fête, namely, the lesson of patriotism to be derived from the great Frenchman's career.

The scene shifted in the afternoon to the venerable precincts of the Sorbonne, where a distinguished audience listened to solemn speeches commemorating the civil institutions founded by Napoleon, and expressing France's gratitude. Both of these events, however, were preliminary to the celebrations held the next day at the Arc de Triomphe and the Tomb of Napoleon, in which the Government took a more active part. Standing beside the Unknown Warrior's Tomb, President Millerand eulogized the former Emperor, linking his name with that of the unknown soldier. The days of despotism were over, he said, and France need have no fear in eulogizing Napoleon as one of France's great national glories. He then drew the lesson for the present and the coming time:

Napoleon thought, in September, 1808, that he could cut the claws of the Prussian Army by a military agreement limiting its strength. But he failed to take account of Prussian hypocrisy, of the tenacity of a people which never admits itself to be beaten. Scharnhorst, to avenge Jena, began his labors in 1807. He succeeded so well that the Prussian Army, reduced to 42,000 men by the conditions of the treaty, possessed in August, 1813, no fewer than 280,000 men. By what means? It is useless to find them in the history of yesterday; today's history is sufficient. Prussia has more tenacity than imagination; she has no vain pride in regard to repetition, if repetition as a process suits her ends. Ludendorff is copying Scharn-

horst today, borrowing from him his means of dissimulation, his indirect combinations, his instructions, and even his very language. Vanquished Prussia is preparing, under Ludendorff's orders, the revenge for which it will yet fix the exact moment, and the mingled threat and hope of which it acclaimed at Potsdam. [The funeral of the late Kaiserin is referred to here.] We will not allow her to begin this process all over. Napoleon's mistake should be for us a sufficient lesson. What good would our victory have been for us if victory had not killed during the war the national industry of impenitent Prussia? We do not wish for war; we hate war, annexations, conquests and imperial visions. But it cannot be construed as a wish for war to compel Germany to fulfill the terms of peace by those measures of coercion which her resistance and bad faith, aggravated by her insolence, have made inevitable.

The booming of great guns closed the ceremony at the precise moment when—a hundred years before—Napoleon had died at St. Helena.

Ceremonies no less significant were held at the Tomb of Napoleon, where Marshal Foch delivered an address which moved the large audience greatly. The conclusion of this address follows:

Sire, sleep in peace! From the very tomb you are still working for France. Whenever danger threatens the Fatherland, our flags are moved by the breath of your imperial eagle as it passes. If our legions have returned in triumph through the Triumphal Arch which you erected, it is because that sword of Austerlitz had shown us how to unite and lead the forces which win to victory. Your masterly lessons, your obstinate labor remain unparalleled examples. As we study and meditate upon them, the art of war assumes an ever-growing grandeur.

In a special article written for The London Times, Marshal Foch drew another lesson. Though he acknowledged Napoleon's mistakes in placing the individual above the nation and war above peace, he did homage to his unconquerable spirit and fierce energy for France:

In the dark hours of the war, we often asked ourselves: "If Napoleon were to rise from his tomb at the Invalides, what would he say to us, what would he do with our armies of today? He would have said to us: "You have millions of men; I never had them. You have railways, telegraphs, wireless, aircraft, long-range artillery, poison gases; I had none of them. And you do not turn them to account? I'll show you a thing or two!" And in a couple of months he would have changed everything from top to bottom, reorganized everything, employed everything in some new way, and crushed

the bewildered enemy. Then he would have come back at the head of his victorious armies—and would have been very much in the way.

Similar exercises were held in Corsica. The same note was voiced there; likewise in the celebration of the new national fête of Joan of Arc on May 8. France's determination to secure justice from Germany, if need be, at the point of the sword, was similarly expressed by President Millerand on the occasion of his visit to Lille on May 16.

In all these national festivities the note of a renewed Catholicism was heard again and again. France, it will be recalled, has reopened diplomatic relations with the Vatican. Senator Charles Jonnart, formerly the Allied High Commissioner in Athens, and later Extraordinary Ambassador to the Vatican, was nominated by Premier Briand on May 17 as French Ambassador to the Holy See.

With the triumph of the radical element of the railroad brotherhood early in June, and the probability of a pitched battle between the moderate and extreme factions, the fate of both this union and the General Confederation of Labor was left hanging in the balance. The Government decree dissolving the Confederation for the anti-governmental activities of its radical leaders still stands unexecuted, but any increase of radicalism is a bad omen for the existence of either of these organizations. The Government was taking steps to eliminate the surreptitious teaching of communism in the public schools. It was also waging a determined war on criminality, and on June 1 it resumed its former system of deportation to the penal colony of French Guiana, interrupted for lack of transportation since 1915. The resumption was due to the overcrowding of French prisons, which was serious. Some 700 convicts left La Rochelle on a former German freighter on June 1, shut up in eight huge iron cages constructed between decks, guarded by fifty military warders.

**BELGIUM**—The Belgian Chamber of Deputies, on May 13, ratified the treaty of Trianon, putting an end to the state of war with Hungary, by a unanimous vote of the 132 members present. \* \* \* The long-expected split in the Belgian So-

cialist Party became definite on May 29, when the extremists decided to constitute a communist party, which will seek contact with the Third International of Moscow. \* \* \* A Franco-Belgian monument on the summit of Mount Kemmel, to commemorate the victorious allied resistance to the German attack in 1918, was unveiled on May 22. \* \* \* The proposed ocean yacht race for the cup offered by King Albert of Belgium from Sandy Hook to Ostend has been abandoned for this year, only two entries having been received.

**HOLLAND**—Secretary Hughes of the United States, on May 27, sent a new note to Holland on the oil question through the American Minister at The Hague, instructing him to take issue with the Dutch Government's statement that in claiming rights for American nationals to help exploit the Djambi oil field in the Dutch East Indies the United States Government had acted too late. The United States contends that, as Dutch citizens are permitted to share in the development of oil properties in the United States, American citizens are entitled to equal opportunity in the whole Dutch territory. Representatives of the Standard Oil Company, which wants a concession for one-half the Djambi oil fields, also expressed surprise at the statement

that their claim came too late, as they said that persons acting in the interests of the Standard Oil Company as late as October, 1920, were told by the Dutch Colonial Minister that no consideration could be given to an application by the Standard Oil Company because it was a foreign interest.

The annual convention of the World's Young Men's Christian Associations met in Utrecht on June 10, with delegates from all national organizations in attendance. The sessions were taken up mostly with comparing reports of war work organizations and deciding upon the policy to be pursued during the coming year. The sessions were to close on June 17.

A marble bust of the former German Empress was received by the Kaiser at Doorn on May 18. Although the Kaiser was for some time extremely depressed after the death of his wife, he is now reported to have emerged from his gloom. He has paid a visit to the Bentinck family to thank them for their marks of sympathy. The Doorn municipality, on May 25, bought a strip of woodland which belonged to his estate, but was outside his fences and therefore useless to him. He wished to sell it in small allotments as building ground in order to add to his income, but the town will preserve it for the public in its natural state.

## HOMÉ PROBLEMS OF THE BRITISH PREMIER

*Mr. Lloyd George's Coalition Government again defeats its enemies—  
Approaching settlement of the coal miners' strike hastened by use of fuel oil*

[PERIOD ENDED JUNE 10, 1921]

**ONCE** again Mr. Lloyd George and his Coalition Cabinet have weathered a threatening storm, making a new show of strength in the face of hostile criticisms of the Government's Irish policy, defections in Parliament and the general labor turmoil. Talk of a general election subsided for the time, and even the labor crisis showed signs of approaching settlement. Though the Anglo-French conflict of policy on the Silesian question produced a tense situation in foreign affairs, especially after Lloyd George's speech containing the words, "I

am alarmed, I am frightened," nevertheless public interest continued to centre upon home troubles, among which the Irish and labor problems continued to be foremost.

Out of what was termed the "creeping paralysis" of the coal miners' strike, from which the midland and northern counties chiefly suffered, considerable relief was presently obtained by the use of oil as fuel. It was pointed out that so long as coal was cheap, accessible and easily obtained it held its own against the commercial encroachments of oil, but now that these attributes

had vanished "the twilight of the coal age seemed to have set in." Thus by June 1 the Great Eastern Railway, which was almost shut down a fortnight before, was running almost normally with over sixty converted oil-burning locomotives, while several other railways and great engineering plants were following suit as fast as possible.

Meantime quiet "conversations" for a settlement of the dispute continued until May 27, when definite negotiations between the mine owners and miners were again opened under the handling of Premier Lloyd George. On the 28th he met representatives of both parties and handed them a plan for temporary arrangements leading to a permanent peace. His proposals provided for a gradual scaling down of wages until they reached an economic level which the industry was capable of sustaining, and were based on the grant of £10,000,000 from the Exchequer and surrender by the owners of the standard profits for three months in the districts where Government assistance was required. As a hopeful sign, on May 31, the National Union of Railwaymen and the Transport Workers' Federation decided to lift the embargo on imported or "tainted" coal. However, the atmosphere became clouded again by returns from the colliery districts, indicating that the miners were voting solidly against the Government's new peace proposals. A reply of the mine owners on June 3, while declaring that they were "unalterably opposed" to a national pool and a national settlement of wages, nevertheless made new offers, including one to provide a subsistence wage for the low-paid workers. Fore-shadowings of peace were seen when, for the first time in the coal deadlock, the owners and miners had a full and frank conference on June 6 without the presence of Government representatives. Another meeting on the 7th resulted in an announcement by the miners' representatives that they had decided to call a special conference of the Miners' Federation and to recommend a ballot on the owners' new proposals. When the miners' delegates met they agreed to the latter proposal, and on June 10 formally decided to submit the offer of the coal owners to a vote of all members of the Miners' Federation, to be taken June 15. This was the first time in the ten weeks' warfare that the rank and file

had had an opportunity to express their views, and it was generally believed that an amicable settlement of the strike was in sight.

Otherwise the disturbed industrial situation was intensified by a walkout of 500,000 cotton mill operators against a proposed 30 per cent. reduction in wages, and by the acute depression in shipping. The case of the latter was declared to be the worst on record, with thousands of longshoremen, seamen, firemen, officers and engineers walking the docks looking for berths. With the slump in freight rates and shipping values, shipbuilding had come to a standstill so far as new orders were concerned. Thus, no contract for a cargo boat had been reported for about twelve months, and in different parts of the country important yards were ordered closed. The woolen industry, too, was in a deplorable condition, although it had not suffered from strike troubles.

Representatives of farmers and workers in the House of Commons received a shock on June 8 when Sir Arthur G. Boscawen announced the Government's decision practically to repeal the Agricultural act, not six months old, by which means it purposed saving £30,000,000 a year in subsidies. At the same session Dr. McNamara, Minister of Labor, asked leave to introduce a bill to curtail unemployment benefits 5 and 6 shillings a week for men and women, respectively, as an absolutely necessary measure in the interest of public economy.

The new American Ambassador, Colonel George Harvey, arrived in the course of the month, as did Rear Admiral Sims. The cordiality of the welcome extended to the latter, who came to England to receive a degree of doctor of laws from Cambridge University, was particularly marked. One newspaper declared he was "the best friend in need that England found during the war." A guard of honor of destroyers escorted the American Admiral's ship into Liverpool, and later he was entertained by the King and Queen in Buckingham Palace.

Following a solemn Memorial Day service in St. Paul's Cathedral on May 30, Ambassador Harvey unveiled a replica of Houdon's bust of George Washington in the crypt near the graves of Nelson and Wellington. It stood there, he said, to

commemorate "a great British soldier and a great American patriot." Lord Bryce announced that in acknowledgment of this gift it was proposed to present to the American people busts of the famous Earl of Chatham and Edmund Burke.

A record job lot of 113 obsolete warships was announced by the Admiralty as having been sold to one firm for breaking up at

the flat rate of 50 shillings per ton on actual displacement. Under the contract the provisional price was deemed to be £600,000. The lot included the battleships Dreadnought, Magnificent, Hindustan, Dominion and Mars, six cruisers, six light cruisers, three flotilla leaders, seventy-two torpedo-boat destroyers, thirteen torpedo-boats and eight monitors.

## THE NEW NORTH-OF-IRELAND PARLIAMENT

*Ulster Chamber organized at Belfast by forty Unionist members, while eleven Sinn Feiners and Nationalists, also elected, remain away—Speaker for the British House of Commons elected by royal sanction through Viceroy—Burning of Dublin Custom House*

[PERIOD ENDED JUNE 10, 1921]

**B**ENEATH the turmoil of a decidedly active warfare the current of peace efforts in Ireland still wandered uncertainly. A new negotiator was disclosed in former Governor Martin H. Glynn of New York, who, upon his return from Ireland and England, admitted that he had acted as an intermediary between Premier Lloyd George and Mr. de Valera. Another peace effort came in a long letter written by Pope Benedict to Cardinal Logue appealing to both the English and Irish to abandon violence and proposing that the Irish question be settled by a body selected by the whole Irish Nation. This effort was criticised by friends of the Irish on the ground that the Pope had directed his appeal to the people of Ireland over the heads of their Government. A word on the subject from Sir Hamar Greenwood, Chief Secretary for Ireland, was to the effect that if Ireland failed to settle itself through the medium of the two new Parliaments "a situation would arise which the Government must face with all its resources."

Final elections for the Southern Parliament left the situation as stated in last month's CURRENT HISTORY. A few contests did not change the result of 124 Sinn Fein members facing four Imperialists. While

it was believed that the moderates among the former were in a conciliatory mood, nothing could be said as to how far the extremists were prepared to go to wreck the new parliamentary system.

Hardly had the curfew been raised at 5 o'clock on the morning of May 24, the date fixed for elections to the Northern Parliament, when opposing parties, with bands thundering, began parading the streets of Belfast and soon came into fierce conflict. At the outset clubs and stones were mostly used, though revolver firing was indulged in here and there. A feature of the day was the number of children, with names on the register, who recorded their votes. A little fellow two and a half years old presented himself at a booth in South Belfast and voted. It was estimated that 90 per cent. of the voters of Belfast went to the polls.

Early returns showed that Sir James Craig, Premier designate, had gained a great personal triumph in County Down, where he polled more than 13,000 votes over de Valera. The figures for the three candidates who were certain of election in this constituency were Sir James Craig, Unionist, 29,829; de Valera, Sinn Fein, 16,269, and Andrews, Nationalist, 12,584. Londonderry returned Professor John MacNeil, the

Sinn Fein Vice President, along with three Unionists. Michael Collins, Chief of the Irish Republican Army, and Arthur Griffiths, "Vice President of the Republic," also won seats in Armagh in company with Unionists. In the West Division of Belfast Joseph Devlin, M. P., Nationalist, was elected with T. H. Burn, M. P., Unionist. The final count gave the Unionists forty seats against eleven won by the Sinn Feiners and Nationalists.

Organization of the Northern Parliament took place on June 7 in the Council Chamber of the City Hall, Belfast. Forty Unionist members were sworn in, with some 175 Government officials and prominent citizens present. The eleven Sinn Feiners and Nationalists did not appear. The formal ceremony went through without a hitch and in a quiet, unemotional manner. The Viceroy, Viscount Fitzalan, entered the Council Chamber at 11:30 A. M. and took a chair. Thereupon the Sergeant at Arms brought in a new mace and laid it on the table. Archbishop d'Arcy, Anglican Primate, read prayers, and then the Viceroy announced that he had authority from the King to sanction the election of a Speaker for the House of Commons. Robert William Hugh O'Neill was unanimously elected. Premier Sir James Craig was the first member to take the oath, which read: "I swear by Almighty God that I will be faithful and bear true allegiance to his Majesty King George, his heirs and successors, according to law, so help me God." The other thirty-nine members followed in threes, including two women, Mrs. Julia Chichester and Mrs. Robert McMordie.

After adjournment by the Speaker at 12:40 until June 22 a luncheon was served at which Joseph Devlin's seat was the only one reserved for members of the Opposition. On this occasion the Viceroy made his maiden speech in Ireland. Lord Fitzalan spoke of conditions generally and was frequently applauded. After luncheon Sir James Craig read a message from King George announcing His Majesty's intention of opening the Parliament on June 22 in person. The Premier also announced his Cabinet as follows:

Home Secretary—Sir Dawson Bates.  
 Minister of Finance—H. M. Pollock.  
 Minister of Education—The Marquis of Londonderry.  
 Minister of Labor—J. M. Andrews.

Minister of Agriculture—Hon. E. A. Archdale.

The elections, however, brought no cessation of fighting, burning and reprisals. Reports of ambushes and other attacks on Crown forces in Ireland during the week-end of May 16 showed the highest record for such a period—thirty-three persons killed. On May 17, while a military football match was in progress at Bandon, County Cork, fire was opened on the players and spectators with a Lewis gun.

VISCOUNT FITZALAN

*New Viceroy of Ireland, formerly known as Lord Edmund Talbot*

But these and similar actions were dwarfed into comparative insignificance by the burning of the Dublin Custom House on May 25. This was regarded as the most serious damage done by the revolutionaries. The building, of which nothing but the shell remained, was erected 145 years ago, during the existence of the Irish Parliament, on a quay on the left bank of the Liffey, and was one of the most beautiful structures in Ireland. It had little to do with the customs, but housed many of the chief administrative departments, and its destruction was therefore regarded as more disabling to the ordinary machinery of

Government than if Dublin Castle had been burned. The methodically planned operation was carried out in the afternoon by a body of about seventy raiders. These men approached the building amid the throngs of ordinary passers-by, and suddenly overpowered the guards before an alarm could be given. They then entered the building, held up the officials at revolver point, and proceeded to throw all the documents and books on the floor, which they saturated with petrol and ignited. Within a few minutes the greater part of the huge building was in flames.

Suddenly the gathering crowd of awed spectators was driven helter-skelter as armored cars with three tenders loaded with auxiliary police came at full speed along the quays. As they approached they were greeted with bombs from the railroad bridge and revolver fire from the Custom House windows. A machine gun and rifles were promptly brought into return action. Fire being opened on the police from adjoining streets, a machine gun was sent to

sweep them. This caught the crowd between two fires, resulting in numerous civilian casualties. The last act of the dramatic scene was the desperate attempt of the raiders to escape from the building under rifle fire from police and with the roof burning over their heads. In the fighting 7 civilians were killed, 4 auxiliaries and 7 civilians wounded, and 111 prisoners taken by the police. The damage was estimated at \$10,000,000, a sum which, Mr. Lloyd George stated, Southern Ireland would have to pay in additional taxes.

That the announced intention of Irish revolutionaries to carry the warfare into England was no idle threat was demonstrated in Liverpool and suburban districts of London on May 15. Bandit gangs traversed the City of Liverpool in automobiles. Six districts in London were visited by armed men, who wore masks and carried bottles of petrol, and showed no hesitation in shooting. Altogether, incendiary fires attributed to Sinn Fein terrorists broke out in thirteen districts.

# CANADA'S NEW GOVERNOR GENERAL

*General Lord Byng succeeds the Duke of Devonshire—Attitude of Canada, Australia, New Zealand and South Africa on disarmament and the Anglo-Japanese treaty*

[PERIOD ENDED JUNE 10, 1921]

WHEN the Duke of Devonshire formally prorogued Parliament on the evening of June 4, he performed his last act of that kind in Canada. His Excellency is succeeded by General Lord Byng, who was created first Baron of Vimy in 1919. Byng's appointment is immensely popular in Canada, chiefly owing to his association with the Canadian corps in the great war. He directed the corps as a unit in its great success at Vimy Ridge in 1917. Subsequently he was given command of the Third British Army. Lord Byng, who is the seventh son of the second Earl of Strafford, is expected to assume his duties as Governor General in August.

Within a few days of prorogation Premier Arthur Meighen sailed for London to take part in the conference of British Empire Premiers and representatives. Prior to his departure a dispatch was sent to the Canadian newspapers by the Canadian Press Company's representative accompanying Mr. Meighen. The latter's attitude on two vital questions, namely, armaments and the British-Japanese treaty of alliance, were outlined in that dispatch. In regard to the former it was intimated that Premier Meighen was opposed to any commitments at this time for naval expansion or expenditures beyond those actually undertaken. The financial situation and the uncertainty of the industrial outlook in the countries of the empire were quoted as his reason for the view that matters relative to armament should not be considered at this gathering, or if considered should not be approved as suggested policies. As to the treaty with Japan, it was intimated that Mr. Meighen's attitude was in accord with that of Premier Smuts of South Africa and Premier Hughes of Australia. With them he was of opinion that the treaty should be renewed with modifications that would make it acceptable to the United States. The correspondent of the Canadian Press may be regarded as the official publicity man for the Canadian Premier in connec-

tion with the conference, and the views thus expressed on the two issues mentioned may be taken as those of the Canadian Government. The newspapers generally do not agree with the view of a section of the British press that this is the most important imperial conference ever held in respect to defense matters. They are inclined to regard it as a stepping stone to the constitutional conference expected to be held next year, at which the status of the overseas dominions and Britain will be clearly defined.

Premier W. M. Martin and the Liberal Government of the province of Saskatchewan were re-elected in the general elections held on June 9. The Government will have from 40 to 45 seats in a House of 63, the independents 14 to 16, Conservatives and Labor the rest. The election was fought largely on purely local issues. Harris Turner

GENERAL LORD BYNG  
*Hero of Vimy Ridge, who has become Governor General of Canada*

of Saskatoon, a blinded war veteran who edits a newspaper, was among the sitting members returned, and there is some talk of his leading the opposition ranks in the next Legislature.

**AUSTRALIA**—Views which Premier Hughes of Australia intended to advocate at the British Imperial Conference were published at length in London on May 22 in *The Sunday Times*, as cabled from Australia. Mr. Hughes began by arguing that an adequate navy was indispensable to Australia and continued:

The bearing of the Japanese treaty upon the naval defense of the empire is obvious. As we have seen, there has lately been much talk of strained relations between the United States and Japan. Now in them lie the germs of great trouble in this world. What is the hope of the world as I see it? It is an alliance between the two great branches of English-speaking peoples. Here is our dilemma. Our safety lies in a renewal of the Anglo-Japanese treaty, yet that treaty is anathema to the Americans. We not only have no quarrel with America, we have no quarrel with Japan. Our ideal at the conference is, as I see it, a renewal of the Anglo-Japanese treaty in some such form, and modified if that should be deemed proper, as will be acceptable to Great Britain, to America, to Japan and to ourselves. When one comes to the alleged causes of disputes between Japan and America, those differences appear to be trivial as compared with the tremendous evil which war would inflict upon both nations.

The Victorian Electricity Commission has accepted the single tender of the International General Electric Company, a subsidiary of the General Electric Company, for furnishing switch gear and transformers for the development of coal near Melbourne at a price of £379,000, which is £200,000 below the lowest combination of British sectional bids submitted.

Sir Eric Drummond, Secretary General of the League of Nations, announced on June 2 that he had received from Australia a telegram informing him that the Australian Government on May 8 had established a civil administration in the former German colony of New Guinea under the mandate of the League.

**NEW ZEALAND**—Sir John Findley of New Zealand, speaking before the Royal Colonial Institute in London early in June, talked on the forthcoming Imperial Conference and pointed out that for the

first time the dominions would take a formal directive share in the shaping of the imperial foreign policy—in connection with the Anglo-Japanese Treaty. "Some day," he said, "there will be a world conflict between the East and the West, and—as the only means of preserving our Western civilization—a larger federation may be imperatively required, which will embrace all English-speaking people of the globe and will bring us nearer the poet's ideal of "the parliament of man, the federation of the world."

**SOUTH AFRICA**—General Smuts in a speech to the House of Assembly at Cape Town declared himself in favor of a renewal of the Anglo-Japanese treaty, but added: "I agree with Mr. Hughes (the Australian Premier) to this extent, that no renewal should take place unless we can satisfy America by the form the treaty takes that no jeopardy of her interests is involved. When I look at the question as a whole and the interests for which we stand, it seems to me vital that every effort should be made to keep in touch, sympathy and contact with the great American Republic."

In another address on May 27, also outlining his attitude in the Imperial Conference, he warmly defended the League of Nations, making an earnest plea that the League be given a chance to show what it could do. "Do not let us fight the League of Nations," he said, "but let us fight the Supreme Council, which may be wrong." He saw no other hope for the future of the human race than that of an association of nations, great and small.

**EGYPT**—Semi-political riots occurred in Alexandria and Cairo in the latter part of May. In Cairo on May 20 there was a demonstration against the Government started by students in the Bulac quarter. A student was killed outside the Ministry of Finance, and many policemen were severely injured. Egyptian Lancers were compelled to intervene to disperse the rioters. At the funeral of the student next day rioting was renewed and the police had finally to fire on the mob. Two persons were killed and fifteen wounded.

In Alexandria the disturbance was more serious. Twelve Europeans and thirty-six natives were killed and 191 persons wounded in riots on May 22 and 23. The trouble

started between Greeks and natives and indiscriminate shooting spread throughout the city. There was general looting and many houses in the customs quarter were burned.

Official circles held that the rioting in both cities had its basis in the fact that none of the Egyptian nationalists was chosen on the delegation going to London to discuss the future of Egypt. The Premier had refused to appoint Zaglul Pasha or any of his supporters on the mission, which is

headed by Adly Pasha, the Prime Minister himself.

**L**IBERIA—Five pounds sterling, and no more, is to be the price of a wife, according to a recently ratified convention between the Governments of Liberia, regulating relations between tribes on the Sierra Leone border. No claim can be made in respect of a woman except by her husband and no woman can be compelled to return to a claimant against her will.

## THE VATICAN'S NEW RELATIONS WITH FRANCE

*Appointment of Senator Jonnart as Ambassador to the Holy See and of Mgr. Cerretti as Papal Nuncio at Paris marks a further increase of the Vatican's diplomatic prestige—Difference between the French and Italian attitudes*

**W**ITH the appointment of Senator Jonnart to be Ambassador Extraordinary at the Vatican, and Mgr. Cerretti to be Apostolic Nuncio at Paris, diplomatic relations between the Holy See and the French Republic, after sixteen years' interruption, have been resumed. The appointments are tentative, however—only for six months—for the French Senate has not yet confirmed the act of the Chamber voting the necessary credits. Still, face to face with a *fait accompli*, it is expected that the Senate will now pass the Chamber bill, when the appointments will become permanent. In his allocution to the Sacred College on June 13 the Pope expressed joy at the restoration of diplomatic relations with France, to which, he says, the Pontificate will gladly adhere, faithful to its traditions, and only desiring harmony between the Church and the State for the common good.

The new arrangement presupposes an exchange of diplomats, and provides for the recovery by France of her office as protector of Catholics in the Orient, and for the good offices of the Vatican in making the treaties which were the outcome of the great war prevail in Catholic communities, so that universal peace may be hastened. On the other hand, there is to be no modification

of French legislation in regard to worship and religious schools and associations—that is to say, the associations law will not be abrogated, and the Concordat of 1801 will not be revived. In the appointment of Bishops France is to have the “most favored nation” treatment; Presidents of the Republic finally may visit the Quirinal without prejudice to the Vatican.

The reconciliation is due to several definite causes, chief among which are the desire of the French people to reward the immortal patriotism of the French priests during the war, and the recognition that the Vatican has again become a powerful force in world politics. Had the Allies been better represented at the Vatican during the war, its friends say, the consistent neutral attitude of the Pope would have been better understood by them, and certain delinquencies of which pro-German officials at the Vatican were guilty would not have taken place. As it was, what could Sir Henry Howard and his successor, the Count de Salis, representatives of Great Britain, and J. van den Heunel, the representative of Belgium, hope to achieve against such trained diplomats as Prince von Schönburg-Hartenstein, the Austro-Hungarian Ambassador, Dr. von Mühlberg of Prussia and Baron von Ritter von Grünstein of Bavaria?

And what chance had the devoted Cardinal Mercier, who came in December, 1915, to tell the Holy Father about the rape of Belgium, when he was circumvented on every occasion by his Eminence of Cologne, Cardinal Felix von Hartmann?

"Your eminence," said von Hartmann, tolerantly, on one occasion, when these Princes of the Church met at the house of a Roman lady, "your Eminent need not feel embarrassed. We shall not talk of the war."

"And your Eminence may be quite certain," replied the Belgian Cardinal, solemnly, "that I shall not even hint at peace."

Had the Allies been adequately represented at the Vatican, it is inconceivable that the German and Austrian influences which caused the Pope to present his peace note of Aug. 1, 1917, would not have been laid bare. As it was, these influences prevailed, and behind the universal discussion of the peace note the Teutons prepared for Caporetto and Picardy. All this, however, did not prevent the note from being the sincere expression of a neutral monarch for peace, of a similar inspiration to the note which his Holiness sent to Cardinal Logue on May 21, appealing to both the Irish and to the English to abandon violence in Ireland.

As early as July, 1918, France began a rapprochement by sending M. Denys Cochin on a private mission to Pope Benedict XV. Two years later, at the canonization of Joan of Arc at St. Peter's, France sent an extraordinary delegation, headed by that distinguished historian and statesman, Gabriel Hanotaux. Thus was the rupture gradually healed, although probably few of the soldier priests of France, and fewer still of the members of the Curia, even wished to have relations revert to the old status, under which the Vatican could not exercise the proper authority over religious bodies in France, because they claimed to be French, nor the French Government properly control them because they also claimed to be of the Vatican.

The Concordat of 1801, the famous agreement entered into between Napoleon and Pius VII., had outlived its usefulness for both parties. Even as early as Leo XII.'s time, Cardinal Rampollo, the Papal Secretary of State, believed that a change in the Concordat would work to mutual benefit,

but that the initiative must come from France. The Dreyfus case, with its Royalist plots, in which religious orders were concerned, carried the temper of Frenchmen too far. So the associations law, which drove the orders from France, closed their schools and confiscated their property, was followed and amplified by the Separation act, by which France abrogated the Concordat, deprived the Church of its property and organized rights, and reduced the clergy to simple citizenship, with orders not to recognize any authority from abroad. Thus deprived of both the material and spiritual support of the Mother Church, 20,000 French priests went to the front and freely offered their lives for the country, which had made many of them beggars. They used rifles against the Germans, and crucifixes against the horrors of the trenches. They were Frenchmen first, and then priests, and all France was grateful.

So after the war the element of gratitude joined that of political exigency, and France was constrained to go to Canossa, but without humiliation. By a curious coincidence, on the very day, May 25, that M. Jonnart departed for Rome, there died at Paris the man who, as Premier of France sixteen years before, had been the chief instrument in divorcing the State from the Church, Dr. Emile Combes. On May 31, M. Jonnart was received at the Vatican.

Charles C. A. Jonnart, very wealthy himself, and married to a wealthy wife—the daughter of M. Aynard, the influential Deputy of the Department of the Rhône—owner of half a dozen beautiful châteaux, a devout Catholic, as well as a man of the world, a statesman, a diplomat, was born in 1857. He has been engaged in public life since 1889, when he was first elected Deputy from the Pas de Calais. Later he was elected Senator from the same department. He was Minister for Public Works in the Casimir Périer Cabinet in 1893, and has passed two terms as Governor General of Algiers. He filled for a short time the thorny post of Chairman of the Reparations Commission, and has on more than one occasion been in the running as a possible Premier and a possible President of the Republic. He was Premier Clemenceau's first choice as French High Commissioner in Alsace-Lorraine immediately after the war, a post subsequently filled by M. Millerand, now President of

France. M. Jonnart's most interesting mission perhaps was in 1917, when he headed the allied representatives who went to Athens and expelled King Constantine from Greece.

The new papal nuncio to Paris, Mgr. Bonaventura Cerretti, Archbishop of Corinth, is probably the most gifted diplomat in the College of the Vatican. Although subordinate as Secretary of the Congregation of Extraordinary Ecclesiastical Affairs to the Papal Secretary of State, Cardinal Pietro Gasparri, he is known to exercise a dominating influence in things diplomatic. Like the late Cardinal Ferrata, to whom he bore a striking resemblance, he was born in the Province of Arviato, in 1872. There he made his studies for the priesthood, which he entered in 1895. Almost immediately he was attached to the Congregation of Extraordinary Ecclesiastical Affairs, equivalent to Papal Foreign Office. Nine years later Pius X. sent him to be secretary to the Apostolic Legation at Mexico City; two years later he filled a similar post with the Papal Legate at Washington. The war found him Legate for Australia and New Zealand, whence he was recalled by the present Pope to succeed Mgr. Pacelli in the Foreign Office, who had been ordered as nuncio to Munich.

Mgr. Cerretti has twice been on missions to America. The first time was in July, 1917, when the ship on which he sailed flew the white and gold papal flag, as a moral warning to German submarines. Again, in the Spring of 1919, he came as the Pope's personal representative to the golden jubilee of Cardinal Gibbons. At the Peace Conference, in 1919, although the Vatican had no recognized standing as a political power, Mgr. Cerretti was present as its representative, and did much among the delegates of the Allies toward promoting a true conception of the Holy Father's unswerving neutrality during the war. He also saved the Catholics in the surrendered German colonies from much unnecessary humiliation.

The re-establishment of diplomatic relations between France and the Vatican has revived in the Italian press a debate on the relations between the Quirinal and the Vatican and the possibility of a similar reconciliation. *Il Messaggero*, on June 9, pointed out the mutual benefits to be derived from such a reconciliation. The Pope by recover-

ing his freedom of action, and the State by freeing itself from clerical antagonism. *L'Osservatore*, the organ of the Vatican, for the first time welcomed such a rapprochement: The Church, it said, had done much to bring it about; it had removed the inhibition which had prevented Catholics from taking part in the civil Government, and had then allowed them to form a political party, and to hold portfolios in the Cabinet; moreover, it had tried to range them on the side of law and order in the recent elections. It awaited only the Quirinal's initiative.

But the cases of France and Italy and their relations to the Vatican are not the same. The differences of the Quirinal and the Vatican are fundamental. The case of the Vatican is this: The Kingdom of Italy from 1860 till 1870 illegally absorbed the States of the Church, and thus deprived the Popes of all temporal power. It makes no difference that the people of Romagna, Umbria, the Marches and of Rome itself voted by plebiscite for incorporation in the kingdom—the illegality exists. That the Vatican, however, would be ready to negotiate for a condition which would at least nominally restore the temporality of the Popes was made clear by Pius X., who wrote:

"The Pope in his character of monarch has the power to contract or to extend his domains like other monarchs and by treaties with them, but he cannot be deprived of his temporality by force." The Vatican believes that the essence of this temporality is still preserved through the Pope's possession of the domain of the Vatican, the Lateran palaces and the villa of Castel Gandolfo.

But the Quirinal does not even acknowledge this semblance of temporality. By the law of May 13, 1871, it considered Pope Pius IX. and his successors to be tenants of these places, with a yearly guarantee by the Italian Government of 3,225,000 lire for their upkeep, which sum, however, is still unclaimed and unpaid. The working of the law of guarantees was illustrated by the following case: When the conclave which was to elect Leo XIII. met in 1876, the Cardinals, fearing that the Roman mob might invade the Vatican and that they might suffer indignities, if nothing worse therefrom, asked the Government for safe conduct to Civita Vecchia, the port of Rome, twenty-eight miles northwest of the Eternal

City. The Government promised them safe conduct, but added that if the conclave was held elsewhere the new Pope could not return to the Vatican.

A revival of the question, coming on the heels of the French reconciliation, has inspired some ardent French Catholics to point out that the domains of the Popes at Avignon and Comtat-Venaissin, in France, enjoyed for six centuries by them until taken away in 1791, might be restored. But no intelligent Catholic deems such a solu-

tion possible. Most persons who have studied the question believe that the solution lies in Italy's recognition of the temporality of the Popes over the areas where they now exercise temporal authority, with perhaps an open way between them. They cannot imagine that any large community of Italians, even if the Government permitted it, would exchange its present status for papal rule, as it was in the Eternal City before the troops of Victor Emmanuel made a breach at the Porta Vecchia.

## SPAIN'S MURDER SYNDICATE

[PERIOD ENDED JUNE 10, 1921]

GERMAN propaganda for trade, if for nothing more, has been revived in Spain by the publication at Madrid of a Spanish edition of the *Münchener Neueste Nachrichten*, beginning with a series of articles from the pen of the former German Ambassador at Rome, Count von Monts, pretending to prove that Germany was not responsible for the war. Old arguments and old documents are used, among the latter being extracts from the British-Russian correspondence unearthed at the Petrograd Foreign Office by Lenin in December, 1917, and recently published with pro-German editorial notes in a New York paper.

The only difference between this propaganda and that indulged in during the war is that now the Munich paper gives more attention to religious topics than it does to those of interest to the proletariat.

The Paris *Matin* is publishing a series of

articles from its Madrid correspondent dealing with Spain's great syndicate of murder, particulars of which, from time to time, have been presented in *CURRENT HISTORY*. According to the figures of the *Matin* man in the six months ending April 30, 327 employers of labor had been slain and 167 workers.

After the Spaniards and Moors had agreed upon an armistice on April 24, hostilities were renewed, on May 7, by Generals Sanjurjo and Costro, as reprisal for an attack made on a Spanish convoy marching between Meniero and Tyenin.

The new Spanish tariff, which particularly affects the American republics, went into effect on June 1, accompanied by a Ministerial decree imposing pro rata duties on all merchandise imported from countries the money of which has depreciated in comparison with the peseta.

## PORTUGAL'S NEW GOVERNMENT

[PERIOD ENDED JUNE 10, 1921]

THERE was a political flareup in Portugal in the third week of May; for a time, a cabinet crisis threatened to give way to revolution. On May 21 the Prime Minister, Senhor Bernardino Machado, and the entire Cabinet placed their resignations in the hands of President Almeida. As the opposition forces led by Senhor Augusto Soares had stated their policy as "everything or nothing," and declined to co-oper-

ate, rumors were spread that another revolutionist leader, Machado dos Santos, had been proclaimed President of the Republic, and that Senhor Bernardino Machado and Senhor Alvaro had fled to the provinces, where they were attempting to start a counter-revolution. This last story of a revolution and counter-revolution was published in the papers of Madrid.

It was proved to be incorrect but not be-

fore the story had been cabled abroad without any subsequent contradiction. What had actually happened was this: Senhor Machado's Government, which, like its predecessors, had represented the maximum Parliamentary concentration, did not receive an adverse vote, but went out of office through fears of a revolution directed against itself and Parliament on account of administrative scandals.

One measure claimed by the revolutionary junta was the dissolution of Parliament, but the question arose as to who was to preside over the elections, since the constitutional authority would have disappeared. Some appealed for foreign intervention—Great Britain, for example—under which the elections might be guaranteed. But this was denounced by others, as it was reported that Royalists and Integralists were waiting for just such an opportunity in order to prove their supremacy by intrigue, if not through numbers. Finally, on May 25, the President devised a slate which satisfied all parties, at least for the time. It was:

THOME BARROS QUTIROZ, Premier and Finance.

ANTONIO GRANJO, Interior and Commerce.

MELLO BARRETO, Foreign Affairs.

MATOS CID, Justice.

LADISLAU PEREIRA, Marine.

ABOIM INGLEZ, Agriculture.

RIBEIRO DE CARVALHO, Labor.

Colonel ALBERTO DA SILVEIRA, War.

The majority of the press and republican opinion received the Cabinet well. Senhor Antonio Maria da Silva, the former Minister of Finance, who is the leader of the Democrats, declared that the new Premier might count upon the complete support of his party, the new Ministers being Republicans with respect to whose loyalty there could be no doubt. Senhor Antonio Granjo, the new Minister of Commerce, has announced his intention of adopting the proposals of his predecessor, mentioning in particular the measure for the protection and encouragement of the mercantile marine.

## THE BALKAN STATES GROWING NEIGHBORLY

*Rumania, Jugoslavia and Czechoslovakia collaborating with Italy for an economic alliance that will help Central Europe commercially—Jugoslavia and Rumania sign a treaty of alliance—The Zadruga, a Bulgarian phenomenon*

[PERIOD ENDED JUNE 10, 1921]

SINCE the middle of May several events have happened which supplement the movement of the Little Entente, as outlined in the June CURRENT HISTORY, for political solidarity in the Balkans and economic revival in the emancipated States of the defunct Austro-Hungarian Empire. To be sure, the vote of the Austrian Salzburg, north of Italy's new Tyrolian frontier, for union with Germany somewhat disconcerted the Rome Government; for such a union would have a strong influence upon Italy's new German subjects south of the Brenner, who recently elected to the Italian Chamber the entire Bolzano ticket—four members of the Deutsche Verland led by Count Frederick Toggenburg. Also diplo-

matic exchanges, which ensued between Rome and Vienna, revealed the latter's indifference to the Salzburg vote, which, in diplomatic circles, is looked upon as an entering wedge for Austria itself. On the other hand, the new conference of plenipotentiaries of the Entente and Little Entente, which opened at Porto Rosiga, near Monfalcone, on June 15, is expected, on French as well as Italian initiative, to give the coup de grâce to all Austrian aspirations for a realization of the Salzburg plebiscite. A formal protest against a pan-Austria plebiscite was made by Rumania at Vienna on May 21.

This conference, like the preceding ones at the same place, while nominally called

to devise a formula by which Austria may be economically and financially rehabilitated, has a more extended program in view—the economic, if not the political, interests of the Little Entente and its ramifications in Central Europe. At this conference Lieut. Col. Clarence B. Smith represents the United States in the character of an unofficial observer. The Harding Administration takes the view that the United States is vitally interested, not only in the economic restoration of Central Europe, but also in the methods which the Balkans are able to contribute in order to bring that about. These methods are of particular concern to the American manufacturers of agricultural implements and of railway stock.

Italian delegates at Belgrade completed a commercial treaty with Yugoslavia on June 2. On the same day the Tribuna Belgradese announced that Italy, in collaboration with Rumania, was negotiating at Prague an economic alliance in which Yugoslavia and Czechoslovakia would be brought to a better understanding. According to Signor Salata, one of the Italian delegates at Belgrade, and M. Ribarc, his Serbian colleague, the basis of this alliance would be: (1) The safeguarding and protection of the minority nationals in territory still to be assigned; (2) an immediate exchange of commercial, financial and industrial information among the nations interested for their mutual benefit. Meanwhile the Italian State Railways' New York office announced that the famous Dolomite Road, running from Cortina to Bolzano, via Canazele and Karersee, had been opened for its entire length of seventy miles, and that the public motor service in the Dolomite region would begin running this Summer. This is a distinct achievement for Italian roadbuilders, who performed such miracles of construction for the army during the war.

On June 8, M. Pashitch, Premier and Foreign Minister of Yugoslavia, and Take Jonescu, Minister without portfolio of Rumania, signed at Belgrade an agreement guaranteeing the maintenance of the status created by the Trianon and Neuilly treaties. This means that both Yugoslavia and Rumania will mutually aid each other in preserving what they respectively received from Hungary and Bulgaria. Two days later, at Bucharest, the last bone of con-

tention between Rumania and Czechoslovakia was removed. On the one hand, Rumania agreed to turn over to Czechoslovakia three villages, with a population of 3,000, nearly all Czechs; on the other hand, Czechoslovakia agreed to surrender to Rumania eight villages with a population of 10,000, of whom 7,000 are Rumanians.

The Rumanian Government also appointed a Commission to go to Warsaw with powers to carry out the negotiations with the Polish Government looking toward the conclusion of a commercial treaty and an agreement for the transit of goods through Rumania and for navigation on the rivers connecting the two countries. The Commission is also examining a proposal that Poland be given facilities to use the port of Brailla as a maritime and commercial base in the same way as Czechoslovakia is to use Trieste through the Italian agreement.

Jugoslavia, Rumania and Greece had individually protested to the Bulgarian Government against the alleged invasion of the former Bulgarian territory given them by the Treaty of Neuilly by bands of Bulgarian brigands. Individually and collectively they had complained on the subject to the Supreme Council with added recriminations to the effect that Bulgaria was not carrying out the terms of the treaty, particularly in regard to the demobilization of her army and the making of reparations. Bulgaria's answers to the last complaints having been deemed satisfactory by the Supreme Council, the Bulgarian Government, in the middle of April, addressed an identical note to the *Chargés d'Affaires* of Yugoslavia, Rumania and Greece at Sofia offering in each case to join the complaining Government in a thorough investigation.

As none of the censoring Governments had answered Bulgaria's invitation by the middle of May, Bulgaria laid the entire matter before the representatives of the Entente at Sofia, accusing the interested Governments of entering upon a campaign to destroy the prestige of Bulgaria as well as to obstruct her revival. This had the effect of bringing a reply from Bucharest, and by May 17 a mixed Bulgarian-Rumanian commission had made an investigation of the Dobrudja and had signed a protocol that the conditions complained of were mainly due to smugglers and to the laxity of the customs guards on each side of the frontier—

a matter which could be remedied by more stringent regulations by the Ministries of Interior, both at Sofia and Bucharest, working in better accord. It is asserted by the press of Sofia that the complaints of Jugoslavia and Greece, which principally concern Macedonia and Thrace, can be explained and amicably settled in a similar way, although it is beginning to be charged periodically by the Bulgarian Government that armed bands of Serbs and Greeks frequently raid villages on its side of the frontier, burning houses, slaying people and carrying off movable property. Apparently, here, at most, it is the old story of the *comitadjis* of Turkish times.

Stephane S. Bobtcheff, a professor of law at the University of Sofia, has offered an explanation of the phenomenon: While Bulgaria is essentially an agricultural country, rapidly reviving through the confiscation of the large estates for the use of the nation, through the solidarity of landowners and land workers, enforced national labor, and the development of the Green International, the people, at the same time, except in the case of certain urban minorities, will have nothing to do with Bolshevism.

In the Zadrouga he finds the explanation of the illusion of communism without its actuality, for the actuality would mean the obliteration of individual thought and enterprise to which the independent Bulgarian would never consent. The Zadrouga, or

union of several families who claim a common ancestry, has existed for centuries in the southern and western regions of Bulgaria. Once there were hundreds of these communities; now there are fewer than fifty. The reason, according to M. Bobtcheff, is that the Zadrouga, being in principle a Soviet, came to grief because it denied its members the rewards of personal initiative—just as the Russian Soviet does—while its best features with personal initiative became absorbed by the nation at large, and today accounts for the national cohesion among nearly all classes. For example, the ideal of the Zadrouga has become nationalized—"Each for all and all for the Zadrouga; each what he is able to do and to each what he needs."

The Zadrouga holds all property in common, and the community, not the individual, may benefit where individual achievement, gain, or ability surpasses the common status. It is governed by the *Starei*, or Elders; the *Domakini*, or Auditors; the *Zapovednitzi*, or Masters, and the *Sadii*, or Judges. Years ago the *Domakin* exercised the function of a dictator; at that time the Zadrouga bore an exact resemblance to the Lenin Soviet.

The Zadrouga began to decline when the attractions outside the community proved too strong for the gifted or educated members to resist the rewards of personal achievement and hence personal advancement in the world.

## RACE SUICIDE IN CENTRAL AFRICA

THE Gaboon area is becoming a vast graveyard for the dying races of Central Africa, according to Frederick W. H. Migeod, a Fellow of the Royal Geographical Society, who has returned to London from two journeys across equatorial Africa from sea to sea. The sands of the Sahara have been advancing southward and there has been a steady trek of native tribes, as if pushed by the sand, south and west into French territory. There they are held up by the more vigorous coastal races, and they settle down as if resigned to die out. Women refuse to bear children, and in one tribe the chief has absolutely forbidden

marriage, with the same idea. It is described by Mr. Migeod as the most amazing case of racial suicide on a huge scale that the world has ever seen.

On the other hand, France is about to attempt to stop the advance of the desert by damming the Upper Niger in order to irrigate nearly 4,000,000 acres of land on which it is proposed to raise cotton. A bill introduced in the Chamber of Deputies proposes to appropriate \$250,000,000 for the purpose. With the Niger utilized between Bammako and Timbuctoo, the cotton crop, it is believed, will exceed that in the United States.

# HUNGARY AND HER NEIGHBORS

*Waiving party differences, Hungarians co-operate to secure internal tranquillity and to improve border relations—Education handicapped by want of the books destroyed under the Bolshevik regime—Tottering Austria—Minority rights in Czechoslovakia*

[PERIOD ENDED JUNE 10, 1921]

**H**UNGARY is on the road to consolidation. Although still bitter because of the provisions of the Peace Treaty, she is trying her best to live on friendly terms with her neighbors, especially the secession States, as a political and economic necessity. At present the biggest gap seems to separate her from Rumania, because of the inclement treatment of Hungarians in Transylvania. Refugees still arrive in Budapest from this former part of Hungary, who give vivid stories of their persecution.

Several difficulties must be overcome before friendly relations can be established with this neighbor. What Hungary aims at is economic treaties, and the consequent lifting of the export ban. Although Hungarian money increased conspicuously in value recently, this rise is handicapped because of the obstacles put in the way of commercial traffic with neighbors. Rumania, especially, is slow to come to an understanding with Hungary in this respect.

Relations with Czechoslovakia have improved recently, because of the friendly exchange of views between spokesmen of both Governments on reopening commercial intercourse. Discussions toward this end have brought the date near, it is thought, when all disturbing conditions will be removed. Of course there remain grievances because of alleged disrespect for minority rights granted by the Peace Treaty, such as the political status of Hungarian-speaking citizens residing in Slovakia, and also their right to use the Hungarian language in their dealings with State offices and in their schools.

Decision regarding the four western counties bordering on Austria is eagerly sought. Hungary offers to withdraw entirely from the territory in question if Austria, on the other hand, will give Hungary a narrow strip on the eastern edge of this area, where a number of sugar refineries are located. The contention is that all the beets refined

there are produced in Hungary. Besides this, Hungary would grant certain customs concessions on Austrian products along the frontier. For a time Austria seemed inclined to consider the offer, but lately, as if encouraged by some of the Entente powers, she became less willing to compromise her claim established by the Peace Treaty, and indicated a desire to have the provisions executed literally. Parleys were still in progress when these pages went to press.

Although the internal political situation cannot be called tranquil, there is a manifest desire to overlook party lines and work in harmony for the good of the country. The new Ministry under Count Bethlen is supported on important matters by the two major parties in the National Assembly—the Farmers' Party and the Christian bloc. Law and order prevail, and freedom of speech, press and assembly is more and more rehabilitated. A mass meeting by Socialists on May 1 was allowed, and no disorders occurred. That such a meeting was permitted is considered an unmistakable step toward placating opposing groups. In strange contrast, a demonstration by the Christian Social Democrats planned on the opening day of an international congress by Christian Socialists, May 16, was forbidden. It is said that permission was withheld to prevent clashes between the Christian and non-Christian Socialists.

Count Julius Andrassy, having definitely aligned himself with the Christian bloc, delivered a masterly address in the National Assembly, taking sides unequivocally with Christian ideals and Christian Hungary, but he warned all who, under the cloak of such a program, would besmirch the name of Christianity and commit excesses against persons suspected of having supported the Bolshevik régime. He especially enjoined restraint toward citizens of the Jewish faith, and said that anti-Semitism had no place in the platform of a Christian party.

Jungerth, representing the Hungarian Government in its dealing with the Russian Soviet, announced that he had come to an understanding regarding the repatriation of Hungarian war prisoners still under Bolshevik control. The terms provide for their immediate repatriation if the Hungarian Government releases all persons sentenced to death or to more than ten years' imprisonment. The agreement is acceptable to both countries.

Albert Berzeviczy, Chairman of the Academy for Sciences; Julius Pekar, Assistant Secretary of Public Education; Julius Varga and other noted educators deplore the conditions that exist in schools and the shocking dearth of school books. Some schools have been closed for lack of textbooks. For lack of money and material, reprints cannot be made. The Bolsheviks are charged with the destruction of old books, which they described as promoting the interests of the bourgeoisie and a society built upon capitalism. Instead they inaugurated a system of free thought and enlightenment, especially on sex hygiene, and shocking revelations are now being made regarding their system of education.

Because of repeated charges in the foreign press that terrible deeds are committed in internment camps established by the Government to disinfect the nation of rabid theories, Baron Redding-Biberegg, head of the International Red Cross in Switzerland, was invited to inspect such camps. In his report he makes the following statements:

The unbiased truth is that conditions are satisfactory, and gross misrepresentations were published in the press. In fact, I have made my inspection tour to establish the number and identity of those interned who are citizens of foreign countries. I have advocated their release, and the Hungarian Government is more than ready to grant this. The only difficulty might arise in the case of the Gallician Jews, because of the unwillingness of the Polish Government to permit these to cross the border. Uninfluenced by any motive, I might state that although on principle I do not believe in the necessity of internment camps, yet I find that all laws of humanity have been observed. The interned have not adequate clothing, and the American Relief Administration is doing its best to alleviate this need.

The whole country was roused to a high pitch of enthusiasm by the celebration of Count Albert Apponyi's fiftieth anniversary of public service, and, incidentally, of his seventy-fifth birthday. Hundreds of

Hungarian towns elected him an honorary Burgess, the National Assembly held a festival session, and special services were held in churches. Felicitations were sent to the aged statesman from all parts of the world, including America, especially by citizens of Hungarian birth.

**AUSTRIA**—Austria has not yet collapsed, but it is certainly tottering. In the early days of June it was left without a Government, as Dr. Mayr's Cabinet resigned, and the prospect of forming a more authoritative Cabinet is remote. The Government's fall was precipitated by the action of the annexationists, that is, the Pan Germans and other influential groups, who favored unification with Germany. The people are mainly in sympathy with this plan, at least on one score: They hope that inclusion with Germany would mean a brighter future for Austria. Racial sympathies have played a large part in the development of such sentiment. The Provinces of Tyrol and Salzburg have overwhelmingly voted in favor of such alignment, and Dr. Mayr, in view of the attitude of the Allies, especially France, and of the Financial Commission of the League of Nations, could do nothing but point out the conclusions and resign.

Dr. Mayr's warnings remained unheeded, because the various provinces are very loosely linked to one another. The financial outlook is gloomier than ever, because it is feared that, unless some strong hand intervenes, the Allied Commission will leave Austria to her fate. As a last resort it was proposed to hold a joint conference June 15 at Porta Rosa, near Trieste; but even if such a conference should decide on measures, their application is doomed because of the stanch refusal of the Pan Germans to consider anything without unification with Germany. The French, on the other hand, refuse to countenance anything of the kind, because it would strengthen Germany. The French, however, are encouraging the Austrians to yield nothing to the Hungarians on the question of the West Hungarian counties adjudged to Austria in Versailles.

Eleven former army officers, some of high rank, were placed on trial on the technical charge of having participated in the plot of former Emperor Charles to regain his throne. It is alleged that the officers

have recruited legionary troops and placed themselves at the disposal of Hungarian Carlists in pursuance of the plan.

CZECHOSLOVAKIA is trying to solve difficulties which arise over the position assumed by the German element in Bohemia and Moravia, and by the Hungarians in Slovakia; also by the Ruthenians and Ruthen-Magyars in Podkarpatska Rusinia. The question revolves mainly about the minority rights, and spokesmen of all parties seek an understanding to eliminate what can be termed "non-participation" in the affairs of State by the various groups. Rudolf Keller, a publicist of note, recently declared himself in favor of bringing about an alignment. He thinks that the differences can be smoothed out, provided the Czech Government will make some concessions. The solution lies in the admittance of nationality leaders to State offices, equality in all respects, the use of the mother-tongue, definite regulations of the quota of the former national indebtedness by the succession States, and initiation of a State budget system.

Magyar-speaking subjects of Podkarpatska Rusinia, together with some of the Ruthenian-speaking populace, clamor for recognition. Recently, a delegation composed mainly of members of the Hungarian-Ruthenian Party appeared in Prague and sought an audience with President Masaryk. They were not received by the President and had to make their plea to his secretary. They also left a voluminous memorandum in which they made the following claims:

Termination of authority by representa-

tives of the military in civil cases; regulation of the right to vote so that only those would vote who have resided in what was formerly Upper Hungary at least since Jan. 1, 1919; power of the National Assembly in Prague to determine autonomous rights of Ruthenia and to lay down the principles upon which the Ruthenian Legislature should be called into life; reinstatement of all Hungarian functionaries discharged before the sanction of the Peace Treaty for refusal to swear allegiance; recall of administration officials instated since the occupation unless they speak the Magyar or Ruthenian language; restitution of detached territories within the counties of Saros, Zemplen and Abauj; establishment of parallel classes in public, trade and high schools with Magyar as the language of teaching; compulsion of State and municipal authorities to accept papers drawn in the Hungarian language; the taking of a new census, free from falsifications; the establishment of free trade, and the utilization of all revenues derived from forestry and operation of mines for the promotion of interests of that part of the country which is devoted to these industries. Despite these difficulties, conditions seem to improve, and agitation against Czech overlordship is on the decline.

Czechoslovakia has reached an agreement with Austria regarding the gold reserve in the Austro-Hungarian bank. The Czechs will receive 15,000,000 gold crowns and will be permitted to purchase the bank's buildings in the country at the inventory price, less 20 per cent. Czechoslovakia on June 8 also made an amicable arrangement for the exchange of several villages on the border. [See Page 699.]

## GERMAN WAR CASUALTIES 6,888,982

GERMANY'S casualties in the World War were placed at 6,888,982 by Dr. William S. Bainbridge of New York, commander in the Naval Medical Corps, in a recent address at Boston before the Association of Military Surgeons of the United States. The figure was determined, he said, through two years' service in Germany during the war as an observer and from the study of official and semi-official publications and statements in German, Dutch and Scandinavian maga-

zines. According to Commander Bainbridge's tabulations, the German losses were divided as follows: Killed in battle, 1,531,148; missing, 991,340; wounded, 4,211,481; died of disease, 155,013. It had been absolutely established, however, he said, that 90 per cent. of the German wounded were refitted for service in the field or at the base hospitals, or rendered self-supporting. Of the sick and wounded who reached the home hospitals in Germany only 1.6 per cent. died.

# THE TURKISH DRIFT TOWARD MOSCOW

*How a complete reversal of the situation in the Near East was brought about by Mustapha Kemal's rejection of the new allied proposals, and the conclusion of a strong alliance of the Turkish Nationalists with the Bolshevik Government of Russia.*

**T**HIRTY days have brought a change, at least on the surface, of the Near East question as it emerged from the London conference last Spring. In the middle of May hostilities between the Greeks and the Turkish Nationalists had ceased; a rapprochement had been effected between the latter's Government at Angora and the Sultan's Government at Stamboul; at Angora the Grand Parliament was sympathetically debating the report of Bekir Sami Bey on the London Conference, the proposals of the Entente modifying the Treaty of Sèvres, and the arrangements he had made with France and Italy; Greece lastly had asked the good offices of Great Britain to intercede at Constantinople and was feverishly seeking a formula by which it might accept the Entente proposals modifying the Sèvres Treaty and still save her face.

Now all is changed. The Government in which Bekir Sami Bey was Foreign Minister has been overthrown; his work at London has been repudiated; the extreme Nationalists, strongly backed by the Moscow Government, are in control at Angora; their motto is "No surrender; no compromise"—no surrender to the Allies; no compromise with the Sultan. Finally Greece is on the point of renewing hostilities, with the assured aid of Great Britain and Italy and with the possible aid of France.

The circumstances which led to this change prove either that the Turk is at his old game of playing one nation off against the others or that the influence of the Moscow Bolshevik Government, whether exerted through promise of material support or threats of coercion, has proved too much for Mustapha Kemal Pasha.

As a token of its good faith the Entente had declared its neutrality in the conflict between the Greeks and the Nationalists, which was a real aid to the latter; Great

Britain had released the Turkish prisoners held at Malta; the Italian military Government at Adalia had acknowledged the supremacy of the Turkish authorities there and was preparing to withdraw from the territory; a similar evacuation on the part of the French in Cilicia had released the Cilician Turkish Army Corps for action against the Greeks; there were almost daily conferences between Stamboul and Angora under the direction of the Interallied Commission.

In the first week in May, during the celebration of the first anniversary of the Grand Parliament, Mustapha Kemal Pasha made a speech in which he took occasion to praise the work of Bekir Sami Bey at London, which, he said, gave every promise of early peace; for, as he pointed out, with the acceptance of the Entente proposals and the ratification of the treaties with France and Italy—all, however, capable of modification—the Greeks would be obliged to hasten the steps toward capitulation which they had already taken.

A fortnight later he made before the same body an address which told quite a different story:

Gentlemen: We are the only victors among the vanquished nations. We have conquered the Armenians in the east and the Greeks in the west. We have entered into agreements with the Western powers on condition that the interests of our country are safeguarded, and we have assured them of our peaceful intentions.

The British statesmen alone pretend to ignore our pacific aims. Among the vanquished nations of 1918, Turkey alone has succeeded in not remaining vanquished, thanks to the provident foresight of our policy and the valor of our arms. Despite the efforts of our enemies during the last twelve months, the Treaty of Sèvres no longer exists, neither in law nor in fact.

They wanted to break up our country and so dismember us. We have prevented it. Today we have powerful and good friends in the East. We have entered into sincere pacts

with the Governments of Azerbaijan, with Northern Caucasus, with Afghanistan and with the Mussulman population of Mesopotamia and Syria, with whom we have the most intimate understanding.

We have precious relations with Persia, Armenia and Georgia. But above all we have established most friendly and fraternal relations with the Russian Soviet Republic, which has promised to support and aid us with all its power, so that we are in a good way. We shall try to strengthen these relations by a program of common action, which will be drawn on fundamental principles at the coming conference at Moscow, in which our delegates will participate. There is no doubt that these efforts will be entirely in conformity with the desires of our people. We shall establish a popular Government, which will govern according to the exigencies of civilization and humanity.

In another speech, a few days later, he went further and said:

We really expected nothing from the London Conference and based our hopes on Moscow. The excellent results of our recent conference at Moscow proved finally the harmony and interests which exist between our two peoples. The Entente diplomats in London, being hostile to Russia, were naturally also hostile to Turkey. Russia and Turkey stand inevitably in similar relations to the imperialistic powers of Europe, and the more we stiffen the struggle in common the more we shall ultimately gain.

What had, meanwhile, happened at Angora?

The trouble began when Bekir Sami Bey presented the Entente proposals and the French and Italian treaties, and recommended the immediate acceptance of the terms in regard to Smyrna and Thrace. He was supported in this by twenty members. Then Kemal Pasha waved the proposals aside and asked that the treaties be considered. A great uproar, led by Remzi Pasha, a cousin of Javid Bey, and Mukhtar, arose in opposition. The clauses which were particularly obnoxious to the extremists were the economic clauses granting rights of exploitation in Asia Minor, despite the fact that these rights were to be granted only on condition that collaboration should be made with Turkish enterprise. Both the proposals and the treaties were unanimously rejected and the Cabinet, of which Bekir Sami Bey was Foreign Minister, resigned.

In Stamboul this action was interpreted as meaning "no concessions to the Entente Powers; down with the reigning Sultan!" In Constantinople also it was declared that the extremists were particularly anxious to

repudiate the French treaty, which fact, on the admission of the Old Turks, proves conclusively that Bolshevist agents at Angora completely controlled the Grand Parliament.

The Cabinet of extremists, formed May 22, was made up as follows:

Fevzi Pasha.....	Grand Vizier and War
Yussuf Kemal Bey....	Foreign Affairs
Ata Bey.....	Interior
Fehmi Bey.....	Sheik-ul-Islam
Hassan Bey.....	Finance
Jelal Bey.....	Supplies
Refik Bey.....	Public Health
Refik Sherket Bey.....	Justice
Omer Lutfi Bey.....	Public Works
Hamdullah Subhi Bey.....	Education

Two other events at Angora, said in Constantinople to have been brought about by the Bolsheviki, were the refusal of the Kemal Government to receive the son of the Turkish heir presumptive and the hanging of Mustapha Segir, an Anglo-Indian, as a spy.

The circumstances of the first event were as follows: Prince Omer Faruk Effendi, son of the Sultan Abdul Medjid Effendi, left Constantinople on April 28, telling his father that he could no longer restrain himself from joining the Nationalists. It appears, however, that the Angora Government was suspicious and declined to receive him. Thereupon Abdul Medjid sent a protest to Kemal Pasha, as he considered this refusal to be an insult not only to himself and his son but also to the Sultanate. He declared that all the members of his family had the right to go to Angora and also to visit the Turkish Army at the front.

The case of the British-Indian aroused an even greater sensation. The accused, Mustapha Segir, or Sachir, was publicly hanged in Parliament Square at Angora on May 27, after a trial of eighteen days by the so-called Court of Independence. The best account of the trial, which was published in the Bolshevist Chrezvitchaika of Constantinople, may be summarized as follows:

The courtroom was crowded. The prisoner gave his name as Mustapha Segir, and said that he was of Indian parentage and that his age was 33. He added that he was formerly a British Consul in Persia. His defense was that he had come to Angora under British instructions, to work for an amicable feeling on the part of the Kemalists toward Great Britain. Asked whether Earl Curzon had given him his instructions, he answered, "Yes, in part."

Documents said to have been handed by

the prisoner to the British Intelligence Department here were brought up, containing details concerning Kemal, where Kemal lived and the number and speed of Kemal's automobile. A Turkish associate of the prisoner, in giving evidence, detailed other general instructions, such as the finding out of the relations between the Bolsheviki and the Kemalists, what divisions existed in the Angora Parliament, and how to profit thereby; whether the majority were for war or peace by negotiation and how far the Kemalist majority was really hostile to Britain.

The President of the court asked the accused who was really behind him, and to this he replied that in the Foreign Office in London there were two currents of policy, one which aimed at avoiding a widening of the breach between Britain and Turkey, while the other was militarist and aimed at strengthening Greece and wiping out Turkey. He was in touch with the former group. Despite the desire to maintain amicable Anglo-Turkish relations, it appeared, it was also part of the policy of this group to stamp out the Kemalist movement. In this it was allegedly working with the Sultan, the Imperial Court and the Turkish Liberal Party at Constantinople.

No attention was paid at Angora to the appeals made by the British High Commissioner on behalf of the unfortunate Anglo-Indian and he was executed in accordance with the sentence. The case was said to have decided the Interallied Commission at Constantinople to raise the inhibition which prevented Greek warships from passing through the Straits into the Black Sea, where they will now be able to prevent the Nationalists from receiving any more Bolshevik aid through that route. It was expected that the execution would produce a profound impression in India. In addition to this defiance of Great Britain, the Nationalist authorities took no action to release any British prisoners in exchange for the Turkish prisoners released at Malta.

Bekir Sami had declared at London that the Kurds were perfectly happy under Turkish rule. As a disproof of this declaration, no sooner had he returned to Angora than a Kurdish revolt began. At Mergifoun, on May 31, the Kurds, according to information received in Constantinople, defeated the Kemalist troops and took 2,000 prisoners. The rebels demanded that the Bolshevik delegation be sent home and that negotiations be at once opened with the

Greeks by Muktar Pasha for peace. At Angora it was believed that the Kurdish revolt was organized at Stamboul.

On June 9 there was a serious conference of British Cabinet Ministers at the country home of the Prime Minister to consider the new situation in the Near East. Developments along certain lines, it was reported, may call for a change in the policy of the Government. In this case effective aid would be given the Greeks in the shape of munitions and the Black Sea ports of the southern littoral might be blockaded.

It was reported in Athens that British, Italian and French aid to the Greeks up to June 9 had gone much further than the respective Governments had officially admitted. The Greeks were said to be particularly well reinforced in the way of tanks, airplanes and gas shells. According to a Constantinople account they had in line 120,000 men, of whom 80,000 were effectives, while the Nationalists had only 100,000, with but 60 per cent. effectives. According to M. Gounaris and other members of the Greek Government who visited the Smyrna front in the first week of May, the new situation had greatly improved the morale of the Greek Army.

King Constantine, who, it has been reported, outlined the new Greek offensive—for it will be remembered that he was a successful commander of Greek troops against the Turks in 1912 and against the Bulgars in 1913—arrived in Smyrna with a large staff on June 12. Before leaving Athens he issued the following proclamation:

I depart to put myself at the head of my army. Over there, where for centuries Hellenism has fought with the aid of the Almighty, victory will crown the combats of our race, which moves irresistibly toward its destinies. Our predominance there today will assure, as in the time of our ancestors, the realization of the high ideals of liberty, equality and justice.

The last of our race guides our arms and our admirable record of civilization lays upon us duties of which we have a profound appreciation. We have even the right to proclaim with pride that we are accomplishing our purposes. The Greek people in sacred union confers upon us this duty by its incomparable sacrifices.

Confiding in the Divine aid, in the spirit of our heroic army and in the unconquerable force of the Greek ideal, I go where I am called by our supreme national aspirations.

# CHINA'S STRUGGLE AGAINST JAPAN

*Plans of the Peking Government to resist Japanese aggression and to prevent Great Britain from sanctioning further encroachments—Dr. Sun Yat-sen, elected President of China by the Canton Assembly, appeals for recognition to the United States*

[PERIOD ENDED JUNE 10, 1921]

CHINA, big, unwieldy and flabby, is in the hard grip of Japan, but she is struggling. A Tokio paper not long ago stated that the Chinese Government was determined to lay the Shantung issue before the next Assembly of the League of Nations. Not long ago the Peking Government cabled Mr. Wellington Koo—the Chinese representative on the Council of the League of Nations at Geneva—that China's failure at the first League Assembly to protest against the Japanese settlement had created a storm at home; he was therefore directed to pave the way for such a protest in the fullest and most careful way. The Peking Government, following its fixed policy of resistance to Japanese designs, formally warned the British Government in May that, in case of renewal of the Anglo-Japanese Alliance in July, it would repudiate any clauses tending to impair the integrity of China. The decision of Great Britain regarding this renewal, it may be said here, awaits the assembling in London of the Imperial Council. Canada is known to be opposed to embodying in the new treaty any clause which would pledge the United Kingdom to assist Japan in case she and a third nation should go to war, on the ground that this might lead to a situation in which Great Britain and her dominions would find themselves compelled to fight the United States—a possibility which Canada, loyal to American ties and traditions, considers unthinkable.

China is playing a waiting game. The boycott of Japanese goods goes on, causing the loss to Japan of hundreds of thousands of dollars. Peking is working to get a decision of the League of Nations on Japan's octopuslike encirclings in China itself and in Manchuria. The Chinese leaders are striving to prevent the renewal of the Anglo-Japanese Alliance. Bertram Lenox Simpson, a British authority on Asiatic subjects, widely known under his pen name of Putnam Weale, passed through New York

in May on his way to London to oppose the renewal of the Treaty with Japan. "If China is forced by Japan to commit suicide," he told an interviewer, "she means to put up a big fight doing it!" Though Japan had lost out on most of the outrageous twenty-one demands, he added, she had made her position in Shantung and Manchuria permanent by acquiring railway concessions for ninety-nine years, and had strengthened her economic control by multiplying her own postoffices, by securing 80 per cent. of the mineral resources of the country, by fighting every effort of the Chinese Government to increase its revenue independently of Japan, by establishing a chain of garrisons on various pretexts, and these, once established, had never been known to be withdrawn. As to the consortium, Putnam Weale declared that Japan had no fear that China would derive any benefit from that, inasmuch as she knew that "the Chinese themselves dislike the proposed measure so much that they will make it unworkable." All in all, he implied, the situation is deplorable from China's standpoint, but she is resolved to publish Japan's aggressions to the world and to fight for her liberty to the end.

Dr. Sun Yat-sen was elected by the Canton Assembly President of the Provisional Southern Government of China—of all China, he himself declared in an appeal for recognition sent to the Government of the United States on May 15—and formally assumed office at Canton on May 5. In the note to Washington Dr. Sun—who was the first Provisional President of the Chinese Republic, and who has rallied to his support a number of prominent Chinese, notably Mr. Wu Ting-fang, the former Ambassador—described the present situation as follows:

While the Peking Government is fast crumbling from sheer hollowness, foreign domination tends to spread from North to South. The existence of China as a nation

is in jeopardy. Since the unconstitutional dissolution of the National Assembly in June, 1917, no de jure Government has existed in Peking. \* \* \* As the National Assembly which elected me represents the whole country, so it shall be my first endeavor to unite all provinces and territories of the republic under one Government, which shall be progressive and enlightened. \* \* \* The legitimate rights of foreign powers \* \* \* shall be scrupulously respected. \* \* \* Foreign capital and expert knowledge in pursuance of the open door policy will be welcome. \* \* \* I appeal to the Governments of the friendly powers to withdraw recognition from the soi-disant Government, which is avowedly no de jure Government, and which is proving itself not even a de facto Government, and in the same manner in which they recognized the Republican Government formed by the National Assembly in 1913, I request that they accord recognition to this Government, formed now by the same Assembly.

Dr. Sun's appointment elicited from the Military Governors and commanders in the North a joint declaration denouncing him for having ignored the Peking President's plans for a reconciliation of the North and South; they threatened to organize a punitive expedition against the Canton insurgents. Such an undertaking, especially if the previously announced campaign against the insurgent Mongolians takes place, means more demoralization in the vast, disorganized land, more confusion in the already bankrupt Treasury, but the Tuchuns are actuated only by present actualities.

Pankiang, the last base for defense of Outer Mongolia, fell to the Mongols and their Russian allies under General Ungern-Sternberg late in April. The Chita Government was apprehensive of the possibility that this lieutenant of Semenov seeks to build out of Mongolia an anti-Bolshevist empire, though the Mongols had sent peace emissaries to Peking. Chinese military dispatches dated June 5 reported that the Hutukhtu, or Living Buddha, had died at Urga, and that his widow and General Ungern-Sternberg were administering Outer Mongolia together. The Chinese commander on the Mongol front had asked for reinforcements to meet the new offensive threatened by General Chang Tsao-lin to retake Urga, captured by the Mongolian-Russian forces in February, 1921.

The three super-Tuchuns—Chang Tsao-lin, Tsao-kun and Wang Chan-yuan—held

an important conference at Tientsin early in May. They haled before them the Prime Minister and several Cabinet Ministers to discuss military and financial policies. The conference foreshadowed important changes in the Peking Cabinet, responsive to the undoubted political power wielded by these military leaders, especially Chang Tsao-lin and Tsao-kun. These changes were announced on May 16 as follows:

Chi Yao-shan, Minister of the Interior.

Li Shih-wei, Finance.

Tsai Chen-chsun, War.

Admiral Li Mingh-sin, Navy.

Chang Chih-man, Communications.

Li Shih-wei, who is a Director of the Sino-Japanese Industrial Company, brings back Japanese influence into the Cabinet. The utter confusion of the finances, the impossibility of demobilization, and the serious situation in Mongolia make the Premier's task very difficult. The Government's lack of money has brought about the wholesale resignation of professors and teachers in the Peking University. The Government's attempts to negotiate a trade agreement with the new Far Eastern republic have been checked, mainly through Japanese opposition.

Abundant rains in Northern China have put an end to famine conditions there, according to a cablegram from the American Minister, Charles R. Crane, on June 10. Millions of lives have been saved since last September by American contributions. In March 6,000,000 people were being fed by the China Famine Fund. A month later American relief organizations were feeding 9,000,000 Chinese. Surprisingly large contributions were made also by Chinamen to the famine fund. Though the famine has abated, the relief work will be continued by church organizations, in order to provide for the thousands of orphans. Subscriptions made through the China Famine Fund totaled \$4,374,206. This sum, with the million previously contributed by the Red Cross, \$1,250,000 by church agencies, and \$250,000 by Chinese, made the grand total exceed \$6,874,000.

China's commercial treaty with Germany, signed on May 20, consists of seven articles, deals with the mutual right of appointing diplomatic and consular representatives, and gives to the nationals of both countries the right to travel and trade in

all places where the nationals of other States are permitted to do business. Nationals will be under the jurisdiction of local courts and will be eligible to equality in taxes and other imports on the same basis as other nationals. The agreement is to be the basis of a definitive treaty.

Supplementary notes exchanged specify that China is entitled to apply Article 264

of the Versailles Peace Treaty regarding import charges against Chinese goods. Germany agrees to reimburse China for internment expenditures, and also to pay in advance a portion of the indemnity equivalent to half the proceeds of liquidated German property in cash and railway bonds. Germany is to assist Chinese students.

## PERILS OF JAPANESE IMPERIALISM

*Alarm over the dangers of Japan's colonial out-reachings evidenced in the holding of an Extraordinary Council at Tokio—Situation in China and Siberia*

[PERIOD ENDED JUNE 10, 1921]

THE various kinds of trouble emanating from the annexed or occupied regions on the mainland of Asia are in the aggregate alarming to all thoughtful Japanese. An extraordinary council was held in Tokio, beginning May 18, which discussed the measures to be taken to cope with the situation in Japan's colonial ventures. This council was attended by the highest Japanese military and civil officials of the colonial territories. The sessions were secret, and no official report of what was decided was issued; it was semi-officially understood, however, that the Japanese occupation of Siberia, the Shantung controversy with China, and the attitude of the United States toward Japanese aspirations in the Far East were the main topics of discussion.

Regarding the Siberian occupation, the Kenseikai, or Opposition Party, headed by the former Premier, Viscount Kato, has been unwearied in its attacks on the policy of the Government. Warning after warning has been issued by this leader, stressing the hostility which the presence of the Japanese troops was engendering. The *Asahi*, a well-known paper of Osaka, was quoted by the *Japan Chronicle* on April 14 to the effect that an opinion in favor of withdrawal from Siberia was gaining strength in Government circles and was finding support among officers of the General Staff. M. Tanaka, the Minister of War, soon to retire because of illness, was reported to be anxious to effect this withdrawal before

his retirement. The *Jiji Shimpō*, however, declared that Japan would withdraw only one and a half divisions—that she had no intention to evacuate the Siberian territory completely.

This announcement antedated the Kappel coup in Vladivostok, which overthrew the Provisional Government—virtually controlled by the Chita Republic of the Far East—and extended to Nikolsk and other places (May 24). The military situation was so threatening that the people of the Maritime Province appealed to Japan for protection, and it was stated that Japan had promised to send troop contingents to certain points. This new situation, of course, made the prospect of evacuation more remote, as Japan's whole point has been that she cannot withdraw her forces until the political conditions in Siberia are stabilized.

The strained situation with China over Shantung remained in statu quo, though it was decided at the Tokio council that every effort must be made to persuade Peking to negotiate. The Government was called upon to answer a number of opposition attacks, based on the concessions allegedly made to the consortium powers regarding Japan's special privileges in Manchuria and Mongolia. The import of its answer was that though it had consented to exclude these territories nominally, it had still reserved the rights of Japan generally in all territory where she had acquired special privileges. Regarding Korea, the *Nichi Nichi* declared

that Japan was seeking to conclude a special agreement with China to extend consular and police control of the million or more discontented and even rebellious Koreans in Manchuria and Siberia. The Tokio Government was also considering economic measures for the benefit of destitute Koreans in Manchuria, with the object of combating their disaffection. In her opposition to Bolshevism Japan did not waver; her attitude toward the semi-Bolshevist republic of the Far East at Chita continued to be one of watchful waiting and she maintained her rejection of all trade overtures by Chita pending the attainment of greater stability. Justification of this reserve was found in the Kappel coup, which was aimed at Chita.

With regard to the controversy with the United States regarding Japan's mandate in the Pacific, notably over the Island of Yap—a situation for which Viscount Kato vigorously denounced the Government at a meeting of his party on May 26—it was authoritatively announced from Tokio on May 27 that Japan would not reply directly to Secretary of State Hughes's note to the Council of the League of Nations on the question, but would initiate a series of diplomatic exchanges with Washington in an effort to reach an understanding. The Japanese negotiators at the communications conference in Washington, which went into recess toward the end of May, let it be known that Japan was not averse to some kind of international control of the cables, provided this could be arranged without impairing Japan's political control of the Island of Yap.

Japan has found one more cause for uneasiness in the arrival at Washington of one Soon Hyun, "Diplomatic Agent from the President and Provisional Government of Korea to the United States of America,"

and his presentation to the State Department of a lengthy proclamation denouncing Japan's acts toward Korea and appealing for American recognition. After recapitulating the various steps by which Japan established her rule over Korea, the appeal concludes as follows:

The autocratic and militaristic Government of the Empire of Japan deliberately spurned and broke its solemn pledge and promise to the Government and people of Korea and refused to withdraw the Japanese military and naval forces from Korea and Korean ports, when and after the war between Japan and Russia was terminated, but, instead, by unjust and cruel application of military force and arms, made captive our rulers and all our Government officials and, after first declaring a protectorate over our beloved country, finally attempted and assumed to annex Korea and make of it an integral part of the Empire of Japan.

Earnest and patriotic Koreans who refuse to recognize the alleged right or authority of the autocratic and militaristic Government of the Empire of Japan to rule over Korea and its 20,000,000 people look to the United States of America as the great Republic, symbolizing in them an ever-burning beacon light of liberty which will ultimately lead the nations of the world to a universal reign of law based upon the consent of the governed and sustained by the organized opinion of civilized mankind.

In an effort to force the Government to cut down national expenditures, the Opposition Party began late in May an organized study of the possibilities of at least partial disarmament, on which the leaders expect to base the policy of the party in the next Diet. The public campaign of Mr. Ozaki Yukio is said to have done much toward focusing public interest on this question, though the more prominent men in both parties incline to the view that little or nothing can be done in the way of disarmament until the principal allied nations and Japan take up the problem at the initiation of the League of Nations.

# MEXICO'S ATTITUDE ON PROPERTY RIGHTS

*President Obregon and Secretary Hughes thrash out serious differences regarding the guarantees to be given to American owners of oil wells in Mexico—A proffered treaty that carries recognition with it—Increase of Bolshevism in Mexico*

[PERIOD ENDED JUNE 10, 1921]

SECRETARY Hughes brought the discussion of Mexican recognition to a head on June 7 when he announced that the fundamental question was the safeguarding of property rights against confiscation. With that object in view he had proposed a treaty of amity and commerce in which Mexico would agree to safeguard property rights that had existed before the Carranza constitution of 1917 was promulgated. He did not, however, define what he meant by property rights, whether investment of American capital in useful production and development or the acquiring by American capital of vast land and other monopolies, wherever they could be had, and by whatever means. It is the latter feature to which Mexico objects and which she is trying to eliminate by the Constitution of 1917.

What the Harding Administration is seeking to achieve is a mutual accommodation between the United States and Mexico under which there would be no confiscation of legitimate American vested rights and interests. But Mexico hesitates to sign a pledge not to disturb alleged rights vested in monopolies. That is the crux of the difference between the two Governments. The making in proper form of a treaty recognizing property rights, but not monopoly rights, would at once end the controversy and would result automatically in granting recognition to Mexico.

The essential portions of Secretary Hughes's statement of June 7 are as follows:

The fundamental question which confronts the Government of the United States in considering its relations with Mexico is the safeguarding of property rights against confiscation. Mexico is free to adopt any policy which she pleases with respect to her public lands, but she is not free to destroy without compensation valid titles which have been

obtained by American citizens under Mexican laws. A confiscatory policy strikes not only at the interests of particular individuals, but at the foundations of international intercourse. \* \* \*

This question is vital because of the provisions inserted in the Mexican Constitution promulgated in 1917. If these provisions are to be put into effect retroactively, the properties of American citizens will be confiscated on a great scale. This would constitute an international wrong of the gravest character, and this Government could not submit to its accomplishment. If it be said that this wrong is not intended, and that the Constitution of Mexico of 1917 will not be construed to permit, or enforced so as to effect, confiscation, then it is important that this should be made clear by guarantees in proper form. The provisions of the Constitution and the Executive Decrees which have been formulated with confiscatory purposes, make it obviously necessary that the purposes of Mexico should be definitely set forth.

Accordingly this Government has proposed a treaty of amity and commerce with Mexico, in which Mexico will agree to safeguard the rights of property which attached before the Constitution of 1917 was promulgated. The question, it will be observed, is not one of a particular administration, but of the agreement of the nation in proper form which has become necessary as an international matter because of the provisions of its domestic legislation. If Mexico does not contemplate a confiscatory policy, the Government of the United States can conceive of no possible objection to the treaty. \* \* \*

The question of recognition is a subordinate one, but there will be no difficulty as to this, for, if General Obregon is ready to negotiate a proper treaty and it is drawn so as to be negotiated with him, the making of the treaty in proper form will accomplish the recognition of the Government that makes it.

President Obregon has repeatedly stated that he would sign no formal treaty or protocol as a condition of recognition. He said on May 20:

The acceptance and signing of a convention to obtain recognition by the United

States would be equal to placing in doubt the rights that Mexico has to all the privileges international law establishes. Mexico is not a new State. Her rights cannot be doubted as a sovereign country. Mexico will evade none of her obligations, accepting, moreover, all the responsibilities of her situation.

On May 22, George T. Summerlin, Chargé d'Affaires of the American Embassy at Mexico City, left Washington with the memorandum prepared by Secretary Hughes, which, it was said, avoided any reference to the existing controversy, but affirmatively guaranteed the rights of American property and American citizens in Mexico. Mr. Summerlin arrived in Mexico City on May 27, and presented the memorandum to President Obregon. The latter's reply was received in Washington on June 3 and was considered not entirely satisfactory. He stood out for his original contention that negotiations must be conducted with both parties acting on the basis of equality. But Washington is not disposed to abandon the upper hand, and intervention to coerce Mexico into adopting the Administration view has already been suggested. It was stated that no foreign Government would object to anything the United States chose to do to Mexico. The interests in Mexico of British, French and Dutch companies are mainly concerned with oil, are similar to those of the American concerns, and look to the United States to act in their behalf. The propaganda in news dispatches on the controversy with Mexico is enormous.

The Mexican Foreign Minister on June 9 announced the willingness of Mexico to agree to some of the suggestions contained in Mr. Summerlin's memorandum after certain changes had been made by the United States Government. It was confidently expected that these changes would be made. A note from President Obregon asked for forbearance on the part of the United States until its suggestions could be carried out in a legal manner.

That there is some danger from Bolshivism in Mexico all parties admit. On May 1 communists in Morelia, the capital of Michoacan, rushed the cathedral guards, destroyed the images and raised the red and black flag of their creed on the church tower. Police easily dispersed them and restored order. On Thursday, May 12, a

mass meeting was called to express indignation at the event. Some 15,000 persons assembled in the Aztec Garden and were preparing to march through the town. Suddenly they were fired on by police and soldiers, apparently under orders of the chief of police, who was present. He had attempted to persuade the paraders to disperse and on their refusal the clash followed.

Radicals among the spectators joined the police in firing on the crowd, and in a few minutes the streets were filled with fighting men, women, and children. More than a hundred persons were wounded and a score killed, among the latter being an Inspector of Police and a prominent Red leader, named Isaac Arriaga, who was also chief of the local agrarian commission, then holding hearings on land cases. Federal troops restored order and replaced the city police, patrolling the streets. A manifesto was issued from the headquarters of the Catholic women of Mexico to observe May 17, 18 and 19 as days of mourning for the victims of the riots at Morelia.

On Friday, May 13, mobs bearing red flags took possession of the capitol in Mexico City while Congress was sitting. Their leaders mounted the tribune and made subversive speeches. Some members who ventured to protest were roughly handled and were thrown out of the hall. Only the prompt arrival of Yaqui Indian battalions, it is said, saved the building from destruction and cleared out the Reds. President Obregon immediately instructed the prosecuting attorney to investigate all the facts and bring to justice those who took part in the disgraceful demonstration.

These events strengthened the Liberal Constitutionalists, who form the dominant political party, with Obregon himself as its leader. Hitherto reckoned extremely liberal, they have been joined by Catholic and independent members in the line-up against the radical groups. A memorial signed by 138 Liberal Constitutionalist Deputies and several Senators was sent to President Obregon on May 17, urging him to deal vigorously with the ultra-radicals, warning him that he might meet the fate of Francisco Madero if he fails to change his policy, and advising that Elias Calles, Secretary of the Interior, and Adolfo de la Huerta, the former Provisional President

and now Secretary of the Treasury, be dropped from the Cabinet as having encouraged the radicals.

President Obregon issued orders prohibiting mass meetings, parades and all kinds of demonstrations. Nevertheless, disorders continued. On June 4 the American Embassy was guarded by police armed with rifles following notice that a group of Italian anarchists had planned to blow up the embassy. On June 5 a bomb was placed inside the palace of Archbishop Orozco y Jimenez of Guadalajara, which exploded and destroyed the south side of the building.

The Archbishop was not at home. The Knights of Columbus called meetings to discuss measures to protect the lives of church officials and a group of young Mexicans planned to start a newspaper to combat Red doctrines.

A revolutionary plot in the State of Oaxaca appears to have had ramifications in all parts of the republic. Followers of Carranza boasted that some Mexicans and American oil men had organized a campaign in Washington to place Esteban Cantu in the Presidency, with Manuel Cahero as Vice President, and to force Mexico to return to the Constitution of 1857. Plotters planned to capture the city of Oaxaca and had established headquarters in a school building near by. It was surrounded early on June 4 and a dozen men were arrested, among them José Sanchez Juarez, grandson of Benito Juarez, Mexico's great reform President, and Jesus Acevedo, former Governor of Oaxaca. Documents seized are said to have recognized Félix Diaz as their chief. Simultaneous outbreaks were planned for June 6 in Guadalajara, Morelia, Monterey, Saltillo, Torreon, Chihuahua and other smaller cities. General Gonzalo Enrile, who was taken at Oaxaca, was shot while attempting to escape from prison. General Fernando Vizcaino was caught in Mexico City, court-martialed and shot. He was chief of staff of General Pablo Gonzales and documents found on him showed

a combination between Gonzales and Cantu, the ousted Governor of Lower California.

Mexican outlaws in Yucatan sacked a hacienda owned by Edward Thompson, a former United States Consular officer, destroying valuable historical documents and antique Indian relics, the result of twenty-six years' collecting. Mexico will be asked to indemnify. Elmer Buchanan, an American on the ranch of A. M. Berkeley, was killed and another American wounded near Tampico on June 1.

General Maximilian Kloss, an Austrian in Carranza's war department, was shot and killed before his home in Mexico City on May 21. Obregon had made him Consul General at Berlin, but he had been recalled four months ago for special duty in the war office.

Mexican railways, previously under the dual management of the Treasury and the Department of Communications, were transferred directly to the Executive Department by order of President Obregon on May 30, as a result of the recent strike.

A decree was issued on June 7 announcing that petroleum companies must pay an average increase of 25 per cent. in export taxes on their products, beginning July 1. It is expected that this increase will net the Government about \$15,000,000. The proceeds, it was announced, would be used solely in making payments on Mexico's foreign debts. This is the first move made to begin settlement of these debts which have been in default since 1913. The decree, which is based on the law of May 8, 1917, is aimed at the prevention of excessive production, the protection of the nation's oil reserves and at compelling exporters to pay toward the national expenses a proportionate amount of their profits. American oil interests denounced the decree as confiscation, and appealed to the State Department to interfere in their behalf. Another step in Mexican financial reform was contained in a decree of June 8 prohibiting the importation of any foreign money except gold or the circulation of any such currency after July 1.

# THE CENTRAL AMERICAN UNION

[PERIOD ENDED JUNE 10, 1921]

**C**OSTA RICA on May 15 ratified the agreement to join the Central American Union, which thus becomes a strong federal republic, consisting of the four States of Guatemala, Honduras, Salvador and Costa Rica. Only Nicaragua held out, unfortunately cutting off land communication between Costa Rica and the rest of the new republic. She feared that entrance into the union might in some way involve her rights under the Bryan-Chamorro treaty, which provided for the possible building of an interoceanic canal across Nicaragua by the United States. There is nothing, however, in the Central American pact to sustain this stand. Article 4 is a specific pledge to carry out faithfully all previous international treaties to which the several States had bound themselves.

Speaking on June 1 at a luncheon in honor of Maximo H. Zepeda, Nicaraguan Foreign Minister, who was about to leave for Europe, Secretary Hughes gave a cordial indorsement to the Central American Federation, saying it would "in the opinion of this Government be a happy result, as it would seem that important advantages would accrue through united effort in the field of common interest." This, it was thought, would be the means of inducing Nicaragua to join the union. Nevertheless she maintains her separate legations, while Guatemala on June 5 voted to close her legations in Cuba, England and Spain.

The first gas well ever discovered in Costa Rica has been brought in at Cahunite, about 180 miles west of the Panama Canal. Gas was struck at a depth of about 800 feet, and the estimated flow was a million cubic feet daily.

**G**UATEMALA — A strong plea for immigrants was made by Dr. Julio Bianchi, Guatemalan Minister, at a conference on world trade in New York on May 17. The United States, he said, had the capital, Europe had the people and Latin-America had the land. The people want to leave Europe, America wants to employ her

capital, Guatemala needs the development which the two together could give.

A cattle company financed by Americans is negotiating for the purchase of 17,000 acres of coast land near Puerto Barrios, on the Atlantic, now covered by a dense tropical forest containing valuable mahogany trees. These would be cleared and sold, and the land be used for raising cattle.

The United States, it was reported from Washington on June 3, was about to urge Guatemala to release from prison Estrada Cabrera, former President, who was deposed by the revolution of April, 1920.

**P**ANAMA.—Instead of acquiescing in the settlement of the Costa Rican boundary dispute, as affirmed in Washington, Panama appealed to South American nations to intervene in her controversy with the United States, sending envoys to Peru, Argentina, Brazil and Chile to demand that final disposition of the disputed area be left to a commission from the Latin-American nations and the United States. Panama also sent her Foreign Minister, Narciso Garay, to Washington to make a final appeal to Secretary Hughes. He presented an opinion rendered by Dr. Bustamente, the Cuban authority on international law, that Chief Justice White exceeded his jurisdiction as arbiter of the dispute and that Panama is therefore justified in refusing to accept the award, Señor Garay met President Harding on June 7 and expected to have a conference with Secretary Hughes, but there were no indications of any change in the attitude of the United States.

**P**ANAMA CANAL ZONE.—The Secretary of War on June 2 named a commission to be sent to Panama to investigate the entire civil administration of the Canal Zone. The present system, Mr. Weeks explained, was wholly one of State socialism, practically the entire population being on the Government payroll, employes being furnished with living quarters and buying provisions from Government commissaries at cost, while wages are 25 per cent. higher

than for similar work elsewhere. He believes considerable money can be saved by a thorough reorganization.

**S**ALVADOR—Earthquakes in Salvador on May 14 were followed in June by a four-day flow of hot water from the vol-

cano of San Miguel and a terrific storm which swept down from the mountain, destroying twelve villages and ruining crops.

American fire insurance companies were reported on May 16 to be canceling policies in San Salvador on account of the prevalence of incendiarism.

## REFORMS UNDER CUBA'S NEW PRESIDENT

*Dr. Zayas begins by recommending many important changes and rigid economies—Help furnished by Generals Crowder and Goethals—Other West Indian Islands*

[PERIOD ENDED JUNE 10, 1921]

**D**R. ALFREDO ZAYAS was inaugurated as fourth President of Cuba on May 20, taking the oath of office before a brilliant assemblage in the National Palace. The ceremony marked the end of one of the bitterest campaigns in Cuba's political history. Earlier in the day General Francisco Carillo took the oath as Vice President in the Senate Chamber. Immediately after the inauguration Señor Menocal, the retiring President, boarded a steamer for Key West and New York, on his way to Europe with his family for a rest. He is going to Spain, where he will present a speed boat, the gift of the Cuban Government, to King Alfonso.

The Cuban Congress met on May 21, and President Zayas delivered his first message, urging among other things ineligibility of the President for re-election, election of President by direct vote of the people, abolition of the rule requiring a quorum of two-thirds in both houses of Congress before sessions can be opened, creation of a Federal district to include Havana and suburbs and to be governed by a commission; abolition of immunity for members of the Legislature, and authorizing larger cities to organize a new form of municipal government.

President Zayas also recommended rigid economy by reducing the budget of Government expenses for the year beginning July 1 from \$136,000,000 to \$60,000,000. He asked that Congress, if it did not care to undertake such revision, allow him to put into effect the budget of \$64,000,000. Cuts in expenditures he called for in every gov-

ernmental department except education. He urged the necessity of revising the commercial reciprocity treaty with the United States, especially regarding sugar and tobacco, and the establishment of a national bank which could issue notes and act as fiscal agent of the Government.

Reorganization of the Cuban army of 11,000 men, which now costs \$6,000,000 a year, owing chiefly to the high salaries paid, is another of Dr. Zayas's proposed tasks. Elimination of sinecures was initiated on June 7 by a decree ordering the Secretary of the Treasury to investigate every case where there is reason to believe Government employes are not earning their salaries.

Many of the proposed reforms were said to have been inspired by General Enoch H. Crowder, who was sent to Cuba by President Wilson to straighten out the electoral tangle that followed the campaign there. On June 2 Enrique Maza introduced a resolution, which was adopted, asking the President to furnish Congress with information on General Crowder's mission and the powers he possessed. The Deputy declared that the United States in aiding Cuban independence had acted simply for the selfish purpose of gaining more power.

Another American, Major Gen. Goethals, has been inspecting Cuba for the purpose of improving the public roads. He left on June 9, but will return in July to attend the opening of a new highway between Havana and the eastern end of the island.

Cuban finances are very slowly emerging from the difficulties occasioned by endeavor-

oring to keep up prices of sugar against declining markets all over the world. Seven large institutions have been obliged to liquidate and three small banks suspended payment owing to heavy runs. New York banks have approximately \$40,000,000 tied up in Cuban sugar. On May 30 there were 139 mills grinding, while the warehouses held 1,322,000 tons, as against 661,000 last year. Expiration of the moratorium on June 16 was looked forward to with anxiety and a conference of American bankers was called for June 14 to consider the situation. Meanwhile trade in the island is stagnant and unemployment is growing, 75,000 being out of work in Havana.

General José Miguel Gomez, former President of Cuba and leader of revolutions during the Spanish régime, died in New York on June 13 at the age of 65. When still a mere lad Gomez had taken up arms against Spain, and had served with distinction in the patriot army during the Ten Years' War (1868-78). Again, in the '90s, he took the field with the revolutionists in the bitter struggle that led to the Spanish-American war. At this time he held a commission as Major General. He became a member of the Constitutional Convention during the American occupation of Cuba. Later his revolt against President Palma's administration led to American intervention and to his imprisonment. Released from prison, he was elected President in 1908 by the Liberal Party. Almost to the end of his life he was in active opposition to his successors in the Presidency.

**P**ORTO RICO—Statehood or independence is the demand of the Porto Rican Unionist Party with which the new Governor of the island, E. Montgomery Reily of Kansas City, is confronted at outset of his term. The demand was presented to President Harding last Spring, accompanied by a request to have the Governor elected instead of being appointed. This would require legislation, and Porto Ricans were anxiously awaiting the result.

**H**AITI—Three Haitian delegates presented a memorial against atrocities by American marines and a demand for their withdrawal. They expressed resentment at Secretary Denby's remark that the charges are "the same old rot." The Na-

tional Association for the Advancement of Colored People subsequently reported that Colonel John H. Russell, commanding the marines in Haiti, had imprisoned two native

of Cuba*

editors, Jolibois and Lanoue, and had forbidden Haitian newspapers to publish American comments on the memorial to Congress.

**S**ANTO DOMINGO—The State Department at Washington announced on June 7 that a proclamation would be issued soon fixing the date when the American Government forces would be withdrawn from the Dominican Republic. This proclamation was issued on June 14 in Santo Domingo City by Rear Admiral S. S. Robison, the Military Governor. It pledged withdrawal within eight months, provided that certain conditions were fulfilled, among others the following: Orderly elections for the new Government, ratification of the Military Government's acts, and validation of the republic's loan. The primary assemblies to choose the electors were to be convened by the Governor within one month.

# SOUTH AMERICAN DEPRESSION

*Drop in exchange and in prices of staple products reduces trade and causes severe suffering—Nearly \$100,000,000 of American exports lying unclaimed in South American ports to be liquidated by a new corporation.*

[PERIOD ENDED JUNE 10, 1921]

**S**OUTH AMERICA has suffered severely from the decline in the prices of raw materials to the production of which they are particularly well adapted. It has even become difficult to dispose of them at any price owing to the decreased purchasing power of European countries which were the principal takers of South American exports. It is estimated that American merchandise valued at almost \$100,000,000 is lying unclaimed at Buenos Aires, Rio Janeiro, Montevideo and Valparaiso owing to the decline in exchange.

A determined effort is now being made to liquidate these goods. A committee of eight was appointed at a meeting of more than 300 exporters in New York on June 3 to form a corporation to take over the rejected and unclaimed merchandise in South American ports, daily depreciating in value from exposure and storage charges, and in some cases subject to sale by auction in the importing countries. The corporation will take title by assignment and determine in each case whether to sell the merchandise at a percentage of invoice where it lies or to transship it, perhaps for return to the United States.

At the second Pan American Postal Conference to be held in August in Rio Janeiro an effort will be made to lower rates on parcels and mail matter to South America and establish closer connections with the United States, such as were urged by Esteban Gil-Borges, Venezuelan Minister of Foreign Affairs, during his visit to the United States. At the same time the independent commission formed to investigate the working of the League of Nations has drafted a report recommending that the League organize a separate bureau for Latin Americans to strengthen the relations of South American members. A group of Spanish merchants intend to send a floating sample exhibition of industries to Latin American ports in an endeavor to capture the markets there.

**A**RGENTINA—Argentine commerce is believed to have touched bottom and the American Chamber of Commerce in Buenos Aires, on June 9, sent an invitation to Herbert Hoover to visit Argentina at an early date to assist in its revival. German manufacturers are said to be obtaining considerable orders for wire fencing, railway rolling stock, steel rails and other products at prices with which no other country can compete.

Strikes have added to the trade depression in Argentina, and several conflicts have occurred with union port workers who tried to prevent non-union men from unloading ships. The Custom House warehouse at Buenos Aires was burned on May 29, causing a loss of millions of pesos. The Government is now protecting non-union labor, and it was believed, as this issue of CURRENT HISTORY went to press, that the general strike called to support the port workers would prove a failure.

Argentina has suffered a great loss in the death, at the age of 63, of Dr. Luis Maria Drago, noted jurist and author of the world-famous Drago doctrine. He died on June 9 in Buenos Aires. He held that the collection of private loans in one country by the military forces of another implied a potential occupation of territory, and was therefore at variance with the spirit of the American policy. The occasion was the simultaneous appearance off the coast of Venezuela in 1902 of German, Italian and British warships to collect a private debt owed by the nation to individuals in their respective countries.

**B**RAZIL—An issue of \$25,000,000 twenty-year 8 per cent. noncallable bonds of Brazil was offered to American investors on May 16 by a syndicate of New York bankers and was oversubscribed in forty-five minutes. The proceeds are to be used in the electrification of the Government railways, and all materials and supplies will be pur-

chased from American manufacturers. This is the first time Brazilian securities have been sold openly in the American market.

Two American companies have recently been organized to develop tracts of forest and diamond-bearing lands in Bahia, Brazil.

Hugo Stinnes, the German captain of industry, is reaching out for ore fields in Brazil, one of his companies, the Rhine-Elbe Union, having acquired rich deposits of iron ore in the Sabara district of Minas Geraes. A German shipping company will carry the ore to German smelters and transport German coal on the outgoing trips.

Brazil is rapidly developing her oil fields, which now number thirty-five, representing an area of 25,000 square kilometers in the States of Alagoas, Pernambuco, Bahia and Sergipe. There are more than 200,000 square kilometers of petroleum fields to be developed, with an estimated capacity in ten years of 500,000,000 barrels. Wells on Government land are property of the Government; those on private lands belong to the owner. Residents or foreigners may operate under license, but both Federal and State Governments can appropriate privately owned oil wells if public necessity justifies it.

Six American scientists, headed by Dr. Henry H. Rusby, Dean of the College of Pharmacy of Columbia University, are about to explore the headwaters of the Amazon. They intend to pick up the lost trail of Theodore Roosevelt's River of Doubt and trace it to its source. Their chief object is the discovery of new herbs and drugs for the enrichment of medicine.

**CHILE**—The Chilean Congress opened on June 1, and President Alessandri in his first message emphasized the necessity of reaching a solution of the Tacna-Arica question, suggesting that a plebiscite be held for the purpose of determining whether those districts should remain Chilean or become Peruvian. He asked for a conference with representatives from Peru, Colombia and Ecuador, to settle the boundaries of all the west coast nations, so that the peace of the South American Continent may not be disturbed.

He also proposed the creation of the office of Vice President, reorganization of the Foreign Office and the separation of Church and State, and also advocated wo-

man suffrage. He included in the administration program a Government control of nitrate prices and a participation in profits in return for the abolition of export duties and the suppression of speculation.

Announcement was made on May 17 of the sale of 2,000,000 tons of nitrate by the Chilean Nitrate Producers' Association to a nitrate pool in London at £14 a ton, shipments to begin in September. Fire on June 8 destroyed 30,000 tons of nitrate stored at Iquique, causing a loss of 2,000,000 pesos.

**COLOMBIA**—Earl Harding, Chairman of the Colombian Commercial Corporation, in an address to the Pan American Advertising Association on May 29, announced that Colombia would use the \$25,000,000 which she will receive from the United States under the treaty ratified by the Senate in public improvements and railway development. Much of it will be spent for materials to be purchased in the United States.

One of the larger islands located in the harbor of Barranquilla, at the mouth of the Magdalena River, has been acquired by the Petroleum Company, Ltd., a subsidiary of the Standard Oil Company of New Jersey, on which a refinery with a daily capacity of 25,000 barrels will be erected.

**ECUADOR**—Professor W. W. Rowlee and George W. Mixer are exploring Ecuador for quipe timber for the American Balsa Company. Quipe is a very light, buoyant wood, used extensively as a substitute for cork in the manufacture of life preservers and similar articles.

Messages from Santa Elena, sixty miles southwest of Guayaquil, on May 20, reported that oil had been found on the fields of the Ancon Oil Company at a depth of more than 3,000 feet.

**PERU**—Virtually all the nations of the world have been invited to send representatives to Lima in July to attend the celebration of Peruvian independence. Many have already accepted, and American participation was expected to be authorized by the Senate at the request of President Harding. Argentina will send a cavalry troop and an air squadron. Bolivia will send a company of infantry. An international exhibition will be opened about July 20, in

which the agricultural and mineral products of Peru will be displayed. Foreigners are planning to exhibit and Peru has agreed to admit the exhibits and permit them to be sold free of duty and consular charges. An equestrian statue of José de San Martín, the Argentine General who played a leading part in the liberation of the South American colonies from Spanish rule, will be unveiled.

With reference to the reported disturbances in Peru, noted in CURRENT HISTORY for June, Récardo Espinosa, Director of Government, cabled to The New York Times under the date of Lima, May 21, denying that President Leguía has set up a dictatorship and stating that the political exiles comprised a small body of political malcontents who had failed in a conspiracy against the Government, involving assassination.

Among the exiles was General Oscar Benavides, a former President of Peru. They were deported on the steamer Paita on May 11, ostensibly to Australia. When six days out, about 1,500 miles off Callao,

they overpowered the officers of the Paita, took possession of the steamer and directed the crew to steer for Costa Rica. A dispatch from San José announced their arrival on May 25 at Punta Arenas. They were detained on board pending consideration of their appeal to the Costa Rican Government for asylum. They pledged themselves to abstain from interfering in Peruvian politics if permitted to land and remain in Costa Rica.

A partial moratorium was declared in Peru on May 14. Debts owed to banks are collectible in instalments of 10, 20 and 30 per cent. at the expiration of 30, 60 and 90 days, but the collection of foreign drafts was excepted from the decree.

VENEZUELA—According to a dispatch from London of June 9 a British company has sent two airplanes, aviators and photographers to Venezuela to prospect for oil in the Orinoco delta. It is said that wherever oil seeps to the surface of the ground the vegetation withers and dies, and photographs show this plainly.

## ITALY'S NEW PARLIAMENT

*Premier Giolitti's new Coalition Government apparently can count on the support of 275 Deputies, as against a possible opposition of 260—Detailed results of the recent elections*

[PERIOD ENDED JUNE 12, 1921]

ALTHOUGH Article 3 of the decree of King Victor Emmanuel, issued April 7, appointed June 8 for the convocation of the Senate and of the Chamber to be elected May 15, Parliament did not assemble at Montecitorio until June 11, when the Deputies were sworn in and his Majesty delivered his Address from the Throne; they were then to adjourn until June 13 to elect the President of the Chamber.

Of the 535 Deputies composing the new twenty-sixth Legislature only about 300 were present to take the oath and listen to the address. Among them were many Socialists, all of whom rose when the King entered, as did all the Fascisti. It was expected that both parties would absent themselves in a body; the Socialists, by orders, and the Fascisti, because their leader, Ben-

ito Mussolini, had said: "No one can swear that the cause of Italy is necessarily bound to the monarchy." But it developed that the anti-monarchical interpretation put upon the phrase was due to Socialist propaganda.

The King's speech took scarcely ten minutes. His theme was co-operation and national loyalty for the reconstruction of the country — political and administrative reforms and cordial, sincere loyalty to Italy's allies and *Associato* (The United States). The matters which most needed legislation set forth April 2 in the address of the Council of Ministers to his Majesty asking for dissolution and a new election were indicated but not mentioned. At the session of June 13 Enrico de Nicola, who had been President of the twenty-fifth Legislature,

was re-elected to that office. He is a Neapolitan lawyer of great energy, eloquence and patience, who declined portfolios under both Nitti and Giolitti. Again and again he had quieted interruptions in the last Chamber by saying to the disturber—once the Hon. Orlando—"Why not show the same attention that you desire others to show when you have the floor?"

So Signor Giolitti, as President of the Council and Minister of the Interior, with a Cabinet composed of five members of his own party, three Popularists or Catholics, three Radicals, two Reformists or War Socialists, and two non-political experts holding the portfolios of Foreign Affairs and the Navy, faces the new Chamber composed of 535 Deputies, over 200 of whom have never before sat in Montecitorio, and among whom there are more doctors, lawyers and professors than at any time in recent years. What may happen has not even been indicated at the preliminary meetings of party leaders; still, certain figures and political facts will explain most eventualities. According to the official division, the parties which the Government counts on for 275 votes, thus forming the constitutional bloc, the result of local coalitions, are as follows:

Liberal Democrats (Giolitti's own party).....	106
Nitti Liberals .....	41
Progressives, or Anti-Socialist Agrarians. 26	
Fascisti .....	28
Radicals .....	37
Reformists .....	21
Independents .....	16
—	
Total .....	275

The Opposition is thus officially divided:

Popularists, or Catholics.....	107
Republicans .....	8
United Socialists .....	121
Communists .....	14
Slavs .....	6
Germans .....	4
—	
Total .....	260

This gives the Government a majority of only fifteen, which may at any time be wiped out by the Nitti Liberals. In such an attempt to overthrow the Government, however, support, it is expected, would come from the Popularists, who have representation in the Government, notwithstanding the fact that they are listed with the Opposition, because in the past the extremists among them have voted with the Socialists. At the same time their prestige is threatened by the Socialists, whose lead-

ers, in certain circumstances, are ready to replace the Popularists in the Government. Both parties, however, would unite against the Government should it attempt to put through an election law to take the place of the *scrutin de liste*, which, as the only organized parties, save the Republican, they have found to be to their advantage.

For two bills the Government counts on Catholic and Socialist coalition or support: A bill for the breaking up of the large estates with equitable profits for peasants and landowners, and a bill for co-operation of the workers in the large industries. If the Government is forced to make concessions, at the risk of losing the support of the more conservative elements in the bloc, it has prepared bills on a reform of the judiciary, decentralization of certain Government departments, and the yielding to Parliament of the sole right to declare war and negotiate treaties. Both the Catholics and the Socialists will support the Government if it presents its bill on free education in the right way.

The Socialists, in the late election, carried no constituency completely; their greatest return was seventeen out of the twenty-eight Deputies elected in Milan-Pavia; in fifteen they were entirely unsuccessful; elsewhere their ratio was two to seven. The four Germans in the Opposition are members of the Deutsche Verland of Bolzano; the six Slavs are members of the Slavic Unity of Gorizia-Gradisca and Istria-Parenzo. Thus of the twenty-seven Deputies elected from the former Austro-Hungarian territory ten are Outlanders. Bombacci, the prescribed communist leader, was elected from Trieste.

In the third week in May Government employes numbering 20,000 went on a "white strike"—that is, they reported for rollcall, but did not work—by which they hoped to evade the law which visits a Government employe with discharge if absent without leave. Italy's civil servants all over the country number 400,000, and a general strike would have seriously crippled or annihilated Government business. The Fascisti were appealed to by the strikers, but these modern Lictors merely advised them to return to work and let Parliament handle their grievances, which they did on June 10 after 4,000 of them had been discharged or otherwise disciplined.

# WHAT IS THE MATTER WITH BUSINESS

*American export trade is still suffering from abnormally high prices, but Europe is showing signs of recovery—French trade improving and Germany taking long strides—Facts and figures that indicate a more encouraging trend in the United States*

**A**N intent scrutiny of the past may seem a strange preparation for a glance into the future, but only an intimate knowledge of the past insures a fair judgment of the probable course of events and of present opinions of them. It is only necessary to call up memories of opinions of the present, formed when the present was yet a month or so away, to appreciate the truth of this.

When the armistice was signed, the world was thrown off balance by the tremendous relief from a conflict of years. Optimism was the common feeling. At last everything was to be well with the world. Europe was to go to work, trade was to revive, things were to return to normal. But they didn't. Instead, matters appeared to grow worse. Prices rose with a rush to points never approached in war times. Business activity became actually violent until, as unexpectedly as they had risen, prices halted, wavered, broke and fell. Business declined, trade fell off. Everywhere there were signs of deepest depression.

On every hand were heard arguments that Europe was bankrupt, that the Continent could never pay its debts, and that Germany would never pay the indemnity. Bolshevism was seen as a menace about to spread westward from Russia, engulfing all transatlantic civilization in its progress. Optimism gave way to bitterest pessimism. Failures and panics here were freely predicted. Everything seemed wrong with the world. But again sentiment was mistaken. None of the things predicted happened. Instead, the world went plodding along as though upon a pre-destined path, improving a little here and a little there, successfully overcoming an assault on this side and an attack on that, until that time which was the future has become the present, and now new prognostications are being made

with no less assurance because the prognosticators have seen their earlier prophecies discredited and denied.

The head of one of this country's biggest hardware businesses, an institution with an international reputation and trade mark, was moved to comment on these facts the other day. Said he:

I travel much throughout the country sounding out the sentiments of what you would call the little fellows, the small-town storekeepers, the country newspaper editors, the conductors and trainmen on whose cars I ride—every one, in fact, with whom I can make a contact. In addition, I am thrown much into the company of big bankers, men of international as well as national affairs, and I take an active part in the affairs of the Chamber of Commerce of the United States. With one and all I discuss the same topic: What is the country coming to? What will the future bring? What can we do or should we do to better ourselves, our country and the world?

And I have been struck by the opposing viewpoints these conversations have disclosed. The bankers are perplexed, puzzled, troubled, in fact. It is clear to them that conditions present a problem which must be solved, that ways must be found to finance the trade of the world, to start up production in all countries, so that conditions may return to what they call normal. They sense the problem, but they have not sensed the solution. And they are disturbed accordingly.

Opposed to this is a totally opposite view, which is typical of many of the small-town men with whom I have talked, and which is well exemplified, perhaps, in the words of a cobbler who put a pair of heels on my shoes as I waited in his shop in a Middle West city. As he worked he replied to my leading questions, practically thinking out loud and answering me by an oral marshaling of his ideas.

"Europe's been there," said he, "since the days of the Greeks and Romans, and I don't know how many years before. In those years there's been a lot worse things happen than this big World War. Stands to reason there must have been. But things went right on just the same. Eu-

rope's still there, and there's still folks there, and, as near as I can see, she'll still be there when we're dead and gone. It don't seem to me to make much matter what we do or what they do. You can't destroy a continent and you can't destroy a people. What's due to happen will happen, and, when all's said and done, it won't make a whole parcel of difference what we do to try to change things."

What that shoemaker said seemed to me to have a lot of good, sound sense back of it. No matter what we do, things will certainly go on just as a good Providence has decreed that they should go on. Perhaps we can make things a little better for all hands if we do the right thing, but it seems to me we're just as likely to make matters worse trying to help them. Some day, in the ordinary course of events, the whole situation will right itself, no matter what we do, and, it seems to me, maybe the best thing for all of us would be to get right down and saw wood. By that I mean go to work and hustle, just as we were doing before war came, and count on it that, in the long run, things will come out all right.

#### PROGRESS SEEN IN EUROPE

To the extent, at least, that our efforts to aid in the reconstruction of Europe have been abortive, this idea seems to have been realized by the facts. Progress has certainly been made toward a more stable condition of affairs across the Atlantic, and it is not easy to see where, in recent months at least, this progress should be attributed to any concerted effort on the part of this Government or the business community of the United States to direct the movement of events. Indeed, the movement of events has seemed not to be in response to any preconceived direction, but problems have risen and been met upon the spot, just as they were accustomed to arise and be met before the war set the thoughts of men upon the problem of reorganizing and reconstructing the world, where, before, they had been devoted to making the best of occurrences as they came up.

Questions which press for solution seem unnumbered. Political questions, economic questions, financial questions crowd each other for first place in the minds of the men who are striving to bring the world back to the condition that we call normal, though what would have been at the present a truly normal condition, had not the World War occurred, none may assert with assurance.

Yet all the problems simmer down to one

problem, the problem of money, and, in international thought, money means gold. The war has not altered the needs or the desires of the races that entered the conflict. To the extent that men were lost, it has reduced the demand for goods, but this reduction has been much more than offset by the increased demands of those who are left. Not only was production tremendously reduced, but ordinary waste and destruction were greatly increased while Europe was at war.

Europe's wants are, then, as great as, if not greater than, ever before. Capacity for production is greater here than at any other period in the nation's history. But one thing is wanting to permit a resumption of trade upon a record-breaking scale and an immediate return to what we call normal. And that one thing is gold. At present we have the goods and most of the gold. Europe has very little of either. It may truly be said that we cannot afford to sell indefinitely to a customer who cannot pay. It may just as truly be remarked, however, that we cannot afford to corner all the goods and gold in the world. Too much, in such a case, would be as bad as too little. We cannot prosper if the world does not prosper, and it is unthinkable that ways will not be found by which exchange of goods may be brought about, regardless of which nations have, or have not, gold. Gold was employed at first in international transactions to expedite the exchange of commodities. It was devised to help trade, not to check it; yet today, gold, or rather the absence of it from some countries, is so far from expediting business that it is putting all but a complete stop to it.

#### MAKING VICTORY AN ASSET

A correspondent of *The London Economist*, in a recent letter to that publication, wrote:

The value of a bill on London payable in gold is unquestioned, but arises from the stability of gold as a measure of value. Unfortunately the bond between our currency and gold was broken by the war. The Bank of England has failed to restore it, and admits its failure by reducing the Bank rate before the pound sterling has reached its pre-war equivalent of \$4.86. We are therefore driven by the logic of events to erect a new barrier against inflation, where the old one has been swept away. What that barrier is to be must be determined by our economic health as a nation.

In a general sense inflation was produced by the fact that we spent £8,000,000,000 more than we earned during the war, the evidence of this being that we have no increase in our assets to set against that figure, but, on the contrary, a fairly palpable decrease, considering the state of the country, the neglected state of house building, roads, &c. Victory as an asset can, unfortunately, only be realized by our own industry. The process of deflation, which is the reverse of inflation, must therefore necessarily involve the payment of our debts or the creation of assets to an equivalent value. In a figurative sense we have been putting ourselves into liquidation, and, by so doing, we have been taking the resources of merchants and manufacturers—which are the very life blood of industry, as the Bolsheviks are beginning to discover. Bolshevism believed that the bourgeois, the class that organizes and controls industry, could be dispensed with, and Russia has been reduced to ruin. We are not very much better ourselves, for that same class is being crushed out of existence by the heavy burdens imposed on it.

The struggle to get back to a gold basis will not be made more difficult by natural deflation. With our population in the present state of inactivity, with two million unemployed, one million on strike and a further million on short time, our progress toward paying our debts and re-establishing a gold currency is not merely slow, it is retrograde. That comes of efforts at artificial deflation by methods recommended by the Cunliffe committee.

The prosperity of industry is far more important than the immediate conversion of our debts to a gold basis. Gold is our servant; not our master.

**GOLD ALONE NO HELP**

But though foreign trade is difficult if not well-nigh impossible without gold, mere possession of the metal is no assurance of a prosperous foreign trade for the country possessing it. The Government report of the money in circulation in the United States on June 1 showed that our gold holdings were the largest on record, the stock amounting to \$3,175,037,198, an increase of \$391,202,771 over the total of Jan. 1 and of \$528,421,448 over that of May 1, 1920, the low level of last year. Until this month the maximum in our history was \$3,095,077,467 on July 1, 1919, and, at the beginning of the war, on Aug. 1, 1914, our total stock was only \$1,887,270,664. Today the United States holds nearly 40 per cent. of all the gold in the world. Economists say no such accumulation by one nation occurred in the history of the last two centuries.

Yet all this gold seems to be doing us no

good. It has not been accompanied by an increase of paper currency. In fact, up to date, there has been a decrease. Nor is it being made the basis for increased credit. The loan account of our banks has been steadily contracting while this gold importation was in progress.

And, meantime, while we have been acquiring this record stock of gold our foreign trade has been falling away from us. Latest available figures from the Department of Commerce follow:

	1921.	May- 1920.
Imports .....	\$208,000,000	\$451,004,944
Exports .....	330,000,000	745,523,223
Excess of exports..	122,000,000	314,518,279
	Eleven Months Ending May	
	1921	1920.
Imports .....	\$3,471,876,268	\$4,685,746,580
Exports .....	6,179,603,978	7,479,611,906
Excess exports ....	2,707,727,690	2,793,865,326

In other words, in approximately the last year our exports fell off \$1,300,007,928 and our imports \$1,213,870,292. Nor has this been any sudden drop. Monthly figures show that the decline has been steady since last December. The record follows:

**EXPORTS**

December, 1920 .....	\$720,286,774
January, 1921 .....	654,271,423
February.. ..	486,281,597
March .....	386,680,346
April .....	340,338,729
May .....	330,000,000

**IMPORTS**

December, 1920 .....	\$266,057,443
January, 1921 .....	208,796,989
February .....	214,529,680
March .....	251,969,241
April .....	254,597,362
May .....	207,000,000

**IN ENGLAND AND FRANCE**

Meantime, how has England fared? Later figures than those already published in this magazine are not available at the time of writing, but the record for the first four months of the year shows a decrease in exports and imports similar to the change which has occasioned alarmed comment in the United States. Total exports, in which are included exports of British products as well as re-exports of foreign goods, dropped from £497,302,154 in the first four months of 1920 to £323,014,213 in the first four months of 1921, a decrease of £174,287,941. Total imports fell from £697,167,383 to £397,621,757, a decrease of £299,545,626.

A readjustment of French trade figures through February of the present year shows marked changes from the figures as reported by the French Government, but, at

the same time, makes out a better case for the French than the official figures did. Here are the figures for 1920 and the first two months of this year adjusted to current values:

Month.	(In millions of francs.)		
	Total Imports.	Total Exports.	Excess Imports.
January, 1920 .....	3,040	1,089	1,941
February .....	4,340	2,138	2,202
March .....	5,420	2,330	3,090
April .....	5,320	2,540	2,780
May .....	4,110	2,400	1,710
June .....	3,990	2,790	1,200
July .....	.....	.....	.....
August .....	4,116	3,528	588
September .....	4,047	3,314	733
October .....	3,737	3,360	377
November .....	3,608	2,543	1,065
December .....	3,744	2,109	1,635
January, 1921 .....	2,258	2,241	17
February .....	1,501	1,766	*265

\*Excess exports.

The figures published each month by the French Government are cumulative for the year, so that in July, 1920, when a new schedule was last introduced, there was added a correction to adjust the prices for the preceding six months to the new level; hence figures for July, exclusive of the correction, are not available at this time, and the month has been omitted from the tabulation.

It is to be noted that, although these corrected figures make the adverse balance of trade for France greater than the official figures showed, at the same time they disclose a more marked improvement, for in February the excess of imports is turned into an excess of exports. As a fact, the adverse French balance of trade in 1919 was 84 per cent. greater than the customs figures showed, so that the change to a favorable balance is just that much more of an accomplishment than appeared in official figures.

#### GERMANY'S TREMENDOUS STRIDES

Figures for Germany have not been published, so that comparisons cannot be made for the nation which, above all others, must increase its foreign trade and create a large excess of exports over imports if it is to pay off the indemnity to its conquerors in the war. There are plenty of signs, however, that Germany is making tremendous strides along the path that leads to a favorable trade balance, and in this connection it is worth quoting from a bulletin just issued by the First Federal Foreign Banking Association. Says this document:

The international trade of the whole world

has been noticeably contracting in the last five months, and the effective demand for manufactured merchandise of all kinds by foreign customers has lately been falling off even faster than the fall in movement of raw materials. In this situation, a very drastic competition between the industries of several nations has developed. Germany has led off in going after business by cutting prices. Belgium's industries have also offered their output at reductions from prevailing price levels, which has been a trying matter to competing industries in England. Exporters here inform us of instances where, within a few weeks, France and Sweden have successfully negotiated competitive business which had before been regularly done with America.

The fact is very plain to anybody who keeps well acquainted with the figures of foreign trade published by our Government and others, that American export business is dropping more rapidly than that of its chief competitors, and this seems to be due to the maintenance of high export prices. It is impossible to profiteer now, in the international market. It is going to be hard enough to meet competition and keep up foreign sales by concessions in price. One of the unfavorable factors in our foreign trade situation is that, except for a few exceptionally capable and farsighted men, our people seem to have very little definite information about the prices their foreign competitors are making.

Our export prices in recent months have not only been high, out of line with the prices of the rest of the world, and seemingly out of line with domestic prices, but they are all at "sixes and sevens," in various lines, with each other. If prices throughout the whole structure of our business organization have responded to the artificialities of our drastic campaign for "deflation" in the same way, it is a very indifferent kind of testimony for the method. Our raw materials (which are holding up in volume of export movement better than our manufactures), have had a price decline that has brought cotton and metals down to the 1913 level, and the whole group to a fair relationship to a "deflation" point. This is because the organization of their marketing makes them more directly amenable to international competition. But our manufactures, the export volume of which has been cut in two since the first of the year, were in March still sticking up at 224 per cent. of the pre-war price level. And there was no consistency throughout the decline in prices, such as it was, that was beginning to appear—one line was up, another down. The whim of export movement as between different lines was just as irregular. The central fact of the situation is the glaring one that our organization of export of manufactures has been working in the dark. Everybody knows that the war-time condition of things, in which foreign merchants begged for goods, asked our banks and consular agencies to get them into touch with our manu-

facturers, and there was no finesse about prices, is past. But we haven't done much in the realization that we now have to go after business, will have to talk up for it and meet competitive prices, and to that end must find some way of knowing, as definitely as we are able, what the other fellow's prices are. From now on we are sure to meet the keenest and cleverest kind of skillful international price-making. \* \* \*

It seems very difficult for some of our export executives to overcome the persistent delusion that it is "exchange" that is causing them to lose foreign orders.

The exchanges are a cause of increased difficulty in handling foreign business; they will be for several years a cause of difficulty, and men who have to do with export, from selling to financing, will have to develop a better quick grasp of exchange. But, as affecting the market for our goods, exchange is not now as serious a factor as the fundamental differences in costs of production and in prices that have developed in international commerce.

Money, whether it is cheap money or stable money, is only a medium of exchange. If the pound sterling goes down in value so that more pounds can be bought for so many dollars than at par, it also goes down in value in the buying and the pricing of goods, so that it takes more pounds to buy a hundred tons of fabricated steel. If the cost of production of the steel, measured in commodities of international market, do not change, it will take just as many dollars to buy the hundred tons in sterling at \$3.94½ as at \$4.86.

HANDICAP OF HIGH PRICES

It is clear that profit may be made by a skillful use of the exchanges, but it should be equally apparent that "cut-rate" money

will not account for all price differences. There has been a real reduction in production costs made by European manufacturers or a real reduction in percentage of profit accepted, and it behooves American manufacturers to realize that not exchange difficulties but a real price competition is taking away from them the trade which the war threw into their laps.

Evidence of the failure of our manufacturers to reduce prices in line with the deflation in the prices of raw materials is disclosed by the accompanying table, which was prepared by the statistical department of the Foreign Banking Association. In it prices and volumes in January last have been taken arbitrarily as a base, or 100 per cent., and prices and volumes in the ensuing months have been computed as percentages of these figures, as shown in the table at the foot of this page.

So much for the international situation as it affects this country. What, now, of the domestic situation?

ENCOURAGING SIGNS AT HOME . . .

Certainly the so-called period of deflation, into which this nation entered last year, is not at an end. Commodity and security markets alike reflect the depression which has supplanted the intense activity that was the first result of the termination of the war. There is unemployment in large measure. There is a curtailment of manufacturing enterprise. There is a lag in pro-

duction which is the more noticeable because of the fierce pace which was maintained for so long.

But all this is not to say that the times are bad, that the outlook is gloomy, that the future is filled with uncertainty and doubt. On the contrary, there is much in the situation to encourage confidence and assurance that we are approaching the end of our ordeal. After all, we have not had the wholesale failures which were confidently predicted some months ago. We have had no money panic such as those we experienced periodically before the creation of the Federal Reserve system. As a fact, we have had much less of a disaster than we predicted for ourselves, and our success in avoiding the evils which we had regarded as unavoidable should lend courage to the thought that we may be now imagining for ourselves troubles much more intense than we shall be asked to confront.

There are positive as well as negative reasons for such assurance. To be sure no general upturn in business is to be noted; the improvement lies more in a strengthening of underlying conditions, but some problems that had seemed well nigh insurmountable have been overcome.

Those who are accustomed to regard the movements of the stock market as a barometer of the later moves of business have had difficulty in reconciling the continued weakness of the market with the conviction that the worst was, to a major degree, over with business and that signs of improvement were to be looked for. In such a case it is probably well to forget the old rule and to accept as a working basis the theory that, in this instance, as in previous ones, the financial markets are reflecting the psychology of the financial community itself, which is experiencing a sense of hopelessness that the downward movement can be combated, and a sentiment that it must be allowed to run its course, a state of mind which aggravates, if anything, the very condition which it would wish to see altered. The increase in building activity which has been generally reported throughout the country is certainly an omen for good. The awarding

of building contracts means work for many hands.

The railroad situation has taken a turn which should be for the better. Revision of railway wages goes into effect this month together with the abrogation of the national agreements which were hold-overs from the period of Government control, thus allowing the carriers to make a fresh start, so to speak. Prospects of labor for many men now among the great ranks of unemployed are held out in these decisions of the Railroad Labor Board. It is expected that the railroads will add to their forces at once, under new agreements and new rates of pay, and, in addition, will begin to undertake some of the deferred repair and maintenance work which will give employment to additional hands.

This may appear optimistic in view of the fact that the earnings of 200 railways were \$1,494,000 less in April than in March. It must be remembered, however, that the troubles of the railways have been due, not to lack of business, but to lack of control of costs. These are now to be fixed again at a point which will allow the carriers a fair return on their investment and operating costs. There would be cause for dismay if the roads had been able to operate profitably and yet had been unable to obtain the business to make this possible. On the contrary, there is no lack of business other than a seasonable one, and the volume is sufficient, and will become more so, to enable the roads, with properly adjusted costs, to do business at a profit instead of a loss.

All values are relative. We appreciate heat because we know cold. We desire prosperity because we know its opposite. Judged on such a basis, should we not say that general business conditions are reasonably satisfactory just now? Certainly they are far better than some of us expected them to be, far better than they very easily could be. The movement toward normalcy is slow, perhaps, but it is steady, and today we are nearer the desired point than we were a month ago. Judged from such a viewpoint, conditions are good, and they are becoming better.

## EX-PRESIDENT TAFT TAKING THE OATH AS CHIEF JUSTICE

William Howard Taft, organizer of the American Government in the Philippines, and former President of the United States, is here seen taking the oath as Chief Justice of the United States Supreme Court. Beside him stands Attorney General Daugherty. On the extreme right, holding a paper in his hand, is Chief Justice Hoehling of the District of Columbia Supreme Court, who is administering the oath of office. Mr. Taft is the first man in the United States to hold both the office of President and that of Chief Justice

# THE CALL FOR A DISARMAMENT CONFERENCE

*President Harding's proposal meets with acceptance from all the powers invited to take part—Text of the Knox-Porter resolution declaring peace between this country and the Central Powers—Appointment of ex-President Taft as Chief Justice*

[PERIOD ENDED JULY 15, 1921]

**I**NTENSE interest was aroused the world over by the proposition for a conference on the limitation of armaments which was issued by President Harding on July 10. This momentous action was announced in the United States through the following official statement:

The President, in view of the far-reaching importance of the question of limitation of armament, has approached with informal but definite inquiries the group of powers heretofore known as the principal allied and associated powers, that is, Great Britain, France, Italy and Japan, to ascertain whether it would be agreeable to them to take part in a conference on this subject, to be held in Washington at a time to be mutually agreed upon. If the proposal is found to be acceptable, formal invitations for such a conference will be issued.

It is manifest that the question of limitation of armament has a close relation to Pacific and Far Eastern problems, and the President has suggested that the powers especially interested in these problems should undertake in connection with this conference the consideration of all matters bearing upon their solution with a view to reaching a common understanding with respect to principles and policies in the Far East. This has been communicated to the powers concerned, and China has also been invited to take part in the discussion relating to Far Eastern problems.

The invitation to the armament parley received prompt acceptance from most of the powers concerned. France and Italy were enthusiastic, and Great Britain scarcely less so. Premier Briand of France stated that he himself would head the French delegation, although later it was in-

timated that, as the French Parliament would be in session in November, which it was assumed would be the month in which the conference would be held, it might prove impracticable for him to be absent from this country. China, which was invited to participate in the discussion of the Far Eastern problems, also sent a formal acceptance.

It was stated in Washington on July 14 that Japan had sent formal approval of the President's proposal for a conference of the great powers, but had limited her participation to discussion of the question of the limitation of armaments. She had not accepted the President's suggestion that the conference, in addition to discussing disarmament, should devote itself to problems affecting the Far East and the Pacific.

While the text of the Japanese response was not at that time made public, it was decided to view the communication as an acceptance of the proposal, and plans were at once begun for the holding of the conference. It was stated that the next step would be to issue formal invitations to the conference in the name of President Harding. While there had been informal suggestions from London that it would better suit the wishes of the British Government and the Dominion Premiers then in session there to have a preliminary conference in London, the Washington Administration construed the communications received from the four great powers and China as ac-

ceptances of the President's suggestions that the conference should take place in Washington. There had been no opposition to the President's tentative suggestion of Armistice Day, Nov. 11, as the date of opening.

The attitude of the foreign press in countries not included in the invitation was one of approval. Holland showed indications of wishing to be a participant in the conference owing to her large interests in the Pacific. The total surface of the Dutch Indian possessions exceeds 5,000,000 square miles. The success of the conference would solve for her the vital problem of the protection of her colonies.

Prior to the issuance of the proposal the President's hands had been strengthened by the adoption of the Borah amendment, which had previously passed the Senate and was adopted in the House on June 29 by a vote of 330 to 4. Its passage followed the receipt of a letter from the President to the Republican leader, Mr. Mondell, embodying an appeal for an expression of opinion favorable to the limitation of armaments through international agreement. The large majority by which the amendment was passed was interpreted as largely due to the President's plea. The Borah amendment provided:

That the President is authorized and requested to invite the Governments of Great Britain and Japan to send representatives to a conference which shall be charged with the duty of promptly entering into an understanding or agreement by which the naval expenditures and building programs of said Governments—the United States, Great Britain and Japan—shall be reduced annually during the next five years to such an extent and upon such terms as may be agreed upon, which understanding or agreement is to be reported to the respective Governments for approval.

Although the amendment was concerned simply with naval disarmament and applied to three powers only, its passage was significant of the general Congressional attitude toward disarmament and gave the

moral backing of the House and Senate to the more comprehensive proposal of the President that followed.

The primary purpose of this Government in proposing that the conference should take up Far Eastern

(Keystone View Co.)

CYRUS E. WOODS

*New Ambassador to Spain, succeeding  
Joseph E. Willard*

and Pacific problems, as well as the question of the limitation of armaments, was born of a desire to remove causes of friction which, unless removed, might lead to war. The suggestion was understood to have the hearty approval of Great Britain, and especially of the Dominion Premiers then in session in London, the interests of whose countries were largely bound up with problems of the Pacific. It was also felt in London that such a conference would tend to clarify the vexing problems connected with the proposed renewal of the Anglo-Japanese treaty.

The other outstanding event of the month in the United States was the

signing by the President of the joint Congressional resolution which declared the war with Germany and Austria to be at an end. This resolution passed the House of Representatives on June 30 by a vote of

WILLIAM MILLER COLLIER  
*Newly appointed United States Ambassador to Chile*

263 to 59. On the following day the Senate adopted it by a vote of 38 to 19. On July 2 it was signed by the President in the home of Senator Frelinghuysen at Raritan, N. J., where he was spending the week-end. The text of the resolution follows:

Joint resolution terminating the state of war between the imperial German Government and the United States of America and between the imperial and royal Austro-Hungarian Government and the United States of America.

*Sec. 1.* That the state of war declared to exist between the imperial German Government and the United States of America by the joint resolution of Congress approved April 6, 1917, is hereby declared at an end.

*Sec. 2.* That in making this declaration, and as a part of it, there are expressly reserved to the United States

of America and its nationals any and all rights, privileges, indemnities, reparations or advantages, together with the right to enforce the same, to which it or they have become entitled under the terms of the armistice signed Nov. 11, 1918, or any extension or modifications thereof; or which were acquired by or are in the possession of the United States of America by reason of its participation in the war or to which its nationals have thereby become rightfully entitled; or which, under the Treaty of Versailles, have been stipulated for its or their benefit; or to which it is entitled as one of the principal allied and associated powers; or to which it is entitled by virtue of any act or acts of Congress or otherwise.

*Sec. 3.* That the state of war declared to exist between the imperial and royal Austro-Hungarian Government and the United States of America, by the joint resolution of Congress approved Dec. 7, 1917, is hereby declared at an end.

*Sec. 4.* That in making this declaration, and as a part of it, there are expressly reserved to the United States of America and its nationals any and all rights, privileges, indemnities, reparations or advantages, together with the right to enforce the same, to which it or they have become entitled under the terms of the armistice signed Nov. 3, 1918, or any extensions or modifications thereof; or which were acquired by or are in the possession of the United States of America by reason of its participation in the war or to which its nationals have thereby become rightfully entitled; or which, under the Treaty of Saint Germain-en-Laye, or the Treaty of Trianon, have been stipulated for its or their benefit or to which it is entitled as one of the principal allied and associated powers; or to which it is entitled by virtue of any act or acts of Congress or otherwise.

*Sec. 5.* All property of the imperial German Government or its successor or successors and of all German nationals which was on April 6, 1917, in or has since that date come into the possession or under control of, or has been the subject of a demand by the United States of America or of any of its officers, agents or employes, from any source or by any agency whatsoever, and all property of the imperial and royal Austro-Hungarian Government, or its successor or successors, and of all Austro-Hungarian nationals which was on Dec. 7, 1917, in or has since that date come into the possession or under control of, or has been the subject of a demand by the United States of America or any of its officers, agents or employes, from any source or by any

agency whatsoever, shall be retained by the United States of America and no disposition thereof made except as shall have been heretofore or specifically hereafter shall be provided by law until such time as the imperial German Government and the imperial and royal Austro-Hungarian Government, or their successor or successors, shall have respectively made suitable provision for the satisfaction of all claims against said Governments respectively, of all persons, wheresoever domiciled, who owe permanent allegiance to the United States of America and who have suffered through the acts of the imperial German Government, or its agents, or the imperial and royal Austro-Hungarian Government, or its agents, since July 31, 1914, loss, damage or injury to their persons or property, directly or indirectly, whether through the ownership of shares of stock in German, Austro-Hungarian, American, or other corporations, or in consequence of hostilities, or of any operations of war or otherwise, and also shall have granted to persons owing permanent allegiance to the United States of America most-favored-nation treatment, whether the same be national or otherwise, in all matters affecting residence, business, profession, trade, navigation, commerce and industrial property rights and until the imperial German Government and the imperial and royal Austro-Hungarian Government or their successor or successors shall have respectively confirmed to the United States of America all fines, forfeitures, penalties and seizures imposed or made by the United States of America during the war, whether in respect to the property of the imperial German Government or German nationals or the imperial and royal Austro-Hungarian Government or Austro-Hungarian nationals, and shall have waived any and all pecuniary claims against the United States of America.

Sec. 6. Nothing herein contained shall be construed to repeal, modify or amend the provisions of the joint resolution "declaring that certain acts of Congress, joint resolutions and proclamations shall be construed as if the war had ended and the present or existing emergency expired," approved March 3, 1921, or the passport control provisions of an act entitled "An act making appropriations for the diplomatic and consular service for the fiscal year ending June 30, 1922," approved March 2, 1921, nor to be effective to terminate the military status of any person now in desertion from the military or naval service of the United States, nor to terminate the liability to prosecution and punishment, under

the Selective Service law, approved May 18, 1917, of any person who failed to comply with the provisions of said act, or of acts amendatory thereof.

It was pointed out at Washington that the next step would probably be

(© Moffett, Chicago)

CHARLES B. WARREN  
New Ambassador to Japan, succeeding  
Roland S. Morris

the issuance by the President of a formal peace proclamation, to be followed by negotiations for a treaty of peace and amity with the former enemy powers.

#### ARMY REDUCTION

On June 30 President Harding signed the Army Appropriation bill, under which the regular army must be reduced to 150,000 men by Oct. 1. At the same time he sent a message to Congress suggesting that it might be necessary later on to ask for a modification of the measure to provide for the 50,000 enlisted men who

would have to be dropped. While no definite plan in discharging men from the army had been worked out, Secretary Weeks indicated that so far as possible men who wished to remain in the service would not be discharged. His department hoped to be able to reduce the army as re-

Pershing was acting as Secretary of War, Secretary Weeks having gone on a five-day visit to his farm at Lancaster, N. H., and Assistant Secretary Wainwright having departed on a trip of inspection of army posts in the South.

#### AIRPLANES VS. WARSHIPS.

In the army and navy tests to determine the efficiency of airplanes as antagonists of warships, the former German submarine U-117, which was the terror of the Atlantic coast shipping four years ago, was sent to the bottom of the ocean in sixteen minutes by naval fliers sixty miles off the Virginia Capes on June 21. Before reaching the anchored target far out at sea the planes had flown in triangular formation a distance of seventy-five miles from their bombing base at the Hampton Roads Naval Station. The only planes used in the actual assault were a single division of three F-5-L planes commanded by Lieutenant Delos Thomas. Just a dozen 163-pound bombs, each containing 117 pounds of T N T, were used. The first salvo of only three bombs fell with such precision as to bracket the submarine, port and starboard, and probably inflicted damage enough to put the vessel out of commission, though no direct hits were registered. Nine minutes later nine more bombs were dropped, and the submarine went to the bottom.

On July 13 it took army aviators twenty minutes after the first hit to sink the former German destroyer G-102 in fifty fathoms, sixty miles east of Cape Charles, Va. Fifty-one 300-pound T N T missiles were dropped on the target. The first direct hit was made at 10:20 o'clock, and eight minutes later the destroyer was seen to be sinking rapidly, her decks being awash to the funnels and her bridge a shattered heap. It was then that the fatal hit was scored by one of the Martin bombers. It struck amidships in the funnels and wrought such destruction that the destroyer lunged forward and was out of sight

JOHN G. EMERY

*Of Grand Rapids, Mich., new Commander of the American Legion, succeeding Colonel Galbraith*

quired by favorable action on applications for discharge. The Secretary further stated that the army forces on duty in Hawaii and the Canal Zone would be maintained at their present strength.

#### PERSHING CHIEF OF STAFF

General Pershing on July 1 assumed his new duties as Chief of Staff in succession to Maj. Gen. March, and at the same time Maj. Gen. Harbord took charge as executive assistant to General Pershing. The assumption of their new duties took place simply and without ceremony. Within a few hours after he became Chief of Staff General

in two minutes. Only a large elliptical spot of loosened oil, amid which floated splintered wreckage, was left.

Less encouraging to the advocates of airplanes as attacking craft was the test made June 29, when the old battleship Iowa, controlled by radio and steaming at a gait of only 4½ knots, was struck only twice, though eighty bombs were dropped.

#### U-BOATS SUNK BY GUNFIRE

With deadly precision, in which half the shots fired by two destroyers were recorded as hits, the former German submarines U-140 and U-148 were riddled by gunfire attack and sent to the bottom sixty miles east of Cape Charles, Va., on June 22. The U-140 was attacked by the destroyer Dickerson, the leading ship in a division of five destroyers that steamed in line formation past the submarine. The Dickerson's gunners fired thirty-nine shots out of a possible forty permitted by the rules for experiments, and nineteen of these were hits. From the time that the first shot was fired until the U-140 sank only 1 hour 24½ minutes elapsed. A little later the destroyers steamed in similar fashion past the U-148, and out of forty shots fired twenty were hits. The submarine went to the bottom in less than 30 minutes.

Secretary Denby of the navy took action on June 23 to check any tendency toward so-called "Sovietism" in the navy by removing Captain Clark D. Stearns of the battleship Michigan for having permitted his crew to discuss with him disciplinary matters vested only in the commanding officer. The action of Captain Stearns was said to have had the approval of former Secretary Daniels, but the action of Secretary Denby showed his emphatic disapproval of the policy of his predecessor. The order issued on the Michigan to which the Secretary took exception provided for a "ship morale" committee to consist of four petty officers and ten other enlisted

men to investigate and report to the Captain on disciplinary cases, and to transmit to the Captain from the crew suggestions tending to increase the efficiency of the ship or the naval service.

#### REBUKE TO ADMIRAL SIMS

Rear Admiral William S. Sims was publicly reprimanded on June 24 by Secretary of the Navy Denby for his remarks on Ireland and England at the luncheon of the English-Speaking Union in London, June 7. [See July CURRENT HISTORY.] The essential part of the reprimand, after reciting the remarks to which exception was taken, was as follows:

The department is not unmindful of your record and achievements as an officer of the navy, but the conspicuous position you now hold, coupled with the fact that you have previously offended in a similar manner, merely serves to add to the gravity of the present offense. The department deplores the fact that it is necessary to rebuke a flag officer in public, but you have made such action unavoidable. The department expresses its strong and unqualified disapproval of your conduct in having delivered a highly improper speech in a foreign country and you are hereby publicly reprimanded

The Admiral refused to comment on the reprimand except to say that he hadn't known his speech was "loaded as much as it was," and that he had got "what was coming" to him.

#### ALLIED DEBT REFUND BILL

A bill to enable the refunding of the obligations of foreign Governments to the United States was introduced in the Senate on June 23 by Senator Penrose of Pennsylvania, Chairman of the Finance Committee. The bill was intended to clothe Secretary of the Treasury Mellon with sweeping authority to refund the obligations of the foreign Governments and to adjust claims of the United States against them. It was broad enough to permit the Secretary of the Treasury to receive bonds and obligations of "any foreign Govern-

ment" in substitution for those now or hereafter held by the United States Government. The bill was introduced at the request of President Harding, who in turn acted at the instance of Secretary Mellon. It was announced that public hearings would begin at once on the bill.

[For details of the \$11,000,000,000 debts of foreign Governments to the United States Government see Page 802.]

### TO DEFER BONUS ACTION

President Harding appeared in person before the Senate on July 12 to make a presentation of the reasons why the soldiers' bonus bill, already condemned by Secretary of the Treasury Mellon, ought not to be passed at the present time lest it contribute to "the paralysis of the Treasury." He spoke forcibly of the need of appropriate action for disabled soldiers and sailors, which he urged was a primary consideration as a matter of national gratitude. The enactment of the adjusted compensation bill in the midst of the struggle for readjustment and restoration, however, he said, would hinder every effort and greatly imperil the financial stability of the country. In addition this menacing effort to expend millions in gratuities would imperil our capacity to discharge our first obligations to those we must not fail to aid. Stating that he did not wish to restrict the action of Congress, he urged the prompt readjustment and reduction of war-time taxes and the enactment as soon as possible of the pending tariff bill. After a spirited debate, the bonus bill was referred again to the Finance Committee on July 15.

The United States Labor Board on

June 27 extended its wage reduction order, effective July 1, to nearly every large railroad in the country. No change from the average 12 per cent. reduction granted 104 carriers on June 1 was made. It was estimated that the general extension of the wage cut would lop approximately \$400,000,000 annually from the country's railroad labor bill.

The decrease in the cost of living between June, 1920, and May, 1921, was 16.7 per cent., according to figures based on prices from thirty-two cities, made public June 3 by the Department of Labor. Except for fuel, light and housing, all items dropped in price between the periods mentioned.

### TAFT AS CHIEF JUSTICE

On June 30 William Howard Taft was nominated by President Harding as Chief Justice of the Supreme Court of the United States, succeeding the late Edward Douglass White. The nomination was confirmed by the Senate on the same day. The new Chief Justice took the oath of office on July 11. He is the only man in the nation's history who has held the office of Chief Justice of the Supreme Court and President of the United States. The nation greeted his appointment with almost universal approbation.

It was announced on June 24 that Charles B. Warren of Michigan had been chosen by President Harding as Ambassador to Japan. On the same date William Miller Collier was nominated as Minister to Chile. Mr. Warren is a lawyer of international reputation and has been prominent in Republican councils. Mr. Collier served as Minister to Spain under Presidents Roosevelt and Taft.

# SANTO DOMINGO TO BE FREE

BY HORACE G. KNOWLES

Former United States Minister to Santo Domingo

*How objectionable features of the American Government's plan of withdrawal were removed—The most serious blot that remains is the recent loan negotiated without the consent of the Dominican people, saddling them with an annual payment of 14 per cent. on \$2,500,000*

FOLLOWING somewhat along the lines of the previous Administration's announcement of Dec. 23, 1920, in which it stated its decision to put an end to our nearly five years' military occupation of the Dominican Republic, an occupation regarding which the American people had been kept in almost complete ignorance, and yielding to the appeals of the Dominican people for a fulfillment of the pre-election promise of President Harding, the present Administration, through the Department of State and Military Governor Robison, issued on June 14 a proclamation to the Dominican people, in which were stated the conditions on which the American military force would be withdrawn from Santo Domingo and sovereignty and self-government restored to the natives of that country.

[See documents, Page 813; also article, Page 809.]

Certain conditions of the plan embodied in the proclamation, notably those relating to the selection of the Dominican members of a commission to negotiate with the United States a treaty of evacuation, the ratification of "the acts of the Military Government," and a military mission to be composed of officers of the American Army, were so contrary to the promises and assurances given by both the last and present Administrations, and so very objectionable to the Dominican people, that the entire population was aroused to a pitch of patriotic indignation never known before in that country.

Meetings of protest were held simultaneously in every city, town and hamlet of the country. In Santo Domingo City, the capital of the country, over 15,000 participated actively in the demonstration, the like of which was never known before in that old city. It was not a gathering of either politicians or members of a particular party. It was patriotism of the famous Boston "tea party" kind, and not politics; that inspired the people to such intense protest. A formal document of protest and appeal was unanimously adopted by that memorable meeting and immediately forwarded to President Harding, who took due notice of it. The subject matter of the petition of protest was then taken up personally by Secretary Hughes, and without delay he so modified and clarified the plan of June 14 that the major objections to it were removed.

The status of the Dominican situation may now be said to be better than at any time since the occupation began, and there is every prospect and hope that, as negotiations proceed, it will not be long before a thorough and in every way satisfactory understanding between Washington and Santo Domingo will be reached. That now easily attainable end is the one hope of the Dominicans and the plain duty of the present Administration.

The revised proclamation by Secretary Hughes was hailed with delight by the friends of Santo Domingo, and brought great relief to its citizens. It greatly clarified our

relations with the South American countries. We were losing ground heavily in South America. Because of our doings in Santo Domingo the Monroe Doctrine was being represented in all the Latin-American countries as a diplomatic bludgeon to enable the United States to do

see no other peril to our country so great or so imminent as that, and dim of vision are our statesmen and national leaders if they cannot see it.

Soon the tariff wall will be built around our country, and this large, rich market for foreign manufactures will be closed to those nations of Europe who are now both our debtors and our foreign trade competitors. It is only with the profits on their foreign trade, in our markets or others, that they can ever pay the interest and principal of the debt they owe us. The harder we press them for what they owe us, the harder must they press us in the foreign markets of the world. Thus it is plain that the commercial Armageddon for us will be in South America. As we close our doors to European manufactured products and immigration, we shall automatically divert them to South America. There, sooner or later, we shall have to meet them in great phalanxes, first in commercial and then in political battle.

The invasion and oppression of Santo Domingo was not only a wrong to that little country, but an assault on the sovereign rights of one of the Latin-American republics. As they looked at their little Dominican sister in chains, saw her homes being burned, her people tortured and killed, her jails filled with her patriots, her public money seized and misspent, her country exploited and bankrupted, and her taxes gathered and spent to reward American politicians and job-hunters, they realized that the "great power of the North" had broken one of the links of their Latin-American chain; and feared that, sooner or later, another and then another link might be broken, and that the horrors of five years of oppression, suffered by the Dominicans, might be imposed upon one or many of them. Is it any wonder that they regard us with suspicion and fear? It will require tremendous tact for Harding and Hughes, great men as they are, to

HORACE G. KNOWLES

*Former Minister of the United States to Rumania, Serbia, Bulgaria, Santo Domingo and Bolivia*

whatever it pleased—anything or all the things it prohibited European countries from doing—to the Latin-American countries, and then to prevent the Latin Americans, in case of invasion or attack, as in Santo Domingo, from receiving assistance from any European power. If the Latin-American countries are to understand that the way we have applied the Monroe Doctrine to Santo Domingo is the way we may apply it to any one of them, they will want none of it; and, sooner or later, an alliance will be formed to enable them to break away from the Monroe Doctrine or fight it. I can

get this terrible nightmare out of the minds of the Latin Americans.

The Dominican people, before our advent, were happy, prosperous and peaceful, save for some few political disorders, such as we have at most of our elections. They did not owe us a dollar; no American property was in peril; no American had been harmed. As a nation they were happy mostly because they believed in us and trusted us. They considered that, because of our friendship for them, as was manifested among other things by the Roosevelt treaty of 1907, they were safe from any foreign foe. From that dream of security they were rudely awakened in 1916, when, without notice, an American fleet, with frowning turrets and large calibre guns, stole into the roadstead of their capital city and dropped anchor there. Then, in the shadow of those formidable guns, an American Admiral, holding in hand an order partly in the handwriting of President Wilson and bearing his signature, landed with a large detachment of marines and began the invasion and occupation of that country—an occupation which has now lasted for over five years.

The undoing of this wrong has begun. The promise of President Harding has begun to be fulfilled, and justice toward Latin-American countries is to be practiced. Soon the Dominican Republic will be free, and her complete sovereignty will be restored to her. The latest order of Secretary Hughes, dated June 25, modifying and clarifying the previous order of the Department of State, issued on June 14, seems to give to the Dominicans the promise—if not as yet the full assurance—of:

1. The restoration of their national sovereignty, full liberty and independence, and complete self-government within eight months from June 14, 1921.

2. The election, as soon as the details can be arranged, of a National Congress, said election to be free and untrammelled and without any interference whatsoever of the American military force.

3. The right to have their National

Congress select the Dominican members of the commission that is to negotiate the treaty of evacuation with the United States.

4. The withdrawal of the entire military force from the republic within the specified period of eight months.

The only acts of the American Military Government in Santo Domingo that the United States will ask to be ratified are those connected with the raising of funds which were expended by the said Military Government during the occupation.

The one fly in the ointment, now so well and carefully prepared by Secretary Hughes to heal the Dominican wound, seems to be a loan of \$2,500,000 negotiated by an overzealous American naval officer without either the consent or the aid of the Dominican people, and intended to be forced upon them regardless of their protests and of the very unfavorable criticism provoked in our country by the said loan. This loan is guaranteed by two nations—the United States and the Dominican Republic—and seems to be better secured than any bonds our Government ever issued. It is a first lien upon the customs revenues of the Dominican Republic, which are collected and controlled by the United States, and, as the proceeds of the loan will be paid to officials of the United States and will be disbursed by them, there will be a moral obligation, involving the good name and credit of our country, fully to protect the bonds.

Notwithstanding this double-barreled guarantee, the representative of the Navy and State Departments, given such a free hand to negotiate the loan with Wall Street bankers, agreed with them for an annual interest rate of 14 per cent., which, combined with other charges, makes a total cost charge of over 9 per cent., up to nearly 19 per cent. The representatives of Chile are on their way to this country to conclude an 8 per cent. loan for \$25,000,000. As this article is being written there is to be seen in all the New York newspapers

the announcement by a prominent banking house of an issue of \$1,000,000 Porto Rican 4½ per cent. bonds, offered at a price that will net the investors less than 5¼ per cent. For the United States-Dominican Republic bonds, a great deal better secured, why pay 14 per cent.—nearly three times as much? There must be something wrong. In the New York market there are being sold State bonds that net the investors less than 5 per cent. and scores of 8 per cent. industrial loans are being placed; yet our Government is saddling upon the Dominicans a loan with an annual interest charge of 14 per cent., plus a proportionate commission to the bankers! Who is responsible for thus throwing the poor Dominicans to the wolves of Wall Street? It is believed that this very questionable operation was slipped past Secretary Hughes, and that when he learns the details of it he

will decline to give it his approval and insist upon its immediate cancellation.

It will not be long now before the final chapters in the unfortunate Dominican affair will be reached. In the crown of nations soon will be reset the brilliant Dominican Republic gem. There will be a declaration by our Government as to the meaning and value of national sovereignty, confirming our support of the principle that *sovereignty is sovereignty wherever it exists*, and that whoever is entitled to it shall never be deprived or robbed of it, if we can prevent it. We will say that there is no big and no little sovereignty; that neither the size nor condition of a nation in any way diminishes or enlarges it; that we hold it inviolate when possessed by others, as we do our own, and that in our hearts we respect it in its entirety, like honor in a man, like chastity in a woman.

## DECLINE OF THE GREAT WHITE PLAGUE

DR. JAMES ALEXANDER MILLER, the newly elected President of the National Tuberculosis Association, declared before the seventeenth annual meeting of that body, held in New York in June, that the beginning of the end of the battle against tuberculosis in the United States was in sight. "After years of hard work," said Dr. Miller, "the death rate continues to go down, and this is in marked contrast to the tremendous increase in tuberculosis in Europe on account of the war." His statement was borne out by the testimony of experts from all parts of the country.

It was stated that there were 12,000 tuberculous ex-service men in various hospitals of the United States. One regulation passed by the association indicated that a

certain percentage of returned soldiers were refusing to avail themselves of the facilities for treatment offered through the Public Health Service and other organizations, and urged that the Compensation act be amended so as to reduce the compensation sanctioned for such patients among the ex-service men.

The association put on record its apprehension of the growth of the disease in Europe, following the war, and adopted resolutions calling on the United States Public Health Service to see that trained examiners should be stationed at all the ports of debarkation to prevent the entrance of tuberculous immigrants from France, Italy, Russia, Germany, and other countries involved in the war.

# MENACE OF THE ANGLO-JAPANESE ALLIANCE

BY GEORGE L. KOEHN

Department of History, Reed College, Portland, Ore

*How renewal of the treaty might endanger the friendship between England and the United States—Pact that forced Japan into the World War may also force Great Britain to take sides against us—How it has served Japan's ambition to dominate China*

THE opening of the Imperial Conference in London late in June focused the attention of students of world politics on the Anglo-Japanese Alliance. One of the objects of that conference was to decide the momentous question of a renewal. So momentous was it, in fact, that no agreement could be reached on it before the date of the treaty's expiration; the emergency was met by a ruling that, in the absence of definite action, the alliance was automatically renewed for one year. Thus the issue is still pending. What action will Great Britain and Japan take: will they renew the compact in its present form, or will they modify it? The British dominions bordering the Pacific are vitally concerned in its renewal. So, also, is the United States.

Many Americans, especially those who live on the Pacific Coast, view with uneasiness the renewal of the alliance in its present form. They regard this pact as inimical to the safety of the United States, and feel that if it should be renewed without change British-American relations would be poisoned by mutual distrust and fear, and vitiated by a continuous anticipation of war.

To understand the issues involved, it is necessary to review the events that led up to the creation of the original alliance. In 1854, an American naval officer (Commodore Perry) opened the doors of a backward, Oriental nation named Japan to intercourse with the rest of the world, and in half a century that

backward country was among the first five powers of the world. No sooner did it realize its power than it launched into a policy of economic imperialism, followed by military aggression. It adopted the policy that any territory within its proximity must be under its control as a matter of national safety; and so it began to cherish designs on Korea, a peaceful nation of 17,000,000 souls, whose country was the doorway into China.

Japan realized, however, that her designs would conflict with China and the many European nations who were just then carving that empire into spheres of influence, and knowing that she was unprepared for war with a European power, she sought an ally to give her the necessary financial assistance, and to protect her from European interference. It was England that first freed Japan from European interference by a treaty in which she pledged herself to prevent European nations from intervening in case of a war between Japan and China. The pact was signed on July 16, 1894, and it is significant that just one week later, on July 25, Japan picked a war with China over Korea.

Japan won a brilliant victory over China, but the fruits of that victory were stolen by the intervention of Russia, France and Germany. Japan realized that if she were to cope successfully against European powers for the control of Asia, she must ally herself with a strong European power. She remembered England's aid in the Chinese war, and decided

to make that great power her ally. Fortunately for Japan, Russia was at that time encroaching on England's interests in India, through her interests in Persia and Afghanistan, and Russia's interests in Manchuria and Mongolia were affecting England's monopoly of the Yangtse valley. Then, too, the spectre of German commercial competition in the Far East was disturbing to Britain's well-being there. The suppression of Russian aggression being a common enterprise, Japan, in exchange for England's recognition of Japan's special interests in Korea, guaranteed England's interests in the Yangtse valley and in India.

Thus the fateful alliance of 1902 was concluded. The alliance made possible the war with Russia, and Japan's consequent victory. During this war—in 1905—the alliance of 1902 was strengthened into a binding defensive alliance, in which each nation guaranteed to guard the interests of the other in its respective spheres of influence. This pact recognized Japan's special interests, and her right to do with Korea as she pleased. In 1910, therefore, Korea was definitely annexed to Japan, against the protests of its inhabitants, and also of America.

#### ALLIANCE AGAINST WHOM?

In 1911 the alliance was again modified to assure England that her interests in India would be especially safeguarded by Japan, and to exclude the operation of the alliance from those nations with whom either England or Japan had a general arbitration treaty. As the alliance was then modified, it remains today. Since then the two nations against whom this alliance was originally aimed have been removed. Russia will not be concerned with Far Eastern affairs for a long time to come. Germany will not be a factor in Asiatic problems for an even longer time. Against whom, then, is this alliance aimed? What are the motives and reasons that prompt its contin-

uance? Whatever the answer, the alliance as it works today amounts to this: It says to England, "Go as far as you like in the Yangtse Valley, and in India"; it says to Japan, "Go as far as you like in your sphere of influence"—which Japan interprets as the rest of China.

This alliance is an obstacle to good relations between Great Britain and the United States; first, because it is conducive to bringing about a war between America and Japan; and, second, because in case of war England would be morally bound to come to the aid of Japan.

That the Anglo-Japanese Alliance is the basis of Japan's foreign policy is indicated by the testimony of Count Hayashi, the Japanese Minister who negotiated the alliance, and that of Baron Kato, who has had more to do with enforcing it than any other man. Count Hayashi in his Secret Memoirs says of it: "It is the basis of this country's foreign policy." Baron Kato says: "The Anglo-Japanese Alliance is revered and respected in Japan as long as it can be used as a stepping stone in China. It will remain in the future, as in the past, the shaft on which the wheels of Japanese diplomacy revolve." Mr. A. M. Pooley, England's most eminent authority on Far Eastern questions, declares in his book on Japan's foreign policy: "That Japan has been in a position to carry out successfully her policy of wanton aggression in China is due to the alliance of 1902." Such eminent students of Far Eastern problems as E. T. Williams, T. F. Millard, J. O. Bland, K. K. Kawakama, are all of the opinion that Japan's policy in the Far East would not have been possible without the Anglo-Japanese Alliance.

On the basis of this alliance, which associated her on terms of equality with a great European power, Japan adopted a foreign policy which involves these three aims:

1. To have repealed all legislation of a discriminatory measure, and to obtain equal privileges and rights for her people;

2. To obtain a free hand in China and to proclaim a so-called Monroe Doctrine over Asia;
3. To gain the control of the Pacific.

In every one of these ambitions, Japan's policy has come into direct conflict with that of the United States, and has led to a state of affairs which some observers believe makes a war highly probable.

Japan's first policy, that of securing the repeal of all discriminatory measures against her nationals, has an important bearing on the California issue. This issue, like that of race equality in general, is being used by Japan merely as a smoke screen to hide her actions in the Far East, and to imbue the populace of Japan with a strong hatred of America as a popular pretext for war. Her loud protestations about the California issue are answered by merely pointing to the fact that Japan herself does not allow foreigners to become citizens or hold land, does not allow them even to become laborers or engage in any business. Many Americans now realize that Japan is harping on the California issue to keep America's attention from the Far East, just as she harped on the issue of race equality at the Peace Conference to keep the world's attention from the issue of Shantung. It is over China and the Far East that American and Japanese policy must seriously conflict.

#### POLICY TOWARD CHINA

What has been our policy toward China? The United States has been the only true friend of the Celestial Empire. When China was on the verge of dismemberment by the policies of economic imperialism and "spheres of influence" pursued by the Great Powers, John Hay, the American Secretary of State, recognized the fundamental importance of the square deal in China, and devised a plan to check the progress of the spheres of influence policy in that country. He succeeded in securing the acceptance by all the major pow-

ers, including Japan and England, of those principles of the Commercial Open Door and the preservation of the territorial integrity of China which constituted the Hay Doctrine.

The Monroe Doctrine and the Hay Doctrine, which is but an extension of the same principle to the Far East, are the only two traditional foreign policies of the United States. They are both based on the same broad-minded principles: (1) The protection of a weaker nation by its stronger neighbor, and (2) the safeguarding of equal commercial privileges to all nations dealing with the weaker countries. This means that no nation, regardless of political interests or geographic proximity, can maintain special commercial privileges or monopolies to the detriment of free and open competition of the commerce of all nations. The United States has always intended to enforce these policies. She has done so in South America to the benefit of all concerned. Her military unpreparedness in the past has prevented her from doing so in China. She has had to depend on the pledges of those nations who signed the Hay Doctrine.

#### JAPAN IGNORES THE "OPEN DOOR"

Japan has broken her pledge, and her every move since the Russo-Japanese war has been to destroy the efficacy of the doctrine, and to substitute for it the war-breeding "spheres of influence" policy. She annexed Korea in 1910, after cruelly putting down the native revolt, and against America's official protest. She then began her policy of economic aggression and followed it up by the political subjugation of Formosa, Mongolia, and Manchuria. Wherever Japan entered, her stay was followed by the slavish subjection of the inhabitants and the suppression of all free commercial competition. To such an extent did her underhand measures and vicious discriminations prevent foreign trade, that in the port of Newchwang, Man-

churia (to cite an instance where, twenty years ago, two-thirds of all cotton goods used by the Chinese entered from the United States), there is no longer a single American firm. The Japanese Government has actually driven out every American merchant, closed the American missions and schools, and compelled our Government to recall our Consul-General. Both the Shanghai Chamber of Commerce and the American Association of China have issued formal protests against Japan's unfair discriminatory measures, which range from putting American trade marks on her own cheap imitations, to the entire exclusion of American goods by excessive taxes or railway rates. Mr. T. F. Millard, an authority on China and the Far East, in his testimony before the Senate Foreign Relations Committee stated that it was Japan's intention to force all American trade with China to pass through her hands. Thus the Japanese Government violated every principle of the Open-Door policy, if not with the active assistance of England, at least with her tacit consent. Japan would never have dared to violate a fundamental American policy had she not felt that the greatest navy in the world would at least "keep the ring" for her.

#### VICIOUS AGGRESSIVE POLICY

It was not until 1915, however, that the most vicious nature of Japan's aggressive policy came to light. While the allied nations were busily engaged in the war, Japan took advantage of this situation to present to China her infamous twenty-one demands. The disgraceful method by which Japan on this occasion attempted to force her domination down the throat of a helpless people will always remain as the supreme example of the national perfidy and callousness to which a bureaucratic nation's belief in her divine mission to force her leadership on weaker peoples can drive her. When Japan's real intention to sub-

jugate China was discovered, she made some awkward attempts at explanation. Her chief excuse was that she intended to establish a Monroe Doctrine over Asia. Let us not be deceived. To America, the Monroe Doctrine represents a check on imperialistic aggression and a protection of democracy; to Japan it means the predominance of a strong nation over weaker nations.

Suppose the United States had used the Monroe Doctrine to apply in South America a commercial and political policy like that which Japan has practiced in Korea and Manchuria, and which is embodied in her demands on China in 1915. Suppose that the Monroe Doctrine should be construed to mean that no railway could be built in South America except under conditions dictated by the United States; that no mines or material resources could be exploited without first consulting the United States; that no foreign loan would be made without United States sanction; that Americans must be employed as political, financial and military advisers to the South American Governments; that the South American Governments must purchase at least half of their armaments from the United States; that American goods must be given a preferential rate, and that Americans must be heads of police in important South American cities. Every one of these conditions Japan has already put into effect in Manchuria, and wherever she has established a sphere of influence. These conditions were included among her twenty-one demands, by which she intended to subjugate China. Japan remembers and cherishes an undying hatred toward the United States, because it was America's official protest which made her give up the most objectionable of these demands.

#### AMERICA IN THE WAY

America realizes that she has definite obligations toward China; that those obligations are written into the fundamental policy of this nation. We

have been content in the past to answer Japan's interference with that policy by mere lip protest. But now that we are prepared, now that the leaders of our ever-increasing trade interests in China are complaining most bitterly against Japan's interference, the time is here when our protests will take a more material form. Japan realizes that America is the only country that stands in the way of her aggressive ambitions in the Far East and the Pacific. Her press convinces the people that America stands in the way of their daily bread, and that war would mean their economic emancipation; it threatens war if the United States does not recede. America will not recede. She has just fought a war for pure unselfish principle. How much sooner will she fight in this instance, where that same principle of "might makes right" is even more apparent—where a feudal yellow race is an even greater menace than was the Prussian autocracy—where not only fundamental principle but a basic foreign policy is at stake, to say nothing of the very large and legitimate interests of her Chinese trade.

We see Japan increasing her army from 1,500,000 to 4,500,000 men. We see her spending huge sums in a gigantic naval program. It is very questionable whether she will join the Great Powers in an agreement to reduce armaments. She is fanatically exploiting the raw materials of China for purposes of her own self-sufficiency. She is preparing her people for the coming war. America realizes that Japan's vast preparations are directed against her, and feels only too keenly the menace of the Anglo-Japanese Alliance.

#### TERMS OF THE ALLIANCE

Turning now to the Alliance itself, we find that Article II. of the 1911 pact reads as follows:

*If, by reason of unprovoked attack, or aggressive action on the part of any power or powers, either high contracting party is involved in war in defense*

*of its territorial rights or special interests mentioned in the preamble of this agreement, the other high contracting party will at once come to the assistance of its ally, and will conduct war in common and make peace in mutual agreement with it.*

This section of the treaty can mean nothing else than that, should the United States become embroiled in a war with Japan, England is bound to come to the aid of Japan. The express wording of the Alliance leaves no room for doubt concerning England's obligation. It explicitly places upon England the obligation to go to war against the United States in the event of hostilities between the United States and Japan.

Even more important than the exact wording of the Treaty of Alliance is the recent interpretation placed upon it. Treaties, like other laws, grow and expand by the interpretation placed upon them. It is less than seven years ago that occasion arose for the enforcement of the Anglo-Japanese Treaty—an occasion when this alliance was definitely and precisely interpreted by both England and Japan. Fresh within the memory of all is the incident to which I refer. In August, 1914, after Germany had sent her troops through Belgium, England, even before she formally declared war, sent a request through the British Ambassador at Tokio asking for Japanese aid under the terms of the Anglo-Japanese Alliance. K. K. Kawakami, eminent Japanese historian and political writer, describes in detail in his book, "Japan and World Peace," the conditions surrounding the Japanese entrance into the war. He states that Sir Conyngham Greene, the British Ambassador to Japan, on Aug. 3, the day before England declared war, made a formal request on the part of his Government for aid under the terms of the Anglo-Japanese Treaty of Alliance.

Baron Kato, Japanese Minister for Foreign Affairs, after conference with Count Okuma, then Prime

Minister, on the following day informed the British Ambassador that Japan would not evade the responsibilities she had assumed in entering into the alliance with Great Britain. Japan, upon the urgent request of the British Ambassador, decided to act at once, and on Aug. 14 sent an ultimatum to the Imperial German Government demanding the immediate release of all German connections in the Far East. In this ultimatum Japan officially set forth as the reasons for her demands the "safeguarding of the general interests as set forth in the agreement of alliance between Japan and Great Britain, and in order to secure a firm and enduring peace in Eastern Asia, which is the aim of said agreement." It must be borne in mind that this ultimatum refers in exact words to the Anglo-Japanese Alliance, and that it expressly states that such action was being taken in fulfillment of the Japanese treaty obligations.

#### WHY JAPAN DECLARED WAR

On Aug. 23, Japan issued a formal declaration of war, in which she again referred to the Alliance as the reason for her action. I quote the exact words of the Imperial Rescript declaring war which was issued at Tokio on Aug. 23, 1914. It says:

*We, on our part, have entertained hopes of preserving the peace of the Far East by the maintenance of strict neutrality, but the action of Germany has at length compelled Great Britain, our ally, to open hostilities against that country. Accordingly, our Government and that of his Britannic Majesty, after full and frank communication with each other, agreed to take such measures as may be necessary for the protection of the general interests contemplated in the agreement of alliance. We, in spite of our ardent devotion to the cause of peace, are compelled to declare war, especially at this early period of our reign.*

This document explicitly states that such action is being taken in fulfillment of the Anglo-Japanese Treaty of Alliance. Baron Kato, in an official address before the Japanese

Diet, explaining why Japan was forced to enter the war in 1914, said:

Great Britain was at last compelled to take part in the contest. The British Government asked the Imperial Government for its assistance under the terms of the Anglo-Japanese alliance. Therefore, inasmuch as she is asked by her ally for assistance at a time when the commerce of Eastern Asia, which Japan and Great Britain regard alike as one of their special interests, is subjected to constant menace, Japan, which regards the alliance as the guiding principle of her foreign policy, cannot but comply with such request and do her part. The Government, therefore, finally agreed to take such measures as may be necessary to protect the general interests contemplated in the agreement of alliance. Japan had no desire or inclination to get herself involved in the present conflict. She only believed that she owed it to herself to be faithful to the alliance and strengthen its foundation by insuring the permanent peace of the East by protecting the special interests of our two allied powers.

The statement of Baron Kato was further affirmed by his successor to the post of foreign affairs. Viscount Motono, in an official address to both houses of Parliament in 1918, said:

Our alliance with Great Britain always has been the fundamental basis of our foreign policy. It was above all things the reason why the Japanese participated in this war. Since then Japan has spared no effort to assist her ally.

In view of these facts, any open-minded student will be forced to the conclusion that Japan's entrance into the war was under a fair and frank interpretation of the provisions contained in the Anglo-Japanese alliance. England, by her formal request for Japanese aid, showed by that act that she regarded Japanese aid as a necessity for carrying out the provisions of this alliance. Japan, by her immediate action upon that request, left no doubt as to the interpretation of her obligations under the agreement of alliance. There can be no mistake, therefore, in saying that both England and Japan regarded the Japanese entrance into the war as an act in compliance with her undoubted

obligations under the provisions contained in the Anglo-Japanese alliance.

### ENGLAND LEGALLY BOUND

This being true, it must necessarily follow that England is in the same way both morally and legally bound to aid Japan in the event of a probable war between the United States and Japan. England is thus bound not only by the specific wording of the treaty itself, but also by the legal interpretation placed upon that alliance in 1914. The World War originated in Europe. It was entirely removed from the continent of Asia. It had not, in fact, touched the Japanese nation in any respect. Yet England and Japan both regarded Japan's entrance into the war as the only logical interpretation which could be placed on the Anglo-Japanese treaty of alliance. England's legal obligation also is plain.

The American people have been lulled into a feeling of security in regard to the alliance by the statements of a misinformed press. We have been told that Article IV., which was inserted into the treaty in 1911, obviates the obligation of England to participate in a Japanese-American war. Such a contention arises from a misunderstanding of the treaty obligations between the United States and Great Britain, and has absolutely no foundation in fact. Article IV. of the treaty states:

Should either high contracting party conclude a treaty or general arbitration with a third power, it is agreed that nothing in this alliance shall entail upon such contracting party the obligation to go to war with the power with whom such a treaty of arbitration is in force.

Article IV. does not in any way impair England's obligation to go to war against the United States under the terms of this alliance unless it can be definitely shown that a treaty of general arbitration exists between the United States and Great Britain. Such a treaty, however, does not exist, nor is such a treaty being consid-

ered by the United States. It is true that a treaty of general arbitration was formulated in 1911, but the United States Senate refused to ratify that treaty in March, 1912, with the statement that it would "never consent to a treaty of general arbitration between the United States and Great Britain." The only treaty concerning arbitration now in existence between the United States and England is one of the eleven so-called "Bryan treaties." This merely provides that before the United States and England declare war they must first submit their differences to a commission of inquiry. The treaty contains no provision that would prevent either power from declaring war after an inquiry has been made. It is, therefore, in no sense a treaty of general arbitration, and has never been interpreted as such. Since the treaty of general arbitration failed of ratification in March, 1912, there is nothing whatsoever in the form of a treaty that would fall within the meaning of Article IV. of the Anglo-Japanese Alliance.

It is evident, therefore, that Article IV. of the Treaty is inoperative as far as the United States and Great Britain are concerned. England's moral and legal obligation to go to war against the United States in the case of war between the United States and Japan remains unimpaired.

It is for these reasons that the Anglo-Japanese Alliance menaces the future friendly relations between the United States and Great Britain. The fact itself that England has pledged her honor and respect among the nations of the world to the fulfillment of an alliance with a potential enemy of the United States—an agreement which, by its express wording and explicit interpretation, obligates England to go to war against the United States—is a menace to British-American relations. It is realization of this fact that has caused so many members of the British Empire itself to come out in open opposition to the

Anglo-Japanese Alliance. As the Hon. Earnest G. Theodore, Premier of Queensland, recently remarked:

My recent visit to America has convinced me that much of the regrettable misunderstanding between this country and England is due to the Anglo-Japanese alliance. The treaty will never be understood by our cousins across the Atlantic, who have adopted the maxim of trusting to God and keeping their powder dry.

Picture the situation, with the United States situated between the two greatest naval powers of the world, who are bound in an alliance to the fulfillment of which they have pledged their national honor, an alliance which specifically binds them to the conduct of a war in common against any third power, an alliance

which drew Japan, without hesitation, into the European war on the side of England, an alliance which leaves no room for doubt concerning England's obligation to go to war against the United States in the case of Japanese-American hostilities. Situated as we are between these two great naval powers, beholding the rising power of Japan, and realizing that England is bound to Japan in such a treaty of alliance, we can never regard England as a friend or even as a neutral in the causes of friction which now exist, or in those which are likely to exist, between the United States and Japan. As long as this alliance continues we must regard England, even as we regard Japan, as a potential enemy of the United States.

#### SOVIET RUSSIA'S TREATIES WITH AFGHANISTAN AND PERSIA

A TREATY of amity and alliance between Soviet Russia and Afghanistan was signed at Moscow on Feb. 28, 1921, and thereby the Bolshevik leaders acquired one more means of influencing or controlling events on the border of British India. Russia agrees to hand over to Afghanistan certain frontier territory which belonged to her in the last century, and guarantees the independence of Bokhara and Khiva. Russia promises to give Afghanistan financial and other help, and a supplementary clause pledges the payment of a yearly subsidy of 1,000,000 rubles. This clause has been interpreted to mean that Afghanistan is now to all intents and purposes a dependency of the Moscow Government, and will be compelled to obey the dictates of Lenin and Trotzky. As the British have already had serious trouble from the aggressive spirit of the Afghans on the Indian border, the new treaty has a special importance for them. A clause binding both Russia and Afghanistan not to enter with any third State into a military or political agreement which could damage one of the signatories, is evidently aimed at Great Britain.

The treaty of peace and alliance conclud-

ed by Soviet Russia with Persia on Feb. 26, 1921, is of somewhat wider scope. The characteristic Bolshevik declarations against monarchists and capitalists run like a red line through the text. All Czarist treaties, concessions, and loans are abjured. Russia gives up the grip which the Czar's Government had acquired on northern Persia. Each signatory acknowledges the sovereignty of the other, pledges itself not to harbor parties or forces hostile to the other, and agrees to come to the aid of the other if attacked by a third power. In case Soviet Russia is compelled to throw its armed forces into Persia in fulfillment of this agreement, it promises to withdraw such troops as soon as its military operations are concluded. Persia pledges herself not to transfer to third parties any concessions which Moscow has returned to her. A curious stipulation is contained in Clause 15, which declares that Russian Orthodox religious missions in Persia, as in other countries of Islam, were merely part of the "rapacious intrigues of Czarism;" the treaty withdraws all missionaries from Persia and hands over the mission properties to the Persian Government.

# THE PLIGHT OF CHINA

BY JESSE WILLIS JEFFERIS

*Nation torn between two contending Governments—That at Canton, headed by Sun Yat-sen, has the higher democratic ideals, while that at Peking has the greater strength and recognition—Danger of a coalition of Japan and China to fight Western imperialism*

THE recent return of Dr. Sun Yat-sen, father of Republican China, to the Presidency of the Southern Chinese Government, was disconcerting to the militarists at Peking and displeasing to the monarchists at Tokio, who realize that the strange doctrines of republicanism introduced by "foreign devils" will continue relentlessly to gnaw away the foundations of political principles and traditions 4,000 years old. On his assumption of office, Dr. Sun issued a manifesto to all foreign powers and a special appeal to the United States, setting forth the abuses of the Peking Government, the state of anarchy into which the country had fallen, and the patriotic aims of the Southern leaders. [The full text of these documents will be found on Pages 749-753.]

In the past, Peking officials have viewed with contempt the struggles for liberty of the revolutionaries in South China, who had the temerity to secede from the Central Government; but now Peking's financial plight is so serious as to dislocate the arm of her military power and to result in the dissolution of her Parliament, the liberal members of which have voted to join the Extraordinary Assembly convened at Canton under the leadership of President Sun Yat-sen.

The present outlook is worrying Japan, which has effectively used Peking as a pawn, but is now threatened with a checkmate by Canton. A Government genuinely republican is likely to prove unmanageable. To direct the policies of a Manchu monarch, or to bribe the military Gov-

ernors of Chinese provinces, would not be an insuperable task; but the seeds of democracy planted in the Flowery Kingdom threaten a political upheaval so momentous, irresistible and far-reaching as to be felt around the world.

To meet this critical situation, a conference of Inspector Generals was hastily summoned by Premier Chin of the Peking Government to assemble at Tientsin. The program proposed to further the reunification of China was as follows:

1. The military suppression of the Mongolians, who are fighting for the restoration of autonomy.
2. Reorganization of the Peking Parliament.
3. The arrest of President Sun Yat-sen.

Although Sun Yat-sen was elected to the Presidency by the National Assembly of South China in April, congratulations have not been received thus far from the provinces of Huan, Szechuan, Yunnan and Kweichow. This is owing to the fact that General Wang Chan-yuan is organizing a separate federation of six neutral provinces, which have agreed to establish their capital at Hupeh, to pool their finances, to raise an army for "driving out bandits," and to prevent Peking from forcing these provinces to accept military Governors.

Thus the Peking Government hopes to reunite China by refusing autonomy to Mongolia, by centralizing so far as possible the military power and resources of the refractory provinces, and by crushing out democracy, for which, it is said, the provinces are totally unfitted both by

nature and by tradition. In view of the difficulties which beset the citizens of the American Commonwealth in their efforts to realize the principles of true democracy, the militarists of Peking and the monarchists of Tokio perhaps have some reason for the conviction that 400,000,000 Orientals—Manchus, Chinese, Mongols, Mohammedans and Tibetans—who have been self-governing only in local communities, cannot at present be welded into a national union under a republican form of government.

This was the view taken by Professor Goodnow of Columbia University, who, in 1915, as constitutional adviser to President Yuan Shih-kai, published a pamphlet to show that a monarchy was more suitable to China than a republic. Advice from so authoritative a source was cheerfully adopted by President Yuan Shih-kai, who declared his intention to ascend the throne as "The Son of Heaven," despite the fact that he had cast hundreds of Chinese into filthy jails for daring to suggest such an unpopular idea; for the revolution in favor of a republic had swept thirteen out of a total of eighteen provinces.

A retrospect of the political anarchy which has prevailed in China since the outbreak of the revolution in 1911 is likely to lead to the conclusion that the awakening of the "Sleeping Dragon" from its 4,000 years' state of suspended animation was entirely too rude and abrupt, resulting in a reaction of racial ill-humor which only time can mollify. The sudden transition from a paternal despotism to a republic has been followed by an upheaval comparable almost to that which resulted from Russia's leap in the dark from Czarism into Bolshevism. If the Manchus and the present Peking Government had been willing to follow the constitution proposed by the Chinese liberals, the Flowery Kingdom would never, like Gaul, have been divided into parts, waiting for a conqueror. The natural political evolution of China should have been from a des-

potism to a constitutional monarchy, and finally to a republic.

The independence, arrogance and venality of the Tutchuns, or provincial military Governors of the North, are today the chief impediment to the reunification of China. Controlling, as many do, not only the finances, but the military power of the provinces, they are often able unduly to influence the policies of Canton and Peking; for without the support of these ambitious Generals comparatively nothing can be accomplished. It would seem that only such a civil war as was fought in America for the preservation of the Union can solve the problem of State rights in China and guarantee the sovereignty of the republic.

#### THE "WHITE PERIL."

Reunification must be realized without delay, or China will suffer the fate of Turkey and the Holy Roman Empire; for the yellow race is confronted as never before with the "white peril," more ominous and overwhelming than the terror inspired among the inhabitants of the Pacific Coast by the peaceful invasion of the little, almond-eyed men from the Kingdom of the Rising Sun. The militarists of Japan realize that only a solid yellow front can withstand the imperialism of the Western nations. "Without China, Japan would have lost her independence," says Dr. Uesugi of the Imperial University of Tokio. "The establishment of friendship between Japan and China is the question of the whole Asiatic continent."

The overthrow of the Government of Sun Yat-sen and the restoration of the monarchy in China is openly espoused by Japan, which sees in such restoration its hope for the reunification of China and the formation of an Asiatic League of Nations. "We sincerely hope that under the leadership of General Chang Tso-lin of Mukden the monarchy will be restored," says *The Herald of Asia*, a leading Japanese weekly published in Tokio. "China needs now nothing so ur-

gently as a period of strong discipline under centralized authority."

A union of the yellow race for protection against the imperialism and commercial exploitation of Western nations is no more impossible than the long-discussed British-American alliance to preserve world peace; for China, of which Japan was formerly a dependency and from which she received her early culture, is just as truly the mother country of the Kingdom of the Rising Sun as England is the mother country of America. "China has three enemies, of which Japan is *not* one," says Dr. Wang Chung-hui, Chief Justice of the Supreme Court of China. These three enemies, he says, are:

1. Article XXI. of the League of Nations, laying down the doctrine of regional understanding—a direct challenge to China's integrity.

2. The Anglo-Japanese Alliance, which will lead to war, with China on the side of America.

3. The Lansing-Ishii notes, upholding the doctrine that geographical propinquity confers rights.

The Anglo-Japanese Alliance, which may ultimately be renewed, though with modifications, is viewed with apprehension by the Chinese, who regard this pact as a "robbers' agreement," by which England and Japan will protect each other in the exploitation of the Far East. If, however, the alliance is not renewed, Japan and China are likely to be drawn closer together than they ever have been since the close of the Chinese-Japanese War in 1894.

#### SINO-JAPANESE SOLIDARITY

"We should make the control of China's foreign policy and the management of her internal financial and military affairs our goal," says Mr. Uchida, member of the Japanese House of Peers, "thereby establishing an Eastern Asiatic Federated Empire, with Japan as its leader."

But Japan must return to China Germany's former rights in the Province of Shantung, together with the

control of the Tsinanfu-Shunteh and Ksomi-Hanchow Railroads.\*

Japan must also relinquish the special privileges procured under duress from China; they are wholly inconsistent with the policy of the "open door," which guarantees equal opportunities for the commerce of all nations. By securing an abundance of China's raw materials, Japan, with her cheap labor, would be able to underbid the merchants of the Western world.

Left alone, China will be unable to withstand the overwhelming pressure brought to bear upon her by Japan, which now has a preponderating influence in South Manchuria, East Mongolia and other coastal provinces. No Napoleon is needed to warn us of the danger that Japan's militarization of China might lead eventually to an Asiatic invasion of Europe, already prostrated by the most destructive war in history. Accordingly, the relations between China and Japan may largely decide the future of civilization.

The policy of an "open door" in China for the commerce of all nations, as enunciated by President McKinley in 1908; the proposal by Senator Knox in 1915 to neutralize the railroads of Manchuria, when threatened with domination by Japan; President Roosevelt's act in returning to China America's share of the Boxer indemnities, to be used for the education of Chinese youth in the colleges of the United States, and President Wilson's plea for the political unity of China at the outbreak of an armed conflict between North and South over the Manchu restoration—all these have tended to create the conviction among the Chinese people that America is a genuine and disinterested friend.

Not until the dispatch of the Lansing-Ishii note, Nov. 15, 1917, recognizing the principle that terri-

\*China's firm refusal to negotiate with Japan over Shantung, or to accept other than an unconditional restoration of Shantung and all rights previously enjoyed by Germany, was again emphasized by China through Dr. W. W. Yen, Chinese Minister for Foreign Affairs, on June 22.

torial propinquity creates special interests for Japan in Chinese territory, and President Wilson's acceptance under protest of the "Shantung infamy," a dagger aimed at the heart of the Chinese Nation, did America's influence in China begin to wane. The fact that both countries have repudiated the Versailles Treaty remains, however, a hopeful sign that they will stand together when the real test comes regarding the justice of the provisions governing China and the islands in the Pacific.

#### STATUS OF THE CONSORTIUM

Commercial competition, which many concede was the cause of the last great war, will probably result in a conflict between the white and yellow races, unless it is superseded by economic co-operation. The dismemberment of China will continue until her political entity and national sovereignty are sufficiently secure firmly to resist foreign encroachments.

Undoubtedly, the most efficient measure for the reconstruction of China is the new financial consortium of Great Britain, France, Belgium, Japan and the United States, through which loans may be advanced to the Chinese Government, not for special privileges, not for further disorganization of the struggling republic, but for the building of railroads, highways, &c., and for the reorganization of China's decentralized banking system. This international con-

sortium, headed by Thomas W. Lamont, may not only enable America to treble her trade with China, which now totals \$400,000,000 a year, but, best of all, will tend to relieve China from the pressure of external interests and from the civil strife within, both of which are now threatening her very life as an independent nation.

But this program of fair play can never be put into operation until it has the support of the Chinese Government, which now realizes that it has been sadly demoralized by Japanese loans, made ostensibly for industrial development, but actually for political disorganization, in order that Japan might fish in troubled waters. Neither can China ever function as a nation so long as it is divided into warring factions.

At the present moment, President Sun Yat-sen of South China is anathematized in the North as the Jefferson Davis of the Southern secessionists. Premier Chin, the recognized head of the Peking Government—said to be the puppet of General Chang Tso-lin, the Military Governor of Manchuria, and of General Tsao Kun, the Military Governor of Chi-li—is denounced by the liberals of the South as a hopeless reactionary. Only a Chief Executive approved by both factions and powerful enough to force into line the Governors of the provinces, most of which are practically independent, can restore the political unity of China.

#### SUIT OF THE INVENTOR OF MELINITE

**Y**EAR ago a French inventor named Turpin filed a copyright with the Patent Office of his Government for the invention of a picric acid explosive. The process was rediscovered by two French army officers and used by the French Army under the new name of melinite. Four years before the war the French courts admitted M. Turpin's claim to the invention of melinite, and ordered the Government to pay him \$20,000 damages, plus an annual income of \$4,000. Not satisfied with this, M. Turpin has now brought suit against

the Government, demanding royalties on every recoiling cannon manufactured in France for either national or foreign use. He asserts that he is the original inventor of every high explosive, every cannon, shell and bomb used by the belligerent armies in the World War—even trinitrotoluene, the French seventy-five and the universal detonators—and gives proof that he has covered all these inventions by patents in the last thirty years. If the French courts recognize his contentions, he may yet become a multimillionaire.

# CHINA AND THE ANGLO-JAPANESE ALLIANCE

BY SAO-KE ALFRED SZE\*

Chinese Minister to the United States

*Why the United States and China should be consulted in arranging any renewal of the pact between Japan and Great Britain—The only guarantee of peace in the Far East—Avowed objects of the alliance summarized in clear terms*

IT has been said that an agriculturist is one who can make two blades of grass grow where only one grew before. So a banker may be defined as one whose business it is to produce two dollars with one. Where can money be placed to the best advantage? Economists tell us that materials, labor and capital are the essential elements of production. Capital is what bankers deal in. In order to make capital productive they have to seek a combination of materials and labor. Like Alexander, they are always seeking more worlds to conquer. What country presents a more alluring prospect for the investment of capital than China? Within its limits may be found everything that satisfies human wants. It has all the raw materials that are essential to industrial progress.

Take the Province of Shansi, for example. This province lies just north of the Yellow River. It is an immense coal bed. With modern methods of development, this region may some day rival Eastern Pennsylvania in anthracite production. There is the Province of Sechuen. This is a western province of the republic, bordering upon the Tibetan plateau. It is walled in on all sides by lofty mountain ranges. It has always been known as the treasure house of China. Salt, petroleum, gold and other metals are found in sufficient quantities to meet a constant demand. Its vegetable products, such as wood oil, are growing in commercial importance. I might

go on and tell of the products of the other provinces, but this is enough to show what opportunities American capital has in China's development. It is hardly necessary for me to say that China can furnish all the labor required for all industrial purposes. In fact, her economic strength lies in her labor. To provide employment for Chinese labor at home may solve a great many problems that are confronting other countries. China may be said to be a country of the future, and as such it presents immense possibilities and great opportunities for all.

## THE ANGLO-JAPANESE ALLIANCE

I have been asked to say something about the Anglo-Japanese Alliance. This is treading on very treacherous ground for a diplomat. When John Hay was Secretary of State, it was the custom for a newly appointed Minister to come to Washington some time before proceeding to his post, for the purpose of receiving instructions. One newly appointed Minister came to Washington and went to the State Department every day for a month to receive instructions, but got none. At last, when it was about time for him to leave, he called on Secretary Hay to say good-bye, and as he was about to go he asked the Secretary about

---

\*This article by the Chinese Minister at Washington is based upon a speech which he delivered before the New York State Bankers' Association in Atlantic City, June 24, 1921.

his instructions. For the moment the Secretary did not seem to understand what he meant. The Minister then explained that he had been in Washington for a month to receive instructions and had not yet got them. The situation began to dawn upon the Secretary, and he simply answered: "Make no speeches." This is good advice for all public men to follow. Many have disregarded this advice and got into trouble. One reason is that a speaker is apt to be misquoted. Another reason is that words when detached from their connections often take on different meanings. You will recall a very recent instance of this with reference to a very distinguished Ameri-

can naval officer. But on questions of the day it is sometimes desirable for public men to make their views known in order to clear the atmosphere. Among friends I have no hesitation in speaking my mind freely on the Anglo-Japanese Alliance, but it must be understood that I am speaking now not as a representative of the Chinese Government, but only as a private citizen of the Chinese Republic.

What is the Anglo-Japanese Alliance? It is a warlike measure designed by England and Japan to protect their interests in the Far East. Its avowed object, as set forth in the preamble of the agreement, has a threefold aspect, namely: (1) The consolidation and maintenance of the general peace in the regions of Eastern Asia and India; (2) the preservation of the common interests of all powers in China by insuring the independence and integrity of the Chinese Empire, and the principle of equal opportunities for the commerce and industry of all nations in China; (3) the maintenance of territorial rights of the high contracting parties in the regions of Eastern Asia and of India, and the defense of their special interests in the said regions. The alliance has a ten-year term, which expires in July. Accordingly, the question is now before the two countries for the third renewal.

#### CHINA NOT CONSULTED

You observe that this alliance has a good deal to do with China, but China has nothing to do with it. Here is an agreement vitally affecting China, but China has not even been consulted in its making. You will agree with me that any nation would resent such treatment.

The Chinese people, therefore, have good reasons to object to the renewal of the alliance. They regard the situation as intolerable. The sentiment against a renewal is growing in intensity and strength all over the country. The press has taken the matter up, and the Provincial Gov-

(© Harris & Ewing)

SAO-KE ALFRED SZE

*Chinese Minister to the United States*

ernments have made official inquiries of the Central Government in regard to it. The Chinese people are aroused as a nation and have raised their voice against it.

The preservation of peace in the Far East is a matter of such supreme moment that it concerns not only England and Japan, but other countries as well. China and the United States ought to have something to say in the matter.

With the possession of the Philippine Islands and Guam the United States may be considered as an Asiatic power. China occupies a large portion of the Continent of Asia. Under the circumstances, China and the United States have certain rights to be consulted in all matters pertaining to the Far East. An agreement for guaranteeing peace in the Far East, therefore, should include China and the United States as parties. Unless China and the United States become parties to the agreement, I cannot see how peace in the Far East can be made enduring.

Some years ago the A B C powers were instrumental in promoting peace

on the American Continent. You may be interested to know that there are A B C societies formed in China for international co-operation, A representing America, B Britain and C China. The object is to secure Anglo-American co-operation in the development of China. Such co-operation the Chinese people welcome.

As I have been so long in England, I know pretty well the general sentiment of the British people on the subject. It is fortunate for the world at large that the same guiding hand that led the British Nation through a successful war is still at the helm of British affairs. Mr. Lloyd George, who has seen so much suffering and misery inflicted by war, will not permit the peace of the world to be again disturbed. I feel sure he will in time find a way to get China and the United States into his confidence in affairs of the East. With Mr. Lloyd George at the head of the British Government the problem of the Pacific will be solved, I believe, with the same statesmanlike wisdom that has marked the handling of other momentous questions in the last few years.

## THE PASSING OF THE DREADNOUGHT

IT was announced by the British Admiralty on June 1 that the old battleship Dreadnought, first of a famous class, was to be broken up. The Admiralty has sold the once mighty vessel, which blocked all the Kaiser's naval ambitions, together with over 100 other obsolete battleships, cruisers, monitors, destroyers and torpedo boats. Launched on Feb. 2, 1906, with her ten 12-inch guns, her complete armored belt and her speed of twenty-one knots, she not only made the rest of the British fleet obsolete, but also the rapidly growing fleet on which the Germans were building their hopes. The Dreadnought meant that the Kiel Canal had to be widened, the locks enlarged and the docks rebuilt. German time and money that might have been spent on constructive work

were wasted on mere alterations. Though the design was varied, every capital ship laid down by every country since then has been built on the all-big-gun model of the Dreadnought. This new battleship type, initiated by the late Lord Fisher, was a stroke of genius. When the great conflict began in 1914, Great Britain held an unquestionable advantage on the sea. And now, only fifteen years after King Edward VII. launched the great vessel at Portsmouth, with Lord Fisher standing at his side, the Dreadnought goes to the scrap heap, hopelessly obsolete. Such is the speed of naval progress: sic transit gloria. The advocates of a naval holiday—a period of lessened activity in battleship building—have here an argument on their side.

# DOCUMENTS BEARING ON CHINA'S DESTINY

*Dr. Sun Yat-sen's proclamation against the Peking Government, with his special appeal to the United States for recognition of the Canton Government—South China's charges against Japan—Peking speaks on Shantung—Important declaration of the United States regarding the "open door"*

THE split between North and South China was accentuated by the return of Dr. Sun Yat-sen, the first Provisional President of the Chinese Republic, to the office of President under the new Canton régime, on May 5, 1921. On his assumption of office Dr. Sun issued a proclamation addressed to all the foreign powers. In this he set forth the deplorable state into which China had fallen, bitterly attacked the Peking Government as illegal and undemocratic, declared himself the constitutional leader of the whole country, laid down his program for reunification, and appealed to all the powers to recognize his Government. The text of this proclamation follows:

During the last four years the patriots of China have been waging war against the militarists and traitors of the country for the cause of constitutional government and for national existence itself. It has been no war between the North and South of China, but a struggle between militarists and democracy, between treason and patriotism. That the people in the North are sympathetic with the purposes and aims of the South has been demonstrated by the fact that they have spontaneously organized demonstrations and boycotts for the same purposes and aims.

The Government at Peking has lost the last vestige of its control over the provinces—even those nominally within its jurisdiction—where the military satraps are plundering the people and ruining the country. These militarists wage war among themselves in the struggle for power. One of them has lately gone to the extent of treacherously leaguering himself with the Russian monarchists, and aiding and abetting them to attack and capture Urga.

While the Peking Government is fast crumbling from sheer hollowness, foreign domination tends to spread from north to south. The existence of China as a nation is in jeopardy. Since the unconstitutional dissolution of the National Assembly in June, 1917, no de jure Government has existed in Peking. New election laws may have been made and new National Assemblies may have been elected, but they all lack legal basis. Confirmation of this has come from an unexpected quarter—from Hsu Shih-chang himself, when he issued the order in October last for the holding of a general election, based, not on the new election law which is the basis of his own title, but on the old election law, which is incompatible with his claim to the Presidency. The extraordinary spectacle is thus presented of the self-styled President of the republic confessing that he has no legal right to that title. Thus in this hour of crisis, when the national existence itself is imperiled, there is in Peking no Government which is legally constituted or able to discharge the functions of Government.

Under these circumstances the National Assembly, the only body of legally elected representatives of all the provinces and territories of the country, has established a formal Government and has elected me to be President of the republic. Being the founder of the republic, I cannot afford to see it in danger without making an effort to save it. Having been summoned once before—in 1911—to the Presidency, from which I resigned after a short tenure, in order, as I thought, to bring about unity to the country, I intend now to do all in my power to discharge those duties and functions honestly, faithfully and to the satisfaction of my fellow-citizens.

As the National Assembly which has elected me represents the whole country, irrespective of north or south, so it shall be my first endeavor to unite all provinces and territories of the republic under one Government, which shall be progressive and enlightened.

The legitimate rights of foreign powers and their nationals, duly acquired by treaty, contract or established usage, shall be scrupulously respected. The vast resources of the country, natural and industrial, shall be developed so that the whole world, suffering from the disastrous effects of long years of war, will be benefited. For this purpose foreign capital and expert knowledge will, in pursuance of the open-door policy, be welcomed. There is little doubt that with the Southern provinces enjoying good government and prosperity under honest administration and a constructive program, other provinces will be only too ready to throw off the yoke of militarism and misrule, and, acknowledging the authority of this Government, bring about the much-desired unification of the country. I believe my task is lightened by the fact of the illegality and incompetency of the Peking Government. That Government is not recognized by the Chinese people themselves, but is being propped up solely by its possession of the historic capital of the country and its consequent recognition by the foreign powers.

I appeal to the Governments of the friendly powers to withdraw recognition from the soi-disant Government which is avowedly no *de jure* Government, and which is proving itself not even a *de facto* Government. And, in the same manner in which they recognized the republican Government formed by the National Assembly in 1913, I request that they accord recognition to this Government formed now by the same Assembly. This is the only Government of the republic actuated by no desire of selfish gain, but by the sole motive of serving the republic to the best of its ability. Members of this Government represent those ideals and those principles which, if the republic is to survive and take its rightful place in the family of nations, as they firmly believe it will, must necessarily triumph, *viz.*; liberalism, constitutionalism and devotion to the common weal.

#### SPECIAL APPEAL TO AMERICA

To the United States, however, Dr. Sun made a special appeal for recognition, believing that the American Government, pre-eminently, was the friend of democratic China and her protector by virtue of the Hay doctrine of the open door, which is characterized as the "Monroe doctrine of China." The text of this appeal, dated May 17, 1921, was obtained for CURRENT HISTORY from Ma Soo, the

unrecognized representative of the South China Government at Washington. It is addressed to President Harding and reads as follows:

Your Excellency:

I have just issued a manifesto to the Friendly Nations, but I am impelled, on behalf of my countrymen, to make a particular appeal to your Excellency, for the reason that we regard America as the Mother of Democracy and the champion of liberalism and righteousness, whose disinterested friendship and support of China in her hour of distress has been demonstrated to us more than once. China is now in the most critical time of her existence. Whether democracy triumphs or fails, much depends upon the decision of America. This time we look again to America to support righteousness and to help uphold the will of the Chinese people.

As I have shown in my manifesto to the Friendly Nations, the so-called war between North and South China is not a war between the different sections of the country, but a national struggle between militarism and democracy, between treason and patriotism. That the people in the North are sympathetic, and are working in co-operation with the South, has been demonstrated by the fact that they have spontaneously organized demonstrations and boycotts in order to fight against the foreign oppressor who supports these traitors.

When, at the end of the great war, the powers advised us to cease fighting and bring about the unification of the country, the South complied by meeting the North at a conference in Shanghai. The South was ready, for the sake of early restoration of peace, to yield in practically everything, on one condition, namely, that the Peking Government should repudiate all the secret treaties and, in particular, the Twenty-one Demands of Japan, which were contracted after the illegal dissolution of Parliament, and which were merely the bait offered by the Emperor Yuan Shih-kai for the recognition of his abortive empire. But this simple and just demand of the South was rejected. The South being unwilling to sacrifice national independence for a nominal unification, the Peace Conference came to a deadlock, and the state of war continued.

Furthermore, it was simply the weight of public opinion in China that forced China's delegates to the Peace Conference at Paris to present an appeal for the restoration of Shantung to China. The Northern militarists, however, worked secretly against this appeal, for should Japan be forced to re-

turn Shantung, they would lose the material support of Japan.

The internal condition of China has gone from bad to worse. While the people of North China are dying by the millions from starvation, food in abundance is "cornered" by these militarists around the famine districts for the sake of self-gain. This is proved by the fact that when some foreign philanthropists offered a large quantity of rice to relieve the famine situation, the Chinese Famine Relief Society declined the offer in kind, but requested in its stead the equivalent in money, on the ground that plenty of food can be gotten even in the famine areas.

Such is the state of affairs in China that unless America, her traditional friend and supporter, comes forward to lend a helping hand in this critical period, we shall be compelled, against our will, to submit to the Twenty-one Demands of Japan. I make this special appeal, therefore, through your Excellency, to the Government of the United States to save China once more; for it is to America's genuine friendship, as exemplified by the John Hay Doctrine, that China owes her existence as a nation. The John Hay Doctrine is to China what the Monroe Doctrine is to America. The violation of this Hay Doctrine would mean the loss of our national integrity and the subsequent partitioning of China. Just as America would do her utmost to keep intact the spirit as well as the letter of the Monroe Doctrine, so we in China are striving to uphold this spirit of the John Hay Doctrine. It is in this spirit, therefore, that I appeal to the author of the John Hay Doctrine to befriend the Chinese Nation again in this hour of her national peril, by extending immediate recognition to this Government. (Signed) SUN YAT-SEN.

#### JAPAN ARMS NORTH CHINA

The new South China Government shortly after its inauguration found itself called upon to renew actual fighting with its northern opponents, and according to charges made by Dr. Wu Ting-fang, the Foreign Minister in Dr. Sun Yat-sen's Cabinet, these continuers of civil war were armed and even officered by the Japanese. Ma Soo, the Washington representative of Dr. Sun, received a long dispatch from Dr. Wu on July 7 in which an account was given of the circumstances under which the militarists of Kwangsi, the province

bordering on Kwangtung, invaded the latter territory and how they were finally repelled. The dispatch, which made serious charges against Japan, reads as follows:

War has been forced upon the people of Kwangtung. We have been at pains to preserve peace in South China, so that industry might be developed and business prospered, but we are not permitted to go on with the peaceful development of the province. The Kwangsi militarists, urged by the war lords in North China and aided by funds from Tokio, have been for the last three months harassing the borders of Kwangtung. In several places they have crossed the boundary line and disturbed the peaceful inhabitants.

Instead of repelling the marauders by force, we withdrew our troops further into the province, hoping that time and reason would lead them to see the injustice of their actions, but our patience has been mistaken for weakness, and on May 22 a large force of Kwangsi militarists boldly marched across the border line and many miles into Kwangtung, plundering the city of Ling Shan, in the southwestern part of Kwangtung. Our soldiers urged them to withdraw, but in answer they fired upon them. Then our soldiers drove them back, and since then there has been fighting in many places along the border line. On June 30 our troops met the Kwangsi forces near Wuchow, the most important commercial city in Kwangsi, situated about 100 miles from the City of Canton.

We succeeded in capturing that city after a severe battle, but in the struggle we discovered that we were not fighting against the Kwangsi militarists alone. There were many Japanese fighting in their ranks. The Japanese Captain Nagamura directed the Kwangsi forces in that campaign, and many of the arms and munitions that fell into our hands with the capture of the city were of Japanese manufacture. We have also just discovered that the Japanese steamer Kogawa Maru, laden with arms and ammunition destined for Kwangsi, is now in the Port of Shanghai ready to sail for South China.

As there is an understanding among the different powers not to permit the importation of arms and ammunition into China for internal warfare, call their attention to this flagrant violation of that understanding. The people of China cry for justice. They hope their cry will be heard by liberty-loving people of America.

## SHANTUNG PARLEY REFUSED

Despite the charge of the Canton Government that the Peking Government is in league with the Japanese in their encroachments on China, the Peking leaders continue to give signs that they have no intention of yielding to Japan in the matter of Shantung. The sending of Mr. Simpson ("Putnam Weale") to London to organize a whole campaign against Japan and the Shantung settlement demonstrated this quite recently. For many weary months Japan has used every persuasion to induce China to enter into discussions of the conditions under which the Shantung Peninsula might be returned to China. These invitations have been continuously refused. An official statement on the subject—the first in many months—was issued in Peking on June 22 by Dr. W. W. Yen, the Chinese Minister of Foreign Affairs. After asserting that China had always lost territory or prestige as a result of negotiations over international questions, Dr. Yen explained the Chinese view regarding Shantung as follows:

If Japan intends unconditionally to restore the German leased territory in Shantung and the inalienable rights and privileges formerly enjoyed by Germany, she should announce that fact to the world in unequivocal terms. If she proposes to make conditions for such restitution, she should likewise frankly announce those terms for all nations to pronounce judgment upon them.

China does not want an empty restoration, but wishes to know in advance what restoration is meant—what Japan proposes to do with all public buildings, docks, railway terminals, railways, mines, the property seized by Japan since her occupation by forced sale; the salt industry, and the revenues from the railways collected by Japan during her occupation. Let Japan go on record as to what she intends to do with these and other questions, and there will be no need for negotiations.

Furthermore, China does not wish to jeopardize her right to carry the Shantung question to the League of Nations by entering into direct negotiations. China does not purpose to permit Japan to cite such negotiations in support of possible opposition to submission of the question to that body.

China also would be lacking in proper consideration for the nations which have interested themselves in the Shantung settlement should she undertake to negotiate directly. This is particularly true with reference to the Senate and people of the United States, who have evinced a friendly desire to see China's interests safeguarded.

Internationalization of the port of Tsing-tao would meet with approval by China. It is in line with China's declared policy and action in throwing open various ports to international trade, and it is realized that it would be greatly to China's interest. The initiative in this direction, however, lies with China and not with Japan.

[For further details of Japan's foreign policy, see Page 887.]

## INSISTING ON THE OPEN DOOR

The Peking Government was much elated by a new declaration for the open-door policy in China, issued by Secretary Hughes in answer to a letter from Sao-ke Alfred Sze, the Chinese Ambassador at Washington, inquiring as to the attitude of the United States Government on the various complaints made by the British, Japanese and Danish Governments against wireless concessions granted by China to an American wireless company. The full correspondence was given out subsequently by Mr. Sze. The Ambassador's note, dated June 9, referred to the agreement made on Jan. 8 between the Chinese Minister of Communications, representing the Peking Government, and the Federal Telegraph Company, an American corporation, "for the erection and operation, as a joint enterprise of the Chinese Government and the American company, of stations for wireless communication." It further referred to the protests made by several of the powers, on the ground that previous rights granted to their respective nationals were thereby violated. The reply of the American Secretary of State was sent on July 1, 1921. Here is the official text:

I have the honor to acknowledge the receipt of your note of June 9, and in reply assure you that it is not the intention of this Government to withdraw

from the position hitherto taken by it in support of the rights accruing to the Federal Telegraph Company under the contract of Jan. 8 last. In its view, the communications which it has received from the other interested Governments, in reply to its inquiries as to the reasons for their protests to the Chinese authorities against this contract, tend only to confirm this Government in its belief that the adverse claims which have been urged as excluding the Federal Telegraph Company from participating with the Chinese Government in establishing wireless communications are founded upon assertions of monopolistic or preferential rights, in the field of Chinese Governmental enterprise, which cannot be reconciled either with the treaty rights of American citizens in China or with the principle of the open door.

Your reference to the principle of the open door affords me the opportunity to assure you of this Government's continuance in its whole-hearted support of that principle, which it has tradition-

ally regarded as fundamental both to the interests of China itself and to the common interests of all powers in China, and indispensable to the free and peaceful development of their commerce on the Pacific Ocean. The Government of the United States has never associated itself with any arrangement which sought to establish any special rights or privileges in China that would abridge the rights of the subjects or citizens of other friendly States; and I am happy to assure you that it is the purpose of this Government neither to participate nor to acquiesce in any arrangement which might purport to establish in favor of foreign interests any superiority of rights with respect to commercial or economic development in designated regions of the territories of China, or which might seek to create any such monopoly or preference as would exclude other nationals from undertaking any legitimate trade or industry or from participating with the Chinese Government in any category of public enterprise.

## HUGO STINNES, THE GERMAN CROESUS

TO say "Stinnes" today in Germany is to pronounce the German equivalent for "Rockefeller." This comparison is true, however, only as regards the enormous fortune which Hugo Stinnes, coal magnate, steamship owner and newspaper controller, has by a chain of fortunate circumstances, depending mainly on the war, but also on the man's undisputed commercial ability, been enabled to amass. Aside from his vast interests, or rather by means of the power they give him, this sinister-looking figure has become a political force. The *Economic Review* of June 10 describes him as follows:

He has the somewhat squat figure of a country parson; his swarthy complexion and black hair and beard have earned him the name of "the Assyrian," the gaze of his narrow eyes under heavy eyebrows is penetrating, his mouth is hard and long, with thin lips. \* \* \*

The leader and financier of the German Popular Party, he is now, from both the economic and the political standpoint, a central figure of public life, and it is even said that the *Fahrenbach* Cabinet did not

dare to reach any decision without hearing his views. While his vast industrial undertakings spread further and further through Germany, and his numerous newspapers give the law to the rest of the press, he is proclaimed by the ultra-pan Germans as the legitimate successor of Bismarck. To the Socialists, naturally, he is anathema as the incarnation of capitalism and reaction.

Stinnes has reached his present position within thirty years. Only 50 years of age, he started his career at Mülheim on the Ruhr with a capital of 50,000 marks. The stages of his rise were through the sale of coal to the acquisition of mines, from iron and steel production to shipping. The chief purveyor of military supplies for the German Government during the war, he charged and received fabulous profits, plunged into politics, bought newspapers (including the official organ of the Government, the *Deutsche Allgemeine Zeitung*) and even the *Hirsch* Telegraph Union, indispensable for the lesser German press. Today he seems to be on the way to buying up all Germany.

# MUSTAPHA KEMAL AND THE GREEK WAR

BY CLAIR PRICE

An American newspaper correspondent who has lived in the Near East

*What the Turkish Nationalists under Mustapha Kemal are fighting for, and how the fate of Europe may hang upon the decision of their war with the Greeks—Why the struggle centres about the Treaty of Sevres—Constantinople the key of the situation*

THE new campaign begun about the middle of July by King Constantine and his Prime Minister against the Turkish Nationalist forces under Mustapha Kemal Pasha may justly be said to involve the fate of Europe. The danger of this new war for control of Asia Minor is fully realized by some of the allied Premiers.

The war in Asia Minor between the Turks and the Greeks centres about the Treaty of Sèvres, which originally was wholly favorable to Greece and unfavorable to Turkey. The first trouble came when that treaty was modified at the London Conference held in February, 1921. Greece, seeing herself threatened with loss of the advantages gained under the original treaty, rejected the modifications decided upon by the Allies, and rushed into another war with Turkey, a war devised to enforce the Sèvres Treaty on a strong Turkish Nationalist Government, for whom that treaty is "suicide 400 times over." It is a war of peculiar futility, inasmuch as its outcome, whatever it may be, has yet to receive the consent of Russia—the senior partner to all settlements in Turkey, a senior partner temporarily laid up with troubles of his own. Until Russia guarantees a new régime over the Straits of Constantinople it is difficult to consider any such new régime as permanently written into Near Eastern history. The Russian Government has already repudiated the Near Eastern settlement which the Sèvres Treaty proposes. In its

treaty of last March with the Turkish Nationalists it announced its own policy respecting the Straits in the following language:

In order to secure full freedom of trade on and around the Black Sea, a conference of the neighboring States shall be called to draw up the necessary, detailed and authoritative statutes, which shall, however, in no way tend to diminish the absolute sovereignty of Turkey, or the security of the country and its capital, Constantinople.

Greece's disregard of such a pronouncement can hardly be accidental. One can look upon the blow which Greece has dealt the Turkish Nationalist Government only as an attempt to rush the imposition of the Sèvres Treaty during Russia's absence. In the light of France's coolness toward the Sèvres Treaty and of Italy's known hostility; in the light of the century of worry which Constantinople has occasioned the British Government, one may infer that the British are not disinterested spectators of this attempt to present the future Russia with a Greek *fait accompli* in the region of the Straits. One may go further and find in the present Greco-Turkish war a circumstance of the highest importance in connection with Great Britain's failure thus far to summon the general peace conference provided for in the Anglo-Russian Trade Agreement.

## THE RELIGIOUS ISSUE

But the Anglo-Russian struggle for the mastery of the East, a struggle

which has raged for more than a century from the Balkans to Burma, is not as historic an aspect of the Greco-Turkish war as the mediaeval religious issue which still abides between the Ecumenical Patriarch of Orthodox Christianity and the Caliph of Sunni Mohammedanism.

Judaism, Christianity and Mohammedanism have all sprung from the same corner of the earth. All three are monotheist religions with many elements held in common. Just as Christianity may be looked upon as Judaism plus the Messiahship of Jesus, so Mohammedanism may be looked upon as Christianity plus the sword of Mohammed; for Mohammed did not come to reveal a new religion, but to convert the world to the religion revealed before him by Moses and Jesus. Yet, closely related as they are, the respective believers in Christianity and Mohammedanism probably hate each other more than the

devotees of any other two religions on the face of the earth; the memory of the great Mohammedan conquest is too green in Christian minds to permit of peace.

It is idle to point out that Europe no longer lives in the Middle Ages, that wars arise nowadays out of politics rather than religion, that the Sign of the Cross has been somewhat eclipsed of late by the Sign of the Factory Chimney. It is a waste of breath to point out that there are as good brains in Mohammedanism as in Christianity, and that the Near East has abundant need of both, if its broken pieces are to be picked up and put together again. For Europe is still a small continent completely surrounded by Mohammedanism and the sea. Good Europeans know what to expect of the sea, but not even the shrewdest of them looks upon Mohammedanism as a dependable force. Twice in the last dozen of centuries Mohammedanism has ripped and torn its way deeply into Europe. Once it was Charles Martel who flung the Arabs back from Tours; nothing now remains of that raid except the memory of the great days when Cordoba ranked with Bagdad as a seat of Arab learning. Later it was Vienna which twice stood like a rock in the path of the Grand Turk—and Constantinople is still a Turkish bridgehead. The Ecumenical Patriarch still wanders homeless among the churches he lost in Stamboul on the afternoon of May 29, 1453. Now that Russia for the moment is out of it, Greece has become the spearhead of Christian Europe, and the Greeks are ready to sound the Last Post over the Mosques of Stamboul.

No move in the history of Christendom has hurt Mohammedanism so much as the Treaty of Sèvres, and the association of Great Britain's name with that treaty is in marked contrast to the benevolent tradition which characterized British policy in Mohammedan countries down to 1914. Great Britain's historic enemy at

MUSTAPHA KEMAL PASHA  
*Commander-in-Chief of the Turkish  
National Army*

Constantinople has been Russia, and one may infer that the greatest Mohammedan power in the world would not have put its name to the Sèvres Treaty without a very urgent motive.

For the present, Greece has undertaken the imposition of the treaty on the Turkish Nationalist Government, and the Greco-Turkish war is being waged in the small ring of a world arena, an arena in which far greater issues are at stake than were settled in the great war. If, however, we may cut sharply away the endless ramifications of the Greco-Turkish war, we shall find that the Turkish end of the war presents a remarkable story in itself.

#### THE BRITISH OCCUPATION

The crash of the last three years' events in Europe still obscures the fact that the old Turkish Empire has at last been partitioned. When General Townshend, of Kut-el-Amara fame, led a Turkish delegation down to a British battleship off the Dardanelles at midnight of Oct. 30, 1918, what was left of Turkey consisted of about 300,000 square miles stretching from Bulgaria to Baku. The separate armistice with Great Britain, which the Turkish delegation signed that night, stipulated the withdrawal of the unbeaten Turkish armies in Transcaucasia behind the old Turco-Russian frontier, and Turkey thereafter, pending the signing of peace, occupied an area of some 250,000 square miles, with a population of some 10,000,000. Turkey then included only Turkish territory proper. The Arab countries from the Persian Gulf to Libya were lost.

The armistice was followed by one of the important events in the history of Europe, but amid the din of a world war which was smashing to its close it slipped by almost unnoticed. The Anglo-French Saloniki force marched into Constantinople; the greatest naval force Constantinople had ever seen, a force which included a large proportion of the British Grand Fleet itself, steamed up the

Dardanelles and anchored off Dolma Bagtsche Palace; and, temporarily at least, Constantinople had been returned to Christian control.

The British command in Constantinople took over the policing of the Pera section, detailed control officers to operate the Bagdad Railway to Konia, whence British expeditionary forces operated it all the way to Mesopotamia, and dispatched heavier forces to Batum for the occupation of Transcaucasia. The French command policed the Stamboul section of the capital, operated the railways of Turkey in Europe, and garrisoned the principal towns. The Italian command policed Scutari, on the Asiatic shore of the Constantinople area, and later occupied a large area of Turkey in Asia, extending from Adalia to Konia. The rest of Turkey in Asia was not occupied; the British command did not have troops available. Here the war had broken down the whole fabric of ordinary intercourse. Banditry and typhus were laying waste what was left to lay waste; whole provinces lay in weed-grown ruins; and in large areas across which the Turkish and Russian armies had surged neither man nor animal could be found alive. Throughout this great stretch of primitive Alpine country the allied command in Constantinople permitted the Sultan's Government to police the larger towns in an effort to bring such order out of the appalling chaos as it could.

The Sultan's Government had now returned to the British influence, which had dominated it from 1810 to 1888. Purged of its Russian alliance and traditionally linked to the Sultan-Caliph by reason of India's 60,000,000 Mohammedans, Great Britain was Turkey's inevitable refuge as long as the Turkish Government should be too weak to stand alone against the powerful influences which make a perpetual battleground of Constantinople. For the time being the Turks looked to the Mohammedans of India to produce a British

peace treaty as easy in its terms as the British armistice had been, and, in so far as the broken-down means of communication in Asia Minor permitted, the Sultan's Government obeyed the allied demands to the letter, demobilizing such forces as the terms of the armistice demanded, and surrendering large quantities of war material to British units on the fringes of the Constantinople area. Further than that, the Turks sought in the United States an escape from permanent British domination. Turkey's demand to be taken under an American mandate became unanimous, despite the fact that the Allied Board of Censors in Constantinople had forbidden the publication of "news from Russian Soviet or American agencies" in the Turkish press.

Then came the Greek occupation of the great Turkish port of Smyrna on May 15, 1919, which alienated Turkey from the British and compelled her to stand or fall by her own strength.

#### MUSTAPHA KEMAL'S DEFIANCE

Because the Greek disembarkation had been preceded by a small British landing, the Turks rightly or wrongly interpreted it as a British move. It caused such amazement that every shop in Stamboul shut its doors for three days, and the British command across the Golden Horn in Pera mounted machine guns on Galata Bridge. The Turks claimed that, since Greece had not been one of the Allies, the Greek occupation of Smyrna was a violation of the armistice they had signed with Great Britain, and was equivalent to a new declaration of war on Turkey. Even now, in little Turkish villages far away in the mountains of Asia Minor, one may see Turkish men mumbling over their coffee about the "dirty English," and Turkish women passing with the red brassard inscribed in black Turkish script: "Remember Smyrna until it is avenged."

The armistice with Great Britain was torn up, and thereafter not an-

other bullet was surrendered to the Allies. Thrown on their resources, the Turks were able to find a strong man in the person of General Mustapha Kemal Pasha, then Commander of the Turkish Third Army Corps stationed at Sivas in Asia Minor. In view of the sort of government which Constantinople has forced upon the Turkish Nation for the last century, a system of government in which nearly every strong man whom Turkey could produce was sooner or later assassinated, Mustapha Kemal's rise at this desperate moment evidences the soundness and virility of the Turkish people. Mustapha Kemal declared his allegiance to the person of the Sultan, whom he regarded as a prisoner in enemy hands, but he repudiated the Sultan's Government, which he declared was incapable of registering the decrees of the Turkish people, by reason of the pressure of the allied command in Constantinople.

Disregarding Constantinople's demand for his resignation, he hastily began extemporizing a Turkish Government in Asia Minor which should represent the Turkish Nation until such time as the Sultan's Government in Constantinople would be able to function freely. In the meantime the Sultan's Government preferred charges against the Greeks of atrocities committed during their occupation of Smyrna, and the allied command in Constantinople sought to ease an increasingly difficult situation by dispatching a commission, consisting of the British, French, Italian and American High Commissioners, to conduct an investigation at Smyrna. The result of the investigation was that four Greek officers were sentenced to long terms of imprisonment, but the commission's report was officially suppressed. One who looks upon the old Turkish Empire as one of the major scandals of Christendom may be permitted to point out that it is by such suppressions of the truth that hatred of the

Turkish Nation has been manufactured.

Mustapha Kemal's efforts brought some 300 delegates from the Turkish provinces of Asia Minor trekking into the ruined town of Erzerum. The Congress of Erzerum in July, 1919, was followed by the still larger Congress of Sivas in September, at which the Grand National Assembly was organized to sit at Angora as the provisional Turkish Government. The final inauguration of the National Assembly was, to any lover of Turkey, the most hopeful event which has occurred in Turkey for more than a century. It is impossible to visualize its vast promise for Turkey without knowing something of the old days of the empire, and of a Turkish Government in Constantinople which, in fact, was anything but Turkish.

The old Turkish Empire occupied the military centre of the world. It was the junction of three continents. The trade routes of Asia, Africa and Europe crossed and crisscrossed it. With the rise of the mechanical revolution Europe began to reach out along the trade routes after the raw materials of Asia and Africa. From a continent of castles and serfs, Europe became a continent of blast furnaces and trade unions, driven by industrial hunger into that terrific competitive search for raw materials which goes under the name of imperialism. Europe's reach for the raw materials of Asia and Africa, along with the control of the trade routes to fetch home these materials, inevitably brought it into touch with Constantinople. The medieval religious feud which has centred for centuries in the Mohammedan bridgehead of Constantinople became inextricably interwoven with the powerful industrial influences of European imperialism. Although an Eastern and a non-industrial nation, Turkey endeavored to drop into step with the new industrial march of Europe; but the young Russian Empire was already feeling the bars of its Black Sea jail, Great Britain was finding it

imperative to bar Russia from the Straits, and Constantinople had already become the battleground of the most powerful political forces in the world.

One can indicate only a few typical results for Turkey. The capitulations were forced on the Sultan's Government by which every unscrupulous rascal who could show a foreign passport was placed beyond the reach of the Turkish courts. Treaties were forced on the Sultan for the "protection" of his minorities, treaties which were not enforced and which had the single effect of stimulating his minorities against the empire. Money was loaned to Turkey by bankers who, in return, took over a mortgage on every piaster of the Turkish Government's revenue, making the Government a helpless subsidiary of its foreign bondholders. The time finally came when Turkey needed everything necessary to a modern industrial country, railroads, harbors, ships, good roads, water power, factories, but even its salt and tobacco were already foreign monopolies. So completely was its income tied up that when the Sultan built the Hedjaz Railway he had to call for popular subscriptions, and Turkish women stripped the jewels off their fingers and even cut off their hair and sold it. The Turkish Government long ago ceased to rule in Constantinople, and the European embassies, each with its court of concession hunters, permitted nobody to succeed it. The empire became an insane asylum of jangling races and religions, while Constantinople became such a cesspool that its future, a British doctor once said, has become not a political, but a medical problem.

#### A PATRIOTIC MOVEMENT

It was a bitter and an unaccustomed position for Turkey. The result was a slow but substantial growth of a Turkey-for-the-Turks movement, a sound nationalist movement which envisaged a Turkey standing again erect among the na-

tions by its own strength. For the moment, however, Turkey was tied hand and foot. In order to preserve her life she was compelled to rely on the great British Embassy in Constantinople which saved her from Russia in 1856 and again in 1876. But the British Embassy refused in 1880 to accept concessions for the construction of a railroad from Constantinople to Bagdad, and Turkey's need of such an elementary highway was so urgent that she finally broke with Great Britain and let the first of the Bagdad concessions in 1888 through the German Embassy, relying on the Berlin-to-Bagdad scheme to afford her the same protection from Russia as the British Embassy had previously afforded. Turkey's position remained as humiliating under German domination as it had been under British influence, but the completion of the Bagdad Railway was expected to hasten the day when Germany could be dismissed as Great Britain had already been dismissed.

When in 1907, however, Great Britain unexpectedly signed a truce with Russia in Persia, and King Edward VII. met the Czar at Reval in 1908 preparatory to lending his powerful support to Turkey's great enemy, an electrical shock ran through Turkey. "Any agreement between Great Britain and Russia, Turkey reasoned, would inevitably mean her own partition (and the secret Anglo-Russian agreement of 1915, by which Russia "annexed" Constantinople, showed how shrewdly Turkey reasoned); if Turkey was to break her bonds it was now or never.

Turkish nationalism broke surface at once in the Young Turkish revolution of July, 1908. Throughout the empire this movement was hailed with the wildest enthusiasm, but it flickered and went out in the foul air of Constantinople. The great war came, and although Germany was compelled to drag the Turk into it by the heels, Turkey's interests lay inevitably with Germany, for it was Germany who was fighting Russia.

Once in the war, Turkey rescinded the capitulations and Turkish nationalism rose again to meet its supposed opportunity.

But Germany's collapse in 1918 only returned Turkey to the British influence, and allied garrisons in Constantinople itself (the only enemy capital which the Allies have occupied) now fastened a more rigorous control than ever on the Sultan's Government. But beneath the surface the current of Turkish nationalism still flowed so strongly that, with the Greek occupation of Smyrna, it was able to take the utterly unprecedented course of throwing up at Angora a free Turkish Government in flat defiance of Great Britain.

#### ANGORA FORMIDABLE

At Angora Turkish nationalism found at least its long-denied opportunity. Throughout the Autumn and Winter of 1919 the Angora Government attracted increasing numbers of Turkish leaders from Constantinople, and its growing prestige stiffened the hands of the Sultan's Government. From the British point of view the situation became intolerable, and early in March, 1920, the British command in Constantinople withdrew the British control officers from the Bagdad Railway and the allied command withdrew the Italian forces of occupation from the region about Konia. Having evacuated Asia Minor to the Angora Government, early on the morning of March 16 the British command in Constantinople seized the Constantinople telegraph and telephone system, effectively cutting off the Sultan's Government from Angora, and deported to Malta every Turkish leader in the capital who was suspected of the nationalist taint and who had not yet succeeded in making good his flight to Angora.

Meanwhile, Mustapha Kemal's Government at Angora was hemmed in on all sides by enemies.

The Armenians, who had set up the Republic of Erivan in Transcau-

casia, were gathered along the old Turco-Russian frontier awaiting repatriation into the eastern Turkish provinces—a repatriation which the Turks believed would be the cover for the detachment of a large area of Turkish territory and its incorporation in the Erivan Republic. The Angora Government continued to hold the old Turco-Russian frontier with a strong garrison, and still holds it.

The Greeks had occupied Smyrna city, Smyrna province, and a ragged area greatly overrunning the boundaries of Smyrna province. Greeks were also flowing into Trebizond and Kastamuni provinces on the Black Sea, and a propaganda was rife for the detachment of these provinces from Turkey and their elevation into the Greek Republic on the Pontus. Here the Angora Government also assigned garrisons, and still holds uncontested its Black Sea frontier, but the Smyrna theatre is still the scene of military operations.

The British Egyptian Expeditionary Force had evacuated the plain of Adana, Syria, and the fringes of Upper Mesopotamia to the French, and here Mustapha Kemal launched a campaign which pressed back the Franco-Armenian forces until the French command at Beirut was forced to sue for an armistice. Further negotiations between Angora and Beirut recovered for Turkey all the Adana plain and extended the Turkish frontiers in Syria and Upper Mesopotamia down to the line of the Bagdad Railway.

These operations compelled France to evacuate most of Turkey in Europe, and the Turks of Adrianople (European Turkey) immediately began an isolated nationalist movement under the leadership of Colonel Jaffer Tayer Bey. Angora at once moved on the Straits to link up with Adrianople. This precipitated such a crisis at Constantinople that the British command was compelled to evacuate Batum and to recall to Constantinople every British and Indian soldier it could lay its hands on. The

Greeks were hurriedly loosed against Jaffer Tayer; his nationalist movement was snuffed out, and with Greece holding Turkey in Europe in Constantinople's rear, the British command was able to throw its strength upon the Asiatic shores of the Constantinople area, where British battleships were now shelling the Angora troops in the very suburbs of the capital.

#### EFFECTS OF SEVRES TREATY

While this situation had been developing, the Treaty of Sèvres was handed to the Sultan's Government on May 11. Except that German and Russian interests were excluded, the Sèvres Treaty proposed to fasten officially and permanently on the Sultan's Government the same outside control which had slowly rotted that Government during the old days of the empire. It proposed to make over immediately to Greece all of Turkey in Europe except the Constantinople peninsula; to deprive Turkey of military access to Constantinople, and to make her retention of the capital contingent upon her observation of "the provisions of the present treaty, or of any treaties or conventions supplementary thereto"; to transfer Smyrna and its hinterland to Greek administration within the Greek customs system, and to place what remained of Turkey under the permanent financial, military and economic control of Great Britain, France and Italy. Its final proposal was to commit the peculiarly Turco-Russian problem of the Straits to an international commission to be "composed of representatives appointed respectively by the United States of America (if and when that Government is willing to participate), the British Empire, France, Italy, Japan, Russia (if and when Russia becomes a member of the League of Nations), Greece, Rumania and Bulgaria and Turkey (if and when the two latter States become members of the League of Nations)."

A delegation of elderly Anglophile Turks representing the Sultan's Government in Constantinople finally signed the treaty on Aug. 10, but the Angora Government had already denounced it, and with its denunciation France tacitly and Italy openly had associated themselves. The Russian Government had also repudiated it, and at the Conference of London last February the British Government itself offered to modify it by evacuating Constantinople and instituting allied investigations into the wishes of the inhabitants in the Smyrna area, and in Turkey in Europe. But the proffered modifications were rejected by the Greek dele-

gates, and within a week Greece had launched a blow from Smyrna which was intended to smash Angora, to hurl Turkey back into Asia Minor, and to erect in her place a new Greek Empire across the Straits. Angora broke the Greek drive at Eski-Shehr, however, and extinguished the last lingering spark of life in the Sèvres Treaty.

Now the Turks and Greeks are again fighting for a settlement of the great issues at stake. The immediate issue is Smyrna. The future of Constantinople depends on the fate of Smyrna—and the future of Europe, perhaps, depends upon the fate of Constantinople.

## WHY THE GREEKS ARE FIGHTING TURKEY

BY ADAMANTIOS TH. POLYZOIDES

Editor of the Greek Daily, Atlantis

*A war for the rescue of millions of Greeks from intolerable Turkish persecutions—Historical evidence to prove that Asia Minor always has been Greek territory—Appalling facts of recent massacres, which are among the causes of the present war*

WHAT is the essential character of the Greek struggle in Asia Minor? Is it an imperialistic campaign such as the Socialists consider it to be, or is it an assignment given to Greece by Great Britain in order to strengthen and maintain the British hold on the Near East; or is it an effort of King Constantine to preserve his popularity with the Greek people?

All these explanations and many more of a similar character have been given to the events that we are witnessing in the war now going on in the region that was the cradle of Greek and Christian civilization. And yet no one seems to know, or dares to say, that this whole Greek campaign is purely a struggle of self-preserva-

tion, conducted by the same nation that sent the first settlers and that has always furnished most of the inhabitants of the extended territory known as western Asia Minor.

The most superficial reading of history will show to what an extent the Near East is Greek territory. That previous to the Greeks there may have been other races in those lands no one denies. But even in that case, those aborigines have been so completely absorbed by the Greek element during the last thirty centuries, that no trace of them remains, save perhaps, in some grotesque forms of prehistoric ruins—ruins which, even to this day, have not given us the secret of the races that

built those walls, temples and palaces of so long ago.

On the other hand, Greece, both ancient and modern, has left the imprint of her culture and civilization over all that vast territory in which Hellenism has never ceased to predominate for three thousand years.

Asia Minor, making the westernmost end of the Asiatic continent, forms an extensive peninsula, stretching between the waters of the Mediterranean and the Black Sea, from the Gulf of Issus (the present Alexandretta) to the shore of Trebizond, and advances as if to meet the European continent. Thus we consider Asia Minor the first stop of Asia, in the same way as the Asiatic peoples consider Greece the first sentinel of Europe. Here we have two names, Greece and Asia Minor, which by nature are inseparable. Here we have two opposing elements that must live together. \* \* \*

There, notwithstanding the differences in geography, in racial features, in religions and habits, the will of nature has always been stronger than human prejudices. Greece and Asia Minor have always been destined, willy-nilly, to be provinces of the same State \* \* \*. In this continuous struggle, which began historically with the Trojan war, Greece and Asia have been alternately the victors, and for the last 400 years the Turks were the masters of both lands. It is a fact, however, that long before the Ottoman conquest the Greek element was fighting and winning for so many centuries that the Christian world became used to consider Asia Minor as an integral part of Greece. Anatolia in those years was simply Asiatic Greece.

How long will this arrangement last? God alone knows. And yet we must acknowledge that European civilization is daily making new progress in the redemption of its lost territory. Asia Minor, always leaning to Europe, whose waters bathe its three sides, turns its back to Anatolia as if to show that it does not belong to it. It is therefore for this reason that we have always considered Asia Minor as an annex to Europe and as the necessary complement of the Constantinople Empire. This is shown by the fact that, notwithstanding its temporary subjection to the Asiatics, Asia Minor has never remained under their mastery, except only the period of 400 years when this mastery was extended to cover Old Greece itself.

These are not the words of a Greek imperialist, nor the arguments of a politician. They are the sober thoughts and findings of a learned Frenchman, Dr. Ph. le Bas, author of probably the best historical book on Asia Minor.

According to the same historian the country was first mentioned as Asia Minor in the fourth and fifth centuries, A. D. But it was in the middle of the tenth century, A. D., when the Greek Emperor Constantine VII., known as Porphyrogenitus (the one born in purple) stated that Anatolia was the name given to the territory east of Constantinople, while the same territory was known to the inhabitants of greater Asia, to Hindus and Ethiopians, and to those living in Syria and Mesopotamia, as the Middle West or Asia Minor. From the Byzantines the Turks inherited the name of Anatolia, which they gave to the entire territory known today as Asia Minor.

According to the division made by the Turkish Sultans after their conquest of that territory, Asia Minor, which is separated from the rest of Asia by a straight line drawn from the Gulf of Alexandretta to Trebizond, was split into the following named provinces or vilayets: Aidin, with Smyrna as capital; Houdavendikar, with Broussa as capital; also these, known under the names of their capitals: Konieh, Angora, Kastamoni, Sivas, Trebizond and Adana. In addition, the Asiatic territory adjacent to Constantinople was made part of the Province of Constantinople, while the independent counties or Sandjaks of Ismid and the Dardanelles formed what is now known as the Zone of the Straits.

#### PERSECUTION BY TURKS

More than three million Greeks lived in this vast territory in 1914. These Greeks were the remaining population after 400 years of continuous persecution by the Turkish conquerors. It is estimated that nearly two million Greeks made their

escape to Russia and other lands after the fall of Constantinople. That an equal number were massacred in all parts of the empire during the four centuries between the Turkish conquest and the Greek revolution of 1821 is a conservative estimate of the Greeks' national loss under the Turks. But to this must be added the Greek youths that were snatched from their families at the tender age of ten, to be brought up by the State and become the Janissaries, the backbone of the military organization of the Empire. In the beginning a thousand of these boys were taken each year, but afterward the number was greatly increased; as the Janissaries were maintained for 200 years, it is believed that upward of a million Greeks were lost that way. An equal number was forced to adopt Islam, while the number of those who renounced their faith voluntarily in order to share the spoils and the privileges of the ruling race can only be guessed at. Thus one is not far from the fact when placing at five to six million people the net loss of the Greek nation under the domination of the Turk.

This systematic extermination or Turkification of the conquered race was based on very solid reasons—from the Turkish point of view. The founder of the Turkish dynasty, Ertogrul, had only 400 families with him when he settled around Broussa in the latter part of the tenth century A. D. This small Turkish group for the next hundred years was continually occupied with efforts to gain the support of the chieftains of various barbarian bands that were coming from Turkestan and Indo-Chinese borders and settling on the fringes of the Byzantine Empire. The paramount object of the Turks was the creation of a strong army, and this could not be formed except at the expense of the conquered population.

Being the strongest element in Asia Minor, the Greeks naturally paid the largest toll of suffering exacted from the Christian peoples of the Near East after the Turkish invasion. That they

survive today is due to the tenacity of their superior civilization, and their religious, cultural and communal organization, which they preserved under the most trying circumstances.

Against this hard-headed and morally strong element the Turk, notwithstanding his fighting qualities and his fanaticism, had to give way. He had some very significant victories in Europe, and for a moment his victorious armies threatened Vienna itself. But aside from his military prowess, and his contempt for death, the Turk lacked the attributes of a civilized and civilizing people, and when he abandoned Europe he left behind him nothing but the memory of a hideous nightmare. Travelling over what for five centuries has been the Ottoman Empire, one looks in vain for such landmarks as the Moors left in Spain, and the Arabs in Bagdad and Jerusalem. No more backward nation ever invaded Europe from the East, and the invasion was made with the avowed purpose of destroying all that Greek and Christian civilization had accomplished in twenty-five centuries.

Asia Minor was first colonized by Aeolian, Ionian and Doric settlers, who established themselves along the coast of the Aegean and all the way up to the Black Sea. Even before the campaign of Alexander the Great, it was one of the most highly developed centers of Greek culture and civilization, as well as of commerce and business. It was scarcely less so after the premature death of Alexander, and after the Hellenic Empire fell under the heel of the legions of Rome.

#### GREEKS SAVED CHRISTIANITY

Greece fell, politically and militarily, just about the time when Christianity made its appearance in the Near East. That fact explains the marvellous Hellenic revival of Byzantium. It was on ground previously prepared by the teachings of Greek philosophy that the Sermon on the Mount fell, and it was the eager adoption of the Christian doctrine by the

Hellenized portion of the Roman Empire that gave Christianity its first and only chance for development and stability in the world. With the Jewish world holding strictly to the traditions of the past, and the Roman Empire firmly upholding the ancient pagan gods, who but the Greeks of Asia Minor saved Christianity in those early years?

The Orthodox Church was originally Greek; the seven general councils whose canons had fixed its doctrines were Greek. And, as Finlay says in his marvellous history of the Greeks under the Romans, "from the moment a people, in a state of intellectual civilization in which the Greeks were, could listen to the preachers, it was certain that they would adopt the religion." In Athens Paul was listened to with great respect by the philosophers. Constantine the Great was probably the first Roman to understand that the destinies of Christianity and Hellenism were closely interwoven, and when he made Christianity the official religion of his Eastern Empire he sealed the fate of the old Roman imperialism, which gave place under Emperor Leo III. to the Hellenized Byzantine Empire.

For a thousand years this Byzantine Empire made itself the bulwark of Greek and Christian civilization against the hordes of Asia. When this empire fell in 1453, after being treacherously abandoned by the whole of Europe, the whole world awoke to the danger threatening it from the East. With the fall of Constantinople Greek culture became the common possession of Europe. The Reformation, followed by the discovery of printing, made the treasures of Greek philosophy and Christian literature accessible to all, and this spiritual movement, crowned by the discovery of America, gave the whole world the new aspect, which, with some slight variations, is continuing to our day.

Greece was the victim sacrificed on the altar of Christianity and Civilization. But for five hundred years the civilized world took little interest in the fortunes and the never-ending

struggles of this gallant people of the Near East.

Thus we come again to the main purpose of our story, which is to explain the present Greek campaign in Asia Minor. That campaign is simply a continuation of the same old struggle between a highly civilized people and a barbarian invader, who after five hundred years has remained as much a stranger to the culture, the morality and the ideals of Greek-Christian civilization as he was when he first came to oppress Europe ten centuries ago.

The Greek today cannot reconcile himself with the idea that he is to continue to live under the shadow of Turkish domination. A nation which refused subjection to the Turk when the Turk was in the prime of his power will not suffer itself to be placed now at the mercy of so backward and so barbarous an alien element.

When it becomes more widely understood that Asia Minor, or, rather, the westernmost part of Asia Minor, along the Black Sea, is nothing less than a portion of Greek territory held by a foreign oppressor; when it becomes known that the presence of the Turk there dates only from the fall of Constantinople, while the Greek was there long before the fall of Troy; when the world realizes that the millions of Greeks in Asia Minor, suffering through long centuries, have never given up the thought of ultimate liberation, then and only then will it be understood why the present struggle can never end until the Turk shall have ceased to be the master in that land hallowed by the martyrdom of a noble people.

#### FIGHTING FOR GREEK CITIES

The Greek soldiers that are fighting for possession of Eski-Shehir know that this is the ancient Doryleum, while next to it stand the ruins of old Hierapolis, the hallowed city. But is not Angoria a city with a splendid Greek past, as is proved by its name and by the ruins surround-

ing it? Is not Smyrna the birthplace of Homer, and is it not on its ancient Acropolis that the tomb of the mythical Tantalus is shown to the present day? And Ephesus, excavated by Austrian scientists; and Priini, excavated by the Germans; and Pergamus and Militus—are these not all cities of immortal splendor, now once more open to the admiration of the world? And are not Laodicea and Tralles and Nicaea and Kyzikos and Nicomedia and Chaldea and Neokesareia and Elioupolis and Philadelphia proof enough that all over that territory it is the Greek who is at home, and not the invader?

The Turk has always known that the success of his political organization depended mainly on the good will of his Greek subjects, as is shown by the fact that there were times when he tried to win over the friendship of this race. Thus he allowed the religious organization of the Greeks to remain intact during all the long years of the Ottoman régime. The Sultan Mohamet II., who conquered Constantinople, was the first to inaugurate a policy of tolerance toward the Orthodox Church, his object being to win the predominating Greek element of his newly acquired empire by means of favors to the old State Church. The Greek accepted the favor, but refused to sell their birthright and their ideals; what they wanted was their freedom and a Government of their own, and this the Turk could not give without jeopardizing the entire fabric of the Empire.

The Turk gave position, wealth and standing to any Greek who would become a renegade; but such Greeks were few, and they soon found out that by rejecting Christianity and Hellenism in favor of Islam and Turanism they became wholeheartedly despised and hated by both elements.

Another reason why the Turk needed the Greek in the management of his empire was his utter incapacity to govern so highly developed an organism as the Byzantine empire was when it fell under the Ottomans. And it was the same reason that made the

Turk turn to Armenians and Arabs, to Syrians and Kurds, to Albanians and Jews in quest of helpers and advisors in the management of his imperial estate. But none of these elements accepted as a definitely established fact the domination of the Turk. Thus the struggle between the conqueror and the conquered has continued, until we are witnessing today the more or less complete emancipation of these racial elements.

#### INTOLERABLE PERSECUTIONS

That so many Greeks still remain under the Turks is due to the fact that they have always formed the predominant element in the region of Constantinople; and it is against these Greeks who have done so much toward undermining Turkish power that the Turks are aiming their last arrow.

It was against this uncompromising Greek element that the fury of the Turk was let loose after the second Balkan war. During that period the Greeks still living under the Sultan suffered persecutions for the like of which we have to go back at least a hundred years to the massacre of Chio.

Over 300,000 Greeks were violently deported from their homes between January, 1914, and the middle of 1917. Over 400,000 were deported, massacred, or otherwise injured from 1917 to the end of the war, at a time when the anti-Greek and anti-Armenian persecution reached its climax. And the bloody record of Turkish barbarism continued even after the armistice, until, according to estimates of the Greek Government and the Ecumenical Patriarchate, more than 730,000 Greek civilians were made to suffer at the hands of the Turkish authorities in the last seven years. That more than 500,000 of these victims have been massacred or died as the result of their sufferings is only a detail in the appalling record that is marking the last days of the Ottoman Empire.

I have before me a copy of the "Black Book of the Sufferings of the

Greek people in Turkey from the Armistice to the End of 1920." This pamphlet, published under the authority of the Ecumenical Patriarchate, and bearing the official seal of the double-headed Byzantine Eagle, ought to be in circulation in every civilized country.

Here we have a report of the Bishop of Amassia. A certain Ali Ghalib, Prefect of Tsarshamba, near Bafra, where some of the best Turkish tobacco comes from, completely annihilated the whole district, setting fire to it, and exiled to Castamoni all the male population between the ages of 14 and 90. The carrying away and raping of fifty girls and married women by the Turkish soldiery is one item of the tragic episode. Another is the hanging of 178 young men in the market place of Samsoun for no other reason than that they were Greeks. The destruction of 210 villages in that same diocese and the deportation and subsequent massacre of more than 70,000 Greek men, women and children are covered in a single paragraph of this most interesting and singularly plain narrative. Two hundred Greek schools destroyed, three hundred and fifty Greek churches plundered and smashed to pieces. What more does a nation need to go to war against the perpetrators of such deeds?

Thus the tragic report continues. Bishop after bishop and diocese after diocese send in their reports, covering hundreds of cases in hundreds of villages, all *after the armistice*, Amassia reports 228 killed, and Elioupolis 494, Philadelphia 230, and Chalcedon 610, Nicomedia 37, and Heraclea 54, Angora, 23, and Ephesus 35, Ancon 100, and Chaldia 24 \* \* \* and so on in an endless story.

These reports cover only a very small part of what has happened in Turkey between the armistice and the end of 1920.

When one has the facts before him, as the Greek nation has them, one does not ask why Greece continues the war in Asia Minor. It is not a

question of Greek imperialism, because it is not imperialism to demand what has always been yours. It is not a question for or against this or the other leader of the Greek nation, because personalities have nothing to do with this all-absorbing Greek problem.

Those who light-heartedly ask that Greece comply with the sober advice of her friends—or, rather, her supposed friends—and abandon Asia Minor after shaking hands with Turkey, not only betray a complete lack of understanding of the issue, but they also fail to see beyond their diplomatic monocles.

For Greece the maintenance of her army in Asia Minor until such time as her persecuted sons and daughters are freed from the Turkish yoke is not a question of national pride or of royal prestige. It is a question affecting the very life of more than 2,500,000 people who have the same history, the same religion, the same language and the same aspirations, and who help to make the totality of the Greek nation. These Asia Minor Greeks who for five long centuries have kept the faith, and never lost the hope of liberation, are entitled to their overdue freedom.

Unpopular as the war in Asia Minor may seem to many, it is the only way open to the Hellenic people in their struggle for national unity, for the preservation of their national life, and for the honor and the property of those Greeks who, after so many sacrifices and so many sufferings, were left unredeemed when the great war ended.

In her campaign Greece will welcome the help of all those who believe in the righteousness of her cause, and who wish to see the Greek and Christian civilization victorious in its ancient cradle. But, even should she be abandoned by the powerful and civilized peoples of the world, Greece, faithful to that ancient oath of the youth of Athens, will not shame her arms, and will defend her patrimony, whether with the help of the many or entirely alone.

EXTINCT ANIMALS HUNTED BY PREHISTORIC MAN, INCLUDING A GIANT MOOSE AND GIANT BEAVER. FROM A PAINTING BY CHARLES R. KNIGHT

## THE QUEST FOR THE "MISSING LINK"

BY FRANK PARKER STOCKBRIDGE

*Object of the expedition sent out by the American Museum of Natural History to explore the regions of Central Asia, believed to be the cradle of the human race—The "missing link" and the types of "sub-man" now extinct*

WHEN and where lived the "Missing Link"? How shall we find conclusive evidence that will enable us to connect the species of animals to which we belong, and to which scientists have given the name of *Homo Sapiens* (Man of conscious thought, or knowledge), with earlier and more primitive forms of life? Who or what were the beings from which humanity sprang?

This was the problem that Charles Darwin, the English scientist, expounded to his startled contemporaries in the '70s of the nineteenth century, when he demonstrated his now generally accepted theory of the evolution of mankind from a long series of antecedent lower forms. Darwin's "Descent of Man" appeared on Feb. 24, 1871. On the fiftieth anniversary of this publication, almost to a day, viz., on Feb. 19, 1921, the

American Museum of Natural History sent out from San Francisco a scientific expedition to the Far East in an attempt to solve Darwin's riddle by discovering traces of the first human progenitors of the race. This expedition, headed by Roy Chapman Andrews, the explorer of the great desert of Gobi, at the time this article was written, was still outfitting at Peking preparatory to a five years' search in Central Asia for the fossil remains of primitive man on what scientists now incline to believe was the ground of his origin. This particular part of the whole investigation will be under the direction of Walter Granger, a distinguished paleontologist of the Museum's staff.

It is naturally impossible to predict the result of this well equipped, adequately financed search, with trained scientists at its head. They

may spend five years and come back empty handed. The laws of probability are all against any particular individual or group, working within a time limit, discovering anything so elusive as, let us say, the skeleton, or even the skull of any creature that can be identified as in any sense a progenitor of humankind. Human remains, doubtless, may be found in great numbers and variety. Here, above all, the words of Bryant are applicable:

Take the wings of the morning,  
And traverse Barca's desert sands,  
Or lose thyself in the continuous woods  
Where rolls the Oregon, and hears no  
    sound  
Save its own murmurs, yet—the dead  
    are there!

#### THE "RECENT" RECORDS

Dead men's bones a-plenty, dating as far back as the end of the Fourth Glacial Age, or somewhere from 25,000 to 50,000 years ago—these might be turned up almost anywhere, given time, money and will to dig for them. Europe's ancient caves have yielded many specimens of Neolithic man—that is to say, man of the New Stone Age—and Asia, Africa, America and Australia were inhabited by men of this period of development down to historic or even recent times; the North American Indians, most of them, had not progressed beyond the Neolithic stage when the first white settlers came.

Here and there, even, have been found remains, a few bones and many implements, of Paleolithic man—man of the Old Stone Age. These were human beings who inhabited this earth during the last glacial epoch. How long they had existed as human beings before that time when the polar ice cap thickened and spread, from year to year, under the influence of some great cosmic digression from the normal, we do not know. The record stops there; more properly we might say that the record of humanity, of man as we know man today, of *Homo Sapiens*, in short, *begins* under a sheet of ice more than

a mile thick that covered the northern part of our globe down to Southern England and Middle Germany in Europe, down to New York in America, probably 50,000 years ago and for perhaps ten, twenty or thirty thousand continuous years prior to that.

We do not even know what caused the glacial epochs, of which this latest was the fourth to leave its record graven in the rocks; it may have been the oscillation of the Poles, the same gradual shifting of the earth's position in space that astronomers tell us is still going on and that, in another 20,000 years or so, will make Vega instead of Polaris the "pole star." Perhaps there will come another glacial epoch; perhaps a hundred thousand years from now scientists will discover, under the detritus or glacial drift, rolled down from the flattened Rocky Mountains to the plains of Nebraska, fossil skulls, fragments of pottery and inscribed stones to prove that man lived in the period we call "now," and try in vain to link these poor relics with an earlier past! We do not know. We only know that any cause sufficient to reduce the mean annual temperature by only ten degrees on the Centigrade scale would surely bring on another glacial epoch, for then the reduced heat of the short arctic Summer would never be great enough to melt all the ice formed by the increased cold of the long arctic Winter, and year by year the ice would pile up at the Poles, and year by year slip toward the Equator, progressing perhaps only a foot a year, but relentlessly gaining that foot, until once more all the seats of civilization and centres of human life save those fringing the tropics would be buried under the same sort of rocks, gravels and sands as now overlie the earliest traces yet found of the human race. This we know, for what has just been suggested as a possibility of the future is a fact of the past, and of the not very distant past, as geological time is reckoned.

## THE PREHISTORIC PERIOD

We have just swung the pendulum of imagination a hundred thousand years ahead; now let us swing it back half a million years or more. We must go back through the period that elapsed between the Third Glacial Epoch and the Fourth, a period that stretched, perhaps, from 150,000 B. C. down to 50,000 B. C.; back of that, back through the Second Glacial Period, that may easily have been as long ago as 400,000 years; then we must go back another 100,000 or 150,000 years, before the time when the earliest record was carved in the rocks by the drifting ice of the First Glacial Period. In every one of these ages or periods of geological time, if the geologists have read the riddle of the rocks aright, there lived upon earth beings like men, implement-using animals with skulls and skeletons similar to those of the human race.

*And yet we do not know when human life began, nor where!*

For these earlier forms, scientists now quite generally believe, are relics of a race or species today totally extinct; they are not our ancestors, any more than the apes and the monkeys are our ancestors. Who or what these were, the beings from which humanity of today, or much of it, *did* spring—that is the quest upon which Darwin set the world of science in 1871, and it is the quest upon which the Natural History Museum's expedition into Central Asia set out early in 1921.

In the short half-century between these two events the deepest-rooted beliefs of the civilized world have been overturned. Evolution is accepted as universally today by pulpit and public as it was rejected and ridiculed fifty years ago. It is no longer a "theory" to be argued against, but a definite, scientific fact, demonstrated a thousand times over in the case of plants and animals and, by analogy, in the case of man. But there is yet to be found tangible evidence of the existence of an earlier form of being than the

men who lived about the end of the last Glacial Age, say 50,000 years ago, a being of whom, or of which, it can be predicated, to the complete satisfaction of anthropologists, that it was the creature that came between man and his earliest progenitor, which, in turn, may well have been also the progenitor of the anthropoid apes and of the pre-human types that lived half a million years ago.

If the expedition of the American Museum of Natural History finds the remains of such a creature it will be the rarest of accidents. Much more probable, traces may be found of completely developed human beings of an older period than any we now know, for nowhere but in Europe and around the shores of the Mediterranean has extensive scientific research for such remains been made, and all the evidence these have yielded, as I have said, points to Central Asia as the common centre from which humanity came.

## DARWIN'S THEORY

Darwin, in 1859, in publishing his great work, "The Origin of Species," predicted that "light would be thrown upon the origin of man and his history." In 1871, thirteen years later, his "Descent of Man" threw that light upon the human race, a light that has not only not been extinguished, but that has burned for half a century with ever-increasing brilliancy. As to the import of this revelation, Darwin expressed himself as follows:

It gives man a pedigree of prodigious length, but not, it may be said, of noble quality. The world, it has often been remarked, appears as if it had long been preparing for the advent of man; and this, in one sense, is strictly true, for he owes his birth to a long line of progenitors. If any single link in this chain had never existed man would not have been exactly what he is now. Unless we willfully close our eyes we may, with our present knowledge, approximately recognize our parentage; nor need we feel ashamed of it. The most humble organism is something much higher than the inorganic

**PITHECANTHROPUS ERECTUS**

*The Ape-Man of Java, lowest known type of prehistoric man, whose antiquity is estimated at 500,000 years*

(By permission, after McGregor's model in Museum of Natural History)

dust under our feet; and no one with an unbiased mind can study any living creature, however humble, without being struck with enthusiasm at its marvelous structure and properties.

To review here the truly marvelous reasoning, backed up by incontrovertible facts marshaled in tremendous array, by which Darwin traced the common origin of man and all other vertebrates to the lowest form of marine life, through the fishes and the amphibians to the land mammals, would be tedious and is unnecessary for the purpose of the moment. It is important to note his positiveness, as when he said, referring again to the conclusion that man is descended from some less highly organized form:

The grounds upon which this conclusion rests will never be shaken, for the close similarity between man and the lower animals rests on facts which cannot be disputed. \* \* \* The great

principle of evolution stands up clear and firm. \* \* \* It is incredible that all these facts should speak falsely. \* \* \* Man is the co-descendant with other mammals of a common progenitor.

Two questions immediately stirred the thought of the world. "If these things are true, what becomes of the

**PILTDOWN MAN**

*With some characteristics of the ape and some of man. Antiquity variously estimated at 100,000 to 300,000 years.*

(Restoration by McGregor, Museum of Natural History)

doctrine of the immortality of the soul?" was the first question and the one that pressed most urgently for an answer. "Where are the features that came between the ape and man?" was the second.

We can now, after fifty years, answer neither of these questions except as Darwin himself answered them: "I do not know." But the research that was already under headway when Darwin wrote, and that gained new impetus from the sudden rise of his theme into the commanding position of humanity's most important problem, has disclosed such a series of previously unknown facts as to strengthen immeasurably the beliefs that the "Descent of Man"

expressed, and to shatter forever a mass of belief and dogma that had been held to lie at the very foundations of the social order. We can sum up the facts as to man's origins as these have been disclosed in the last fifty years and state, with some reservations, the beliefs as to man's future held by scientific thought today, but we cannot produce the "missing link," nor demonstrate either the mortality or the immortality of the human soul.

### THE FOSSIL REMAINS

A review of the half century's evolutionary research would begin with

NEANDERTHAL MAN

*Type of man inhabiting Central France 25,000 to 40,000 years ago*

(From a restoration by McGregor, Museum of Natural History)

the reconstruction—one of tremendous interest, though perhaps inconclusive to the unscientific mind—of the fossil remains of the extinct species that lived before the Fourth Glacial Period, and that resembled

man, yet was not man, as we use the term. It would concern itself, first of all, with the discovery in 1856 of part of the skull, two leg bones and a few other fragments of a presumably human skeleton in a glacial deposit in the Neander Valley in Germany; it would also consider the Piltdown skull found just before the war in a geological formation of the Thames Valley in England that must have been present *before* the last Ice Age, and it would take cognizance of about half a score of other specimens of manlike creatures having a geological age greater than that of the earliest known remains of true or modern man. For example, in the caverns of Spy, in Belgium, two skeletons precisely like the remains of the Neanderthal man were found; near Heidelberg a jawbone of a different type; at Trinil, in Java, in 1892, a leg bone, two teeth and the brain-cap of still another type were discovered.

CRO-MAGNON MAN

*Highest type of prehistoric man, with great increase of brain power over earlier types. Antiquity about 25,000 years.*

(By permission, after McGregor's model in Museum of Natural History)

These, with a few other relics obviously of the Neanderthal type, are all, apart from the evidences of the situations in which they were respectively found, and the remains of other animals and primitive tools or weapons found near them, that we possess to build upon for even a fragmentary picture of earlier human types.

The very lowest type of these is that represented by the Java remains, which scientists have refused to classify as of the genus *Homo*, and which they have defined as the *Pithecanthropus erectus*, or "ape-man who walked erect." Somewhere around the end of the time that geologists call the Pliocene Period, or in the beginning of the succeeding Pleistocene, this ape-man walked erect in the tropical forests of Java. Reduced to years, we may safely say that it was more than half a million years ago; it may have been fifty million years. Hailed at first as the "missing link" between humanity and that direct ancestor of man which Darwin described as "a hairy, tailed quadruped, probably arboreal in its habits, and an inhabitant of the Old World," scientists have now reached the conclusion that this creature was neither human nor sub-human; that he was the product of evolution in a direction that would not have led to the sort of human beings we are if the evolutionary process had not been terminated by the extinction of his species; in short, that it was but one of the millions of Nature's experimental failures, a few of which still survive in the monkeys and apes of today, which, it is probable, are themselves the product of evolutionary processes that began long after the strain that produced man had become established. It should not be forgotten that this evolution is continuous, that it is still going on, in man as in all other forms of life. From these very monkeys and apes of today, unchecked by outside influences, there may yet be evolved beings equal or superior to the men of today. But from the

weight of scientific evidence it is clear that we may drop the *Pithecanthropus* out of consideration when we go hunting for traces of humanity's ancestors.

Traces, indeed, we find scattered all through the geologic periods that

Diagram showing evolution of the brain, from pre-human to modern human form. Note early development of back of brain, as compared with late development of forehead, the seat of higher mental faculties

(From Osborn's "Men of the Old Stone Age")

overlie the time when the bearer of the Java skull stood erect among his crouching cousins. Down through half a million years or so some sort of creatures that *made and used stone implements* lived in many parts of the world, and we can study these implements, each with relation to the geological age of the rocks and gravel among which it was found, and note a steady development from the crudities of the earliest to the refinements of the later forms, and so reach some fairly definite conclusions as to the physical and mental development of the species of beings that made and used these things. And we know that we are dealing with a human type, with the genus *Homo*, in these conclusions and speculations, because the human animal is the only one that has ever acquired the ability to *make implements*. The higher apes may on occasion *use* implements—clubs, stones as missiles or for cracking the shells of coconuts or shellfish—but man alone *makes* either tools or weapons. We find still further proof that these implements were the work of a human-like being when we find

them associated with traces of fire in places and under conditions where the fire must have been deliberately kindled; for only human beings make or use fires.

But until we come down to the Third Interglacial Period—the age preceding the last Ice Age—we find no remains of these creatures themselves, if we except the Heidelberg skull, the precise geological period of which is subject to some question. Here, in the warm period that lasted perhaps 100,000 years and ended possibly as long ago as that, when the last great polar ice cap was formed, we find the Piltdown skull in England; and in the period simultaneous with the last era of ice and immediately following it, a possible 50,000 years ago, we find the Neanderthal man and his contemporaries, the men of Spy. Were either or both of these our progenitors? Scientific thought today tends strongly toward the rejection of this assumption.

### THE NEANDERTHAL MEN

The Neanderthal men, Professor Henry Fairfield Osborn of the Museum of Natural History believes—and most, if not all paleontologists have reached the same conclusion—were merely another experiment in

evolution, an experiment that reached an immensely higher stage of development than poor Pithecanthropus ever attained, but that came to an end when the last of the Neanderthals perished, possibly in conflict with the first of the true men to invade Europe.

The preponderance of scientific weight, therefore, is behind the conclusion that in the Neanderthal man evolution produced not Homo Sapiens, but a different species of Homo; that these beings, like ourselves but of a different species, were almost but not quite human in our modern sense; sub-men, "gorilla-like monsters, with cunning brains, shambling gait, hairy bodies, strong teeth, and possibly cannibalistic tendencies," who, if the suggestion of Sir Harry Johnston be accepted, are the germ, through "dim racial remembrance," of the ogre in folklore; creatures of enormous muscular power, with almost no nose, no forehead, no chin, and a thick ridge of hair that may have grown down the back of the neck and along the spine in a mane that bristled or stood erect when they were enraged; it is more than probable that the whole body was covered with hair, thicker in Winter than in Summer, and almost concealing the brownish skin; doubtless, too, the males had heavy beards growing from lips, cheeks and throats.

Naked they roamed through the valleys of the Alps, across the wide plain that is now the bed of the North Sea, and so over the British Isles and Norway. The Glacial period probably drove them south. Small-brained, they could yet think and reason better than any of the apes, though they probably possessed no articulate speech. They used flint knives and wooden clubs as weapons. They knew the use of fire, in all probability, but used

THE WOOLLY RHINOCEROS, ONE OF THE ANIMALS HUNTED BY THE NEANDERTHAL MAN ABOUT 30,000 YEARS AGO

(By permission, from a painting by Charles R. Knight for the Museum of Natural History, New York)

it to keep off enemies, and continued to eat their food raw.

Before the last of these Neanderthal men had disappeared, Europe began to be invaded from the south, as the ice cap began to melt, by an entirely different type of man, the product of a different chain of evolution, the earliest specimen of *Homo Sapiens* of which we know anything at all, and which had reached, at least 25,000 years ago, a stage of development higher than that of many of the savage tribes now living. But science is still without evidence that will connect either these or the Neanderthal species of man, or the species of which the Piltdown skull is all we have to go by, with distinctly lower forms of life.

#### EVOLUTION AND RELIGION

We do know now, however—science has proved it conclusively—that Darwin's words, received with such skepticism when he wrote them fifty years ago, were true:

To believe that man was aboriginally civilized, and then suffered utter degradation in so many regions, is to take a pitifully low view of human nature. It is apparently a truer and more cheerful view that progress has been much more general than retrogression; that man has risen, though by slow and interrupted steps, from a lowly condition to the highest standard as yet attained by him in knowledge, morals and religion.

How shocking such a hypothesis seemed to the average thought of Darwin's day, rooted and grounded in the dicta and dogmas of the Hebraic-Christian religious teachings, it is impossible for any one of today to realize. Archbishop Usher's chronology, which gave the world a life of but 4,004 years before the birth of Jesus Christ, was but one of the least important of the rooted beliefs and convictions accepted by the whole civilized world as absolute truths that had to be thrown overboard if what Darwin wrote were true. The whole structure of religion seemed to be tottering. Darwin himself recognized this when he wrote:

He who believes in the advancement of man from some low organized form will naturally ask, how does this bear on the belief in the immortality of the soul? \* \* \* Few persons feel any anxiety from the impossibility of determining at what precise period in the development of the individual, from the first trace of a minute germinal vesicle, man becomes an immortal being; and there is no greater cause of anxiety because the period cannot possibly be determined in the gradually ascending organic scale.

I am aware [he went on] that the conclusions arrived at in this work will be denounced by some as highly irreligious; but he who denounces them is bound to show why it is more irreligious to explain the origin of man as a distinct species by descent from some lower form, through the laws of variation and natural selection, than to explain the birth of the individual through the laws of ordinary reproduction. The birth both of the species and of the individual are equally part of that grand sequence of events which our minds refuse to accept as the result of blind chance. The understanding revolts at such a conclusion, whether or not we are able to believe that every slight variation of structure, the union of each pair in marriage, the dissemination of each seed, and other such events, have all been ordained for some special purpose.

And here we are, fifty years later, still seeking the link in the chain of evolution that connects our own species with primitive life-forms; still asking for proof of immortality. We may never find either. To say that either quest is futile would be foolish; to say that the discovery of either is essential to human progress or human happiness would be even more so.

Evolution goes on, slowly in the individual, with accelerating and almost breath-taking speed in the species. In the fifty years since Darwin wrote his "Descent of Man," doubtless not a single child born into the world has within his physical structure a single cell or combination of cells which in its formation and grouping is not precisely like those of a thousand of its direct ancestors, as far as the most powerful instruments of the biologist can determine; yet we know that there *are* differ-

ences, from generation to generation, and that in a million generations these divergences, so slight that, seen from any one point, they appear parallel, will have evolved a new and different kind of being from those of which the writer and his readers are individual specimens. But we know—we have the evidences all around us—that in the same fifty years since Darwin wrote the human species has made longer and swifter strides toward the goal of happiness and comfort for all of its component individuals, toward the conquest of its environment and the power over life and death that is, perhaps, man's nearest approach to Divinity, than in any five-hundred-year period of the past.

#### IMMORTALITY OF THE RACE

Perhaps the great fruit of the seed Darwin sowed is the concept, now gaining wide acceptance among biologists, that immortality, like evolution itself, is not individual but racial; that the organism destined to survive forever is the species, not the unit; that it only needs that all the dominant individuals of the human family should realize this for man to proceed with even greater speed toward the fulfillment of the millennial dreams that lie at the roots of all religious philosophies.

"The biologist says," remarks Vernon Kellogg, himself one of the foremost investigators in that field of knowledge, "if he is not a bigoted biologist, that he has no right to say, and will not say, that there cannot be a human spirit-life. He cannot authoritatively, and hence will not try

to, affirm that there cannot be human immortality. He simply remains agnostic. He does not know."

But hear him a little further. "If evolution is carrying man forward—and we do not doubt it—it is doing it in a different way. This way seems to be the way of social evolution, based on man's social inheritance and the biologic factor of mutual aid. \* \* \* That means, in the ultimate analysis, that future man can be consciously determined by man today; that human evolution has been turned over to humankind itself to direct. What an opportunity, but, at the same time, what a responsibility! \* \* \* The soundest of science leads us to the conclusion that man has in his own hands a great instrument for determining the fate of himself as a species, the future of mankind."

We may well rest here. Nothing that the Andrews expedition is likely to bring back from Asia can do much more than cement still more strongly man's intimate kinship with every other form of life. No new discoveries of man's origins can alter the fact that our race is, as the eminent French scientist, Mr. Boule, points out, one body with the world that carries it. We are the product of causes so remote, of the interplay of forces so prodigious, of actions and reactions so complex, that they may well be said to have constituted the chief and only important steps in the development of the earth itself, and to have had as their sole purpose, if we concede a purpose at all behind it, the creation of man out of the substance of earth itself by the process we call evolution.

MASTODON AND ROYAL BISON, ANIMALS OF THE OLD STONE AGE, AS RESTORED IN A PAINTING BY CHARLES R. KNIGHT OF THE MUSEUM OF NATURAL HISTORY, NEW YORK

# THE JEWISH PROBLEM IN POLAND

BY JAMES JAY KANN

Late Treasurer of the American Relief Administration's Mission to Poland

*A dispassionate view of both sides of the case, showing that Polish hatred of the Jews is due to an intense desire for national unity, to the Jews' unfair commercial methods and to their pro-German and pro-Bolshevist leanings—Possibilities of a solution*

THERE have been many articles and statements written concerning Poland's Jewish problem, some of them for ulterior motives and others from sincere conviction, but for the greater part they have all been either pro-Polish or pro-Jewish in intent. In the following article I shall present the facts as I saw them, and in such a manner as will please neither the one extremest nor the other. It should not be forgotten that two parties to a bitter struggle have seldom a monopoly of righteousness on either side.

Since the report of the Morgenthau Commission it is almost unnecessary to waste space with a denial of the vivid and exaggerated stories of atrocities which have been disseminated for one reason or another, as the various allegations of this kind were fully investigated and properly disposed of by that body of men. During four months' residence in Poland, including visits to many parts of the country, I saw no such atrocities.

In approaching this problem from an unprejudiced viewpoint, it is necessary, first of all, to rid one's self of the misconception that it is a religious problem. The truth of the matter is that the basis of friction between the Poles and the Jews is not Judaism, but Polish nationalism, combined with an economic cause which is probably secondary in importance.

The Poles are a people of intense patriotism, which reaches a degree of almost fanatical fervor. The disintegration of their country and the major share of their political misfortune

have been due to the factional differences among themselves. After years of dismemberment Poland has finally been reunited, but the lessons of the past have taught them the value of cohesion, and reunion of the country in spirit and culture has become the goal of their ambitions.

The years of subjection to foreign Governments have left the particular imprint of each of the governing countries upon the portion of Poland under its rulership. These marks are not easy to eradicate. German Poland today is as different in many respects from Russian and Austrian Poland as one nationality of the same race of mankind is from another. To bring these dismembered parts together in a strong union is a task demanding the statesmanship and ability of a Bismarck.

## WHY JEWS ARE HATED

When the intensity of desire for unification in a people is so inherent, any body of men opposing the fulfillment of this desire are naturally bound to incur hatred. Hatred is essentially based on fear, and it is fear that the Jews will thwart them in their national ambition that has brought forth the enmity of the Poles to as great a degree as their hatred for the Germans and the Russians.

Thanks to the protection of the Allies, for the moment Poland's fears from external aggression are allayed. All the more have they been concentrated upon the possibility of internal disruption. For, living among them, scattered throughout their country,

with the exception of the Duchy of Posnan (German Poland)—forming a large part of the population of the cities, the strategic points of the country's economic and political life—is a people not only of a different race, but claiming a different nationality.

The Jews who live today in Poland are mainly the immigrants of recent years who have come westward from Russia. These late arrivals, or *Littvacs*, as they are called, are the leaders of Jewish life, barring, of course, the small but highly cultured and intelligent group of Assimilators, who are completely disowned by the great mass of their co-religionists. These *Littvacs* are as orthodox in their belief and customs as were their forefathers generations ago. They stand stalwart in their resistance to any suggestion which will tend to modify their ghetto life. They are Jews, first, last and always, and they will not assume Polish nationality or Polish culture, whatever persecution may be brought to bear to make them conform to the will of the majority. Their language is a jargon called Yiddish. They will not speak Polish, though they teach Hebrew in their schools. Their lives are lived in that part of the city called the ghetto. Their schools, their social life and their interests centre around the synagogue.

Let the reader consider what his feelings would have been if he had learned during the World War that there were schools in this country wherein the pupils were taught the German language, or even what he would think today, were it discovered that there were institutions of learning solely employing a foreign tongue and not even demanding of their students the study of the English language. Certainly no more unfair treaty was ever signed than that which forced the Polish Government to permit the Jews resident within its domain to conduct schools of their own, using their own language. This interference in a strictly internal

question, which was prompted by the American Jewry, and to a lesser degree by the Jewry of other countries, will cause a lasting resentment, far outbalancing the good which might be accomplished by such a privilege. It constitutes a wound to national pride and dignity, which has brought forth a protest even from the Polish reformed Jews.

Is it not possible for us, who are confronted by the great problem of Americanization, and who comprehend so well the necessity of melting the various races and nationalities that come to our shores into a homogeneous body of American citizens, to understand the impossibility of permitting a people to live among the citizens of any nation, and yet not be of them.

#### THE JEWISH BLOC

The Jewish population of Poland is a small minority (5,000,000 out of a total of 30,000,000), and not integrally resident in one section of the country, but permeating the entire population. If the cardinal principle of republican government is that the minority shall conform to the will of the majority, it certainly does not befit us to preach to a sister republic the doctrine of allowing the minority not only all the rights enjoyed by the majority, but added privileges as well.

And this is what the Jews in Poland desire, and, to a certain extent, have theoretically gained. They have elected to the Polish Diet, members of the Jewish Nationalist Party, whose sole political efforts are devoted to safeguarding their own interests and securing further concessions. The mere fact that such a party exists proves to the Poles the complete lack of interest which the Jews have for the national welfare. No more striking evidence of the absolute separation of the Jew from his fellow-countrymen is his voluntary assumption of a distinctive appearance. He insistently wears a long black smock, a tight-fitting black cap, and high

black boots, which, coupled with his refusal to shave or cut his hair, marks him unavoidably for what he is, and permits him to present as unattractive a personal appearance as could be accomplished if prompted by intention.

To a foreign observer such determination is quite impossible of understanding. To the Pole it is unmistakably the badge of a secret fraternity conniving for the downfall and possession of his country. With equal determination, the Jews insist on crowding together in ghettos, where filth and disease cannot possibly be prevented. True, both the garb and the ghetto are the products of hundreds of years of oppression and compulsion, and it is perhaps fittingly ironical that the descendants of their oppressors should find these former means of subjection a source of discomfort and worry.

Offers of Polish citizenship and nationality hold no attraction to the Jew. He will have none of them, for he distrusts the Pole, and he has no interest in the wars, problems or prosperity of a country he will not call his own. To the great majority, the brilliant dream of Zionism is the only future worth having, and of a certainty, if all the Jews of Poland could be transported to Palestine the solution of the problem would be reached—for Poland.

The complete lack of patriotic and public spirit among the Jews cannot fairly be attributed to their absence of faith in the promises of the Poles that they will be granted full citizenship and political equality. For those Jews who have deserted the ghetto and given up their secular peculiarities, though still maintaining their independence of thought and religious belief, have prospered in their various occupations and professions. Some of the most prominent bankers, merchants, manufacturers and professional men of Poland are Jews, and the textile mills of the great manufacturing City of Lodz, the largest in-

dustrial metropolis of Poland, are owned for the greater part by capitalists of the Jewish race. These successful men have surrendered no more of their racial individualism than have the modernized Jews in any other country in the world, and the application to them of the name "Assimilators" should not mislead one into the fallacious belief that assimilation necessarily means a surrender of religious conviction. Of all the leaders of Polish life and thought with whom I discussed this problem, I never met one who expressed the hope that the Jews would desert their creed.

#### FOREIGN SYMPATHIES

The impression that the ambition of the Jews is anti-nationalistic is strengthened by the unfortunate preference of great numbers of them for the rulership of the Germans or the Russian Bolsheviki. Their leaning toward the Germans is explained by the fact that during the German occupation of Poland there was a strong and efficient Government, which provided greater security to person and property than does the present weak and recently organized administration of the Poles. The Germans, being administrators of an enemy country, had no more prejudice against the Jews than against the Poles, and it is also true that business was far better under their sovereignty than it is now.

Among the poor Jews—and the great majority of them are in a pitiable state of poverty—there is also a strong radical feeling, which tends to create a sympathy for Bolshevism, encouraged by the presence of many Jews in highly responsible official positions in the Russian Soviets. In Eastern Poland, where the battle with the Bolsheviki has been waged with such intensity, there are many alleged cases—founded on varying degrees of truthfulness—of connivance between the Jewish population and the attacking enemy. Were it to be

granted that these stories as an entirety are false, the fact would still remain that the Jews, by their passive attitude and lack of interest in the success of the Polish armies, have laid themselves open to the charge of anti-patriotic sympathies.

The rare instances of violence to the Jew arise from suspicion of his giving aid to the enemy, from indignation against his profiteering and usurious methods of business, or from crude desire to indulge in the practice of so-called Jew-baiting; the cases of Jew-baiting have been instigated almost entirely by Polish-American soldiers of General Haller's army, who are unaccustomed to the freakish appearance of the Jew, and find it provocative of an ignorant and brutal sense of humor. The failure of the Government to protect the Jews against such harm and humiliation is not due to any predetermined policy of the officials, but rather to the general weakness of the administrative system, which is equally powerless to prevent smuggling or graft.

We Americans, who possess one of the most efficient governments of the world, protect the person of our American negroes with such laxity that they are daily the unfortunate victims of mob license. Scarcely a morning passes that one does not read in the newspapers of the hanging of one or more negroes, and occasionally of their being burned alive. The number so put to death immeasurably exceeds the total number of Jews in Poland who have suffered physical violence of any kind at the hands of the populace.

#### THE ECONOMIC CAUSE

To understand the economic cause of the violent prejudice against the Jews, one must be conversant with present and past conditions of Poland. The Poles are divided into two classes, the aristocratic landowners and peasants. The absence of a large and powerful bourgeoisie, such as exists in every modern country, is

a great weakness to the social structure. The organization of commerce on a scientific and respected basis is as yet in its infancy, and trade is, therefore, still conducted mainly in the old manner.

The Jews, inclined by heredity toward a mercantile life, having for centuries been forbidden the ownership of property, form the great class of merchants. Their business is run in a small bargaining fashion, undeniably lacking in the principles of fairness or equity, and the ignorant, naive Polish peasant is at their mercy for the securing of the goods he needs. Today, when instability is so universal in all material things, the peasant is at an even greater loss to determine whether or not he is being charged a fair value for the article he purchases. There can be no denial of the fact that the Jewish merchant is guilty of shameless profiteering, and also of the smuggling of forbidden goods, tempted by the large profits he can obtain for the sale of them. If the Polish Government is as yet unable to protect the peasant from such injustice, can it be surprising that in turn it is incapable of protecting the Jew from the occasional outbursts of anger aroused by his unfortunate occupation?

The anti-Semitic party does not wish for a better understanding between the Jews and the Poles, but strives to increase existing ill-feeling, to aggravate the unpleasant friction in every instance, and to fan the smoldering flames of prejudice into a conflagration before which the Jews will flee never to return. The historic example of the expulsion of the Jews from Spain teaches them no lesson in political shortsightedness. To them the Jew will never be anything but what he is today, and they will not grant the remotest possibility of his becoming an asset to the community. It is their conviction that material prosperity will only give the Jews the means to control the State to the exclusion of the Poles, and it is futile to point out

the examples of France, England and America, where the Jewish immigrant, granted equal opportunity and equal rights, has within the space of a generation or two become completely nationalized, and has developed into the finest type of patriotic citizen.

That the Polish Government permits the violent agitation and insidious propaganda of the anti-Semitic party to persist is greatly to be regretted, and it only serves to make a wise and practical solution of the racial problem more difficult. The widespread publication in newspapers and periodicals of articles preaching such prejudiced and untruthful doctrines causes indignant protest from many people in this country; but can we as a nation condemn the Polish Government for failure to suppress the printing of such matter when we tolerate Mr. Henry Ford's literary efforts in *The Fort Dearborn Independent*?

The first step toward solving the Jewish problem in Poland is for the radical parties on both sides to become reconciled to the fact that the Jews are a permanent part of the population of the country, and that their future destiny is identical with that of their fellow-countrymen. If they both cling to the idea of the eventual migration of the Jewish residents, no improvement in the existing conditions can be hoped for. But if the two extremists can be brought to acknowledge the impossibility and undesirability of their ambition, a great stride toward a basis of mutual co-operation will have been accomplished.

The Poles, on their side, must realize that prosperity breeds patriotism, and that a prosperous Jewish community will be loyally grateful to the State and will be an economical and political asset to the country. They must never forget that the Jew to a

great extent is the resultant product of centuries of oppression and persecution. They must endeavor to contradict the untruthful stories concerning the character and habits of the Jews, and to dissipate the feeling of prejudice. They must be convinced of the potential ability of the Jew to become a devoted patriot, and they should take the first step toward inducing the Jews to believe in their sincerity.

The Jews must be persuaded to forsake their secular peculiarities. They must be educated in the modern conception of religious practice, taught that devotion to State is as paramount as devotion to creed. They must also be taught that surrender of ghetto life and of its attendant habits and customs does not in any way imply diminution of religious devoutness. The true meaning of the word assimilation must be made clear to them, and they must be shown that if they accept the benefit of equal political and economic rights and privileges they must also assume the duties and obligations of national citizenship. They must seek in every possible way to show their Catholic neighbors that the sole difference between them, aside from one of blood, is that of a religious belief.

Peculiar as it may seem, the hope for a future solution of this problem depends on the outcome of the Russian situation. For Russia once more open to the world will provide Poland's Jewish merchants with an unrivaled opportunity for profitable trade. Let there be sufficient legitimate work for Jew and Gentile alike, and a great part of the discontent and ill feeling would subside. By a process of mutual concessions the leaders of both parties must adopt a program of rapprochement leading to a common goal, and thus strive to fuse the two races into a strong, united and progressive nation.

## Briand's Triumph

For decades Germany will now have to work for France.

—Kikeriki, Vienna.

The reparation terms, which require Germany to pay \$35,000,000,000, are here typified by the magic ring of the Nibelungen, which, in the hands of Alberich the dwarf, (Briand,) makes slaves of all within reach of its power.

### Waiting for Help from the Entente

AUSTRIA (gazing westward): "Hang it all, when will the sun rise again?"

The plight of Austria has been more severe than that of Germany, for, although her obligations are less, her resources have shrunk to the vanishing point. Help has been extended, however, by the Allies, and there is no disposition to press her beyond her ability to pay.

—Kikeriki, Vienna.

[American Cartoons]

WHY?

The increase of the Japanese Navy in number of vessels and in fighting strength is viewed, if not with deep concern, at least with a certain gravity on this side of the Pacific. The Japanese immigration problem and the mandate over Yap have not yet been settled, although it is hoped that these can be adjusted by diplomacy.

# HOW TRADE UNIONS ARE RUINING BRITISH INDUSTRY

BY J. ELLIS BARKER

*Startling facts and figures regarding the union policy of restricting output in mines and factories—Why British coal costs three times as much as American coal—Five English miners do only as much work as one American miner—Labor itself injured.*

THE British trade unions are organizations which pursue simultaneously economic and political aims. The study of their activities in the economic field reveals the fact that they have inflicted the greatest injury upon England's industry and trade, and upon the nation as a whole. The uncritical defenders of British trade unionism tell us that, owing to the activities of the unions, British labor conditions have been greatly improved and British wages have risen considerably. It is true that during the last few decades British labor has been benefited by shorter hours, higher wages and the improvement of factories, houses, &c. However, it is a mistake to ascribe this advance to the trade unions. In the United States, where the power of trade unions is small, labor is far better off than in England, and the highest wages are paid in those industries, such as the United States Steel Corporation and the Ford works, where trade unions are not recognized. Labor conditions throughout the world have vastly improved in the last few decades, and the reason for that universal improvement is obvious. The remuneration of labor depends upon its productiveness. Improved machinery and organization have created that abundance of useful and necessary things which constitute prosperity. Labor organizations by themselves create nothing. The British trade unions, far from benefiting the workers by increasing the supply of goods, have restricted it to the utmost. They have kept the English workers in relative poverty by preventing the expansion of industries. They are principally responsible for the backwardness of industrial England, and for the economic stagnation of the country.

The industries of Great Britain are extraordinarily backward, if compared with those of the United States. England's in-

feriority is startling. The facts of the position are glaringly shown by a comparison of the British and American censuses of production. The only census of production taken in the United Kingdom refers to the year 1907. The American census of production nearest in date was taken in 1909. The two years are so close together that the results of the two investigations are fairly comparable. From these two documents we learn that in 1907-1909 British and American production compared as follows:

	Number of Workers.	Value of Products.
United States, private manufacturing indus- tries only, in 1909....	6,615,046	£4,134,421,000
United Kingdom, indus- tries of all kinds, in- cluding the production of public utilities, such as gas and waterworks, &c., in 1907.....	6,019,746	1,617,340,000

It will be noticed that, taking the industries as a whole, production per worker was two and a half times as great in the United States as in the United Kingdom—that in 1907-1909 two average Americans produced as much as five Englishmen. This comparison is strictly fair. In both censuses wholesale prices formed the basis of calculation, and in 1907-1909 British and American wholesale prices for similar goods were approximately equal. Hence British and American wares competed freely in British, in American and in neutral markets. Since the time of the two censuses American production per worker has increased, while British production per worker has declined considerably. We may, therefore, safely estimate that production per worker is at least three times as great in the United States as in England. Under these circumstances we cannot wonder that American wages are from two to three

times as high as are British wages, and that, measured by their consumption, savings, &c., the American workers are from two to three times as well off as are the British workers.

In the industries taken as a whole, American production per worker is three times as great as is British production per worker. In the more efficient British industries, such as the cotton industry, America's advantage in production per worker is relatively small. In others, such as the iron and steel and engineering industries, which are very backward in England, America's superiority in output per worker is absolutely startling. In the British Government report on the engineering trade, which was published toward the end of the war, we read:

Nearly every employer who appeared before us had the same story to tell. While alleging that the British mechanic stands second to none of the mechanics of the world—that his skill, initiative, and adaptability enable him readily to cope with all engineering manufacturing difficulties—each employer in turn complained of two things. The first complaint was that the workman deliberately restricts his output below that which represents a reasonable day's work, and that this deliberate restriction does ultimately have a serious effect on his character and makes him physically incapable of producing a reasonable day's work, through habit which this restriction engenders.

The second complaint was that the restrictions imposed by trade union rules class as skilled work (a definition which can be determined by the rate of pay) that which is in fact unskilled work. These two points seem to include the main difficulties with which employers have to contend, and which present a most grave aspect if they are to continue after the war, in face of the great national problems which will then demand solution.

We are satisfied that both these allegations are founded on fact. \* \* \*

The trade unions have, in the past, been very reluctant to admit piece rates. Indeed, even now, some of the unions forbid their members to accept piece rates where these have not previously been in force, and, where piece work has been started, the members are asked to discourage it as much as possible. It has also been evidenced to us that cases have occurred wherein, should the men earn more than time and a half, they have been fined by their unions. \* \* \*

Experienced and authoritative foreign observers likewise have frequently ascribed the extraordinary stagnation of many

British industries, and especially of the iron and steel industry, which not so long ago dominated the world, to the fatal influence of the British trade unions and to their policy of restricting output. The final report of the American Industrial Commission of 1902 stated:

That the tendency of workingmen is to restrict the output of their labor within more or less definite limits, which they have come to consider right and just, is undeniable. \* \* \* The trade unions of Great Britain, for instance, have always been relatively stronger than those of America, and at the same time the tendency to fix definite limitations to the performance of each workman has been stronger there. One standard contrast between industrial conditions in Great Britain and in the United States is the greater freedom of the American workman from restrictive rules. To it is often attributed, in a large degree, his greater activity and effectiveness. The alleged decline of British industry is often laid at the door of the unions, by reason of their limitation of the product of their members.

Judge Gary, the President of the United States Steel Corporation, which produces per year about twice as much iron and steel as the whole of the United Kingdom, stated before the United States Senate Committee on Education and Labor in October, 1919:

I think it is immoral for a small minority of men, organized, if you please, to compel by force a large majority to yield to their desires and to submit to their control. Because, if the industries of this country or any other were controlled by union labor it would mean decay, less production, higher cost; and this country could not succeed in its contest with other countries for the world's business—it would be in the condition that, I fear, England is in today, but which, I hope, it will come out of. \* \* \*

Labor unions are practically in control of the industries in England today, I am inclined to think. I am afraid they are. And if they have control, I believe it is a very great hindrance to the progress, prosperity and happiness of England. Of course, I may be mistaken, but that is my belief. I think England is dealing not only with conditions of unrest, but with conditions which compel her to do things which are not the best things to be done. And I firmly believe, whether I am right or wrong, if labor unions had control of the industries of this country it would not only mean the closed shop, but it would mean the imposition and enforcement of conditions which would restrict output and increase cost and add to the expenses of living.

Previous to the war the production of iron was almost stagnant in Great Britain,

while it rapidly increased in Germany, as the following figures show:

	Production of Iron:	
	In Germany.	In the United Kingdom.
1890.....	4,658,000 tons	8,033,000 tons
1913.....	19,292,000 tons	10,260,000 tons

Between 1890 and 1913 English iron production increased by 20 per cent., while German iron production increased by more than 300 per cent. In 1890 England produced almost twice as much iron as Germany, while in 1913 Germany produced almost twice as much iron as the United Kingdom. In steel the position had changed no less strikingly to England's disadvantage. Commenting upon the rapid expansion of the formerly insignificant German iron and steel industry, and upon the utter stagnation of the English iron and steel trade, which used to dominate the world, an authoritative German technical handbook, "Gemeinfassliche Darstellung des Eisenhüttenwesens," (Düsseldorf, 1912,) stated:

No land on earth is as favorably situated for iron production as is England. Extensive deposits of coal and iron, easy and cheap purchase of foreign raw materials, a favorable geographical position for selling its manufactures, reinforced by the great economic power of the State, made at one time the island kingdom industrially omnipotent throughout the world. Now complaints about constantly increasing foreign competition become from day to day more urgent. These are particularly loud with regard to the growing power of the German iron industry. \* \* \*

The German trade unions, with their Socialist ideas, are opposed to progress. If their aspirations should succeed, the German iron industry would be ruined. An attempt on the part of the German trade unions to increase the earnings of the skilled workers by limiting the number of apprentices, the imitation of the policy which has been followed by the British trade unions, would produce a scarcity of skilled workers in Germany, as it has in England. The British iron industry should be to us Germans a warning example. The English trade unions, with their short-sighted championship of labor, with their notorious policy of "ca' canny," (the limitation of output), and with their hostility to technical improvements, have seriously shaken the powerful position of the British iron trade.

Owing to the restrictive policy pursued by the trade unions, the British industries have suffered severely. The great organizations of the workers have in many cases refused to employ improved labor-saving machinery, arguing that its use would

put men out of work. In other cases they have produced no more with the best modern machinery than with old and out-of-date machines previously used, thus discouraging employers from modernizing their plants.

The basis of England's wealth and power is the coal industry. A few decades ago Great Britain produced more coal than all the nations of the world combined. England was at that time the most efficient nation in the world, both in manufacturing and in mining. However, of late the coal output per man has rapidly declined in the United Kingdom, while it has equally rapidly increased in the United States and elsewhere. Since 1880 the following extraordinary change has taken place in England and in America:

COAL PRODUCED PER MAN PER DAY.

	United Kingdom.	—United States.—	
		(Bituminous). Tons.	(Anthracite). Tons.
1880....	1.33	...	...
1885....	1.28	...	...
1890....	1.08	2.56	1.85
1895....	1.18	2.90	2.07
1900....	1.10	2.98	2.40
1905....	1.08	3.24	2.13
1910....	1.00	3.46	2.17
1915....	0.98	3.91	2.19
1918....	0.80	3.78	2.99

During the years under consideration coal production per worker per day has very greatly increased in the United States, owing to the improved machinery and organization introduced into coal mining. In the same period British production per worker has disastrously declined, notwithstanding the extraordinary mechanical progress made. About 80 per cent. of the coal mined in the United States is bituminous. Comparison of the British and American statistics shows that production per worker is almost five times as large in the United States as in Great Britain—that one American miner produces as much coal as five British miners. The British miner works, as a rule, five shifts per week. It follows that an American miner produces approximately as much coal per day as his British colleague produces during an entire week. We can, therefore, not wonder that British coal is three times as dear as American coal, to the ruin of British trade and indus-

try, although the American miner receives higher wages than the British miner. The representatives of the British coal mining unions frequently assert that America's extraordinary superiority in output per worker is due to the possession of thick seams lying close to the surface. That is one of the reasons, but not the principal one. The extraordinarily low production per worker in England is due mainly to the restrictive policy pursued by the workers and by their hostility to labor-saving machinery. Before the Royal Commission on the Coal Industry an eminent engineer, Mr. Forster Brown, stated:

Mechanical appliances for coal cutting and getting are employed to a greater extent in America than in this country. \* \* \* I think it is due to two main causes: Partly the physical conditions under which coal is worked in America are better, but also I am of opinion that American labor has grasped to a far greater extent than labor in this country has grasped the fact that the soundest route to improve its position and its employment is to get the maximum output per unit of labor employed compatible with health and safety, either by direct manual labor or the help of machines.

Before the same Commission Lord Gainford of Headlam, the eminent coal owner, complained:

The terms demanded by miners have frequently prevented and retarded fair trials being given to coal-cutting and labor-saving appliances which managers have been keen to introduce.

Coal-cutting machines are only used very little in Great Britain, as compared with the United States. In 1916 only 26,303,110 tons of coal were mined by machinery in the United Kingdom, and no less than 253,285,962 tons of coal were machine-cut in the United States. The fact that the British miners deliberately reduce output may be seen by comparing the British and the American record of coal produced per machine. In this respect the two countries compare as shown at top of the next column.

	Output Per Coal-Cutting Machine.	
	In the United Kingdom. Tons.	In the United States. Tons.
1903 .....	8,153	10,457
1910 .....	8,039	11,722
1916 .....	7,601	15,638

Production per machine has rapidly increased in the United States and rapidly declined in the United Kingdom, and the result has been that, per machine, production was in 1916 twice as great in the United States as in the United Kingdom.

The defenders of the British mining unions habitually assert that natural conditions and the greater use of machines, which the British miners refuse to employ or deliberately prevent running at a reasonable speed, are solely responsible for America's extraordinary superiority in coal production per worker. That might possibly be true with regard to the bituminous mines, but cannot be correct with respect to the American anthracite mines. The United States has only a little anthracite. It occurs in a circumscribed area, and is found in seams which are so thin, irregular and broken that coal-cutting machinery cannot be used. Many of the American anthracite mines are exhausted, partly exhausted, or waterlogged. Nevertheless, the American anthracite miner produces per day almost three times as much as the British miner, who is aided by a good deal of machinery, as shown by the figures previously given. Even in the best-equipped pits of South Yorkshire, which have only recently been opened, and which exploit very thick seams, the British coal miner produces only about a ton of coal per day—less than half as much as the American anthracite miner, and one-fourth as much as the American bituminous miner.

In the course of his speech to the General meeting of Bolckow, Vaughan & Co., Limited, at Manchester, on Sept. 30, 1920, Sir J. E. Johnson Ferguson, Bt., the Chairman, gave the following figures, showing the fall in output and increased wages at the company's collieries:

	Men employed.	Total Wages. £	Average Wages Per Man. £ s. d.	Coal Raised. Tons.	Average Coal Output Per Man. Tons.	Wages Cost Per Ton. s. d.
Year ending June 30, 1914..	8,844	735,236	83 2 8	2,320,410	262.37	6 4
Year ending June 30, 1920..	9,487	1,589,036	167 10 0	1,616,233	170.36	19 7½
Increase or decrease.....	+643	+853,800	+84 7 4	-704,177	-92.01	+13 3¾

Coal is the principal source of power used for industrial and commercial purposes, and it is at the same time the most important raw material of industry, especially in the iron and steel and engineering industries. We cannot wonder that British industry and commerce are stagnating, and that unemployment is unprecedented, in view of the fact that British coal costs three times as much as American coal. That disastrous handicap of England is due not so much to natural conditions as to the action of the misguided trade unions.

The harmful effect of restriction of output is unfortunately not limited to the British coal, iron and steel and engineering industries, but is general. Lord Askwith, who was Controller General of the Commercial, Labor and Statistical Department and Chairman of the Fair Wages Advisory Committee, and who has had an unrivaled experience of British labor, wrote in his book, "Industrial Problems and Disputes":

It would be useless to calculate how much talent and how many rising hopes have been dashed down in the atmosphere of insistence on time work, with its watchword, "Keep your time by the slowest," or in the absolute command of foremen or colleagues that the number of rivets, the tale of bricks, the lasting of boots, the cuts of clothes, or the output of articles of every kind must be kept within or below the rule of the shop.

A discharged soldier, who returned to work for a motor car firm at Birmingham, found that in turning cylinders he could do a job in forty-three minutes, and he maintained this speed for three weeks. The man was warned that the official time was seventy minutes. The warning being ignored, on Nov. 4 last the union stopped the shop until the man was moved to other work. The same kind of intervention seems to take place on most engineering work on which piece rates are paid.

In the collieries the restriction is exercised indirectly. If a miner exceeds a certain output per day, varying from four to seven tons, he finds himself delayed by the "shunt" men, who cut down his supply of tubs and props. In South Wales and Lankashire the output laid down is a fixed number of tubs per day, called a "stint," and if this were regularly exceeded the pit would be stopped to enforce it. The same applies to the docks. Recently a ship discharging grain in bulk in Birkenhead was stopped because the union considered 150 tons a day was an excessive rate, though the rate was laid down both in the ship's charter-party and the sale contract. The result is that the elevators are now running at 23 per cent. below full speed. In Cardiff and elsewhere carters are not now allowed

to load more than one tier on team wagons. On Nov. 10 last a team-lorry was stopped in Bute Street, Cardiff, by the union delegate, and the carter made to unload eight bags which were in a second tier. At Immingham a motor-lorry was stopped because it had a full six-ton load. The driver asked the delegate what the limit was, and he said: "I don't know, but you have got too much on there, anyhow."

The restriction is of special moment when we find it applied to house building. At Huddersfield, during the building of an extension, four men were stopped by their union for three days because they laid 480 bricks in a day of eight hours. A slater was warned at the same place because he fixed a gutter—a plumber's job—in order that he might get on with his own work. Instances might be multiplied indefinitely.

To the more enlightened trade unionists it is perfectly obvious that the policy of limiting output is bound to be disastrous to the workers themselves. G. N. Barnes, M. P., stated in *The Evening Standard* of July 9, 1920:

There is a fundamental error in the supposition that increased production leads to unemployment. The idea that less work for one man means more for another is entirely wrong. A worker who adopts the "ca' canny" policy is doing no good to himself or any other human being, and is simply paying homage to a stupid fetish which is a curse of the workshop.

First of all, the idea of more production, less employment, is entirely opposed to the facts as they have revealed themselves in the last generation. During that period there has been an ever-widening extension of production, and at the same time a steadily diminishing proportion of unemployment \* \* \*

Increased production at the present time would have swift effect in lowering prices. The more clothes or boots that are produced the less chance has the profiteer for high prices. That, however, is but an incidental advantage. At the moment food is very high in cost, a dominant cause being that we are importing vast supplies from America without being able to send equivalent values in manufactured articles. The result is that the value of the sovereign in America has gone down \* \* \* The policy of "ca' canny" is the policy of high prices for the necessities of every working-class household.

Mr. J. H. Thomas, M. P., stated at a gathering of railwaymen at Kentish Town, on March 15, 1921:

I want you to get clearly into your minds that in return for a fair day's pay you must do a fair day's work. Nothing is more vicious and more uneconomic or more calculated to react upon you than the assump-

tion that you are providing work for some one else by doing as little as you can.

The idea of men benefiting themselves by making their production scarce and dear is perfectly correct within limited scope. Diamonds owe their great value to their scarcity. If they were as common as paving stones no one would wear them as jewelry, and they would be worth no more than paving stones. If the makers of certain indispensable goods, such as boots or clothes, succeed in establishing an artificial scarcity value for their productions, they may be able to exploit the community for their personal benefit, but if all the workers in a country pursue the policy of making their goods scarce and dear, no one will be any better off, but all will suffer from the general shortage. That is, unfortunately, the position in Great Britain. Limitation of output, far from benefiting the British workers, is injuring them most seriously. Owing to their policy they suffer, in the first place, from a general scarcity and dearth of goods and from the high cost of living, which creates widespread dissatisfaction; in the second place, they suffer from widespread unemployment. The goods which the British workers turn out grudgingly at high prices and in totally insufficient quantities are produced in large quantities and at cheaper prices elsewhere. These more cheaply produced goods naturally undersell similar British goods, both in foreign markets and in the English home market, and the result is unemployment and poverty among the workers.

The medieval guilds were closed corporations. The members of every guild strove to keep the special kind of work in which they were engaged to their own members, and jealously prosecuted those guilds which endeavored to encroach upon their privileges. A maker of hats was not allowed to make caps, and a maker of caps was prohibited from making hats. Every locality had privileges of its own, and entrance into a guild was made exceedingly difficult. The result was that labor ceased to be fluid. Men who had lost their employment in an occupation, the productions of which were not in demand, could not engage in the making of other goods because of the jealousy of the established

unions, even if there was a great shortage of labor. The result was disastrous to the workers. Goods were made artificially scarce and dear, and unemployment became great and general.

The French Revolution of 1789 was principally due to economic causes. France swarmed with workers who could not find employment. The great Turgot endeavored to save the situation by freeing industry from its shackles. He prevailed upon the King to issue the celebrated Edict of 1776, which abolished the privileges of the guilds. Unfortunately, the power of the established interests was too great. The Edict was revoked. The sufferings of the people became ever greater. The Revolution broke out in 1789, and one of its first acts was the destruction of the ancient guilds, which aroused the jubilation of the people. The British trade unions are creating a state of affairs which resembles that of France before 1789. An unemployed worker, no matter how skilled, may not enter another trade which is short of workers. Some time ago a lengthy labor dispute occurred in the piano trade. The unemployed piano case makers wished to find work in the furniture factories, which suffered from an acute shortage of workers. However, they were turned away because the furniture workers meant to keep the making of furniture exclusively to themselves. The United Kingdom has been suffering severely through the shortage of houses. The number of workers in the building trades had declined between 1910 and 1920 to almost one-third, as shown by the following figures from the People's Year Book:

	1919.	1911.	1914.	1920.
Masons .....	73,012	52,188	34,381	19,310
Slaters .....	9,796	8,391	4,154	3,673
Plasterers .....	31,300	25,082	19,479	12,067
Joiners .....	265,000	208,995	126,345	108,199
Bricklayers .....	115,995	102,752	73,671	53,063
Totals .....	495,103	397,408	258,030	196,312

At the end of the war the demand for houses was unprecedented. The representatives of labor asserted that a million working class houses were wanted. Besides, hardly any painting and repairing had been done since 1914. At least 5,000,000 houses were in urgent need of painting, patching

and redecorating. Nevertheless, the building trade unions restricted their previously low output very greatly and refused to receive 50,000 ex-soldiers whom the Government had trained. The building trades could at the time have absorbed 200,000 unemployed workers, and the expansion would have vastly improved employment in other affiliated trades, such as furniture making, brick making, &c. Notwithstanding widespread unemployment and the most extraordinary shortage of bricklayers the building trade unions would not abandon their policy of short-sighted selfishness. George Barnes, M. P., who was General Secretary of the Amalgamated Society of Engineers for ten years, stated in the House of Commons on Feb. 16, during a debate on unemployment:

I say, and I say it with extreme regret, that you will get no better world until you have made a better use of the world you live in. Taking things as they are, there seem to be three causes for the present unemployment. The first is that the world has been disrupted by the war. \* \* \* The second cause of the present paralysis of industry is, I would suggest, the lack of confidence due to industrial disputes and conflicts within the past two or three years. I wonder if it is as fully appreciated as it should be that during the last twelve months 27,000,000 days have been lost by strikes, 27,000,000 days at a time when the world is starving for goods, and when every man should be doing his best to get the world on its legs again. \* \* \*

We were told that there were 6,000 applicants for bricklayers. It is very well known that the number of bricklayers wanted is not merely 6,000 but 60,000. \* \* \* There are no bricklayers available, although, as is well known, there is work for hundreds of thousands of them if only they could be found. It is not right. I deplore the fact that there has been so little fellow feeling on the part of the bricklayers for the men who went to the war and fought on their behalf. Everything, in fact, was done to safeguard the interests of the men in the industry and to ensure that there should be no underpayment; yet nothing whatsoever has been done by the bricklayers to welcome these men as they deserve to be welcomed. \* \* \* We are not producing things in their right proportion.

Rigid trade unionism in England has destroyed the fundamental right of men to earn their living by the work of their hands. Starving men may accept charity, but they must not work at a trade which

is short of workers but which jealously closes that trade to all outsiders in order to preserve for its members a profitable monopoly. That state of affairs cannot last.

During and especially after the war the British trade unions followed the policy of raising wages while keeping output low. From the official statistics we learn that in certain trades and industries the following wage advances were secured between 1915 and 1920:

	Workers Affected.	Weekly Advances in Wages.	Annual Amount.
1915....	3,470,000	£677,700	£35,240,400
1916....	3,593,000	637,000	33,124,000
1917....	5,029,000	2,307,000	119,964,000
1918....	5,998,000	2,988,000	155,376,000
1919....	6,160,000	2,432,000	126,464,000
1920....	7,600,000	4,693,000	244,036,000
Total .....			£714,204,400

The official table by no means covers the whole increase of wages. In the first place, millions of workers whose wages have been raised do not come under the purview of the department which looks after labor. In the second place the enormous increase in wages has been accompanied by a drastic reduction in working hours. Lastly, during the years for which figures are supplied a vast number of overtime hours at specially high rates were worked. During the years under review at least £1,000,000,000 were added to the yearly labor bill. We cannot, therefore, wonder that the prices of all British goods rose enormously, partly through the deliberate scarcity created by the trade unions, and partly through the huge addition made to the wages bill. Nevertheless, labor agitators have accused the capitalists, the profiteers, and have pilloried them because of the high cost of living for which the trade unions themselves are chiefly responsible.

The British trade unions have not only made all goods scarce and dear, thereby doing almost irremediable damage to the industries and commerce of the country and to the people as a whole, but they have destroyed the pride of the workers in their work by rewarding slackness and penalizing ability. In many industries payment by results has been abolished by trade union pressure, and time payment regardless of results has been introduced in its stead.

Moreover, the payment of unskilled workers has been raised to, or near to, that of highly skilled workers. Lastly, increase in payment is no longer the reward of ability, but is automatically acquired because the workers in many trades are paid in accordance with their age. For instance, in the perambulator and invalid carriage trade the following wages were fixed for male workers per week of forty-eight hours:

Workers 15 to 16 years old.....	20s. per week.
Workers 16 to 17 years old.....	26s. per week.
Workers 17 to 18 years old.....	33s. per week.
Workers 18 to 19 years old.....	40s. per week.
Workers 19 to 20 years old.....	47s. per week.
Workers 20 to 21 years old.....	54s. per week.

Hundreds of similar wage rates could be given. Age, not ability, being rewarded by higher pay, we cannot wonder that both manufacturers and customers complain about shoddy work.

## DEBTS OF FOREIGN GOVERNMENTS DUE TO THE UNITED STATES

AN official statement issued in July, 1921, gave the complete schedule of foreign debts due to the United States at that time as follows:

### OBLIGATIONS HELD FOR ADVANCES UNDER LIBERTY BOND ACTS—INTEREST AT 6 PER CENT.

Country.	Amount.
Belgium .....	\$347,691,566.23
Cuba .....	9,025,500.00
Czechoslovakia .....	61,256,206.74
France .....	2,950,762,938.19
Great Britain .....	4,166,318,358.44
Greece .....	15,000,000.00
Italy .....	1,648,034,050.90
Liberia .....	26,000.00
Rumania .....	23,205,819.52
Russia .....	187,729,750.00
Serbia .....	26,175,139.22
Total .....	\$9,435,225,329.24

### OBLIGATIONS RECEIVED FROM SECRETARY OF WAR AND SECRETARY OF NAVY ON ACCOUNT OF SALE OF SURPLUS WAR MATERIALS.

Country.	Principal Amount Payable.	Date of Maturity.
Belgium .....	\$19,000,000.00	Apr. 10, 1922
	8,392,097.57	Aug. 5, 1922
	196,483.57	Aug. 21, 1922

Hungary .....	1,685,835.61	Jan. 1, 1925	6
Poland .....	24,353,590.97	June 30, 1921	6
Total .....	\$56,899,879.09		

### OBLIGATIONS RECEIVED BY TREASURER FROM AMERICAN RELIEF ADMINISTRATION.

Country.	Principal Payable.	Date of Maturity.	Int., %
Armenia .....	\$8,028,412.15	June 30, 1921	5
Czechoslovakia .....	6,428,089.19	June 30, 1923	5
Estonia .....	1,785,767.72	June 30, 1921	5
Finland .....	8,281,926.17	June 30, 1921	5
Latvia .....	2,610,417.82	June 30, 1921	5
Lithuania .....	822,136.07	June 30, 1921	5
Poland .....	51,671,749.36	June 30, 1923	5
Russia .....	4,465,465.07	June 30, 1921	5
Total .....	\$84,093,063.55		

The grand total of original obligations, as enumerated above, is \$10,084,367,706.59. To this is to be added the unpaid interest, which on July 1 aggregated in excess of \$1,000,000,000, making the entire obligation on July 1 in excess of \$11,100,000,000.

A bill has been introduced in Congress to empower the Secretary of the Treasury to fund these obligations at his option.

# SWITZERLAND'S DISPUTE WITH FRANCE

By M. E. DE GOURMOIS

[A Swiss citizen, formerly a student at the University of Neuchâtel, who did military service on the Swiss border during the war]

*Story of the controversy caused by France's proposed abolishment of the "Free Zones" adjoining Geneva—How the treaty of Versailles has upset an age-old arrangement between the two countries—A storm of Swiss protests leads to new negotiations*

NEGOTIATIONS begun at Berne, Switzerland, toward the end of April, 1921, have called attention to an unpleasant issue between France and Switzerland. The controversy has to do with the so-called "free zones" of Upper Savoy and Gex, on the Franco-Swiss frontier, adjoining Geneva. Both districts are French territory, but ever since feudal times they have been economically, and even, at certain periods, politically united with Geneva. The present status of affairs, under which Switzerland has all the advantages of trade and exchange, while French business interests are protesting, dates back to 1815 and the Treaty of Vienna, under which France agreed not to place its customs line on the frontier in the neighborhood of Geneva, but to leave certain "free zones."

This situation was left unquestioned until the end of the war with Germany, when the French Government, influenced by home business interests, caused to be inserted in the Versailles Treaty a clause (Article 435) which declared that the stipulations of the treaty of 1815 were no longer consistent with present conditions, and that it was desirable "for France and Switzerland to come to an agreement together, with a view to settling between themselves the status of these territories under such conditions as shall be considered suitable by both countries."

As Switzerland was not a member of the Peace Conference, and had no part in discussing and signing the treaty, this clause of Article 435 was tantamount only to a wish for negotiations, and could not in any way be considered as compulsory. On May 5, 1919, however, the Swiss Federal Council notified the Peace Conference that it was willing to comply with the wish expressed; but that it made all reservations

regarding the new status to be adopted, and that no modifications could be made in the present régime "until new arrangements had been agreed upon between France and Switzerland to regulate matters in the territory."

To understand why the Swiss Government was so cautious in the wording of this note, it is necessary to consider, behind the apparent simplicity of the phraseology of Article 435, the historical, geographical and economic questions involved.

A map of this small part of Europe, which is not as large as Greater New York, shows that Geneva, situated at the end of the lake of the same name, is the only important town of the whole region. One cannot help being struck by the fact that Geneva is the natural centre of the district, which is cut off from the main part of France by high mountains, the Jura to the west and the Savoyan Alps to the south, the only natural way of communication being the narrow break in the mountains which the Rhone River channels.

Passing over the feudal period, when this ground was a bone of contention between the overlords of the Houses of Savoy and Geneva, one notes that it was in the sixteenth century that the first mention of the "free zones" appeared. Geneva had seized the Pays de Gex, then a "fief" of the House of Savoy. The city, however, did not retain its conquest, but turned it over to King Henry IV. of France, on the guarantee that free trade and free communications between that district and Geneva should exist permanently. That district of Gex remained French until the second period of the French Revolution, when Geneva also was annexed to the French Republic (1798).

The district of Upper Savoy, on the other

hand, after having been conquered by the Republic of Berne, was subsequently turned back to the House of Savoy, and according to the Treaty of Saint Julien in 1603 the Duke of Savoy established a free zone in Upper Savoy and granted to the Republic of Geneva trading privileges. At the time of the Directory, Savoy was also annexed to France, so that the whole territory, now partly French and partly Swiss, which is limited by the mountains, was united and formed the "Departement du Léman" (another name for Lake Geneva), with Geneva as capital.

After the downfall of Napoleon, that arrangement, which seemed the only practical one, was broken again. Nobody at the Congress of Vienna (1815), or at the Congress of Paris (1814), seemed opposed to having the Districts of Gex and Upper Savoy (Chablais and Faucigny) united to Geneva. Only differences in religion between the town, which was Protestant, and the agricultural districts, which had remained Catholic, can be blamed for the failure of the desired fusion to take place.

The Congresses of Paris and Vienna were respectful, however, of the principle of the free zones which had been in existence for over two centuries, and, while incorporating the Canton of Geneva into the Swiss Confederation, both Congresses clearly specified that the customs lines of France and of the Kingdom of Sardinia would be placed behind the surrounding mountains. This decision is recorded as follows: In the last part of the third paragraph of the first article of the Treaty of Peace of Paris, Nov. 20, 1815: "The French customs line will be placed to the west of the Jura, so that the whole district of Gex shall be outside of that line." Again, in the last part of the second paragraph of the treaty between the King of Sardinia, the Swiss Confederation and the Canton of Geneva, Turin, March 16, 1816, "\* \* \* \* also that the customs line be placed at least one league from the Swiss border and beyond the mountains mentioned in the said protocol."

The Treaty of Vienna, which is the complement of these two treaties, has created Switzerland as it is today, and is for that country the fundamental basis of its rights, freedom and constitution. It is perpetual in its dispositions regarding Switzerland, and was acknowledged as such by the Peace

Conference when the case of Swiss neutrality was submitted.

When Upper Savoy finally became French in 1860, as a result of a plebiscite, the Imperial French Government issued a proclamation confirming the existence of the free zone in that department, and recognizing the perpetual neutrality of Upper Savoy, thus endorsing the Treaty of Vienna in that respect.

The régime thus instituted has been a great factor in the prosperity of Geneva and the zones. Outside of the city, which has a population of about 130,000, the territory of the canton is very small, and by far inadequate to supply the town with the vegetables and dairy products it needs. The additional supply comes mostly from the free zones. The French people of these districts, before the World War, came to town to sell their products and to buy in the numerous stores of the city all the manufactured articles and wearing apparel they needed. The Savoyard was feeding the Genevois, and the Genevois was in turn clothing and entertaining the Savoyard.

The disturbances caused by the war have somewhat modified that picture. Passport regulations, the closing of the border, big differences in the exchanges, have hampered relations between Geneva and the free zones. The Savoyard is still selling his dairy and garden products in Geneva—the town needs them and pays a good price for them—but the Frenchman is no longer buying clothes and manufactured articles in the city. The exchange is prohibitive; he would have to give from two to three of his French francs for one Swiss franc's worth of goods, and so he now prefers to make his purchases in his own village or in some more remote French town. Stores in these districts have had a prosperous period, they do not feel any longer the competition of Geneva's merchants. They want to retain their clientele and fear that, when the exchange between France and Switzerland becomes normal again, they will lose their customers if the régime of the free zone is still in existence.

The business associations of these French territories, as well as the customs authorities of France, who have been losing an appreciable amount of taxes under the present status, have brought pressure on the French Government, asking it to cancel the

free zones. It is to be noted that the free zone privileges are not reciprocated by the Swiss authorities; while any kind of Swiss products can enter the French zones without paying duty, the Swiss customs are on the political border. The French food products would be liable to duty if there were

EDMUND SCHULTHESS  
*New President of Switzerland*

any, and the French manufactured articles of the zones must pay the regular duties when entering Swiss territory. It thus appears that Geneva has every interest in the maintenance of the free zones, whereas opinion in France is divided; the farmers want the free zones, and the business men want the customs line at the political border.

One would expect that, as a consequence of the age-old friendship between France and Switzerland, particularly Geneva, the negotiations foreseen by Article 435 of the Treaty of Peace would have been conducted along amicable lines, and that a compromise would have been easily found. This has unfortunately not been the case, and the French note of May 18, 1919, in answer to the note from the Swiss Government mentioned at the beginning of this article, took the stand that Article 435 implied the opening of negotiations with a view to canceling the free zones. Such an interpretation was,

of course, utterly unacceptable to the Swiss Federal Council. Unsatisfactory negotiations have slowly proceeded ever since. On March 22 the French Government issued a note announcing that a law canceling the free zones was about to be introduced in the Chamber of Deputies and the French Senate; this note further stated that the French Government "could not contemplate submitting to a court of arbitration a question of sovereignty." Such a bill was actually introduced, but even before it was passed the Paris Government announced that the change would be made and the free zones abolished as from April 26.

This created a storm of protest in Switzerland, and France lost several of her best friends in the Swiss Confederation as a consequence of the issuance of that unfortunate note. Such newspapers as *Le Journal de Genève* and *La Gazette de Lausanne*, which had defended the cause of France during the war even beyond the safe limits of a strict neutrality, were for once in complete agreement with their colleagues of German Switzerland, and criticised sharply the attitude of France.

A question of principle was raised: Was France going to break the Treaty of Versailles on a minor point, and thus create a precedent which would be a powerful lever in the hands of the adversaries of that treaty, and perhaps induce Germany to evade some of her obligations? It was to the best interest of France that such a thing should not happen. As a consequence of the sharp criticisms uttered by the Swiss newspapers and a large portion of the French papers, among them the *Journal des Débats*, the question was reconsidered, and on May 20, 1921, the French Government sent a note to the Swiss Federal Council stating that France was prepared to reopen negotiations and was sending a delegation to Berne for that purpose.

The French and Swiss delegations began their sessions at Berne on May 27. The Swiss at the very outset issued a statement, addressed to the French delegates, in which they emphasized the conciliatory spirit with which, in accordance with their instructions, they were prepared to conduct the discussions, and implied that they were prepared to yield to the French desire to remove the customs line to the frontier. The statement, however, went on to say

that so vital a concession must be rewarded by suitable compensation, and that the provisions contained in the French project must be altered accordingly. The statement added:

In these circumstances the Swiss delegation must regard the French preliminary project merely as the starting point, reserving the right to formulate any proposals for its modification which may seem necessary, and possibly to present a draft convention of its own.

It is to be hoped that a solution by mutual agreement will be reached, as Switzerland undoubtedly has treaties and justice on her side when she says that no one-sided solution can be accepted. It has been suggested that the case be submitted to the League of Nations, or that a plebiscite be called for in the free zones. If, however,

both the French and Swiss delegates have the sincere desire to avoid complications and are ready to make the necessary concessions, a satisfactory solution can be found. France would then not be accused of having broken a treaty the fulfillment of which means everything to her.

In addition to the question of the free zones, the negotiations between France and Switzerland will have to include another point: the neutrality of Upper Savoy, which was established in 1815 for the benefit of Switzerland. The settlement of this question is, however, not likely to create complications, as the Swiss Government and Swiss public opinion seem to agree that the neutrality of Upper Savoy is a part of that status "which is no longer consistent with present conditions."

## GEORGE WASHINGTON HONORED IN ENGLAND

HIGH honors were paid by England to the memory of George Washington in June. Sulgrave Manor, the ancestral home of the Washingtons, was rededicated on June 21, 1921, with elaborate ceremonies following its restoration, at a cost of \$50,000, to the form in which it existed three centuries ago. The exercises were arranged by the Sulgrave Institution, organized in 1912 to foster friendship between Great Britain and the United States; it was this organization which initiated the movement for restoration and conducted the necessary work from the first. Lord Mayors and other great dignitaries, robed in their most picture-que regalia, participated in the ceremonies. The exercises began with short services in the Sulgrave Parish Church, where lie buried Laurence Washington and his wife, with their eleven children, and were concluded on the lawn of the Manor House, where the Marquis of Cam-

bridge, brother of Queen Mary, delivered the principal address. Letters were read from Calvin Coolidge, Henry Cabot Lodge, Samuel Gompers and Charles W. Eliot.

A second ceremony was held in London on June 30. The bronze copy of Houdon's statue of George Washington—the original of which stands in the rotunda of the Capitol of Virginia, at Richmond—was unveiled at Trafalgar Square as the gift of Virginia to Great Britain. The unveiling was witnessed by a large and distinguished company, including Earl Curzon, Viscount Bryce and other notables, and the members of the Virginia delegation headed by Professor Henry Louis Smith, President of Washington and Lee University. The gift was accepted by Earl Curzon on behalf of the British Government. Friendship between Great Britain and the United States was emphasized. Ambassador Harvey was absent from both ceremonies.

# THE POLISH LEGISLATURE AT WORK

BY PRESTON LOCKWOOD

THE Legislature of the Republic of Poland began its labors two years ago without any foundation of law and government on which to build. Elected on Jan. 26, 1919, the Legislature met for the first time on Feb. 10 of the same year. There was no Constitution, and no provisional organization of the country. The three parts of the new republic, formerly under the sway of Russia, Germany and Austria, respectively, sent Deputies to this Parliament so far as they were sufficiently free from the German and Ukrainian invaders to be able to hold elections.

The new Legislature, elected by all men and women of 21 years or more (between 90 and 100 per cent. of the voters went to the polls), faced four groups of problems:

1. The taking of immediate measures to cope with the prevailing conditions—starvation, epidemics, &c.—and to meet the need of organizing the defense of the country against Germans, Ukrainians and other invaders, including brigands.

2. The task of reconstructing a country devastated by Russians, Germans, Austro-Hungarians and Turks, more than, perhaps, any other European country.

3. The urgent obligation of realizing the century-old wishes of the Polish people to unite, to do away with the undemocratic laws of the countries which had governed Poland, and to reform the educational and social system quickly enough to satisfy the hopes of the population, whose nerves had been sorely tried by the war.

4. The universal need of Poland, as of all countries, to carry on the ordinary business of Government as smoothly as possible.

In every one of these directions, the Parliament, which has not yet finished its sittings, has made some progress, and though some of the laws may seem imperfect, and others have already been changed, there is reason to believe that the complexity of its problems and the way in which they have been met will be a matter of interest to the future historian, who will probably have no

reason to blame the Legislature for lack of wisdom or zeal.

In the first place, it was necessary to provide for the whole country a new Constitution. But, before that was enacted, the Legislature, though itself assuming the sovereign power, entrusted Joseph Pilsudski with the office of Chief of State and Commander in Chief of the armed forces, laying down rules as to his responsibility to the Diet, as well as that of the Cabinet appointed by him with the co-operation of the Legislature.

The Legislature had, of course, to adopt at once rules of its own procedure, and these, very liberal from the first, have been changed as need arose and experience dictated. The Constitution was finally adopted, as the result of a series of compromises between the main groups of the Legislature, on March 17, 1921, and it is believed that it is one of the most democratic and liberal Constitutions in the world. In the meantime, steps have been taken to co-ordinate the organization of the three parts of Poland by creating new territorial divisions and by giving these a reasonable measure of home rule. In some parts, particularly in what was formerly Russian Poland, there had been very little home rule; in others, mainly in Prussian Poland, the country was organized so as to give preponderance to the Germans over the Polish majority. In Austrian Poland the Government had been very undemocratic.

The Polish Legislature at once began to democratize the franchise and to introduce a unitary system of organization. It then proceeded to take up the matter of civil law, the law governing family relations, contracts, damages, real and personal property, &c. A commission was appointed to draw up a Polish system of law in place of the four systems actually prevailing. The necessity for this is obvious, for, at present, in what was the Austrian part, the Austrian Civil Code of 1811 is in force; in what was German Poland, the German Civil

Code of 1896 prevails; in what was formerly Russian Poland, around Warsaw (the Congress Kingdom), the Napoleonic Civil Code (as in Louisiana, South America, France and Belgium); and in other parts of late Russian Poland, the Russian civil law. The Commission of Codification, composed of leading professors, judges and practicing lawyers, has been holding frequent meetings and is working out a new legal code.

To meet the immediate needs of defense, many laws have had to be passed organizing the army and assuring its supplies. In this starved and overcrowded country, where over a million houses were destroyed during the war, and where practically no building is going on, because of its high cost, laws on billeting had to be passed, as well as laws devised to supply the army with food and other necessary articles. Similarly, there has been a need of laws protecting tenants against eviction by landlords. Evictions are today very rare. Also provision had to be made against the raising of rents.

All such legislative measures, conceived in the interest of the poor, have sometimes been so far reaching as to make property a burden, rather than a privilege. Laws had to be passed to provide for exceptional criminal proceedings in invaded or upset territories, but most of these enactments have now been abolished. It may safely be said that whenever a law restricting personal liberty was under consideration, the debates were very thorough and every possible angle was considered. The Polish people have submitted to these restrictions, though they believed some of them to be unreasonable. They are, however, very impatient to get rid of them, and since the signing of the Peace Treaty with Soviet Russia, the most burdensome restrictions have ceased to exist. Steps have been taken to improve the material situation of low-salaried Government officials.

Elementary instruction was at once made compulsory in the whole of Poland, and the Legislature gave an earnest of its determination to do away with illiteracy by making the situation of elementary school teachers particularly attractive, providing that teachers should be given land plots enabling them to raise vegetables and grain either for their own use or for purposes of sale. In an agricultural country, this is an

important endowment. Later on, a law was passed organizing on a liberal basis the universities and other academic schools. There are in Poland five universities, two polytechnic schools, a mining academy and an academy for veterinary science. The system of high schools was unified, and laws have been passed fixing in a liberal way the status and income of professors, teachers, judges and other public servants.

Poland has always represented an economic unity, although, for a time, it was artificially divided by political boundaries and unnatural customs barriers. Its reunion as an independent country makes for a revival of destroyed industries, and encourages the creation of new ones. It has large mineral deposits, but the main production of the country is still agricultural. Most of the land in Poland—from 60 to 70 per cent. of the surface—belongs in freehold to owners, whose shares do not exceed 200 acres, and are sometimes as small as a quarter of an acre. The remainder—from 30 to 40 per cent.—forms estates and belongs to the State, to various public and private corporations, and to private individuals.

Since the population of Poland is very dense (about 200 to the square mile), there is a strong demand for land. According to a decision of Parliament, made in 1919, and finally embodied in a statute of 1920, large estates are to be broken up, leaving a prescribed maximum for individual cultivation, the rest being sold in small plots. This "agrarian reform" has already assumed concrete shape, and some estates have been actually purchased from their owners.

The conquering Governments had imposed various disabilities on Poles for Polish patriotic activities. All these have been removed. Moreover, a special statute was passed granting amnesty even to persons who had offended against the military or political law, and order of Poland.

Such is the bare outline of what the Polish Legislature has done in the first two years of its existence. Many of the ordinary problems of finance and administration also have been dealt with. It should be remembered that all these things have been accomplished despite invasions by Germans, Ukrainians, Bolsheviki and other neighbors. Only in the light of that fact can one realize how much energy and devotion the Legislature has given to its difficult task.

# SANTO DOMINGO'S TITLE TO INDEPENDENCE

BY H. P. KRIPPENE

*The author of this fair-minded survey of the situation in Santo Domingo is a graduate of the University of Wisconsin, who served as an officer in the United States Army until the armistice. Since then he has been engaged in business in Santo Domingo. His statement of the mistakes of the American Military Administration and of the capacity of the Dominicans for self-government is written from the viewpoint of an observer who has lived among these people for several years.*

**T**HOUGH the Dominicans have always maintained that the American occupation of Santo Domingo was unjustifiable, it is probable that in the beginning the majority did not consider it an unfriendly act. Wearing with strife and starvation, in the throes of their last and most vicious revolution, they inwardly welcomed the arrival of the American forces that were to bring them peace and order. As a result of war conditions, Santo Domingo almost at once entered upon the greatest business era of her history, and the American Government, in the rôle of "big brother," had every prospect of creating an excellent and lasting impression. With the coming of peace and business and the promise of a program of construction, the Dominicans had impressive evidence that we were going to be their friend and benefactor; and we were launched upon a policy which would have done more to further friendly relations with the Latin-American republics than the costly balm recently accorded Colombia.

It is evident, after four years of military administration, that the great advantage we once held in this republic has been lost. The Dominicans now ask nothing more of us than "to get out." The good that the occupation has actually done has been lost sight of in a maze of maladministration and extravagance, and it is difficult to find many instances where we have shown the Dominicans a way to better government.

During the month of November, 1916, Admiral Knapp issued a proclamation stating that the occupation was undertaken with no immediate or ulterior object of destroying the sovereignty of Santo Domingo, but simply to assist the country to return to a condition of internal order which would enable it to assume again its obligations as

one of the family of nations. A few months later, however, the Dominican Government ceased to function, and the American Military Government assumed control. The latter at once began laying plans for the general improvement of the country. Roads were to be constructed; schools and hospitals were to be built; education was to be extended to the masses; land was to be surveyed, titles cleared and taxes levied: in short, it appeared that Santo Domingo was soon to rival Porto Rico and Cuba in all the higher works of progress.

## THE ROAD-BUILDING FIASCO

In order to appreciate one of the difficulties which confronted the Military Government and one of the first great mistakes which it committed—viz., in respect to road building—a knowledge of the geographical complexion of Santo Domingo is necessary.

The Dominican Republic is more than five times the size of Porto Rico; yet its population is less than a million inhabitants. Most of the people are living in the six natural seaports, or in the outlying districts. This is due to various causes, the most important of which is that the interior is still wild and uncultivated. The republic is divided into a north and south watershed by a chain of mountains running east and west across the centre of the island. The capital, Santo Domingo City, is the largest outlet of the southern watershed, and Puerto Plata, lying almost directly north of the capital, a distance of about 130 miles, is the largest port on the northern slope. Almost directly back of Puerto Plata and in line with Santo Domingo City, is the largest inland city, Santiago, which lies in the most fertile agricultural region of the northern slope. San-

tiago occupies the same strategical position with relation to Puerto Plata on the north and the capital on the south that Chicago does to New York and to the West.

It can easily be seen that a thoroughfare connecting the capital and Puerto Plata, and passing through Santiago, would be of the utmost importance to the rapid development of the island; for the vast uncultivated interior, with Santiago as a centre, would then have both a northern and southern outlet, without considering the various eastern ports, also more or less in touch with Santiago. Before the occupation, considerable work had been done in enlarging the trails which still connect these cities, but a lack of funds had always been responsible for the failure of the Dominican road-building program.

An Obras Publicas, or Public Works organization, was established under the control of the Military Government, and work on these roads was begun. When one considers that the trails in many places of the interior are mudholes and swamps for the greater part of the year, and, where they cross the dividing range, difficult mountain passes, it would seem that the Military Government should have placed a contract with some experienced road-building firm, instead of endeavoring to handle this difficult undersanding itself. It has been stated that bids were solicited, but that they were all considered prohibitive. There can be no doubt that the Obras Publicas has proved the more expensive experiment, and the roads are not yet built. This body has been severely criticised by the Dominicans; and the criticism, on the whole, is just; for extravagance and incompetence are everywhere in evidence. Many of the men who made up the personnel were young, inexperienced engineers, and the men who had expert knowledge had gained their experience upon the thoroughfares of American cities. As a result, thousands of dollars were expended upon machinery and labor-saving devices, which, when put into operation on the jungle passes of the interior, were found impracticable and were left to rust. Millions of dollars have been expended by this branch of the Government, which has now stopped operations for lack of funds, and there is very little to show for it. Had these roads been completed, Santo Domingo would now be a new field

for the American automobile exporter. A great many cars have already appeared in the republic, though there is still little use for them, and a horse continues to be the only means of travel in the interior. Furthermore, thousands of acres of extremely fertile land would now be open to cultivation.

#### THE LAND TAX

The revenue of the republic has been derived in the past from customs receipts and from internal taxes. The latter are collected from licenses issued mainly to business houses for the privilege of operating. The Military Government at once proceeded to work out and levy a land tax. Very few Dominicans have ever questioned the value of a land tax, but they almost unanimously question its wisdom at this time. With thousands of acres of land in the interior unsurveyed, some of it very difficult to approach, and with much of it of uncertain ownership, they concur in the opinion that it has worked more injury than good. The natives were asked to acknowledge and assess their own land, a thing difficult in itself, not only because of the reasons mentioned, but also because undervaluation carried a penalty with it, and as many of the people feared the Military Government, some of them probably overvalued their land for the sake of security. In a pamphlet issued by one of the City Councils, they agreed that the land tax would be of great value to the Dominican Government; but they asked that it should not be put into operation for a period of from three to five years, so that landowners could prepare themselves to make intelligent returns. The tax, however, was put into operation at once, and it appears that the revenue derived from it did not reach expectations, for the Military Government immediately began an investigation of the reported valuations, and in most cases raised them. The land tax, however, will work one immediate result. Many of the politicians and land holders have held in the past large tracts of land to which they had little or no just claim. The tax will force some of them to open the lands to the public, for it will be impracticable to hold them idle and non-productive.

Though some schoolhouses have been built, the teachers are very poorly paid and

the schools poorly equipped; yet thousands of dollars have been spent on equipment bought at wartime prices and stored here for use. The crowning disappointment in the development of education came a few weeks ago, when the Military Government announced that the schools would be closed indefinitely because of lack of funds—and this despite our boast that the landmarks we leave are pre-eminently schools and education.

#### NO CIVIL GOVERNMENT

One of the most serious disappointments the people of this republic have experienced arises from the fact that no effort has been made to re-establish a civil government under American control. This work should have been begun some time ago, for there is no reason to assume that a military government is necessary in any country during times of peace. Conditions have been normal in the island for at least the last three years, so there has been ample time to hold an election under the supervision of the marines and to establish a civil government, which would now be working harmoniously with the American officials. Conditions, laws, and the people are so different in these Latin-American republics that the Americans can never succeed in governing a nation of this type by military rule. If these circumstances had been recognized, and the power to rule themselves under the guidance of the United States had been given the Dominicans at least two years ago, much of the criticism to which we are now subjected could have been avoided. If the Military Government had carried on without the earmarks of absolute military control; if it had given regularly to the public a statement of the expenditures of Dominican moneys; if it had taken the Dominicans into its confidence and told them more of its projects for improvements, it might not even have been necessary to establish a civil government.

The attitude of the American military authorities, on the whole, has been that of conquerors. They have made little effort to know the Dominicans, to learn their language or to understand their customs. They have been told that the Dominicans are lazy and immoral; that Dominicans can never learn to govern themselves; that they

are a worthless, shiftless people, incapable of reasoning or understanding; and the majority of the American officials, though there are some noteworthy exceptions, have accepted, these statements as facts, and acted accordingly.

#### PROMISE OF THE FUTURE

The island of Santo Domingo requires only time and money to become the centre of the West Indies. With a climate which is mild but not enervating, a rich and virgin soil, and a degree of "personal liberty" no longer known in the States, Santo Domingo will of a certainty surpass Porto Rico as a sugar country and Cuba as a Summer resort. When highways have been built, when land has been cleared, and a stable government has been established, this island will assume a position second to none in the West Indies; and that time is not far distant.

In the eyes of the world, Santo Domingo has had a turbulent history. She has been called "the land of blood and revolution," but an examination of the facts proves that this charge is unfounded. It is true that progress has been retarded by the various revolutions, and that the present conditions are due mainly to the fact that the Treasury, in times of peace, found itself so depleted by past purchases of arms and ammunition that public works could not be financed on a large scale. The revolutions themselves, however, were usually more of a strategical than of a bloody nature. Victories were more often gained by a display of a superior military force than by a crushing attack. Civilians were seldom harmed, foreigners never. In fact, fighting was often stopped on both sides so that foreign business concerns could pass goods on to ports for shipment. The Dominican business men, however, now fully realize that revolutions are a serious detriment to business, and the country people know that fighting always means loss of stock and men, so it appears reasonable to believe that any future government established by the republic will show greater stability. Undoubtedly there is still need of American supervision, but the Dominicans are ready for a much greater degree of self-rule than they now have.

The retarding effects of instability are everywhere in evidence, but this country is

not a wilderness, as many Americans believe. The capital on the south is a flourishing city of 60,000 people, the centre of many beautiful homes; and the number of automobiles that can be seen on the streets discourteously the idea that the Dominicans are a shiftless people. La Romana, on the southeast, is a modern tropical town. Santiago is a commercial centre of great promise, and as soon as there are sufficient funds to lay the newly planned sewer system the streets will be widened and improved to equal those of any modern city in these latitudes. Many of the towns have electric light, waterworks and telephone systems.

Puerto Plata, on the north, is one of the most beautiful ports in the West Indies. Of an early morning, as one comes into an emerald harbor, with the sun rising from the ocean on the left, one sees the majestic outlines of Isabella del Torres rising in the background. In the depression between it and the sea the sparkling red roofs of the houses peep from the foliage of the royal palms. As the visitor leaves the wharf and walks up the clean white streets of the city he is impressed with the fact that he is not mingling with a "degenerate people." Squalidness and dirt and carelessness are everywhere in evidence, but these are not peculiar to Santo Domingo; they prevail more or less in all of these tropical islands. It is disappointing to note that many of the writers who visit Santo Domingo select only the flaws, while from the neighboring islands they take only the romance.

The greatest injustice has been done the Dominican people themselves. This may be due, in part, to the fact that many low-caste Haitians are always wandering through the country in search of work and that the critic making only a superficial examination considers them Dominicans. However, when the hostile critic says that the Dominican people are inferior to the Haitians he insults their race; when he says they are lazy and shiftless, he misrepresents their character; when he states that they are ignorant and puerile he minimizes their intelligence. The Dominicans are not, primarily, a black race, as is commonly believed, for they are descendants of the Spaniards who came here as conquerors, and of the Indians whom they

found living here. The Spaniards brought with them at a later period a number of slaves, and these, together with some of the Haitian immigrants, mixed their blood with that of the Dominicans, but to a much lesser degree than is ordinarily supposed.

In Santo Domingo, as in Mexico, there is no middle class. If this is detrimental to the country, it is difficult to see how it works a hardship. The educated class is made up of land owners, business men and politicians and as a whole it is a refined, cultured, progressive type. Many of its members have been educated in foreign schools and universities, have traveled more or less extensively and are cosmopolitan in ideas and customs. They read widely, discuss present-day problems with a keen insight and intelligence, and socially they carry themselves with a grace and refinement which prove them equal to the highest types of any nation.

The peasant class, on the other hand, is extremely poor and illiterate. Although the law requires children to go to school until they are 14 years of age, many families are forced by poverty to send their children to work at an early age. This implies a condition much worse than it actually is, for as a rule the people are well nourished, happy and contented. Living here is not a struggle as it is in a more highly developed country, and the majority of the poor people easily earn enough to buy their rice and beans and to supply their simple luxuries. They usually build their own "casitas," and plant enough to supply their wants throughout the year. They are quiet, peace loving and hospitable; a stranger never fails to find a welcome wherever he may stay. They cannot be considered progressive when compared with the working class of northern countries, but this is more or less true throughout the tropics.

The peons, as a whole, have favored the intervention, for it has enabled them to work in peace and preserve the fruits of their labor. They ask nothing more of any Government. This is their desire: "My cigarrillo (cigarette), a drop of rum when I wish it, and always peace to enjoy the great out-of-doors." An empty philosophy, we may think it, but it is possible that we may not be right.

# THE AMERICAN EXIT FROM SANTO DOMINGO

*Text of the Proclamation by which the United States pledges itself to withdraw its military forces from the island within eight months—Assurances by the Washington Government in response to Dominican protests*

**A**FTER five years of military rule over Santo Domingo, culminating in extreme discontent among the Dominican people, the United States Government has at length pledged itself to withdraw all military forces within a period of eight months. The occupation of the island by United States Marines occurred on May 15, 1916; the proclamation issued by Admiral Robison in Santo Domingo City on June 14, 1921, implies that it will end in February, 1922, provided that certain essential conditions are fulfilled.

This proclamation is an effective answer to the many bitter complaints of Dominicans in regard to alleged abuses and maladministration. For many months the Dominicans have maintained a commission in the United States, headed by the deposed President, Dr. Francisco Henriquez y Carvajal, which has been indefatigable in presenting their case to the Government and people of the United States. President Harding's decision, embodied in the proclamation, represents a radical departure from the policy of his predecessor.

The proclamation itself, prepared by the State Department, and made public by Secretary Hughes, outlines a systematic plan for the withdrawal, which is to occur within eight months, the time deemed necessary for an orderly winding up of the Administration, and for the establishment of a native Government. All acts of the Military Government are to be validated, especially the final loan for \$2,500,000 now being raised in order to complete the public works still in process of construction, and the duties of the general receiver are to be extended, so as to afford a guarantee for the payment of this loan and the whole foreign debt. The primary elections are to be called within one month after the date of the proclamation, the Board of Electors to choose the necessary officials and magistrates, and the new President to be elected.

A Guardia Nacional, or Civil Guard, is to be constituted, and every assurance is to be given that the withdrawal will be followed by an era of peace and order. The proclamation calls on the Dominican people to give their helpful co-operation to the plans outlined.

## TEXT OF THE PROCLAMATION

The proclamation issued on June 14 by Admiral Robison, recently appointed Military Governor to succeed Admiral Snowden, reads as follows:

Whereas, by proclamation of the Military Governor of Santo Domingo, dated Dec. 23, 1920, it was announced to the people of the Dominican Republic that the Government of the United States desired to inaugurate the simple processes of its rapid withdrawal from the responsibilities assumed in connection with Dominican affairs; and,

Whereas, it is necessary that a duly constituted Government of the Dominican Republic exist before this withdrawal of the United States may become effective, in order that the functions of government may be resumed by it in an orderly manner;

Now, therefore, I, S. S. Robison, Military Governor of Santo Domingo, acting under the authority and by direction of the Government of the United States, declare and announce to all concerned that the Government of the United States proposes to withdraw its military forces from the Dominican Republic in accordance with the steps set forth herein. It is the desire of the Government of the United States to assure itself before its withdrawal is accomplished that the independence and territorial integrity of the Dominican Republic, the maintenance of public order, and the security of life and property will be adequately safeguarded, and to turn over the administration of the Dominican Republic to a responsible Dominican Government, duly established in accordance with the existing Constitution and laws. To this end it calls upon the Dominican people to lend to it their helpful co-operation, with the hope that the withdrawal of the military forces of the United States may be completed, if such co-operation is extended in the manner hereinafter provided, within a period of eight months. The executive power

vested by the Dominican Constitution in the President of the Republic shall be exercised by the Military Governor of Santo Domingo until a duly elected proclaimed President of the Republic shall have taken office, and until a Convention of Evacuation shall have been signed by the President and confirmed by the Dominican Congress.

Within one month from the date of this proclamation the Military Governor will convene the primary assemblies to assemble thirty days after the date of the decree of convocation in conformity with Articles LXXXII. and LXXXIII. of the Constitution. These assemblies shall proceed to elect the electors as prescribed by Article LXXXIV. of the Constitution. In order that these elections may be held without disorder, and in order that the will of the Dominican people may be freely expressed, these elections will be held under the supervision of the authorities designated by the Military Governor.

The electoral colleges thus elected by the primary assemblies shall, in accordance with Article LXXXV. of the Constitution, proceed to elect Senators, Deputies and alternates for the latter, and to prepare for the Justices of the Supreme Court, of the Appellate Courts and the Tribunals and Courts of the First Instance, as prescribed by Article LXXXV. of the Constitution.

The Military Governor, performing the functions of Chief Executive, will then appoint, in accordance with Article LIII. of the Constitution, certain Dominican citizens as representatives of the republic to negotiate a Convention of Evacuation. In order that the enjoyment of individual rights may be insured, and in order that the peace and prosperity of the republic may be conserved, the said Convention of Evacuation shall contain the following provisions:

1. Ratification of all of the acts of the Military Government.
2. Validation of the final loan of \$2,500,000, which is the minimum loan required in order to complete the public works which are now in actual course of construction, and which can be completed during the period required for the withdrawal of the military occupation and are deemed essential to the success of the new Government of the republic, and to the well-being of the Dominican people.
3. Extension of the duties of the General Receiver of Dominican Customs, appointed under the convention of 1907, to apply to the said loan.
4. Extension of the powers of the General Receiver of Dominican Customs to the collection and disbursement of such portion of the internal revenues of the republic as may prove to be necessary, should the customs revenues at any time be insufficient to meet the service of the foreign debt of the republic.
5. The obligation on the part of the Dominican Government, in order to preserve peace, to afford adequate protection to life

and property, and to secure the proper discharge of all obligations of the Dominican Republic, to maintain an efficient Guardia Nacional, urban and rural, composed of native Dominicans. To this end, it shall also be agreed in said convention that the President of the Dominican Republic shall at once request the President of the United States to send a military mission to the Dominican Republic, charged with the duty of securing the competent organization of such Guardia Nacional; the Guardia Nacional to be officered by such Dominican officers as may be competent to undertake such service, and, for such time as may be found necessary to effect the desired organization, with American officers appointed by the President of the Dominican Republic upon the nomination of the President of the United States. The expense of said mission will be paid by the Dominican Republic, and the said mission will be invested by the executive of the Dominican Republic with proper and adequate authority to accomplish the purpose above stated.

The Military Governor will thereupon convene the Dominican Congress in extraordinary session to confirm the Convention of Evacuation referred to above.

The Military Governor will then assemble the electoral colleges for the purpose of electing a President of the Dominican Republic, in accordance with Article LXXXV. of the Constitution, and, simultaneously, officials other than the Senators and Deputies elected at the first convocation of the electoral colleges, will be installed in office.

The Dominican President so elected will then take office, in accordance with Article LI. of the Constitution, at the same time signing the Convention of Evacuation as confirmed by the Dominican Congress.

Upon this ratification of the Convention of Evacuation, assuming that through the co-operation of the people of the Dominican Republic a condition of peace and good order obtains, the Military Governor will transfer to the duly elected President of the Republic all of his powers, and the Military Government will cease, and thereupon the forces of the United States will be at once withdrawn.

The further assistance of the Advisory Commission appointed under the proclamation of Dec. 23, 1920, being no longer required, it is hereby dissolved, with the expression of the grateful appreciation of the Government of the United States of the self-sacrificing services of the patriotic citizens of the Dominican Republic of whom it has been composed.

#### WITHDRAWAL PLAN PROTESTED

It soon became evident that the Dominicans were opposed to the conditions of the withdrawal as laid down in the proclamation. Cable after cable was sent from the island republic to Señor Carvajal in Wash-

ington, one signed by the various newspapers of Santo Domingo City, exhorting him to "protest energetically against the proclamation before the State Department, the Senate and the American people." Similar messages were received from the Presidents and other officials of the "juntas" in other parts of the Dominican Republic. Other dispatches intimated that the popular storm was about to break in the form of a mass demonstration, to be staged in the capital. This demonstration occurred on June 20. An enormous throng gathered at a meeting, in which participated the Archbishop, members of the Supreme Court and the Faculties of the universities. Demand was voiced at the meeting that the offer of conditional withdrawal be refused. A letter embodying the protests and declaring that the Dominicans would assume no further obligations than the convention of 1907, providing for assistance by the United States in the collection and application of the customs revenues of the country, was handed to the Military Governor by the leaders of the demonstration.

Moved by these protests, the State Department instructed the American Legation at Santo Domingo to make public a supplementary statement, setting forth the exact meaning of the proclamation. The Government held that the terms of the withdrawal were extremely liberal, and that all the conditions laid down were necessary for the

best interests of the republic itself. In order, however, to put the minds of the protesters at rest on certain points, it issued this new statement on June 28. The main points clarified were: (1) The Dominican representatives to be empowered to negotiate the Convention of Evacuation will not be appointed by the United States, but by the Dominican Congress, as soon as that body shall be elected; these appointments will merely be ratified by the Military Governor. (2) The condition laid down in the proclamation providing that the Convention of Evacuation shall validate all the acts of the Military Governor was intended primarily to insure the recognition of the Dominican debt, including the loan now being negotiated, and in no way implied that the laws and regulations passed by the Military Government must continue without repeal by the new Government. (3) The proviso for extension of the powers of the general receiver was merely a further guarantee for the payment of the last loan. The statement added: "Financial conditions throughout the world are at present on such an unstable basis that it is necessary, in order to obtain funds at this time, to give additional guarantees to those which were demanded in the past. Should the customs revenues, as is anticipated, prove more than sufficient to meet the service of the public debt of the republic, this provision will never become operative."

## NEW CANCER X-RAY IN LONDON

ME. CURIE, after a seven weeks' visit, left the United States for France on June 24, 1921, laden with honors and bearing with her the precious gram of radium which the women of the United States had presented to her. Before her departure she expressed her firm hope that cancer, that scourge of the race, would yet be vanquished by radium. At the very time of her departure, a London dispatch reported that the West London Hospital had installed a new X-ray treatment for cancer—one invented by the Bavarian physician, Dr. Wintz—and had already recorded remarkable results. A demonstration of this new process was given by the hospital on June 24. The apparatus, which cost \$10,000

to install, was attached to the outstretched arm of an upright standard machine, and projected over the patient's bed. The controlling switches were in an apartment shut off by a lead partition. A funneled base was lowered into close contact with the patient's body, and around it were spread leaded rubber wrappings. The rays worked invisibly, and there was no heat, no danger and no discomfort. The intensity of the rays, it was said, was such as had never before been available for practical work. The hospital authorities, on the basis of results already attained, stated it was their hope to effect cures in 80 per cent. of the cases treated, one condition being that the patient had undergone no previous operation.

# THE RAPID INCREASE OF DIVORCE

BY GUSTAVUS MYERS

*A survey of the phenomenal growth in the number of American marriages that end in shipwreck—A historical summary of the phases through which the movement has passed—Official figures on the subject for the last fifty years*

AMERICA'S black spot is the divorce court; America's disease is divorce," said the Rev. Dr. Mark A. Matthews of Seattle, Wash., recently. Addressing a convention of the Episcopal Diocese of Long Island, on May 17, 1921, Bishop Frederick E. Burgess recounted how the fall of the Roman Empire was produced by the laxity and rottenness of the laws of marriage, and he commented, "This low standard of morality in Roman society would seem to be fast approaching in America."

These are only two of the many clergymen who have been trying to fix national attention upon what they consider our most serious social evil. The outcry against the enormously increasing divorce rate is not a sudden one, nor has it been confined to ministers. Many public men and women have uttered warnings of its growing enormity. In 1918 an important hearing on the subject was held by a committee of Congress, but the war absorbed public interest, and the facts and statements there produced received but little publicity. It was at that hearing that the Rev. (now Bishop) William T. Manning of Trinity Church, New York City, made this declaration:

The happiness, the safety, the well-being of our nation depend directly upon the stability and well-being of our home. Now, there is one menace more than any other threatening the life of that institution, and that is the appalling increase of divorces. The menace of that, the danger of that, to the life of our nation, I believe we all feel. \* \* \* It was true recently, and I believe it is true today, that the number of divorces, the proportion of divorces to marriage, is greater in our country than in any other country in the world that calls itself civilized.

Are such expressions of alarm impelled by casual or exceptional conditions? Is the huge divorce rate in the United States chronic, or has it, as in some countries, been largely brought about by extraordinary war dislocations?

In England and Germany the Great War

is authoritatively represented to have been responsible for a great impetus to divorce. A recent dispatch from England said that the courts were overcrowded with divorce cases, a chief cause of which was the loneliness of women during the long absence of their husbands at the front. A cable from Berlin tells how Germany, not so long ago pluming herself as a country of solid domesticity, has become a land of divorce; statistics now show one divorce in every eight marriages, the majority of divorces being granted for breach of marriage vows. A judge of the leading divorce court in Berlin attributes the rush for divorces largely to war causes; he specifies how, during the war, there were many hasty marriages followed by the long separation demanded by army service; and how in the absence of husbands many wives living in a general atmosphere of wartime frivolity and immorality went recklessly to excesses. This judge verifies what many observers of German war methods suspected: that the unmorality of the German Government was accompanied by a widespread breakdown of private morality. Among other ways in which this manifested itself, the judge says, was in "the shocking lack of moral restraints and the trend toward pleasure and luxury" shown by many women.

Such an explanation may be largely true of European countries engaged in a long, desperate war tending to displace all normal standards. But can it be applied to the United States? Our participation in the war was brief, and neither our national nor our private life can be said to have been disarranged. Moreover, there is the striking fact that long before the war divorces were steadily, ominously increasing, and that the process has been continuing uninterruptedly.

To trace the growth of divorce in the United States it is necessary to go far back. Some investigators, and illustrious

ones at that, have, in their veneration of the past, been misled into thinking that divorce is a fairly modern American practice. Even Bancroft, the historian, wrote of New England: "Of divorce I have found no example." Bancroft was wholly mistaken. Had he carefully examined the records of the Massachusetts General Court during the Puritan régime he would have found that a number of divorces were granted, mainly for desertion and bigamy, and that in settlement and Colonial times some divorces were allowed in Connecticut and Rhode Island and others in New York.

In that era, however, and also for some decades after the Revolution, divorces were not numerous. European observers traveling in this country noted the remarkable sense of independence American women had, compared with European women. In many European countries divorces were forbidden or discouraged by church canons, and in such of those countries as allowed them, they were expensive to obtain. But in addition there was a state of mind on the part of European women in general which prevailed to a much less extent in America. So long as the husband did not complicate matters by desertion and non-support the European woman was inclined to overlook her spouse's lapses from virtue, and to a considerable degree this view is still evidenced in Europe. The American woman never tolerated this condoning. If poor and friendless, she would yield to the exigencies of the occasion and continue a union that she resented, for the one reason that there was no other course that she could follow. If well-to-do or rich, she would seek relief in separation. Divorce was then an unpleasant extreme because of the general standard of the times, which viewed it as disgraceful. Church influence also was strong, though not predominant, and its tendency was to regard sternly, even to the point of social ostracism, both those responsible for divorces and the divorcees themselves.

Two events, however, brought a great change in the attitude of many American women toward the problem of marriage and divorce. The entry of women into industry gave them opportunities for self-support; they were no longer wholly dependent, and had greater control over the question of whom and when they should marry. If,

when married, they had good cause for sundering the tie, they could often return to their industrial jobs. This, of course, was not conveniently practicable where there were young children, but, on the whole, the fact that many women had the opportunity to win their own living gave them a greater field of independent action.

#### IN THE "WOMAN'S RIGHTS" ERA

The second event was the movement for woman's rights. Manhood suffrage had been generally gained in the United States by 1828, by which time laws restricting the right to vote to propertied men had been abolished. Immediately thereafter came the movement to establish woman's political and social rights. One of the pioneers of this was Frances E. Wright, who, in 1829 and 1830, gave a series of lectures in many American cities. As in the case of many radical movements, this movement went to extremes of agitation. Miss Wright did not believe in marriage; she proposed free sex unions; urged that children be separated from their parents, and called for the establishment of State institutions in which the children were to be placed and reared. The American people were not at all receptive to any proposals for the disruption of family life, and, in fact, Miss Wright herself later virtually repudiated her earlier views by marrying. But underneath this movement there were ideas which increasingly appealed to many thinking American women.

One of these ideas was the right of women to have a direct voice in politics. Another was the control by women over their property and wages. Still another was the effacing of the double standard of morality. Miss Wright and other agitators pointed out that men were an inexcusably privileged class; that no matter what their moral transgressions were they retained standing, whereas when a woman committed an infraction the whole crushing weight of social proscription fell upon her. "Why this discrimination?" asked the woman's rights leaders of that day. They denounced it as thoroughly unjust and demanded its removal.

Intelligent men of the day realized that a new era was setting in, threatening the overthrow of "man's domination." A writer in the Knickerbocker Magazine, published

in New York City (issue for August, 1834), told, in a spirit of trepidation, how women were beginning to demand the vote; how colleges were beginning to admit them, and how they were on the point of achieving other rights hitherto held by men as exclusive privileges. "My nerves," he wrote, "already begin to tremble in view of the momentous revolution which the evidence I have presented seems to indicate. A war of rights is pending, and every man will soon have to come out in defense of his ancient prerogatives!"

In the following years the agitation to abolish negro slavery became increasingly the dominant issue, tending to obscure other questions. Still, the revolt of women against what they thought existing injustices went on energetically, for many of the leaders, such as Lucy Stone, were at the same time agitators against slavery and advocates of woman's rights.

In 1852 and 1853 there was another organized attempt—chiefly on the part of men radicals—to discredit the marriage institution and to substitute free love. In a notable debate then published in *The New York Tribune*, Henry James and Horace Greeley effectively exposed the free-love propaganda, although their points of attack differed.

Divorce statistics were then unknown; in all Government and State reports the subject was completely ignored. In fact, it was not until 1842 that Massachusetts—the first State to do so—established a general system of marriage and death statistics, and it did so only after urgent petitioning by the American Academy of Arts and Sciences and the Massachusetts Medical Society. But no provision was made by any official body anywhere in the United States until many years later for reporting divorces.

#### CONDITIONS SEVENTY YEARS AGO

Those who are inclined to disparage overmuch the state of our times may find matter for thought in Henry James's statement in 1852 that there was, undoubtedly, "a very enormous clandestine violation of the marriage bond; careful observers do not hesitate to say an unequaled violation of it." James's argument was that this arose from the difficulty of obtaining divorce, and that by freely legitimizing divorce—that is, by making it easy and inexpensive—this

immorality would be reduced. Greeley's opinion was strongly the opposite. He contended that if marriages could be contracted and dissolved at pleasure it would introduce a reckless facility and wild levity. His further comments present interesting facts as to forces then busily engaged in trying to discredit the established marriage institution.

If divorce on mere application were permitted, he wrote, the innocent would be sought in marriage by those who under strict marriage laws plotted ruin outside marriage. "How many have already fallen victim to the sophistry that the ceremony of marriage is of no importance—the affection being the essential matter? How many are every day exposed to this sophistry? \* \* \* The free-trade sophistry respecting marriage is already on every libertine's tongue; it has overrun the whole country in the yellow-covered literature, which is as abundant as the frogs of Egypt and a great deal more pernicious. It is high time that the press, the pulpit and every other avenue to the public mind were alive to the subject, presenting, reiterating and enforcing the argument in favor of the sanctity, integrity and perpetuity of marriage."

What immediate influence the campaign against marriage had it is not possible to say. Evidently not much. It was the agitation making divorce an acceptable idea, and the demand for laws allowing a greater latitude in breaking matrimonial bonds, that then had the practical effect. There was a tendency on the part of legislators to relax the strictness of ancient laws concerning marriage and divorce. Even when these laws came, however, there was no importunate rush for divorces. An article on the subject in *The North American Review* for April, 1860, said that divorces were still rare.

It was after the Civil War that the doctrines for woman's emancipation began to show results. Such leaders as Victoria and Tennie C. Claflin demanded not merely the suffrage right for women but the complete enfranchisement of the sex. What they chiefly meant was that women should no longer be "man's chattel," but should be invested with full rights as human beings. But their views were often distorted, and they were made to appear as full-

fledged proponents of a free-love campaign. So unpopular was their campaign that they were ridiculed and ostracized; influential people of that time were not disposed to tolerate any views impairing the marriage relation. Both of the Claflins, it may be said, later married.

But the fashion of publicly making light of marriage began to spread. So-called comic papers having wide circulation and vaudeville shows abounded in jokes and alleged witticisms on marriage, while serious writers professing to have a mission wrote books and plays either openly or adroitly attacking and mocking marriage. A witness who had made a study of divorce testified before the House of Representatives Judiciary Committee in 1918 that one of the leading provocations of divorce had come from the writings of extreme radicals on the sex question. He instanced Ellen Key, Bernard Shaw and others "who write in all sorts of unreason their story screeds of heathenish devilment against the permanence of homes and against personal purity." If he meant to imply that such writings had more effect upon women than upon men he was entirely mistaken, for official statistics show that on an average twice as many—and often more than twice as many—divorces have been granted to the wife as to the husband; and although it is true that a greater percentage of divorces for adultery are granted to men than to women, yet this is a cause in which men have the evidential advantage. And he should have added, in justice to Ellen Key, that some years before he testified she had written an article virtually repudiating her former ideas and explaining that the originators of the woman's movement never imagined that the ideals they had in mind would degenerate to a low basis.

GOVERNMENT INVESTIGATIONS

By 1881 the divorce question had become such a scandal that the New England Divorce Reform League was organized by leading Protestants and Catholics. It was made a national organization in 1885, and its stated purpose was "to promote an improvement in public sentiment and legislation in the institution of the family, especially as affected by existing evils relating to marriage and divorce." It was at the solicitation of this body that the United States Government made its first investi-

gation of marriage and divorce. This report was issued in 1887-1888 by the Department of Labor and covered the years from 1867 to 1886. Another report was issued in 1906-7 by the Bureau of the Census, covering the twenty years from 1887 to 1906. In July, 1917, Congress provided the funds for another investigation from 1906 to 1916; unfortunately it was decided, because of war conditions, not to cover the previous years, but to limit the report to the year 1916.

From these three reports accurate figures are obtainable for the forty years from 1867 to 1906, and for the year 1916, while the figures for other years have been estimated by members of the International Committee on Marriage and Divorce. This, then, is the result:

DIVORCES IN THE UNITED STATES.

Year.	Number.
1861, estimated	7,114
1862-1866, estimated	42,979
1867-1870, counted	43,850
1871-1888, counted	949,746

Total for thirty-seven years.....1,043,689

The further progressive increase of divorce year by year since 1889 is here shown:

Year.	Number.	Year.	Number.
*1889	31,735	*1905	67,976
*1890	33,641	*1906	72,062
*1891	35,540	†1907	77,600
*1892	36,579	†1908	81,700
*1893	37,468	†1909	85,000
*1894	37,568	†1910	91,600
*1895	40,387	†1911	94,600
*1896	42,937	†1912	100,000
*1897	44,699	†1913	103,000
*1898	47,849	†1914	105,000
*1899	51,437	†1915	107,000
*1900	55,571	*1916	108,702
*1901	60,984	†1917	120,000
*1902	61,480	†1918	125,000
*1903	64,925	†1919	129,000
*1904	66,199	†1920	132,000

Total 1889-1920.....2,349,419

\*Counted. †Estimated.

Thus, from 1861 to 1920 there were granted in the United States a total of about 3,393,000 divorces. It is estimated that, as a result of these, there were perhaps 1,350,000 divorce orphans. The increase of divorce compared with population was, according to the 1916 Government report published in 1919:

Year.	Divorce Rate Per 100,000 Population.	Year.	Divorce Rate Per 100,000 Population.
1870	28	1900	73
1880	39	1906	84
1890	53	1916	112

In particular States the increase in divorces in 1916, as compared with 1906, was enormous. In Oregon it was 109 per cent., in New Jersey 120 per cent., in Idaho 150 per cent., in Arizona 186.4 per cent. and in California 207.4 per cent. Except in the District of Columbia and Colorado, South Dakota, West Virginia, Maine, Mississippi, Alabama and North Dakota the divorce rate for 1916 was higher than for 1906. Recent statistics privately gathered show a continuous increase in divorces. In New York City about 500 more divorces were granted in 1920 than in 1919. In Providence, R. I., 962 divorces were granted in 1920, as compared with 718 in 1919 and 556 in 1917. New Jersey and Pennsylvania report a great increase in divorces in recent years; in Pittsburgh there was a 25 per cent. increase in 1920 over 1919. In Detroit 3,715 divorces were granted in 1920, an increase of 700 over 1919. In Atlanta, Ga., 880 divorces were granted in 1920, as against 770 the previous year. Seattle has become a notable divorce centre, with nearly 2,500 cases a year. These are but a few examples of increases. Only a few cities, such as Baltimore, Toledo, Portland, Ore., and some others report decreases in divorces.

#### CHIEF GROUNDS OF DIVORCE

Government figures show that desertion is the principal ground of divorce, with cruelty second in the list; these two causes account for nearly two-thirds (65.1 per cent.) of all the divorces granted. Of divorces granted to the husband, desertion has been the cause in practically one-half the cases; adultery the cause in one-fifth, and cruelty in a little more than one-sixth of all cases. But of divorces granted to the wife, the most frequent cause has been cruelty, with desertion next. Divorces granted to the wife because of the husband's adultery constituted 7.5 per cent. of all the cases, as against 20.3 per cent. granted to the husband for the same cause. Drunkenness as a cause for divorce has been a minor factor. A little more than one-half of all divorced couples had no children.

Two generations ago there was a general although not invariable reluctance to label oneself as a divorced person; the idea was personally and socially repugnant, and a permanent stigma was supposed to attach itself to any seeking rupture of marriage

ties. But, according to Bishop Manning and others, a wholly different concept now largely prevails. In his testimony on causes of divorce, Bishop (then Rev. Dr.) Manning thus described the change:

Under our present system we have really reached the point under which marriage among our people is no longer a permanent contract. As things stand under our present law, it is a contract terminable almost at will.

Further than that, the present state of law has a worse influence. It tends to tempt people to procure divorces and produce situations in which they can procure divorces; and with numbers of people the marriage contract is entered into with that in mind. Divorce is made so easy that great numbers of people enter into the marriage contract with the thought of divorce already in mind, and they are in a state of mind under which on the most trivial grounds and for the most passing reasons they are prepared to break up the home and seek relief in the divorce courts.

Bishop Manning pointed out that another great evil was the practical effect of law in allowing the rich and well-to-do to create a domicile in whatever State it was easiest to get a divorce. This the poor could not do. He urged the need of laws applying equally to rich and poor and making it difficult to obtain divorces.

Bishop William H. Moreland of Sacramento has expressed the same thought as to a certain state of popular mind. "Our young people," he said, "knowing that the law permits a consecutive polygamy, enter the marriage state with the idea that if disappointment results they may break it off—and draw another ticket in the lottery." Bishop Moreland proposes that there should be a uniform divorce law, a ten days' notice of application for marriage licenses, and he urges the education of public opinion.

At present our forty-eight States have more than forty different codes of law on the subject of marriage and divorce. These codes allow a wide range of grounds for divorce, ranging from violation of the marriage vow to bad temper and religious belief. South Carolina has been the only State that has not recognized absolute divorce for any cause. Under the incongruous and conflicting divorce laws in operation many cases occur in which a couple, married in one State before the divorce decree allows it, are branded bigamists in another State.

Though the increase in the number of divorces in the United States has its disquieting aspects, it cannot justly be taken as a proof of a corresponding decline in morality. When it is recalled that in former times few people, whatever grounds they had for doing so, sought legal relief from marital unhappiness, the reflection upon the moral standards of our day becomes lessened. There is good evidence that previous to fifty or sixty years ago

there were abundant lapses from domestic virtue, but they did not culminate in legal action so as to leave public records of the fact. On the other hand, in more recent decades, it has been the almost invariable practice to apply to the courts for release. It is this fact which gives our age the appearance of having degenerated, when, if we make a real comparison with other times, present conditions are not so discreditable as they seem.

## THE STORY OF A HISTORIC HOAX

IN a London charity hospital on June 9, 1921, there died a man of 74 years who was registered as Louis Redman. This white-bearded old man, who died impoverished and forgotten, was no other than Louis de Rougemont, notorious twenty-three years ago as the perpetrator of one of the most colossal hoaxes of modern times. This French adventurer arrived in London at the beginning of March, 1898. He had worked his passage from New Zealand. Before many days he was telling an astonished and admiring world of his marvelous adventures in Australia.

De Rougemont's story was substantially as follows: He had been wrecked among the South Sea Islands in 1864. By a series of accidents he reached one of the most desolate places in Northern Australia, a spot where no white man had ever been. There he was captured by a cannibal tribe, among whom he lived for thirty years. By sheer force of personality he dominated the tribe, became the chief and married a native woman. Adventure after adventure followed; he rescued two white women from a fate worse than death, he had narrow escapes from crocodiles, he rode turtles, he refused a harem of proffered wives in favor of his "Wamba."

England was impressed. Popular magazines published his amazing adventures. De Rougemont lectured before the British Association. The French traveler became a personage. Fluent and ready witted, he underwent the ordeal of questions without losing his composure. Meanwhile, however, expert students had begun to find flaws in his "facts." One of the chief skeptics was an Australian, Louis Beck, author of books on the South Seas. De Rougemont's story, he declared, was a wonderful work of

imagination and nothing more. Some of its features, such as the "flying wambats," were grotesquely and obviously false. De Rougemont was called to the office of The Daily Chronicle, which describes the interview as follows:

He was a remarkable figure. Slight, gray-bearded, hair brushed up from a high, wrinkled forehead, wonderfully bright eyes under rather heavy lids, he was a man who would have been notable in any gathering. He was invited to tell his story, and he did so. Then came the cross-examination. It was conducted by a member of the staff, a barrister who had the subject at his fingers' ends. De Rougemont broke down. He became confused, burst out into a passionate asseveration of the truth of his story, then faltered miserably and refused to say more.

Meanwhile the paper had kept its Australian wires busy. M. H. Donahoe, a journalist in Australia, began a searching investigation of de Rougemont's movements and brought the truth to light. The man's real name was Henri Louis Grin. He was born of respectable parentage in the Canton Vaud, Switzerland. He began his career as courier to the English actress Fanny Kemble. In a like capacity he went to Australia, where he drifted about from one employment to another, and finally worked his way from New Zealand to England, where he enjoyed his short-lived fame.

Those who knew him declare that he was no vulgar adventurer. He told his amazing falsehoods with no desire of personal gain. The student of French literature recalls at once the famous Tartarin de Tarascon of Daudet, whose exaggerations were the effect of that "mental mirage" so often encountered in the South of France. The exact processes by which de Rougemont conceived his colossal hoax would furnish an interesting study to the psychologist.

# AMERICAN CLAIMS AGAINST GERMANY

An official tabulation showing the claims and losses of American citizens against Germany—A total of \$221,000,000, exclusive of Shipping Board vessels

THE Secretary of State reported to the President of the United States on March 2, 1921, a summary of the claims of American citizens against Germany. The claims number 1,253, aggregating in amount \$221,231,465.69, and, in addition, a total of 672,618,713.46 Rumanian lei; this latter sum represents claims for military requisitions and damage to property of American citizens in Rumania at the time of the German invasion of that country in 1916. [The lei, the nominal value of which is 49.3 cents, is quoted now in New York exchange at about 1 2-3 cents.]

This amount does not include any claims of the United States Government for the loss of Shipping Board vessels, for the pay of soldiers in the army of occupation or any other strictly Government claims.

The report also shows that the American property located in Germany which was sequestered by the German Government aggregates in value \$190,000,000. To offset this the United States Alien Property Custodian has in his custody property of Germans sequestered during the war amounting to a total of \$400,000,000. In addition, the Shipping Board reported to the Hon. Tom Connolly, Congressman from Texas, under date of June 16, 1921, that it now holds 40 German ships of a total of 352,887 tons—16 cargo, 24 passenger vessels.

The official report of the State Department is as follows:

*Statements of alleged losses and claims arising from loss of life.*

	Number.	Amount.
Pre-war, mainly Lusitania claims .....	135	\$15,865,756.02
Belligerents .....	15	205,346.74
Total .....	150	\$16,071,102.76

*Statements of alleged losses and claims arising from personal injuries.*

	Number.	Amount.
Pre-war .....	46	\$1,761,316.41
Belligerent .....	40	634,237.23
Total .....	86	\$2,395,553.64

*Statements of alleged losses and claims of private owners arising from the sinking of vessels.*

	Number.	Amount.
Pre-war .....	11	\$6,604,487.96
Belligerent .....	89	23,807,276.17
Total .....	100	\$30,411,764.13

Insurance losses: Losses by American insurance companies or organizations (including the Bureau of War Risk Insurance), as reported to the department up to the present time, are as follows:

Pre-war .....	\$34,349,900
Belligerent .....	50,734,713
Total .....	\$85,084,613

The Treasury Department has notified the Department of State that it is desired to make claim to reimburse the Government of the United States for losses paid on business written by the Bureau of War Risk Insurance.

Among the heaviest pre-war losses of this character were those sustained by several American corporations which had valuable property interests in Rumania.

## GENERAL LOSSES OF THE UNITED STATES GOVERNMENT.

Various items have been communicated to the department as losses sustained by the Government of the United States as a result of the war which are not included in the general summary of losses and claims as set forth above. These items may be briefly summarized as follows:

	Pre-war.	Belligerent.
Cargoes, United States Government owned .....		\$36,185,890
War vessels of United States Navy .....	12,958,394	
Armed vessels requisitioned as Naval auxiliaries.....		1,566,964
Department of Labor expenses in caring for German officers and sailors.....		900,000
Expenses of United States Navy re same.....	\$26,477	
War Department expenses in caring for prisoners of war in the United States.....		3,305,300
Expenses Department of Justice in handling enemy aliens in United States.....		1,032,656
United States Navy expenses in restoring damaged interned German ships.....		6,961,285
United States Navy demurrage charges in re damaged German vessels .....		8,762,433
Shipping Board expenses in repairing damaged German ships .....		8,584,942
Relief and repatriation of submarine American seamen...	50,000	200,000
Total .....	\$76,477	\$80,457,864
Grand total, pre-war and belligerent .....		\$80,534,341

Property belonging to many Americans was seized by the German Army at the outbreak of the war, both in Germany and in the countries invaded by the German Army. A great deal of valuable American property in Belgium was either seized for military purposes or damaged

or destroyed during the German occupation of Belgium. Much valuable American property available for war purposes, such as automobiles, machinery and supplies, was promptly taken by the German Army. American property in Northern France was also lost or damaged.

CLAIMS OF AMERICAN CITIZENS AGAINST GERMANY

Claims and losses which may be readily classified are herein set forth in summary, indicating the items into which the claims and losses may be conveniently classified, the number of claims which has been filed, the number which is prospective, and the amounts of the claims and the alleged losses.

Summary of losses—statement of alleged losses or communications indicating intention of filing claims (without accompanying proof).

	Num-ber.	Amounts.	Claims Filed—	
			Num-ber.	Amounts.
Submarine warfare .....	451	\$110,254,058.69	411	\$23,321,243.65
(Including loss of life, personal injuries, loss of hulls, cargoes and personal effects, war-risk insurance, losses due to submarine, raiders and mines. These figures do not include hull losses for which the United States Government may be liable through requisition, nor insurance claims on hulls, except by Bureau of War Risk Insurance).		23,500 pesetas.....		£7,908
		22,909.25 lire.....		
		17,709.55 francs.....		
		£13,701 .....		
Military requisitions of and damage to property, including that in occupied territory .....	77	\$10,290,279.69	35	\$5,439,539.41
		6,842,599.05 marks.....		£2,932
		1,419,388.91 francs.....		161,850 francs
		13,580.05 rubles.....		9,680.16 guilders
		55,650 pesos.....		4,500 marks
		£11,868 .....		*1,016,422 taels
		63,000 kronen.....		
		†672,618,713.46 lei.....		
Personal injuries, arrests, detentions, expulsions. Sequestration cases, damage to property in Germany, including loss, use, sale liquidation, forced loans .....	2	\$200,000	2	\$52,500
	82	\$46,066,419.28	65	\$6,075,986.05
		59,000 francs.....		42,000 francs
		29,744,866.40 marks.....		496,874.95 marks
		£135,259 .....		£2,800
		443,970.33 kronen.....		
Miscellaneous, not included above.....	23	\$2,539,420.81	5	\$5,238,646.85
				186,698.28 marks
Total of above, as stated in dollars.....		\$169,359,178.47		\$40,127,915.96
Other items mentioned above if converted into dollars at ordinary value of the respective coins, about .....		107,390,560.10		1,057,815.25
Complete total .....	635	\$180,098,234.48	518	\$41,133,231.21
		672,618,713.46 lei.....		
Grand total of 1,253 claims and statements of loss or communication indicating intention of filing claims.....				\$221,231,465.69
				672,618,713.46 lei

\*A weight of silver. †Claim for German destruction of property in Rumania at time of German invasion of Rumania in 1916. Stated in lei, a coin of Rumania.

Claims in which no amounts have yet been stated..... 37  
 Statements of losses and statements concerning property in Germany in which no amounts have been given. Many of these may become claims, particularly those based upon submarine warfare .....858

The items included in the foregoing summary, which comprise the principal part of the amounts claimed or losses alleged, are loss of life, personal injuries, vessels sunk in submarine warfare, cargoes lost in submarine warfare, insurance paid, and premiums paid on war risk insurance. Further information regarding these losses and claims is set forth below under their respective headings. In the statements which follow, the term "pre-war" relates to losses which occurred prior to the entry of the United States into the war. The term "belligerent" relates to losses which occurred during the participation of the United States in the war.

No account is taken in this report of the expenses of the American Army in occupied territory in Germany.

Monetary losses sustained by the Shipping Board on account of sinkings due to submarine warfare are comprised in three principal classes: (1) Vessels owned by Shipping Board and not in service of army or navy, (2) requisitioned American steamers, and (3) requisitioned Dutch steamers. (See Exhibit 10.)

#### EXHIBIT NO. 11

*Recapitulation of American steamships and sailing vessels destroyed by submarines, raiders or mines since the beginning of the war.*

Type.	Number.	Gross Tons.
<b>Steamships:</b>		
Freight steamers.....	66	251,302
Tankers.....	14	66,335
Freight and passenger.....	5	51,303
<b>Total.....</b>	<b>85</b>	<b>368,940</b>
<b>Sailing Vessels:</b>		
Ships.....	3	8,282
Barks and barkentines.....	7	7,271
Schooners.....	58	43,019
Barges.....	4	2,971
<b>Total.....</b>	<b>72</b>	<b>61,549</b>
<b>Grand total.....</b>	<b>157</b>	<b>430,489</b>

#### AMERICAN INTERESTS IN GERMANY

The treatment of American-owned property of various descriptions in Germany is a possible

source of further claims. Several thousand American citizens have filed with the department statements describing their property in Germany, and giving an estimate of its value. An abstract of information furnished the department regarding American interests in Germany follows:

Character of Property.	Estimated Values.
Real estate.....	\$10,271,449.48
Debts, including accounts and bills receivable.....	29,267,147.27
Securities.....	67,183,750.55
Deposits.....	30,951,549.20
Miscellaneous property.....	49,910,371.10
Inheritances, real, personal and miscellaneous.....	3,563,079.16
<b>Total.....</b>	<b>\$191,147,346.76</b>

By an ordinance of Jan. 11, 1920, various war measures adopted by the German Government relating to enemy property in Germany were repealed.

Consequently, while American citizens since Jan. 11, 1920, have been able to obtain the possession of real estate and certain classes of personal property which had been sequestered by the German Government, they have been unable to obtain the release of credits, cash and deposits.

The amount of claims which may be expected to result from sequestration of American property in Germany is as yet uncertain.

Losses by American prisoners of war: By reference from the War Department some 613 cases

#### EXHIBIT NO. 19.

*United States Shipping Board losses in dollars.*

Vessel.	Deadweight Tons.	Value.	Date of Accident.	Location.
<b>(a) Owned—Total losses:</b>				
Council Bluffs.....	4,200	\$840,000.00	Nov. 13, 1919	Sunk by mine off Terchelling.
Florence H.....	5,500	962,500.00	Apr. 17, 1918	Explosion at Quiberon Bay, France.
Lake City.....	4,000	800,000.00	Oct. 3, 1918	Sunk in collision off Key West.
Lake Placid.....	4,200	840,000.00	May 19, 1919	Sunk by mine off Bingo Light, Sweden.
West Arvada.....	8,800	1,760,000.00	June 19, 1919	Mined near Dutch coast.
<b>(a) Owned—Partial losses:</b>				
Englewood.....	7,323	1,464,600.00	Aug. 18, 1919	Struck mine mouth of Thames River.
Liberty Glo.....	7,500	1,500,000.00	Dec. 5, 1919	Struck mine off Terchelling.
<b>(b) Requisitioned—total losses:</b>				
Alamance.....	5,300	1,103,883.33	Feb. 5, 1918	Torpedoed off Maiden Head, Ireland.
Atlantic Sun.....	3,800	626,728.77	Mar. 18, 1918	Torpedoed, Atlantic Ocean.
Carolina.....	4,100	937,500.00	June 2, 1918	Sunk off Delaware Capes by submarine.
Pinar del Rio.....	4,060	776,071.23	June 9, 1918	Submarine off United States coast.
Santa Maria.....	8,300	1,483,529.73	Feb. 25, 1918	Torpedoed off Lorne, Ireland.
Tyler.....	4,200	915,457.51	May 2, 1918	Sunk by submarine off French coast.
Winneconne.....	3,200	590,912.60	June 8, 1918	Sunk by submarine off Jersey coast.

in which American prisoners of war lost property in Germany or suffered other injuries or losses while prisoners, have been brought to the attention of the Department of State. The losses submitted by the War Department were compiled from data contained in the affidavits of the American military prisoners who were held in various prison camps and hospitals in Germany. In addition to the complaints regarding loss of personal property, other grounds of complaint are cruelty, neglect, lack of food and medicine, ill treatment, insanitary living conditions

and enforced labor. These cases may be summarized as follows:

Number of cases in which value of property is reported.....	296
Total value of property lost as reported .....	\$12,560.08
Cases in which miscellaneous injuries are reported, but no amounts of claim or loss alleged.....	464
Cases involving loss of property in which estimates or statements are incomplete .....	116

## GREEK MOBILIZATION NOT SUSPENDED

To the Editor of *Current History*:

In your June issue, under caption "Greece in New Difficulties," you state that "in Greece \* \* \* mobilization has been suspended and martial law declared." This statement should be accepted with a reserve similar to that with which the news of Mr. Venizelos's triumph should have been received. Every intelligent newspaper reader is aware of the fact that Greece, since the outbreak of the war, has been the victim of shameless misrepresentation. Reports that in after-election demonstrations in Athens pictures of the former Kaiser were in evidence; that Queen Sophie invited the former German Emperor to Corfu, &c., filled the columns of both the American and European journals during the last few months. One does not have to be a genius to understand that such publications constitute pitiless murder of the truth.

When reading a dispatch from Athens one should bear in mind that, so far as is known, every foreign newspaper correspondent in Athens is either a Greek Venizelist or a Frenchman. Of course, to be a Greek Venizelist or a Frenchman is no crime. The fact is worth mentioning, however, for it shows that the news these correspondents send is not reliable. Those who read Athenian Venizelist or Paris newspapers know this. They know that under the guise of a narrative of events, false information is being presented to the public. For example, the Athenian Daily *Patris*, the leading Venizelist organ in Greece, publishes frequent accounts of alleged mistreatment of Venizelists, only to publish their

denial on the day following, as the Greek law demands that a refutation be given as much publicity as a charge. It is amusing occasionally to see denials made by the very persons who, according to the *Patris*, have been the victims. By thus butchering the truth the Venizelists—and only a few militants, for the great majority of Mr. Venizelos's followers are patriotic men—aim at the overthrow of the present Greek Government. Mr. Venizelos does not approve of such methods. Certainly no one with a grain of patriotism would approve of his country's betrayal for the sake of political advantage, and the slanders we see dispatched from Athens are scarcely less than treasonable acts.

No, the mobilization in Greece has not been suspended. On the contrary, if the entire Greek press and the letters I receive from Greece can be relied upon, the Greeks have responded to their country's call enthusiastically. Though it is true that martial law has been declared, its application was made necessary not by the Greeks' unwillingness to fight, but by the suspicious movements of the Turkish followers of Mustapha Kemal Pasha in Greece.

The report that "Greece has asked Italy to intervene at Angora" is not "worthy of consideration," as you seem to believe (P. 520). Mr. Gounaris, asked to confirm it, vehemently denied it, adding that "such rumors are the products of machinations calculated to impede the Government's task." (Athens *Politeia*, April 25, 1921.)

EFTHYMIUS A. GREGORY.

Aiken, S. C., June 11, 1921.

# THE WAR WON ON THE EASTERN FRONT

BY GORDON GORDON-SMITH

Captain, Royal Serbian Army

*A clear view of colossal blunders in strategy committed by both sides—Violation of Belgium was Germany's chief error, and that of the Allies was their delay in striking on the eastern front—Truth emerging from the dust of battle*

AS the World War of 1914 recedes into the distance, much that has hitherto been obscure is becoming clear. The dust of battle is dying down, and the main points of strategy and policy are beginning to stand out more clearly. But so, at the same time, are the colossal errors committed on both sides becoming more apparent. On the side of the Allies the great, the cardinal, error, was the theory that the war could be won only on the western front. It is now becoming clear that this is the front on which the war could *not* be won. It was this error of judgment on the part of the French and British staffs which made the war drag on for over four long years.

This, of course, is not conceded, even today, by the "westerners," who still refuse to admit the capital error they made in rejecting any other solution of the problem than one obtained in France and Flanders. But, as the months pass, the "easterners" are slowly but surely coming to their own. Their numbers are not great in the United States. This is only what might be expected, as the American forces, from the time they entered the war, fought only on French soil. It is, therefore, only natural that the western front should exercise a sort of hypnotic influence on their consideration of the war.

But in spite of this the easterners are beginning to find partisans in the ranks of the American Army. Not the least of these is Colonel H. H. Sargent, the well-known authority on strategy, whose latest book, "The Strategy of the Western Front" (A. C. McClurg & Co., Chicago), is a powerful indictment of the errors in policy and strategy made by the Allies. Colonel Sargent's works on the campaigns of Napoleon are classics in American military literature,

and the present volume will undoubtedly add to his reputation.

In order to realize the astounding errors made by the Allies, and the almost equally extraordinary mistakes made by the Central Powers, the causes of the World War must be kept in view. The curious thing is that these were not realized by the Allies, especially the British, at the time war was declared, and many people fail to grasp them even today.

The cause of the war, or at least the *causa causans*, was the ambition of Germany to be the master of Europe, the first step toward the mastery of the world. In order to realize this ambition; the first thing necessary was the creation of "Mittel Europa," an empire under German leadership running from the Baltic and the North Sea to the Persian Gulf. There was nothing impracticable in the idea; in fact, it came within a hairsbreadth of being realized. What, then, was necessary to realize it? The union of Austria and Germany, the support of the Balkan States and an alliance with Turkey. The union between Germany and the Austrian Empire in 1914 was already a *fait accompli*; the Austrian Emperor was practically the vassal of his powerful German neighbor. The Ottoman Empire had also joined the combination, so that the two main parts of the future world empire were already created.

All that remained to be done was to link them up by bringing the Balkan States into the combination. In order to accomplish this, Carl von Hohenzollern had been placed on the throne of Rumania, and Ferdinand of Saxe-Coburg-Gotha on the throne of Bulgaria. The Kaiser had made sure of the support of Greece by giving his sister in marriage to King Constantine. Through thirty long years this edifice of the future

grandeur of the German Empire had been built up, slowly but surely, by William II. The Kaiser and those around him completely realized the enormous possibilities of this grandiose scheme. Once it was realized, Germany would be master of the entrances to the Baltic and the Black Sea, the Kaiser's fiat would run from Koenigsberg-in-Preussen to the Persian Gulf, Europe would be cut in two, and Russia completely isolated from the rest of Europe. Without the permission of Germany the Russians would be unable to hold any communication with the remainder of Europe, except by airplane. The creation of such a situation was equivalent to German domination of Europe. As soon as it was effected, France, Great Britain and Italy would fall to the rank of second-class powers, accepting the dictation of Berlin and allowing the Wilhelmstrasse to impose its policy on them.

But a chain is strong only in the ratio of its weakest link, and one link was weak in the Pan-German chain. To be precise, it was missing. That link was Serbia. This little country lay right athwart German ambitions, completely barring the route to the Near East. For thirty years nothing was left undone to crush Serbian resistance to the German scheme and to force her to enter the Pan-German combination. Every kind of pressure, diplomatic, economic and financial, was brought to bear on her. But the statesmen in Belgrade saw the danger. They knew that once the Pan-German combination was complete, each of the States composing it would be completely under the thumb of Germany. "Mittel Europa" could be created only at the expense of the liberty and the independence of the smaller States. Serbia, therefore, resisted every effort to force her to enter the combination, and as long as she held out she brought the whole grandiose scheme to naught. Her destruction was therefore resolved upon. When this was accomplished, "Mittel Europa" would be achieved, and Germany would be master of the Eastern Hemisphere.

Of course, no one in Berlin or Vienna for one moment believed that this could be brought about without a general European war, and for this war Germany was preparing through forty long years. But what will amaze future generations is the fact that the remainder of Europe looked on

without realizing whither German ambitions were trending. Still more astounding is the fact that Germany made no effort to conceal her plans and ambitions. Not one volume, but a whole library exists, stating the aims of her national policy. It was perhaps this very fact that caused the blindness of the other powers. If Germany really had such intentions, they argued, she would take good care not to proclaim them from the house-tops. This was an immense error. The German Government had to have the whole nation solidly behind it in its schemes, and for this public opinion had to be educated to understand them and accept them. Hence the mass of Pan-German literature.

Official Germany, of course, on the rare occasions when some statesman of the Entente became anxious, always washed its hands of such propaganda, declaring that the various writers expressed only their personal views, and that these views were in no way inspired by the Government. The ever-increasing strength of Germany, both military and economic, rendered the possibility of relegating her to her proper place without a European cataclysm less and less likely, and all the European statesmen shirked the task; none of them were willing "to bell the cat." They accordingly "carried on," hoping, like so many political Micawbers, that "something would turn up"—preferably some kind of internal revolt in Germany against militarism and exaggerated Pan-German ambitions. And so Europe moved, slowly but surely, to the inevitable catastrophe.

Meanwhile Germany and Austria carefully scanned the political horizon, watching for the favorable moment to strike. This, they decided, had come in the Summer of 1914. In the last fateful days of July they unmasked their batteries and the World War was on.

#### WHY GERMANY FAILED

The German plan was simple. It was to send an Austrian army down to Serbia to crush and seize that country. This victory would have the effect of bringing Rumania (with which country Austria had a military convention almost equivalent to an alliance), Bulgaria and Greece in on the side of the Central Powers. The Turkish ally would join the movement, and "Mittel Europa" would be realized. This would, of course,

immediately bring France and Russia into the war. It was the rôle of Germany to mass her armies at once on the French and Russian frontiers to prevent these countries from interfering with the realization of the "Mittel Europa" plan. The Serbian campaign, it was expected, would be over in four weeks' time. A huge empire, running from the Baltic to the Persian Gulf, with a population of 200,000,000 would at once come into being. By damming back the military forces of France and Russia behind two lines of entrenchments, complete peace would reign in the newly created "Mittel Europa." This area, behind the rampart created, would then be taken in hand and organized, politically, commercially, industrially and militarily, with the usual German efficiency and thoroughness. With a monopoly of the commerce of this huge territory, German mills and factories would find enough trade to keep them busy. Life would, therefore, go on almost normally behind the bulwark of the German and Austrian entrenchments.

Once Germany had established her thorough grip on "Mittel Europa," she would gather together her forces for the final victory. Every available man would be concentrated against France, and her resistance crushed. Then it would be the turn of Russia, and the Central Powers would be masters of Continental Europe and confront Great Britain on her island stronghold, but a Britain without an army, with nothing but her fleet between her and destruction. That the German plan was not only possible but feasible is beyond all doubt. In fact, when it is realized how near the German project came to accomplishment, the world may shudder at its narrow escape.

Why, then, did it fail? For this there were three reasons: a military miscalculation, diplomatic incompetence and national Prussian arrogance. The military miscalculation was the misjudging of the military strength of Serbia. Instead of the Austrian invasion being, as Berlin and Vienna expected, a mere "promenade militaire," it resulted in two Austrian defeats. Twice the army of Field Marshal von Potjereck crossed the Danube, and twice it was hurled back in confusion. And so, instead of "Mittel Europa" being achieved in the first four weeks of the war, it was, thanks to the bravery of King Peter's troops, still un-

achieved twelve months later. There is not the slightest doubt that Serbia, by her gallant resistance, saved Europe. If she had given way in the first four weeks of the war Europe would have been doomed.

The second cardinal error was made by German diplomacy, which assured the Great General Staff that if the German armies invaded Belgium, the Belgian Government would confine itself to a protest, but would offer no active resistance. Not only did the German Army find itself face to face with the forts of Liège, but her action at once brought Great Britain into the war. If the Germans had not invaded Belgium, there is little doubt that Great Britain would not immediately have entered the war. The British people argued that since 1870 France had foreseen the possibility of a fresh conflict with Germany, and had taken her precautions to meet the danger. Her well-equipped and well-trained army was on a war footing almost equal to that of Germany. In addition, she had her alliance with Russia.

If, then, Germany had not gone through Belgium, Great Britain would not have entered the war at once. It is quite certain, of course, that she would never have permitted the defeat of France, and would have come to her assistance if this threatened. But this intervention might have been too late, and France might have been crushed before Great Britain was able to throw her weight into the scale.

#### GERMANY'S CHIEF BLUNDER

Germany's action in invading Belgium was not only a mistake politically, but, as Colonel Sargent points out, was also a military error. Her proper strategy was not to invade France, but was, on the contrary, at once to go on the defensive, dig herself in, and shut France up within her frontiers while, in conjunction with Austria-Hungary, she overran Serbia and crushed Russia before that power had time to mobilize her immense but slow-moving forces.

Colonel Sargent explains this solution as follows:

When Napoleon made war in a single theatre of operations, it was his invariable rule to take the offensive, but to take it along but one line at a time; and had Germany followed this rule and held defensively the French front, from Luxemburg to Switzerland, and then united the remainder of her forces with those of Austria offensively, first

against Russia and then against Serbia, she could have defeated and crushed the armies of both in a short while, and then could have returned to the western front and with overwhelming forces, flushed with victory, have speedily invaded France via Belgium, as she had originally planned, or overrun both Belgium and Holland and conquered France. And in the meantime, while she was disposing of her enemies outside of France, had Great Britain and Belgium declared war against her, she could easily have held her western front against them, since neither, at that time, had any army of consequence; and then, upon her return, could have gone through Belgium without bringing upon herself the odium of violating a neutral country.

Since the front between Germany and France was only 150 miles in length, and was protected, on the German side, by the River Moselle and the fortifications of Metz, and just back of them by the River Rhine and the fortresses of Strassburg; and since the front could not have been turned by France without her violating the neutrality of either Belgium or Switzerland, or both, which it is certain she would not have done, it could have been held by Germany with a small part of her combatant force while she was destroying her enemies in other parts of Europe.

Had she followed this plan, the war at most would have lasted but two years, and probably not so long as that. Had she followed this plan, Great Britain, in all probability, would not have declared war against her at the beginning; for it was the violation of Belgium's neutrality which brought Great Britain immediately into the war. Had Germany followed this plan, she would not have turned the good opinion of the world against her at the start. And it was all so easy, had Germany had any strategical foresight; but, being obsessed with the idea that she must take the offensive at the very start against France, and having worked out plans along these lines for years, and believing that she could conquer France in this way as she had done in 1870, and failing to see that Russia's entrance into the war in 1914 made the strategical situation vastly different from what it was in 1870, she swept forward to her ultimate defeat.

This mistake, this lack of strategical foresight, this stupendous blunder by the German General Staff was appalling, calamitous, for the Central Powers. It turned what should have been a short war into a long one. It cost the Central Powers billions of dollars and millions of men. It brought the young giant, America, into the war against them, and arrayed against them a world in arms. And, what from a German point of view is most catastrophic of all, it has, along with several subsequent strategical blunders, resulted in Germany's practical annihilation as a great military power.

This mistake in strategy was the direct result of Prussian national arrogance. At

the beginning of the war, the German military authorities announced that they were going to capture and occupy Paris. This spectacular but strategically quite unnecessary exploit proved Germany's undoing. Instead of halting her armies at the frontier, digging herself in, and turning her attention to more pressing affairs, she pushed on—to the battle of the Marne. There she got a "wolf by the ear" and dared not let go. So, when Austria proved unable to overcome Serbia, Germany, in death grips with the armies of General Joffre, could not spare the troops necessary to go down and "clean up" Serbia. She had lost the direction of the war, and did not regain it for twelve long months.

The immediate realization of "Mittel Europa" had, for the moment, to be abandoned, until Germany had so developed her strength as to be able to resume the execution of the plan. But the Allies should have understood that its execution was merely deferred and not abandoned.

#### BLUNDER OF THE ALLIES

It is true that the British had one sound strategic inspiration. Having forced Germany to the defensive in the west, the Allies prepared to strike at the other extremity of "Mittel Europa," and attacked Turkey. Though the execution of the Gallipoli attack was faulty, the strategy was sound. It was obvious that if Turkey could be put out of business and free communication with Russia established via the Black Sea, an allied victory was in sight. So obvious was this that one would have thought it equally obvious that Germany, her very life threatened, would leave nothing undone to prevent the success of the attack on Gallipoli, and would herself drive down through the Balkans to the help of Turkey.

Here once more Serbia was called upon to play her heroic rôle. But this time the effort was beyond her unaided strength. She therefore appealed to the Allies for help, asking them to send 250,000 men to the Danube front to help to oppose the German Army then massing in Hungary. This request was refused, the astounding reason being given that no reinforcements were necessary, as *Bulgaria was coming in on the side of the Allies, and would march on Constantinople to administer the coup de grâce to Turkey.* Serbia, with her 300,000 men,

could always hold the Danube front against the German attack.

And so, by this extraordinary aberration of allied diplomacy, the destinies of the world came to Sofia for decision, and the German-born Ferdinand of Saxe-Coburg-Gotha, King of Bulgaria, was the arbiter. If he joined the Allies, Germany's doom was sealed; if he declared against them, "Mittel Europa" loomed large and the Allies would have their backs to the wall and would be fighting for their very existence. The story of the months of July, August and September, 1915, forms the most shameful page for the Allies in the whole history of the war, as it reveals an infirmity of purpose, a want of political knowledge and a diplomatic incompetence unique in history. Then followed von Mackensen's short but brilliant campaign in Serbia; King Peter's armies were driven into the desolation of Albania, and Germany joined hands with Bulgaria. This instantly and automatically led to the abandonment of the Gallipoli expedition, followed by General Townshend's surrender in Mesopotamia. The German plan for "Mittel Europa" was, at last, almost triumphant.

I say "almost," because there was still one menace to its existence. This was the army on the Saloniki front. There the Allies still maintained a precarious footing, and as long as the Army of the Orient was in being, Germany's lifeline, the Berlin-Constantinople Railway, was menaced. Any successful offensive by the Saloniki force would once more isolate Turkey.

One would have thought that the great, the overwhelming results of a successful campaign on the Saloniki front would have been patent to the meanest intelligence. But it was not so. To the British Imperial Staff the Saloniki front was anathema, and though the French General Staff realized its possibilities, there was at that time no unity of command, and the French were unable to shake the British opposition. France could spare no men to reinforce the Saloniki front, and as Great Britain refused to furnish them, the Army of the Orient for two long years melted away from malaria in almost complete inaction.

Of course, a certain number of men who understood the real situation realized the colossal error that was being committed, but so long as General Sir William Robert-

son was Chief of the Imperial Staff, they had no opportunity of making their views heard. The Imperial Staff got rid of all the newspaper correspondents at the Saloniki front, except two, who were practically official, and made ruthless use of the censorship in London to suppress all reference to Saloniki.

And yet, as Colonel Sargent points out, the Balkans were the "Achilles heel" of the Central Powers, the one point where they were vulnerable. While at the Army War College in Washington Colonel Sargent addressed a series of memoranda to the War Plans Division of the General Staff, advocating a strong reinforcement of the Army of the Orient by American troops, with a view to an energetic offensive. His views, as was to be expected, were combated by the British Imperial Staff.

#### WAR WON IN THE EAST

But he was brilliantly vindicated. After the appointment of Marshal Foch to the supreme command, and the elimination of General Sir William Robertson and the out-and-out "westerners" from the British Imperial Staff, the Saloniki front came to its own. The Army of the Orient was strongly reinforced and placed under the command of General Franchet d'Esperey, who undertook a strong offensive. And then took place what everybody who knew the situation had foretold. On Sept. 15, 1918, the Second Serbian Army attacked the Bulgarian centre at Dobra Polie and drove it in. Through the breach thus made poured the whole of the Army of the Orient, and in ten days Bulgaria was out of the war.

Colonel Sargent describes the effect of the allied successes thus:

The allied victory in the Balkans not only disposed of Bulgaria, but it separated Turkey from Germany and Austria, severed the Berlin-Constantinople-Bagdad Railway, cut in two the great theatre of operations of the Central Powers, and laid open to attack the communications of the Austrian Army in Italy and of the Germany Army on the western front. Coming as it did right on the heels of General Allenby's great victory in Palestine against the Turks, and just at the time when Foch, on the western front, was beginning to make great breaches in the Hindenburg line, it was a lethal blow to Germany which sealed the fate of the Central Powers. It meant that Germany had lost the war; for, from the beginning, the strategical and vital centre of the whole theatre of war

had been in the Balkans; and just as soon as the Saloniki army was sufficiently reinforced to make a successful campaign against the Bulgarians and cut the Berlin-Constantinople-Bagdad Railway, over which the Turks were obtaining munitions of war from Germany, while Germany and Austria were getting cotton and other supplies from Asia Minor, the entire scheme of the defense of the Central Powers fell to pieces like a house of cards.

The reasons were these: With the Turks deprived of munitions of war, and this deprivation coming immediately after General Allenby's masterly movements against them in Palestine, they had no alternative but to withdraw from the war and seek such favorable terms as they could obtain. This left the Saloniki army free to move northward into Austria, where it was certain to be reinforced by many Jugoslavs and Rumanians, who were ready and anxious to join with the Allies in striking a powerful blow against Austria and Germany. Such an advance into Austria through Budapest to Vienna would cut the communications of the Austrian Army in Italy—the only army of any consequence left to Austria—deprive it of its supplies and compel its surrender. Indeed, the mere threat of such an advance upon its communications kept it in such a state of demoralization that, when attacked about three weeks later by the Italian Army, it was easily driven from its strong defensive positions and almost destroyed.

In this connection, it is worthy of notice that Napoleon's march down the Danube in 1805 and seizure of the Austrian capital, after capturing an Austrian army under General Mack at Ulm, paralyzed the operations of the Austrian Army under the Archduke Charles in Italy and caused him to fall back before Masséna upon Vienna; and that Napoleon's great victory over the Austrian and Russian Armies at Austerlitz a few days later, not only resulted in the reconquering of Italy, but compelled both Russia and Austria to sue for peace. So in this war, as in the days of Napoleon, a successful battle fought by the Allies in the vicinity of Vienna would have conquered for them all Northern Italy.

Austria once defeated and out of the war, the way would be left open for the Saloniki and Italian armies to unite and attack Germany from the south. Such an attack would not only deprive her of the wheat, oil, platinum and other supplies which she had been obtaining from Rumania and the Ukraine, but, when pushed northward, would destroy or threaten the communications of her army on the western front with Berlin and other important German cities. Moreover, an advance from Vienna through the friendly territory of Bohemia would bring the allied army almost to Dresden and within 125 miles of Berlin. Such an invasion of her territory would mean, of course, the destruction of her railways, canals and cities; the blowing up of her bridges and munition plants and the laying waste of her fields. And there would

be no way to prevent it, for she could not detach for this purpose any troops from the western front, since she was not then able to hold her own there. Even had troops been available, she could not continue to feed them and her own people with the British blockading her northern coasts and her sources of supply to the south destroyed. Seeing that all this would mean the bringing home to her people the ruin and desolation of war and, finally, the inevitable annihilation or capture of her great army on the western front, she realized that there was nothing to do but to make terms with the Allies.

On Sept. 28, the day following the request made by the Bulgarian Army for an armistice, Field Marshal Hindenburg and General Ludendorff considered the situation and decided that the need for immediate action had become imperative. Accordingly, on Sept. 29, they dispatched Major Baron von dem Busche to Berlin to acquaint the German authorities with their decision. On Sept. 30 the Major met the Chancellor, Prince Maximilian of Baden, and the Vice Chancellor, von Payer, in Berlin and explained to them Hindenburg's and Ludendorff's views. On Oct. 2 he appeared before the assembled Reichstag leaders and in a speech made clear to them the military situation and concluded with these words:

"We can carry on the war for a substantial further period, we can cause the enemy further heavy losses, we can lay waste his country as we retire, but we cannot win the war.

"Realizing this fact, and in view of the course of events in general, the Field Marshal and General Ludendorff have resolved to propose to his Majesty that we bring the fighting to a close in order to avoid further sacrifices on the part of the German people and their allies.

"Just as our great offensive was brought to a stop on July 15, immediately it was seen that its continuation would involve undue sacrifice of life, so now we must make up our minds to abandon the further prosecution of the war as hopeless. There is still time for this. The German Army has still the strength to keep the enemy at bay for months, to achieve local successes and to cause further losses to the Entente. But each new day brings the enemy nearer to his aim and makes him the less ready to conclude a reasonable peace with us.

"We must accordingly lose no time. Every twenty-four hours that passes may make our position worse and give the enemy a clearer view of our present weakness.

"This might have the most disastrous consequences both for the prospects of peace and for the military position.

"Neither the army nor the people should do anything that might betray weakness. While the peace offer is made you at home must show a firm front to prove that you have the unbreakable will to continue the fight if the enemy refuse us peace or offer only humiliating conditions.

"If this should prove to be the case the army's power to resist will depend on a firm spirit being maintained at home and on the good morale that will permeate from home to the front."

On the next day, Oct. 3, Hindenburg himself appeared before a meeting of the German Cabinet at Berlin and in the following signed statement set forth the views of the General Headquarters of the German Army:

"General Headquarters holds to the demand made by it on Monday, the 29th of September, of this year, for an immediate offer of peace to the enemy.

"As a result of the collapse of the Macedonian front and of the weakening of our reserves in the west, which this has necessitated, and in view of the impossibility of making good the very heavy losses of the last few days, there appears to be no possibility, to the best of human judgment, of winning peace from our enemies by force of arms.

"The enemy, on the other hand, is continually throwing new and fresh reserves into the fight.

"The German Army still holds firmly together and beats off victoriously all the enemy's attacks, but the position grows more acute every day and may at any time compel us to take desperate measures.

"In these circumstances, the only right course is to give up the fight, in order to spare useless sacrifices for the German people and their allies. Every day wasted costs the lives of thousands of brave Germans."

Accordingly, on Oct. 4, 1918, just five days after Bulgaria withdrew from the war, the

German Government requested "the immediate conclusion of an armistice on land and water and in the air."

This, then, was the situation: Bulgaria had been defeated and had withdrawn from the war, Turkey, as the result of the annihilation of her Palestine army and the victory of the Allies in the Balkans, had become absolutely powerless to continue the struggle and was making preparations to surrender. Austria, with her whole southern boundary open to attack and the communications of her army in Italy seriously threatened, was on the verge of complete collapse. There was needed only one more thrust of the Italian Army against her already partially demoralized troops on the Piave to defeat, rout and dissipate them and force her, too, out of the war. And Germany, her armies short of food and her people threatened with starvation, her supplies from overseas and outside countries cut off and her territory open to invasion from the south and no available troops with which to stop it, knew that she was beaten, not through the defeat of her great army on the western front, for that was still fighting without showing the least signs of demoralization and was to continue to fight desperately, for a period of five weeks through a most skillfully conducted retreat, but nevertheless beaten—beaten by the collapse of her rear, brought about by the great blow in the Balkans.

Thus the World War, which began in the Balkans, for the possession of the Balkans, ended in the Balkans.

## WHY FRENCH CANADA FEARS THE CENSUS

THE main reason why the French Canadian population fears the decennial census, which was being taken when these pages went to press, is well known to all Canadians. Under the British North American act, which established the Constitution of the Dominion, it was provided that the Province of Quebec should have sixty-five seats in the House of Commons, while the representation of the other provinces was to depend on the electoral quotient of Quebec, or, in other words, on the total population divided by sixty-five. It is no secret that the other provinces, especially those in the west, are gaining population at a much more rapid rate than the provinces in the east. But whatever the increase in Quebec, it will not increase the French representation. An increase of representation for the other provinces, however, spells danger to French interests, and it is knowledge of this fact which makes many Canadians anxious that the census returns should show the full population. In this—according to a Mon-

trepreneurial correspondent of *The New York Globe*—they are seconded by the French Canadian Church, which holds property interests rivaling those of the Mother Church in medieval Europe, and which fears that any change of representation may injure the Church.

A complication, however, has arisen from the peasants' fear of conscription, to which they are constitutionally opposed. Fearing that the census is merely a recruitment device, many of these peasant families either avoid making a complete census report or falsify the report so as to make it appear that no member of the family is of military age. The French political advisers are endeavoring to combat this tendency in the press, seconded in this by the exhortations of the clergy from the pulpit. But the French peasant, at home or abroad, is an obstinate mortal. The French leaders, therefore, fear that the census may bring a diminution of their Parliamentary power.

## MME. CURIE'S FAMILY

*To the Editor of Current History:*

After reading "The Story of Radium in America" in the June issue of your magazine, I could not help feeling that it was my duty to correct a statement contained therein. I have reference to the statement attributed to Dr. Robert Abbe that Mme. Curie's father was a Polish Jew named Ladislaus Sklodowski and her mother a Swede. Being a personal friend of Mme. Curie's sister, Dr. Dluska, I affirm that both the father and mother of the illustrious scientist are Christians and Poles. For the information of Dr. Abbe I may give the following sketch of the family of Mme. Sklodowska Curie:

The Sklodowskis came from the village of Sklody, Province of Lomza, Poland. Her grandfather was a man of learning, and held the position of President of the gymnasium at Lublin. His eldest son, Wladyslaw, was the father of the future discoverer of radium. Her mother was Bronislawa Boguska—not a particularly Swedish name, it will be admitted. There were five children, the eldest of whom, Sofia, died during childhood; the next in line, Bronislawa—Mme. Dluska, my personal friend—after completing her medical studies at Paris, established and is still managing with her husband, Dr. Kazimierz Dluski, the famous sanatorium in Zakopane, Poland. The third child,

Helena Szalayowa, is a prominent educator, and Joseph, the brother, is a very well known physician in Warsaw. The youngest of the five children was Mme. Marja Sklodowska Curie.

Evidently CURRENT HISTORY is not the only publication that has printed uncritically erroneous statements about Mme. Curie. I now see that Mme. Curie has found it necessary personally to take up the cudgels against the falsehoods disseminated about her. I herewith give a translation of a letter written by her in Polish to one of the papers in Chicago, namely, The Daily News:

My Dear Mr. Czarnecki: Due to the fact that frequently there appear in the American press articles which are not in accord with the truth so far as my nationality and religion are concerned, I herewith request that you make public the fact that I was born in Poland, and that *both my parents are Polish by nationality and Roman Catholic by religion*. Both my father and mother are of purely Polish descent. I was born in the village of Sklody, Province of Lomza, Poland.  
(Signed) MARJA SKLODOWSKA CURIE.

If you will kindly publish the foregoing facts in CURRENT HISTORY your courtesy will be appreciated.

MRS. LOUIS CZAJKOWA.

80 Garfield Avenue, Detroit, Mich., June 23,  
1921 (care of Polish Consulate).

## THE DJAMBI OIL CONTROVERSY

*To the Editor of Current History:*

With reference to the Djambi oil controversy between the United States and Holland, as exposed in the June issue of CURRENT HISTORY, Page 405, permit me to observe that the last sentence of the penultimate paragraph contains a mistake, which is probably due to wrong translation. It should read, "The majority of the managers and of the directors are to be Netherlands subjects or *residents* of the Netherlands East Indies." This latter term includes aliens. (See third paragraph on Page 19 of Senate Document No. 11 of the Sixty-seventh Congress, First Session, which annuls the fourth paragraph of the American note No. 62 as printed on Page

24.) There are no restrictions as to the nationality of the stockholders.

You may be interested to know that the Djambi question in Holland has never been made so much an international issue as a point in domestic politics. When the petroleum companies operating fields in the Netherlands East Indies began to pay their comfortable dividends, attention was drawn to the desirability of keeping those profits within the country. The same question had turned up already in connection with tin concessions operated by purely Dutch interests, so that this movement has nothing to do with the protection of Dutch capital to the detriment of foreign capital. On the contrary, for various ventures the collabora-

tion of American capital has been invited, but with the exception of the splendid rubber plantations on the east coast of Sumatra, American participation has been very disappointing.

There exist three political parties, roughly speaking, which advocate the reservation of the mining profits for the Colonial Government, viz.: (a) the ethical party, which preaches that the Dutch have assumed a guardianship over the natives; (b) the fiscal party, whose standpoint is that the best method for the Government Treasury to follow is to exploit domestic resources itself, and (c) the Socialist Party, which is in favor of State operation.

The result of the activities of these parties has been the closure of the Djambi territory to private exploration and the intrusting of researches to a Government geologist. As it was considered rather difficult for a Government to enter into the intricacies of the oil trade in the Far East, a harmonious solution was proposed by a contract in which the Government would obtain a certain part of the net profits. Tenders were invited; among others one Dutch company offered 62½ per cent. for a certain district, and the Bataafsche Company 50 per cent., while the Standard Oil Company merely proposed to allow 40 per cent. This shows that there was no discrimination against foreign capital; the American company considered itself automatically out of further consideration.

The bill embodying the two contracts—for 62½ and 50 per cent., respectively—was tabled because of a slight majority accepting a motion in favor of complete State exploitation. This decision was a general surprise, as the competition had been held on the understanding that it would enjoy the sanction of Parliament. The matter was taken up again by the Minister in 1915. As the option of the tenders had lapsed, the highest Dutch bidder withdrew its offer. This resulted in a suggestion from the Colonial Minister in 1917 that the Government should establish the Djambi Mineral Oil Company with the participation of the Bataafsche Company. In 1918 the preliminary written parliamentary reports were published.

To a neutral observer it is not quite clear why a foreign company which had been a lower bidder—just as there were other na-

tional lower bidders whose offers were rejected—now asks the intermediation of its Government in order to obtain a place next to the higher bidder. The bill as passed by the Second Chamber embodies and is the result of the original principles.

The Bataafsche Company will act as a producer and as a technical partner with the Government. In how far the sister institutions will benefit by the distribution is not certain, as the Government is and will become an important consumer for its various enterprises, such as the State railroads, which are already experimenting with American oil-burning locomotives, the Government scrap-metal foundry operated by liquid fuel, and the automobile services in the interior.

J. H. MUURLING.

*Netherland Indian Government Intelligence Office and Produce Sample Room, 44 Beaver Street, New York, June 14, 1921.*

#### DJAMBI OIL BILL PASSED

The First Chamber of the Dutch Parliament, by 27 to 8, passed the Djambi Oil bill on July 1, providing for exploitation of valuable oil fields in Sumatra, Dutch East Indies, for forty years, by a combination of the Dutch Indian Government and the Batavia Oil Company, an offshoot of the Royal Dutch Shell combine, which is controlled in London. The measure is now a law, the Second Chamber having passed it on April 29. Under the bill the combination will have a capital of 10,000,000 guilders (\$40,200,000 at parity), to be divided equally, but the company will be under the control of the Dutch Government, and the Directors must all be Dutchmen.

By adoption of the bill American interests are excluded from exploitation in the Djambi fields. This is Holland's answer to Secretary Hughes's notes in behalf of the Standard Oil Company. (See CURRENT HISTORY for June, p. 404, and July, p. 687.) In reply to the note of May 27 the Dutch Government denied that its act closing the Djambi fields to American participation was contrary to the principles of reciprocity. Moreover, the Dutch Government objected to the representing of its policy toward foreign nations as less liberal than that of the United States. The contrary, the note declared, was rather the case.

GLIMPSE OF BEAUTIFUL MOUNTAIN SCENERY IN ONE OF THE PICTURESQUE PROVINCES OF CZECHOSLOVAKIA

## THE UPBUILDING OF CZECHOSLOVAKIA

BY J. H. WALLIS

Of the American Relief Administration

*Rapid recovery of the new republic from the depression following the war—Problems with which it still has to cope—President Masaryk the Czech George Washington—Present status of industry, transportation, finance and commerce—The racial problem*

TWO years ago in Prague (or Praha, as the Czechs call their capital city) there was a building known as "The Dead House." Its function was to house dying babies. Into this "Dead House" were put sick babies from 1 to 2 years old, whose condition appeared hopeless. There the little ones, who had had but a brief glimpse of human life, lay till death took them; lay without food, without medicine, cared for by nurses who could endure for only a few days at a time the deep, continual horror of "The Dead House." There was not enough food, not enough medicine, for those who had a chance; it would have been waste to give it to those condemned to death. That is one picture—a picture of Czechoslovakia early in the year 1919.

Here is another picture. It is Sunday, May 15, 1921. Through the streets of Prague flows a great parade. A hundred and fifty thousand farmers make up the vast procession. They are members of the

Agrarian Party, the second largest political party in Czechoslovakia, and are in Prague to attend the great agricultural fair and exposition. That exposition lasted for five days and was visited by at least 2,000,000 people. It is said that the total number of visitors who came from outside Prague for the occasion was 300,000.

These visitors came from all parts of the Czechoslovak Republic and beyond. Two thousand Ruthenians from Pod Karpatka Rus, the tailpiece of Czechoslovakia, the section which Hapsburg misrule left greatly benighted, were in attendance—an encouraging sign. I saw a large group of swarthy Bulgarians inspecting the machinery exhibit, and many other European nations were represented in the vast throngs which attended the exposition. Americans who have seen a big State fair can visualize the appearance and nature of this Czechoslovak exposition. Animals, grains and machinery were the principal exhibits.

The exhibit of machinery was particularly significant. The larger machinery was exhibited in the open air, the smaller in a huge hall. Americans, who thoughtlessly believe that all the world's modern farm machinery is manufactured in the United States, would have had their eyes opened if they had visited the exposition at Prague. Power plows, gasoline tractors of various makes, thrashing machines, big and little, mowers, reapers, corn planters, potato diggers, new forms of harrows, disks and soil pulverizers, potato planters with an attachment for dropping the needed amount of fertilizer with the seed potato, rakes, stationary engines, road machinery, were among the items on exhibit. Practically everything needed for modern farming was included in the scope of the exposition—and it was all manufactured in Czechoslovakia. Many Americans do not realize that this new republic is a great manufacturing nation. A visit to the Prague exposition would have convinced them of the fact. And it would further have convinced them that a part, at least, of the life of this nation had returned to normal.

These two pictures are significant. The story of Czechoslovakia of today is a story of recovery. It would be ridiculous to say that the economic life of Czechoslovakia is normal, that things are as they ought to be or as the people want them to be. Czechoslovakia is affected by the world depression in business. It is unable at present to find satisfactory markets for its manufactures in other countries which it would naturally supply. The plight of Austria injures Czechoslovakia. The transportation problem is acute. There is still a serious shortage of milk. There is still considerable hardship in certain districts. Tests now being conducted by the American Relief Administration to determine scientifically the condition of the children being fed by that organization are disclosing a poorer state of nourishment than had been anticipated.

Yet the factory chimneys in Czechoslovakia are emitting smoke in a way that contrasts strikingly with the chimneys of Austria. The people have confidence and purpose in their attitude; they go about their business in a normal way, without fear, sure of the future. Most of them have enough to eat. Except in certain lines there

is no food scarcity. "The Dead House" has disappeared so completely as to seem impossible; it seems a hundred years away instead of two. No longer is it necessary for the American Relief Administration to feed 500,000 children—nearly one-fifth of the entire child population—as it did for a year and a half. The American Relief Administration program extends now to less than 200,000 children, and this number will doubtless be greatly reduced during the Summer and Fall. That it is necessary at all is due more to the present lack of completely satisfactory social agencies for child-care and to the inequitable distribution, arising from the republic's newness as a nation, than to any positive lack of food supply in Czechoslovakia.

#### THE ECONOMIC SITUATION

In Prague I sought out the leading banker of Czechoslovakia, Antonin Tille of the Zivnostenska Bank, to get his views on the economic situation and prospects of Czecho-

THOMAS G. MASARYK  
President of Czechoslovakia, at a review of  
troops in Prague

VIEW OF PRAGUE, THE CAPITAL OF CZECHOSLOVAKIA, SHOWING THE GREAT CASTLE AND CATHEDRAL ON THE HILL, WITH THE CHARLES BRIDGE OVER THE MOLDAU RIVER

slovakia. Mr. Tille was optimistic. He was confident of the future of the nation. He saw clearly enough the unsatisfactory elements in the present situation, the difficulties the new republic has to face, but he pointed out to me numerous items of strength possessed by Czechoslovakia and some very satisfactory features in the present situation:

The condition of industry in Czechoslovakia [he said] is not so bad as might be thought. Some branches are suffering from over-production because they can find no markets for their goods. These are the industries depending mainly on export. For them the difficulties of transport and of exchange are acute. All our industries which depend upon foreign markets are suffering on account of the difficulties of transportation. There is a great lack of freight cars. Freight cars shipped into other countries are a long time in coming back, and some do not come back at all. Even though we repaint our cars and indicate on them in big letters that they belong to Czechoslovakia, they do not always come back. We are now manufacturing a good many cars, but this does not supply all our needs when cars remain so long on the way.

Exportation of goods is also hampered by the artificial restrictions placed in the way of business by some of the States of Central and Eastern Europe. The prosperity of our industries depends upon settlement of arrangements for commercial intercourse between countries. Czechoslovakia now has entered into commercial treaties with a number of States and is negotiating with others. We are in favor of agreements between States for free transit between non-contiguous countries across intervening countries without interference or restriction. The unsatisfactory financial situation in Austria is an injury to our trade. The action of the Austrian Government in issuing so many billions of unsecured paper has depreciated the value of the Austrian crown to such an extent that Austria is unable to buy our goods. For example, we formerly exported clothing to Austria, but the exchange situation prevents that at present. In general, however, our industrial condition is improving in ratio with Europe's adjustment to the new political arrangement, the removal of artificial barriers between States, and the establishment of freer intercourse between nations.

Dr. Alois Rashin, Czechoslovakia's first Finance Minister, to whose wisdom and

THE NATIONAL THEATRE IN PRAGUE, CENTRE OF THE CITY'S ARTISTIC AND SOCIAL LIFE, AND SCENE OF SOME OF THE EARLIEST ACTIVITIES FOR CZECHOSLOVAK INDEPENDENCE

foresight is largely due the nation's relatively strong financial position, happened to be in the bank during my interview with Mr. Tille. Mr. Tille called Dr. Rashin into the conversation. Upon his arrival our discussion naturally turned to the financial position, plans and prospects of the Czechoslovak Government. I mentioned to Dr. Rashin the fact that the countries of Europe had not only abandoned the gold standard, but had really no definite standard at all at present, since one could get from any European Government for a piece of paper currency, on demand, not only no gold, but not even a definite amount of wheat or potatoes. I asked the former Finance Minister what plan or prospect there was of establishing the gold standard in Czechoslovakia.

Dr. Rashin replied as follows:

It was my hope on becoming Finance Minister of Czechoslovakia to be able at once to establish our currency on a gold basis, but I found that conditions made impossible the immediate or very early establishment of the gold standard. The chief cause of our inability to maintain a gold standard at once was the fact that Czechoslovakia had to take over about 9,000,000,000 crowns of old Austrian notes without any security back of them. This huge issue of notes made it impossible for us to secure a gold loan of sufficient size to establish a gold standard. We did not, however, give up the idea of a gold standard; we merely accepted the inevitable,

and postponed the date of establishing such a standard.

Meanwhile we put into effect a system of heavy taxation, so that our money would not be further depreciated. Our currency above the 9,000,000,000 old and unsecured notes is secured by commercial paper, various other securities and some gold, the gold being about 265,000,000 crowns. Our banking office of the Ministry of Finance is not allowed to issue more notes without security. Our budget for 1921 more than balances. Our financial program calls for the reduction of our unsecured note issue through retirement by means of the application of a property tax. This property tax, or tax on capital, is a general one. Fortunes of 25,000 crowns or less—the present value of the crown being taken—are exempt. On fortunes above that the tax is graduated from 5 per cent. on small holdings up to 35 per cent. There are to be six semi-annual payments, so that the whole tax will be paid in three years. We estimate the entire sum to be received from this property tax at 12,000,000,000 crowns. So, in three years we expect to pay off the unsecured 9,000,000,000 of Austrian notes. Our remaining currency would then be fully secured by gold or securities, and our financial position would be such that we could approach the United States and get a gold loan, with which we could establish our currency on a gold basis.

It is interesting to note that Dr. Englis, successor to Dr. Rashin as Finance Minister, does not desire to bring the crown back to par. Yet he is, in general, following the sound financial policy laid down by Dr.

ENTRANCE TO THE GREAT CASTLE AT PRAGUE, PART OF WHICH IS NOW OCCUPIED BY PRESIDENT MASARYK

Rashin. His budget for 1921 more than balances with the receipts conservatively estimated; his postal and railroad budgets show a profit on account of higher rates, and he proposes to create a reserve of 1,000,000,000 marks with which to stabilize the crown.

What I wish to emphasize is the fact that the Government of Czechoslovakia is now, and has been, taking a wise and sound course in national finance. It is doing exceedingly well under the circumstances. Outside of England, it was the first European nation to "stop the printing presses," as the current phrase puts it; that is, to stop the inflation of the currency further by increased issues. These financial matters are of genuine importance in considering the situation and the outlook of Czechoslovakia.

In addition to the matters discussed above, I asked these two well-informed men about the political situation in Czechoslovakia. They agreed entirely on the following matters:

The Government of Czechoslovakia is stable and secure. Every one is satisfied with the republic; no one wants a monarchy, and no one wants Bolshevism. The present Government is strong, energetic, able and busi-

nesslike. The heads of the various Government departments, the Ministers, are now experts, specialists in their lines. They are not political figures, but men who understand the business of their offices and are giving a business administration. These men work in connection with a committee of five, named by the leading parties, with which committee all important matters are discussed. In this way the Government is certain of decisive support in its measures. Mr. Tille and Dr. Rashin further agreed that the relief work conducted by the American Relief Administration in feeding hundreds of thousands of children—560,000 being the high figures—had favorably affected the political situation of the nation.

"Where misery is, the people are easily influenced," said Mr. Tille, and this view was borne out by Dr. Rashin, who stated that the American relief work had made for political stability and security, diverting the people from following extreme leaders.

#### INDUSTRY AND COMMERCE

Another important interview which I had was with Dr. Hodach, President of the Chamber of Commerce. Dr. Hodach told me that Czechoslovakia was working back to normal industrial conditions. "The spirit of the people is getting better," he said. "Prices are going down; the people see that the crown has value, and is not merely paper. Now that the people have more to

eat, they are naturally better satisfied." Speaking of industrial life, he said:

Our industries are suffering to some extent from high cost of production, which causes our costs in some lines to be greater than what the products will bring, greater than prices determined by world-demand. Our industrial problem is to reduce our costs of production. Our manufacturers are making all possible economies to meet the lower price level. They are cutting the number of workers to those absolutely necessary, they are accepting smaller profits. [Mr. Tille had told me that wages would have to be reduced sooner or later and, in this, Dr. Hodach seemed to agree.] In most industries our manufacturers are now able to operate and sell at lower prices.

It is difficult for us, however, to compete with our neighbors, whose costs of production are so low. Those of our industries which get their raw materials from abroad are in trouble, particularly those which had on hand large stocks of materials bought at high prices, for most of those materials have declined sharply in the international market, thus making the cost of the finished product greater for us than for those whose industries benefited sooner by the lower prices. Our cotton industry was an example of this, but in cotton the trouble is nearly over, for most of the dear cotton has been worked up, and we are now buying cheap cotton. The industries which get their raw materials in our own country, such as the sugar, malt, beer, starch, alcohol, ceramics and china industries, have had an easier time of it. Our industrial possibilities are good, but we had to have an adjustment. We are now liquidating the war. We are going through a crisis, not a crisis which goes to the root of industrial life, but a crisis of prices. I hope to see this price crisis ended this year.

Dr. Hodach confirmed the statement of Mr. Tille concerning the gravity of the international transport situation. He said the transport question in Western Europe had been settled, but not in Eastern Europe. "The cars of the old Austrian empire have not yet been divided among the successor States," he said. "The steamers on the Danube have not been divided. For us, the international situation has been distressing, but it is improving. We are building up our Danube port of Bratislava (Pressburg), and are improving our railways. Since the revolution we have built 25,000 cars, but it is not enough. We are building more all the time, and have bought about 2,500 abroad. We must have new railway lines to serve and develop the country, particularly in Slovakia." Dr. Hodach continued, as follows:

We must complete a system of commercial

treaties. We now have such treaties in effect with some countries and are negotiating with the others. We must come to an arrangement to keep down duties. It is not possible for one country to have all the needed industrial relations and have reasonable freedom of commercial intercourse. Czechoslovakia now has a system of duties in self-protection because the other countries have. It is the residue of the war spirit. During the war, a belligerent had to be self-dependent, but such is not now the case.

Czechoslovakia will go to the Porto Rosa Conference, the conference between the so-called Successor States, to be held for the purpose of removing unnecessary economic barriers, &c. Every conference bringing the new nations together is good. But we do not have exaggerated hopes. The biggest work is to be done through treaties between countries. We must have a satisfactory economic organization of Central and Eastern Europe through commercial treaties, but we will not have a political federation. We have the utmost interest in settling the international situation.

I give Dr. Hodach's views at some length because he represents the attitude of the responsible business men of Czechoslovakia. This attitude is clearly the expression of a rational spirit of conciliation, looking toward international freedom of intercourse and progress.

#### THE CZECH'S GEORGE WASHINGTON

It was, lastly, my good fortune to have an interview with President Masaryk, the idol of every Czech, in very fact a present-day father of his country. When I saw him—on May 18—the President was convalescing from a severe and dangerous illness which had kept him in bed for three months, and which had alarmed all those who realize how necessary his presence still is for the success of his republic. He was to leave in a few days for a long rest in Italy. President Masaryk is more than 70 years old. On the occasion of our conversation he looked frail, and it was slowly and with some difficulty that he walked about the great room in an upper floor of the enormous castle—formerly royal—which spreads so mightily over the ridge that looks down on the great city of Prague and the beautiful Vltava [Moldau] River.

Dr. Masaryk spoke with happiness of the present relatively satisfactory condition of the Czechoslovakian Republic, and with confidence concerning the future. Naturally,

THE GREAT SQUARE IN PRAGUE, WITH THE FAMOUS FIFTEENTH CENTURY CLOCK (ON THE LEFT), IN WHICH FIGURES OF CHRIST AND THE TWELVE APOSTLES PARADE AND BOW AT THE STRIKING OF THE HOUR

much of our conversation was of America. The President expressed the deepest appreciation of America's part in the war, which had made the Czechoslovakian Republic a reality, and also of the work done by the American Relief Committee.

I asked the President for his photograph for use with this article. When he autographed it and gave it to me, I felt as if George Washington had returned from the days of America's infancy to do me such a favor, for I realized that the simple, modest, gracious man with whom I had been speaking is one of the great figures of today and destined to occupy a real and a large place in the history of Europe. He invited me to one of the windows of the castle from which can be obtained a wonderful view of the ancient and picturesque city of Prague. Leaning on the window sill, he pointed out a number of places of beauty and historic interest, in the towered city lit with sunlight, along the river spanned by noble bridges far below us and on the adjoining hill.

Thomas G. Masaryk is accepted universally in Czechoslovakia as a national hero. If he were dead a hundred years, he could

not receive more undisputed homage. It is well that Czechoslovakia, in its infant years, has such a national figure, such a rallying point, as Masaryk. He is a unifying force of the first magnitude for the new republic.

#### FOREIGN POLICY

Czechoslovakia has another strong, able and patriotic statesman in Dr. E. Benesh, the Minister of Foreign Affairs. Like Masaryk, Benesh is not aligned with any of the parties; he is a national, not a political, figure. Under his wise guidance Czechoslovakia has been carefully keeping out of international trouble, and, if his policy prevails, will continue to keep out of trouble. He is the father of the so-called "Little Entente," as the protective alliance between Czechoslovakia, Rumania and Jugoslavia is called. There is nothing secret about the understanding between these three States. Dr. Benesh says that the "Little Entente" is a natural and essential arrangement for peace and stability in Central Europe. One good job the "Little Entente" performed speedily and satisfactorily was the squashing of ex-Emperor Karl's attempt to regain the throne of Hun-

gary. Hungary and Karl were warned that the three allied nations would not permit his return to power. A time limit for his departure from Hungary was set—and he departed.

This hostile attitude toward the Hapsburgs, justified abundantly by remembrance of centuries of oppression and cruelty, is the only warlike note in Czechoslovakia's foreign policy. Except for that item, this policy, as set forth fully in a speech delivered by Dr. Benesh in January, is one of peace and amity with all Czechoslovakia's neighbors, including Germany, Austria and Hungary; of neutrality between all belligerents, and of close collaboration with the Entente powers. Czechoslovakia is for peace and economic reconstruction in Central Europe, for international co-operation and good mutual relations. Her behavior has proved the sincerity of her declarations. Her policy and her behavior alike offer bright hopes for the future.

#### THE RACIAL PROBLEM

Czechoslovakia, like the other newly established nations, has her own internal race problem. There are in Czechoslovakia about 6,700,000 Czechs, about 2,000,000 Slovaks, about 3,800,000 Germans, about 900,000 Magyars, about 400,000 Russians or Ruthenians and about 130,000 Poles. The Czechs and Slovaks are Slavs and feel themselves akin. Their languages are variants from the same source, the Slovak being the archaic Bohemian dialect. Dr. Nikolau states that "the Czechs and the Slovaks, without any special studies, can read newspapers and books written in each other's literary language, and when speaking understand each other better still." Statements from hostile sources to the contrary, it is most probable that the Czech and Slovak sections of the population of the republic will work in satisfactory harmony together, becoming more, rather than less, unified with the years. The Czechs and Slovaks together won liberty and nationality for Czechoslovakia, and it is not likely that their naturally racial and mutually advantageous bond can be broken.

The Ruthenians are Russians dwelling south of the Carpathians. They are, of course, of the same great Slav origin as the Czechs and Slovaks. Their speech is not

greatly different from the Slovak, but in religion they adhere to the Russian Church. They are very illiterate, about 95 per cent. being unable to read or write. It is said that they became part of the Czechoslovak Nation of their own free will, but it seems doubtful that they have any genuine attachment of a nationalistic sort to Czechoslovakia. Their gaze is toward Russia. Formerly they suffered under the despotism of Hungary, and their illiteracy is due to that despotism. Dwelling south of the mountain range, they find union with a genuine Russian State geographically difficult, and in joining with Czechoslovakia they perhaps came as close to political union with their own kind as circumstances permitted from a practical point of view. They furnish something of a political problem for Czechoslovakia, a problem not yet settled. Czechoslovakia proposes to solve the problem by education.

In contrast with the Ruthenians, occupying homogeneously a distinct geographical section of the republic, and classifiable as unassimilated rather than hostile, the Magyars may be called a hostile element. But they do not occupy so distinct a geographical section as do the Ruthenians in the eastern tail of Czechoslovakia. The Polish element is a minor matter.

#### THE GERMAN PROBLEM

The big racial problem which Czechoslovakia has to solve concerns the German element of nearly 4,000,000. Only a short time ago the Germans in Czechoslovakia were members of the ruling race, while the Czechs and Slovaks were the subject peoples. It was hardly to be expected that the Czechs, oppressed and exploited for centuries, were going to clasp to their bosoms at once the remnants of the oppressor race who continued to reside among them after the winning of freedom. Not only do the Czechs recall centuries of oppression; they also remember that, in the great war, the rulers of the Central Powers compelled the Czechs to fight for their oppressors against those who would liberate them. Further, the Czechs remember how they were used as the work horses of the old Austrian Empire, and taxed for the benefit of Austria, particularly of Vienna. It would have been more than human had the Czechs, immediately after gaining their independence, be-

gun to love their enemies. Nor was it to be expected that the German element, suddenly become the underdog after centuries of superiority, would feel quite pleased about the matter.

The feeling between the two elements, however, is growing better. Whereas, a year ago, a Czech to whom a question was put in German would refuse to answer, German is now used without especial notice, even by some of the clerks in the Government offices. This language question appears a hard one. The Czechs certainly do not intend to give up their language, nor do the Germans intend to give up theirs. The Czechs are not attempting to extirpate the German language. The Germans have separate schools for both primary and higher education. German representatives in Parliament, of different political faiths and different economic views, all belong to a German party group, or Central Parliamentary Organization of the German parties. The fact that they are German is, thus far, of greater strength than their differences of party; thus far, they are unitedly German first, and Social Democrats, Agrarians, Clericals, or National Democrats afterward.

Recently President Masaryk invited the German Party group to discuss with him their relations with the Government. Upon communication of the invitation to the different German parties, it was discussed among the German clubs and it was decided to accept, provided the "full meeting" of the Central Parliamentary Organization raised no objection. When that organization met, the radical wing opposed accepting the invitation. Upon a vote being taken, the result was a draw, which was decided against accepting by the vote of the Chairman.

But before the meeting, the German League of Farmers had, without consulting the other parties or waiting for a group meeting, sent a representative to see President Masaryk. To this representative President Masaryk promised that a place would be made in the new Cabinet for a German and that Germans would be called to important posts in the Government. When the German representative asked the President what concessions would be demanded from the Germans in return, President Masaryk said that nothing would be de-

manded, but that a relaxation of the tension would be expected. Mr. Masaryk's spirit of humanity and conciliation—a spirit worthy of Abraham Lincoln—made a favorable impression upon the Germans, and the German press severely criticised the refusal of the German Parliamentary group to accept the President's invitation.

America, through the work of the American Relief Administration, has done something to bring Czechs and Germans together. The co-operation on committees and the impartiality in distribution have been effective in creating mutual confidence, respect and sympathy.

It must be admitted that the German problem is a large one for Czechoslovakia. America has different races to weld, but she is not trying to weld them into one of their own old races. Yet, if the Masaryk spirit of fair play and humanity prevails, the problem is not too big a one for Czechoslovakia to solve. The Welsh are not the same race as the English, yet there seems to be racial harmony in the largest of the British Isles.

#### THE CZECHOSLOVAK PEOPLE

Czechoslovakia is a land of great natural resources. But after all, or before all, a nation's greatest wealth is its citizens. Not fat lands, rich mines, vast forests or favorable climate constitute the fundamental strength of a nation; a nation's strength, or weakness—a nation's hope, or despair—lies in its sons and daughters. Then, what of the people of Czechoslovakia? Do these people possess the character which, above material resources, promises success for the nation? I think they do. The Czechs are physically strong and healthy. They are mentally purposeful, confident in themselves, energetic, determined, industrious. They are almost entirely without illiteracy. They are reasonably intelligent. They are willing to learn from others, especially from America and England. They are not afraid to work. The Slovaks are Czechs less developed. They have more illiterates; about 30 per cent. of the Slovaks are illiterate. Slovakia needs not only industrial and economic development, but education—and the Government is giving it education. But the basic character on which nations are built is there also. The German element—more than a fourth of the population—

should furnish value to the nation also, if the racial problem is wisely handled. The Czechoslovaks have been the work horses for Austria; now they work for themselves.

As an example of Czechoslovak energy and determination may be mentioned the building activities of the students in Prague. Prague is fearfully short of dwellings; all the new capitals are—as well as many other places. To supply quarters, 2,200 students, under the direction of architects and assisted by skilled mechanics, are erecting emergency wooden dormitories. These dormitories will house 700 students. The land is leased by the Students' Alliance from the City of Prague. It is expected that the dormitories will be entirely finished by September, which means an actual working time of seven months.

Czechoslovakia is doing other building than for students. One sees no building in Austria, and the change on entering Czechoslovakia is noticeable. The Government has been giving financial guarantees to encourage the building of dwellings. Under a guarantee of interest and amortization of capital by the Government to banks making loans to home builders, 6,000 houses have already been built. Under this plan the Government dictates the rents in order to protect its guarantees. Individuals or corporations investing in new houses for the working classes get the right to deduct from their income subject to taxation, before the tax is applied, 7 per cent. per annum of the cost of their new buildings for a period of ten years, or 70 per cent. in all. This inducement has resulted in the building of some houses, and is expected to have further results. But more ambitious is the lottery loan now being offered for subscription, the proceeds of which are to be used to finance, through the banks, the building of houses. It is hoped to raise 1,000,000,000 crowns (about \$14,285,714, at the present rate of exchange) by means of this loan. The rate of interest is to be 2 per cent. in addition to the prizes of the lottery. This loan will result in the building of a good many dwellings—far more than could be built for the same number of dollars in America. Czechoslovakia is not lying helplessly on her back, waiting for Providence to provide homes for the people.

The educational program of Czecho-

slovakia is an enlightened one. Illiteracy among the Czechs and Germans in the country is practically nil, but it is considerable among the Slovaks and (as stated above) almost general among the Ruthenians. The Czechoslovak Government realizes the necessity and the importance of education. The Government's appreciation of the necessity of a great educational program is clearly shown in the cold figures in the budget. The 1920 budget carried 198,000,000 crowns for public education; the 1921 budget carries 599,000,000 crowns for public education—three times as much as for 1920. And in the 1921 budget appears the entirely new item of 26,000,000 crowns for schools in Ruthenia. Those figures tell a story of purpose and aspiration. Dr. Alice Masaryk, the President's daughter, who, as a political prisoner, spent many months in an Austrian jail with thieves, ruffians and other common criminals, told me that during the past three years 3,000 schools had been established in Slovakia and Ruthenia. Does this not indicate that Czechoslovakia understands what are the basic, essential things of national life and progress?

The attitude of Czechoslovakia toward America is one of admiration and emulation. This new republic is grateful to the great Republic for the part America played in gaining Czechoslovak liberty and in founding the Czechoslovak State. Ex-President Wilson is still immensely popular in Czechoslovakia. The great railroad station in Prague is called the Wilson Station. Pictures and bronze medallions of Mr. Wilson are coupled with pictures and medallions of President Masaryk in offices, schools, hotel lobbies and elsewhere all over the country. The relief work conducted through the American Relief Administration has also made a deep impression. Miss Masaryk said she felt sure that, when an impartial view of the war period could be obtained, the relief activities brought about by Mr. Hoover would be rated of great historic importance, the first post-war activity of the sort in history. Dr. Hodach, whom I have quoted above, said to me concerning the relief work: "Mr. Hoover's work here not only relieved distress, not only improved the spirit of the people and stabilized conditions, but it taught us methods of work and organization, co-operation

and "self-help." In fact, it is now expected that out of the organization created by the American relief will develop a permanent national institution of child welfare—a substantial, enduring result springing from an emergency action.

Dr. Dumba, formerly Austrian Ambassador to the United States, whose activities caused his dismissal before we declared war on Austria, is said to have offered recently predictions concerning the life of the new or expanded nations of Central Europe. To Rumania he granted the longest life. Poland, I think, had about five years in his opinion, and Jugoslavia about ten. Czechoslovakia, Dr. Dumba thought, might break up any time, in two or three years perhaps. Doubtless in the mind of the old Austrian the wish is father to the thought. Czechoslovakia looks good to me. I think it prom-

ises well. It has a deep racial tradition—among the Czechs—going far into the past. It has tremendous resources. It has character. It has wise statesmen. It has Masaryk—let us hope for long! I think Masaryk has builded well. Looking back on my visit to Czechoslovakia, the picture which comes most strongly to my mind is that of President Masaryk—a frail old man, not a militarist, not a demagogue, but perhaps the most generally accepted, the most unsoiled European hero of our generation—leaning from the window of the vast castle, no longer possessed by his country's oppressors, and pointing out, with love and pride, the beauties of the ancient capital city of the nation reborn, under his leadership, to a freer life. I do not think his labor is to be in vain, or his vision to be proved false.

## CZECHOSLOVAKIA'S RIGHT TO STATEHOOD ASSAILED

BY ANTHONY PESSENLEHNER, LL. D.\*

*An extreme Hungarian view which holds that the new republic headed by President Masaryk has no valid ground for autonomous existence—An attempt to disprove its claims on historical, political, economic and ethnical grounds*

**H**ISTORIC, political, economic and even ethnographic considerations were rudely cast aside in the calling into life of Czechoslovakia, a State built upon a fictitious theory of the racial identity of the Czechs, Moravians, Slovaks and Ruthenians, the last now preferentially called Rusins by the Czechs.

To defend the existence of Czechoslovakia from a historical viewpoint is a hopeless task. There once was a Czech Kingdom, a Moravian Duchy, a no man's land in the north of Hungary sparsely populated by some Slavic tribe—not Czech and not even the ancestral line of the present Slovaks—and a mountainous country, uninhabited until the middle of the fourteenth century, now called Podkarpatska Rusinia. These are the four constituent parts of Czechoslovakia; of the four, Bohemia proper is

the only one that had known an organized state-life, a nationalistic existence. Only in the case of Bohemia proper, which was situated entirely within the confines of the late Austria, can there be any assertion of a recurrence to past history, to a revival of a State that had once been in existence and lived a national life of independence. There never was an independent country known as Moravia, Slovakia, Ruthenia, or Rusinia. There was a Bohemia

\*Space is given to this Hungarian attack on Czechoslovakia for the purpose of presenting an issue which is pregnant with danger in South-eastern Europe. The editor, however, does not wish to convey either indorsement of the arguments or corroboration of the claims set forth. It may be added that the author of the article, an attorney living in Youngstown, Ohio, is a native of Hungary and received his degree from Budapest University. He also studied at Edinburgh, Scotland. After practicing his profession in Hungary he came to the United States in 1911 and became a naturalized citizen in 1919.—EDITOR CURRENT HISTORY MAGAZINE.

until the disastrous battle of the White Mountains in 1647, when the Czechs were defeated by the Austrians and their country was incorporated into the realm of the Hapsburgs.

Until a few decades ago the Czechs were quite content with their lot within the confines of Austria, being ruled over by the Hapsburg Kaiser according to his pleasure. Not only were they content with their humiliating rôle, but they proved the most zealous supporters of their overlords, as shown in the liberty war of 1848, when the Magyars, who had come under Hapsburg rule under quite different circumstances, once more asserted their national independence and waged war against the usurpers. In this noble effort to overthrow the Hapsburgs, the Magyars found themselves opposed by the Czechs, who were the most willing tools in the hands of the despot and gladly volunteered to fight the Magyars and keep their country in subjection after Russians choked the so-far-victorious revolution. It seemed as if the Czechs were afraid that the Hapsburgs might be weakened enough to restore their own (Czech) independence. Czech bureaucrats were sent to Hungary to quell the national spirit, and again Czechs were the most useful spies of the Hapsburgs against the Hungarians in the black years that followed the lost revolution.

Political history does not uphold the State known as Czechoslovakia. The parts now constituting Czechoslovakia never formed one unit and have never known a sentiment of cohesion. They were distinctly foreign and alien to each other. Bohemia lived its own life. Moravia was a Polish province. Slovakia was non-existent, its territory being under the rule of the Magyars, who occupied it as early as 896. Ruthenia also was under Magyar rule, but unpopulated, because of its barren lands and high mountains. The country known as Hungary in 896 was the same country known as Hungary in 1914, the year of the outbreak of the war, not an inch having been added to the original area by conquest or otherwise during a period of 1,000 years.

The Magyars would not object to an independent Bohemia carved out of what was formerly known as Austria, because once the Czechs did in fact own their own country and live an organized state-life. But why should the Czechs be given Slovakia and

Uhro-Rusinia, which never belonged to them, and whose populace to a large extent is opposed to incorporation into Czechoslovakia? The coup was accomplished through deliberate falsification of past history and the misleading, but a thousand times disproved, theory of the racial identity of the Czechs, the Slovaks and the Ruthenians.

When more than a thousand years ago the Magyars, by the united attacks of the Bulgars and Petchenechs, two ferocious races, were driven out of their original European settlement on the shores of the Black Sea and the lower Danube, they moved westward and organized the State of Hungary upon the shores of the Middle Danube and the Tisza. No rights of other nations were violated by this occupancy, because the land was uninhabited, a statement subscribed to by various historians and contemporaries, one of which is Alfred the Great, King of England.

In a few years the land was extended northward and westward, the Pannonian and Moravian Slavs having been incorporated into the Hungarian State. But these Slavs, not ancestors of the present Slovaks, were not annihilated or subjugated according to the rules of warfare of those times, but were absorbed into the nation, and even adopted into the Hungarian nobility. Thus they were granted the same privileges that were attendant upon being of the noble caste, while those not taken into the nobility simply shared the lot of other Magyars. Unification thus was accomplished by mutual consent, and many terms in the Hungarian language still offer proof that there was a thorough mingling and unification of the Magyars and whatever Slavs were found in the country. These Slavs spoke an entirely different language from the Czech, Slovak or Moravian of today. They populated the northwesterly part of what was Hungary before the war, and more especially the plains bordered by the present Lower Austria and by the Rivers Morva and Garam.

The mountainous part of Northwestern Hungary was a dividing territory between Hungary and Poland, and, at the beginning of the eleventh century, between the newly created Moravian and Polish duchies. The Czechs had nothing to do with this territory, because their country was situated further west and north, and did not reach so far

south and east. Czechs began to appear in this part of Europe in the fifteenth century, when the followers of John Huss, and later the unscrupulous leader Giskra, distinguished themselves by wholesale plunder.

In later times, when family ties were established between the Moravian and Polish Dukes and the Hungarian reigning dynasty—then purely Magyar and lineal descendants of the clan of Arpad, conqueror of the land—there was no need for a protective corridor in these mountainous and wooded northwesterly parts, and colonization began. Germans and later the White-Croatians—ancestors of our present-day Slovaks—were settled and commissioned to clear the forests and make the country more apt for cultivation. This happened at about the eleventh century, and this accounts for the nomenclature applied to hamlets and towns, most of them ending in what would be the equivalent of "cut" (cutting the forests) in English.

The Ruthenians in the territory now called Podkarpatska Rusinia by the Czechs, immigrated in the fifteenth century. From the neighboring country, called Red Russia (in a different sense from our present Red Russia), the people were granted the privilege to pasture their cattle on this territory; but, later, the Hungarian King came to the conclusion that a colonized country would yield greater revenues, and the same process ensued that was previously witnessed in the northwestern regions of the country. Thus neither the Slovaks nor the Ruthenians, much less the Czechs, were aborigines in the part of Hungary now known as Slovakia. The immediate predecessors of the Slovaks, the Pannonian Slavs, were living further south under Svatopluk, and gave up their claims to the land so soon as Arpad and his Hungarian warriors appeared. Indeed, it was a bloodless conquest, since these Slavs offered no resistance, but received the Hungarians as their superiors, offering them earth, grass and water as symbols of submission.

This is the plain truth about the national and political history of the territory now included in the realm of the Czechs as Slovakia and Podkarpatska Rusinia. The Slovaks and Ruthenians were only immigrants, and the Czechs were not even that. No organized State life existed upon these territories before the Hungarian State was

called into existence and welded them into the dominion of the Kings of Hungary. Nothing was destroyed or taken away by the rule of the Hungarians, but things were created instead. This fact is attested by several authorities of non-Hungarian origin, including the American, the Rev. B. F. Tefft, D. D.; Professor N. S. Shaler of Harvard University, F. D. Millet; the English authors, Knatchbull-Huggessen, Kellner, W. B. Forster Borill, Charles Proxton, &c.

From an ethnographic viewpoint, likewise, there is no foundation for Czechoslovakia. The Czechs, Moravians, Slovaks and Ruthenians are undeniably closely related, but so are all Slavs. If these four branches of the Slav family had to be united, the question can be asked, Why not unite the whole of Slavdom and make one country of the Russians, Poles, Ukrainians, and the rest of the numberless branches of the Slavs? Even if there were an indisputable ethnographic bond uniting the Slavs in Czechoslovakia, are ethnic considerations supreme, and should history, past national existence, geography, economics, political constellations, recognized as just and desirable for ten centuries, all defer to one principle arbitrarily chosen and defensible only on very weak ground?

Economic conditions are such in Slovakia that the country is dependent on Hungary for its livelihood. Slovaks furnish the timber needed in Hungary, while in times of harvest a multitude of Slovaks used to descend to the Hungarian plains and furnish a large quota of the necessary hands to reap the harvest. Because of the new alignment, this is brought to an end; consequently the Slovaks, in a large measure, are deprived of their livelihood. The rivers of Slovakia empty into the Danube, which offers the natural waterway, together with the Tisza, of the geographical entity known as Hungary, as it was before the war. Through severance of railroad trunk lines the whole transportation system of Hungary is badly crippled, and Slovakia suffers in equal measure. In short, not only Hungary but also Slovakia is hopelessly mutilated in an economic sense for no reason but to honor the wish of the Czechs.

On top of this there are grave signs that the Slovaks and Ruthenians do not wish to be included in the Czechoslovak State. The promise was made to them, through the

medium of so-called plebiscites in America, that they were to be granted self-determination; but when it came to fulfilling this promise all sorts of excuses were resorted to. Now both the Slovaks and Ruthenians, wishing to avoid utter destruction, clamor for autonomy—within Czechoslovakia, if it must be; but even this is considered dangerous to Czech interests. Of course, the Peace Council has acted, and now no agreement is deemed binding any more.

Neither the Slovaks nor the Ruthenians ever dreamed of secession from the Hungarian State. The first sign of any separatist consideration for the Slovaks was offered in 1848, when the Hapsburg dynasty sought aid against the victorious Hungarians among Hungary's nationalities. A certain Hurban then offered a memorandum to Emperor Francis Joseph in which some linguistic privileges were embodied. Upon this, some paid agents of the blind Austrian camarilla started agitation among the Slovaks for a Russian orientation under the pretext of unifying all Slavs. This was a failure and did not meet with the approval of the conscious leaders or of the masses of the Slovak people. New channels of interest had to be opened, and upon the leadership of Masaryk, now President of Czechoslovakia, agitation toward an alignment with Bohemia was initiated, Dr. Srobar having been its sponsor in Slovakia.

There was a small group who subscribed to this plan, but in the main the Slovak people were against it, and even among the leaders there was no consent. The more weighty spokesmen of the Slovaks wished some special recognition in the form of unlimited and official use of the Slovak language, but unequivocally declared that they wished to remain with Hungary. A general European conflagration had to be brought about to realize the dreams of a few office seekers. The masses of the Slovak people remained loyal to Hungary, contrary to the manifestations of the Czechs, who committed wholesale desertions in the war. Srobar was appointed dictator of Slovakia after the conclusion of peace, but he lost even the limited confidence he enjoyed in Slovakia and had to resign. The resignation of Srobar can well be taken as proof that his Czech sympathies lacked support in Slovakia.

The Ruthenians were always loyal subjects of Hungary. In the time of the liberty war by Francis Rakoczi II. they furnished his most dependable soldiers; he called them "the most loyal race." Now these Ruthenians are surprised to find that they are wanted to form part of the Czech Empire. In their predicament, knowing, as the Slovaks do, that they can hope for nothing better, they wish at least autonomous self-government. Like the Slovaks, they are between the devil and the deep sea.

## SPAIN'S MINISTERIAL DIFFICULTIES

[PERIOD ENDED JULY 10, 1921]

**M**INISTERIAL dissensions began to manifest themselves on July 4, and Manuel Arguelles, the Minister of Finance, resigned, insisting that the new tariff, which went into effect on May 19, and the commercial treaties were prejudicial to the interests of labor. The revised tariff did away with cases of most favored nations, and was of a provisional character, pending a new commercial treaty or a *modus vivendi* to be negotiated in each case. The next day the rest of the Cabinet joined Arguelles, but the King called Señor Allende Salazar to the Palace, and, by his arguments, they all consented to remain, save the Minister of Finance, whose portfolio was immediately taken by Marino Ordóñez.

Spain badly needs a new division in her Moroccan campaign, but the War Minister dares not ask for it. General Berenquer reports that, despite a reverse on June 7, he is continuing his march on Alhucemas.

Spain has lodged a note of protest at Paris. Before the war the Sultan of Morocco had granted a concession at the Port of Tangier to an international corporation identified with Spanish, British, German, and Austrian interests. The enemy alien interests were ceded by the Versailles and St. Germain treaties to France. They represent 53 per cent. of the stock, while only 20 per cent. is held by Spain, who thinks she should have had the right to acquire the 53 per cent. Hence the protest.

# THE BRITISH IMPERIAL CONFERENCE

*Great problems of the Empire discussed by British and Colonial statesmen in London—  
The Dominions gain an unprecedented share of power in directing imperial policy—  
Anglo-Japanese alliance freely discussed and "automatically extended" for one year*

[PERIOD ENDED JULY 10, 1921]

A CONFERENCE characterized as momentous beyond precedent in its bearing on the welfare and unity of the British Empire was opened at noon in the official residence of the Prime Minister in Downing Street, London, on June 20. The entire absence of spectacular features lent color to the conviction that the leading British and Colonial statesmen had gathered for the discussion of problems of supreme importance not only to the British Empire, but to the whole world. This seemed to be the impression upon the crowd in Whitehall watching the arrival of the Colonial delegates, who, in turn, were received by Messrs. Lloyd George, E. S. Montagu, Austen Chamberlain, Winston Churchill and A. J. Balfour. The delegates were:

South Africa—General Smuts, Prime Minister; Sir Thomas W. Smart, Minister of Agriculture; Colonel Mentz, Minister of Defense.

Canada—Arthur Meighen, Prime Minister.

Australia—W. M. Hughes, Prime Minister.

New Zealand—W. F. Massey, Prime Minister.

India—Maharaja of Cutch and Irimvass Gaitre.

At this great historic meeting Premier Lloyd George welcomed the delegates in a notable inaugural speech. It was especially marked by his declaration that friendly co-operation with the United States was a cardinal principle of empire policy. "We are ready," he declared, "to discuss with American statesmen any proposal for the limitation of armaments which they wish to set out, and we can undertake that no such overtures will find lack of willingness on our part to meet them."

Turning by implication to the Japanese Alliance, the Premier praised the loyalty of Japan in the war and said it was desired to preserve that "well-tryed friendship which has stood us both in good stead, and to apply it to the solution of all questions in the Far East, where Japan has special

interests and where we ourselves, like the United States, desire equal opportunities and the open door." With regard to Colonial relations Mr. Lloyd George remarked that there was a time when Downing Street controlled the empire, but now the empire had charge of Downing Street. The Dominions, as signatories of the Treaty of Versailles and members of the League of Nations, had achieved full national status. Any suggestions from them concerning the foreign policy of the empire, therefore, would receive a full measure of welcome. India had also proved her right to a new status in the councils of the British Commonwealth.

The meeting of June 21 was made memorable by speeches from Jan Christian Smuts of South Africa and Premier Hughes of Australia. Both urged the conference to invite America and Japan to discuss limitation of naval armaments; the storm centre of the world, they agreed, was now in the Pacific. The two statesmen, however, seemed to be divided on the question of renewal of the Anglo-Japanese Alliance. While Premier Smuts came out strongly against the treaty, and was supported by Premier Meighen of Canada, Premier Hughes was, broadly speaking, in favor of it, finding a sympathetic follower in Premier Massey of New Zealand. But the Australian Premier was not oblivious to difficulties, the chief of which was the attitude of America toward the treaty.

I am sure I state the opinion of Australia [he said] when I say her people have a very warm corner in their hearts for America. They see in America today what they themselves hope to be in the future. We have a country very similar in extent and resources, and it may be laid down as a *sine qua non* that any future treaty with Japan to be satisfactory to Australia must specifically exclude the possibility of war with the United States of America. It ought to do this specifically, but if not specifically then

by implication so clear and unmistakable that he who runs may read. \* \* \* In any future treaty we must guard against even a suspicion of hostility or unfriendliness to the United States.

Premier Meighen of Canada on June 27 presented to the conference what was in effect a declaration of Dominion rights in relation to the foreign affairs of the empire. Although the speech and the discussions which ensued were not made public, it was understood that the four cardinal points of the declaration were as follows:

1. That on all questions of foreign policy which more directly concern the British Government, such as matters arising in connection with Palestine, Mesopotamia and the Middle East, the Governments of the Dominions should be kept thoroughly and constantly informed.

2. That upon all questions of foreign policy affecting the empire as a whole the Dominion Governments must be consulted.

3. That the British Government should enter into no treaties or special alliances without consultation with and the advice of the Dominions, and that all such treaties, even when entered into, should be subject to the approval of the Dominion Parliaments.

4. That upon all questions arising as between the United States and Canada the advice of the Dominion Government must be accepted as final.

On the 28th the subject of the Anglo-Japanese Alliance was taken up by the Imperial Conference. Lord Curzon, Foreign Secretary, explained all the aspects of the alliance without attempting to influence the Colonial Premiers in either direction. Later Mr. Balfour, Lord President of the Council, urged the necessity of bringing the alliance into harmony with the League of Nations' requirements, rather than insisting upon any special British interests or emphasizing its imperial aspect. At an afternoon session the Premiers discussed the question of immigration within the empire and the best means of keeping desirable British emigrants within its confines. A committee was appointed to go further into the matter.

The Anglo-Japanese Alliance was again the principal topic on June 30. Little of note, however, was disclosed except that the Maharaja of Cutch, representing India, caused a surprise by protesting against the clause in the treaty which provided that in case India was attacked Japan should come to her assistance. The Indian delegation, he said, was of opinion that England and India should be able to protect India without the assistance of any allies.

At the session of July 1 all the Premiers of the British Dominions again gave their views on the Anglo-Japanese Alliance, but the utmost secrecy enveloped the proceedings. All that the public was allowed to know was that there had been a general agreement on the need of delay in renewing the treaty. The mental fog that enveloped the subject was finally cleared away on July 3 by the announcement of a decision of the Lord Chancellor that the Anglo-Japanese Treaty had not been denounced by the note sent to the League of Nations last July, and that, therefore, even if it were now denounced on July 15, it would run automatically for another year. This decision was held as greatly simplifying matters by giving ample time for the Dominions to reach definite conclusions. It avoided an embarrassing situation, as there would not have been time for a thorough discussion before July 15, when the period of the treaty ended.

On July 6 the conference grappled with the problem of German reparations, the task being to fix a basis upon which the amount to be collected by the empire shall be apportioned to its different parts. While no decision was reached it was understood as not improbable that the amounts would be determined by each country's war expenditure and number of casualties. If adopted this plan would assure to Canada a fair share of whatever sums were paid over in recognition of her heavy sacrifices in both blood and treasure.

In the industrial field the collapse of the costly and prolonged strike of the coal miners came after a hopeless effort to bring on a general "down tools" movement of all labor. They got only a vote of sympathy from the other unions. As their funds were exhausted, the miners' representatives made terms with the Government on June 28, on the basis of the public grant of £10,000,000. The final settlement was a compromise. While the miners agreed to drop their demand for class privilege, the standard wage was fixed at 20 per cent. above the pre-war rate, which, it was generally admitted, had been inhumanly low. An arrangement was also entered into by which labor shared in the profits of the mines, receiving 83 per cent. to the owners' 17 per cent., the owners receiving the balancing concession of the Government grant of £10,000,000.

# A TRUCE IN THE IRISH WARFARE

*King George's appeal for peace at the opening of the Ulster Parliament leads to concerted efforts for a settlement in the South of Ireland—De Valera's acceptance of Lloyd George's invitation to a peace conference brings an end to the fighting*

[PERIOD ENDED JULY 10, 1921]

THAT June 22, 1921, may come to be regarded as one of the happiest dates in Irish history was generally conceded in both Ireland and England, not alone on account of the hearty welcome extended that day to King George and Queen Mary in Belfast at the royal opening of the Ulster Parliament, but because of the effect of the King's speech for peace. Concerning this effort, Premier Lloyd George subsequently declared in the House of Commons: "Never has the Throne rendered a greater or finer service to the empire." Surrounded by statesmen and officers in brilliant uniforms and by heralds and Court officials garbed with Old World pomp, King George addressed the Speaker of the new Northern Parliament and representatives of men who had threatened a few years ago to plunge Ireland into civil war rather than submit to the south. In moving words he appealed to them to make the grant of self-government to the six counties the stepping stone to a settlement of "the age-long Irish problems affecting the whole English-speaking world." He pointed out that self-government had been granted to South Africa, a country also divided by race and religion. Then, with a voice full of feeling and earnestness, he went on:

I am emboldened by that to look beyond the sorrow and anxiety which have clouded of late my vision of Irish affairs. I speak from a full heart when I pray that my coming to Ireland today may prove to be the first step toward the end of strife among her people whatever their race or creed. In that hope I appeal to all Irishmen to pause, to stretch out the hand of forbearance and conciliation, to forgive and to forget, and to join in making for the land which they love a new era of peace, contentment and goodwill.

Premier Lloyd George on June 24 followed up the manifestly favorable effect of King George's speech by a personal letter of invitation to Eamon de Valera to come to London with any colleague he might se-

lect to attend a conference with the British Government and Sir James Craig, Premier of Ulster. The letter read:

Sir: The British Government are deeply anxious that, so far as they can assure it, the King's appeal for reconciliation in Ireland shall not have been made in vain. Rather than allow yet another opportunity of settlement in Ireland to be cast aside, they feel it incumbent upon them to make a final appeal in the spirit of the King's words for a conference between themselves and representatives of Southern and Northern Ireland.

I write therefore to convey the following invitation to you as the chosen leader of a great majority in Southern Ireland and to Sir James Craig, Premier of Northern Ireland: (1) That you should attend a conference here in London in company with Sir James Craig to explore to the utmost the possibility of a settlement. (2) That you should bring with you for the purpose any colleague whom you may select. The Government will, of course, give safe conduct to all who may be chosen to participate in the conference.

We make this invitation with the fervent desire to end the ruinous conflict which has for centuries divided Ireland and embittered the relations of the peoples of these two islands, who ought to live in neighborly harmony with each other and whose co-operation would mean so much, not only to the empire but to humanity. We wish that no endeavor should be lacking on our part to realize the King's prayer, and we ask you to meet us, as we will meet you, in the spirit of conciliation for which his Majesty appealed.

D. LLOYD GEORGE.

This move on the part of the British Premier was warmly approved by the majority of the London press as a logical sequel to the King's generous appeal. The London Times declared that the hour of peace had struck for Ireland, and The Daily News remarked that the Government, having made the offer "in the name of the British people, on the constitutional initiative of the King and in the presence of the Dominion Prime Ministers," was responsible to these as well as to Ireland "for vigorous, candid and effective prosecution of the new policy." In Dublin The Freeman's Journal,

(International)

ARTHUR GRIFFITH

*Founder of the Sinn Fein and Vice President of the "Irish Republic"*

commenting on the invitation, said: "The Premier has gone further than he or his colleagues ever have gone in public. Mr. Lloyd George has at last seen the wisdom of dispensing with conditions and restrictions which hitherto have proved insuperable barriers to negotiations." In general it was seen that the next move lay with the Sinn Fein leaders.

Mr. de Valera sent the following telegram to Mr. Lloyd George on June 28:

I have received your letter. I am in consultation with such of the principal representatives of our nation as are available. We most earnestly desire to help in bringing about a lasting peace between the peoples of these two islands, but see no avenue by which it can be reached if you deny Ireland's essential unity and set aside the principle of national self-determination. Before replying more fully to your letter I am seeking a conference with certain representatives of the political minority in this country.

At the same time Mr. de Valera dis-

patched a letter to Sir James Craig, Ulster Premier; Earl Midleton, anti-partisan Southern Unionist; Sir Maurice Dockrell, Sir Robert Woods and Andrew Jameson, Southern Senator. The letter read:

The reply which I as the spokesman for the Irish Nation shall make to Mr. Lloyd George will affect the lives and futures of the political minority in this island no less than those of the majority. Before sending my reply, therefore, I would like to confer with you and to learn from you at first hand the views of certain sections of our peoples of whom you are the representative. I am confident you will not refuse this service to Ireland, and I shall await you at Mansion House,

EAMON DE VALERA

*President of the "Irish Republic"*

Dublin, on Monday next in the hope that you will find it possible to attend.

A mistake in delivering the letter intended for Sir James Craig led to his being compelled to decline Mr. de Valera's invitation, as he had already telegraphed acceptance of the Prime Minister's invitation to the London conference.

In order that the Irish leaders might have free intercourse to discuss the situation at the forthcoming Dublin conference on July

4, the British Government on June 30 released from prison Arthur Griffith, M. P., Vice President and founder of the Sinn Fein; Professor John MacNeill, M. P., member of the Cabinet of the Dail Eireann; E. Duggan, M. P. for Dublin City, and Michael Staines, M. P. for South Meath. Subsequently the released members of Parliament met Eamon de Valera in private consultation.

The Mansion House meeting on July 4 between Sinn Fein leaders and representatives of Southern Unionists was made the occasion of a popular demonstration. Large crowds assembled with eager expectancy. An auspicious omen was seen in the numerous American flags flying throughout the city. De Valera arrived first in a taxi and received a great ovation. Sir Maurice Dockrell, the popular Unionist member for Rathmines, came next, and was followed by Arthur Griffith. Both were greeted with cheers and by countless little American flags. Sir Robert Woods, independent member for Dublin University and famous surgeon, followed. Then Lord Middleton and Andrew Jameson appeared. A remarkable feature in the reception was the warm greeting bestowed on the Unionist delegates, who were manifestly affected. The Northern Parliament was not represented.

Lord Middleton at this meeting demanded the release of the recently kidnapped Lord Bandon, and de Valera promised to do his best. Lord Middleton also made general claims for minority representation in any Irish Parliament to be set up. At the close of the meeting a brief report was issued, of hopeful import.

General Jan Christian Smuts, Premier of South Africa, arrived in Dublin on July 5 as an unofficial peace emissary. During the day he conferred with Lord Mayor O'Neill, Eamon de Valera and Arthur Griffith. Premier Smuts was back again in London the following morning to breakfast with Mr. Lloyd George, and the same evening, in speaking at a dinner, he said that the Irish problem was soluble and peace could be won if all worked for it. By way of a successful illustration General Smuts added:

If ever this' problem of the subjection of one people to another presented a hopeless view it was in South Africa. But finally, in a spirit of give and take, forbearance and trying to render something to the point of view of the other side, we solved the prob-

lem, and today South Africa is one of the happiest countries in the empire. Our forbearance and self-sacrifice have paid us handsome dividends in our national life.

Meanwhile conferences were taking place in London between Premier Lloyd George, Lord Middleton and Sir James Craig. A Government report on the 7th and the Irish Bulletin, organ of the Dail Eireann, however, agreed that little if any cessation of fighting had taken place since Mr. Lloyd George's invitation to Mr. de Valera. The Government report stated that for the week following Lloyd George's letter the Crown casualties totaled forty, which, however, was below the average for the weeks preceding. The Irish Bulletin said that during the twelve days which had elapsed since the letter was dispatched regular warfare had continued, and added: "Other forms of military terror are in full blast." The Bulletin printed a list of 14 murders, 14 persons wounded and 10 properties destroyed between June 24 and July 26.

The second meeting of the four Southern Unionists—Middleton, Woods, Jameson and Dockrell—with the Sinn Fein leaders de Valera and Griffith, began at 11 A. M., July 8, in the Dublin Mansion House under intensely dramatic circumstances. A large

LIEUT. GEN. SIR NEVIL MACREADY  
Commander-in-Chief of British military forces  
in Ireland

crowd had gathered in the vicinity to cheer the arrival of both Sinn Fein and Unionist delegates, but the lightheartedness of Monday had given place to a deep anxiety. During the long hours of waiting many knelt on the gravel and recited the rosary. Even the singing of patriotic songs at intervals was not as enthusiastic as on Monday, so gravely did some regard the day's proceedings.

About 1 o'clock the Lord Mayor appeared, but would say nothing. An adjournment was taken until 4 o'clock. When the delegates returned at that hour it was plain there was an awful seriousness in what seemed to be their determination to go through with this far-reaching attempt at a settlement. At 6 P. M. General Macready, commander of the British forces in Ireland, arrived and was greeted with a remarkable demonstration. Met by the Lord Mayor, the distinguished officer saluted. Being himself saluted by the officer in charge of the Irish Volunteers, he acknowledged the courtesy in military fashion amid the enthusiastic cheers of the expectant multitude. The conference closed at 8 o'clock. An hour later a letter from de Valera accepting Lloyd George's invitation to a conference in London was made public. Thereupon the waiting crowd melted away in peaceful order and apparent relief. The text of Mr. de Valera's letter as given out in London was as follows:

Sir: The desire you expressed on the part of the British Government to end the centuries of conflict between the peoples of these two islands, and to establish relations of

neighborly harmony, is the genuine desire of the people of Ireland.

I have consulted with my colleagues and received the views of the representatives of the minority of our nation in regard to the invitation you have sent me. In reply I desire to say that I am ready to meet and discuss with you on what basis such a conference as that proposed can reasonably hope to achieve the object desired. EAMON DE VALERA.

At the same time a British official statement was issued from Downing Street which read: "In accordance with the Prime Minister's offer and Mr. de Valera's reply, arrangements are being made for hostilities to cease from Monday next, July 11, at noon." Thus the peace negotiations had reached the stage of a truce. It transpired later that when Lord Middleton had returned to Ireland after seeing Mr. Lloyd George he had taken back a letter from the Prime Minister dated July 7 and containing this passage:

As soon as we hear that Mr. de Valera is prepared to enter into a conference with the British Government and to give instructions to those under his control to cease from all acts of violence, we should give instructions to the troops and to the police to suspend active operations against those who are engaged in this unfortunate conflict.

This letter had been read by Lord Middleton at a conference of the Sinn Fein leaders, and had had the result of bringing about de Valera's acceptance of the invitation to take part in the proposed conference in London. Thus, with a cessation of fighting in sight, the situation was generally regarded as auspicious for ultimate peace.

## BRITAIN'S BLINDED WARRIORS

IN the sixth annual report of St. Dunstan's Hostel for Blinded Sailors and Soldiers, issued on May 16, 1921, Sir Arthur Pearson, head of that English institution, gave interesting facts concerning the blinded men who had passed through St. Dunstan's and are now earning their living in the most distant parts of the empire, "beyond the Rocky Mountains and in Canada, out in the Australian and New Zealand bush, and on the South African veld." The report says:

A man does not leave St. Dunstan's in the sense that a graduate leaves a university. And though it requires a big organization to keep in touch with the blinded soldiers in this country alone, every one will realize how heartening it is to them to feel that they are

still St. Dunstaners and assured of an active interest in all that concerns their comfort and prosperity. The essential training is only the first step in the duty we have undertaken to lighten the loss which it has fallen to these men to bear throughout their lives. We set them up in their chosen occupations, and from that time on our purpose is to do everything possible to help them in the effort to overcome their handicap. St. Dunstan's has always been a cheery place, but those who have still to complete their training—now at our new headquarters—certainly must be stimulated by the knowledge that the men who have made their fresh start are going on unfalteringly. The blinded soldiers are not only busily at work, not only making some remarkable successes in an extraordinarily wide variety of occupations, but are carrying on with the same resolution with which they set out.

# CANADA AND OTHER BRITISH DOMINIONS

*How the farmers triumphed in the Federal by-election held in Alberta—Prohibition drawn tighter for Ontario—Australia's census shows a population of 5,419,702—New Zealand's restrictions on exports*

[PERIOD ENDED JULY 10, 1921]

IT is a long time since a Federal by-election in Canada has created such an impression as did the one held on June 27 for the riding of Medicine Hat, Alberta. The death of the Hon. A. L. Sifton, a member of the Unionist Government, necessitated the contest. Robert Gardiner, the candidate of the National Progressive Party, was returned with a majority of 9,749 over the Government candidate, Colonel Nelson Spencer. The National Progressive Party is a very small group in the Commons, led by the Hon. T. A. Crerar, formerly in the Union Cabinet, now the recognized political head of the various farmer political groups in the Western provinces, which aim to do in the sphere of Federal politics what has been accomplished by their fellow-agriculturists in Ontario. Crerar, who is a strong advocate of freer trade with the United States, took a prominent part in the by-election. The fight of the farmers was made chiefly on what is known as the grain inquiry—the investigation by a Government commission into the handling of grain at the elevators and other points, especially in the West. The argument was that the inquiry was in reality an attempt to discredit the co-operative movements of the various organizations of Western farmers who have gone in for this method of handling the business of their own industry. It was accentuated by the obtaining of an injunction restraining the continuation of the inquiry, pending a ruling on questions of jurisdiction.

It is probable that in the inmost governmental circles defeat was anticipated in Medicine Hat, but not to the extent recorded. Naturally the farmers' organizations are jubilant over the result. Newspapers which support the Liberal Party are inclined to the view that the by-election promises well for that party at the next general election. The farmers themselves are con-

fident that it is a forerunner of a farmers' group as the dominant body in the next Dominion Parliament. So far as is known, Premier Meighen, who is attending the imperial conference of Premiers in London, will not hasten a general election as the result of the Medicine Hat contest.

A painful sensation has been caused by the evidence so far adduced at the inquiry by a Government Commissioner—G. T. Clarkson—into alleged frauds in connection with sterling exchange, and involving a branch of the Militia Department. It remains to be seen whether there was deliberate inside assistance for the perpetrators of the fraud, or merely gross official negligence. The frauds were carried on under the operation of an Order in Council providing for the payment at par of accumulated pay and allowances in sterling of officers and men on overseas service. It is alleged that many people who were in no way connected with the forces have been getting English money exchanged at par under various pretexts, and making very handsome profits. One of the witnesses declared that he had been involved with a former member of the Ottawa police force in the matter, and that the policeman had cleared out after making more than \$14,000 net profit. Another said he knew a man who had kept £1,000 in circulation by ingenious methods, and had it changed at par on several occasions. The inquiry is proceeding.

Ontario became as bone dry as law can make it on July 19, when the Dominion enactment forbidding the importation of intoxicants as a beverage went into effect, as well as a provincial measure known as the Sandy bill. The latter is for the prevention of "short circuiting"—the ordering of liquor outside of Ontario and its delivery from distilleries which are still allowed to make

it for export trade. In addition to these two measures, the Ontario Temperance act is also enforced, and it is as stringent a prohibition law as a province can enact under the Canadian system of government.

**AUSTRALIA**—The Australian census figures show that the Commonwealth has a population of 5,419,702, an increase of 970,000 over 1911. The males outnumber the females by about 83,000. \* \* \* Customs revenue for the year ended June 30 constitutes a record, amounting to \$160,000,000, or \$30,000,000 above the estimates. Since the new fiscal year, however, imports have begun to decline. \* \* \* The Australian House of Representatives on July 6 passed a bill exempting British newsprint paper from duty, but placing a duty of £3 a ton on newsprint from other countries. \* \* \* Many mining companies in Australia have been compelled to suspend operations, costs of production being out of all proportion to market prices. \* \* \* The Parliamentary Labor Party of New South Wales is urging a bill providing endowment for motherhood by which widowed mothers would receive a pension of \$2.50 a week and parents in receipt of an income of \$45.50 will receive an endowment of \$1.50 for each child under 14 years of age after the first two.

**NEW ZEALAND**—W. F. Massey, Premier of New Zealand, who went to London for the Imperial Conference, in an interview on June 17 concerning trade with the United States said that certain conditions left by the war made restrictions upon exports necessary in order to safeguard permanent interests. The country, for instance, had refused permission to the Armours to erect storage plants there and required them to give an undertaking not to send any New Zealand carcasses to the British market, as a condition of being allowed to export to America. It was discovered that a large proportion of the meat they exported to America was not placed on the American market, but was shipped to Great Britain, where it naturally came into competition with meat sent direct from New Zealand. "This may be good business for the meat trust," said Mr. Massey, "but

is of no use for the New Zealand producer." \* \* \* Over one-fourth of the babies born in New Zealand, of well-to-do as well as poor parents, are reached by the infant welfare measures in force in that country. In forty-five years the infant mortality rate has been more than cut in half, until now it is the lowest rate of any country in the world.

**EGYPT**—The disturbances in Cairo and Alexandria, in which a number of natives and Europeans were killed, as related in *CURRENT HISTORY* for July, are regarded in Egypt as a blow to the Milner project. It is generally considered there that the arrangements for the protection of Europeans in Egypt are not of much practical utility and that very stringent new measures will have to be made to satisfy the demands of France, Italy and Greece. \* \* \* Mahomed Fahmy, a leader of the "Young Egyptians," has written to the Council of the League of Nations, according to a Geneva dispatch of June 23, asking it to mediate between Egypt and Great Britain and assure independence to the Valley of the Nile.

**SOUTH AFRICA**—A native African religious sect which calls itself Israelites, and which follows a prophet named Enoch, refused to evacuate Government land at Bulhoek, near Queenstown; it was forcibly ejected, losing 171 killed and 126 wounded in a fight with mounted Cape Colony police. For some years the Government had allowed the members to celebrate the "Passover" on a common, but each year a growing number remained behind, until a village of some 350 huts had sprung up. The sect refused to recognize any authority or to withdraw. A force of 800 mounted police started to evict them, and about 4,000 of the natives charged the police with swords and assegais. After the slaughter, the prophet Enoch surrendered and the village was ordered demolished. \* \* \* Influenza is sweeping through the Eastern Provinces of Cape Colony, claiming thousands of victims. It was most virulent at Uitenhage, 20 miles northwest of Port Elizabeth.

# GREAT ISSUES THAT DISTURB FRANCE

*How the rift in her relations with Great Britain is widened by the different attitudes of the two nations toward Germany, Russia and Turkey—Difficulties of reconstruction in the devastated areas—A tragic mistake in a military execution*

[PERIOD ENDED JULY 16, 1921]

ANDRE TARDIEU, former French High Commissioner to the United States, and one of the most prominent opponents in France of the policy of conciliation to Germany, recorded in June his belief that Anglo-French relations were "just emerging from a serious crisis." That there has been a crisis—or, rather, a series of crises—all international observers have easily divined. The occasion for conflict has always been the same since the signing of the armistice—namely, the sharp divergence between the foreign policies of the respective nations, particularly in regard to Russia, Germany and the Near East.

One of the first things the French Government did, on learning of the decision in the British Courts that Soviet gold and property sent to England for trade purposes could not be attached, was to send to the British Foreign Office France's express reservations of all the rights of her nationals in regard to debts left by the Czarist régime and also regarding property sequestrated by the Bolsheviki when they took power. France has never been a party to the Anglo-Soviet trade treaty, of which the French leaders heartily disapproved. The French attitude, like that of the United States, has been consistent and unchangeable; the foreign policy of the Soviet régime was double-faced and treacherous; it offered treaties of commerce and pursued plans to overthrow the Government of the other contracting nation; it repudiated Russia's honorable debts; it used stolen gold and property to renew its commerce. There is little doubt that Lloyd George's insistence in pushing through the trade agreement with Moscow, sterile, so far, in all practical consequences, had a bad psychological reaction in France, combined as it was with French resentment over Great Britain's fa-

voring attitude to Germany regarding the fulfillment of the Versailles Treaty.

The policy of the Government toward Germany has been determined by the concessions made by Premier Briand in the last London conference of the allied Premiers, in which he met, as far as possible, the desires of his English colleagues for a workable solution of the reparations problem. In this new policy of conciliation Briand has had the confidence of the French Chamber, but it is not too much to say that both the Premier and his policy have many bitter and unwearying enemies in France. These enemies, who include such distinguished personages as former President Poincaré and André Tardieu, are openly skeptical of the Premier's public expressions of confidence in the new German Government headed by Dr. Wirth. Although this element took note of the expressions of goodwill and pledges to fulfill promises made both by Dr. Wirth and Foreign Minister Rathenau, they held that various acts of the German Government seemed to be inconsistent with this avowed attitude.

One of these acts, they held, was the German Government's claiming all Upper Silesia, in spite of the provisions of the Versailles Treaty stipulating that Upper Silesia should be divided between the German and Polish populations according to communes, as determined by a plebiscite vote. They further pointed out that, though Dr. Wirth has promised to expel the German troops of General Hoefler still in this territory, his Government was itself responsible for recruiting and munitioning Hoefler's troops. Other inconsistencies pointed out were the failure of the Leipsic tribunal to mete out any adequate punishment to the German war criminals, despite the Berlin Government's assurance of its

desire to secure verdicts according to the evidence. This failure so incensed the French Government that it withdrew its Leipsic Commission. (See Germany.)

In Upper Silesia the British made common cause with the German element against the Polish insurgent leader Korfanty, whereas the French attitude was inclined to favor the Poles, with whom France has a protective alliance. France has consistently maintained that the rich mining districts of Upper Silesia, which fell in the main to the Poles under the plebiscite, should be assigned to them. The British, backed by the Italians, are considering other factors, notably the complication of the vote, which was bizarrely intermingled between city and country districts.

In the Near East, also, the French and British plans have sharply clashed. The visit of Earl Curzon, British Foreign Minister, to Paris around the middle of June resulted in a decision to offer Greece allied intervention between her and the Angora Government. The latest developments in the Turkish situation, however, up to the time when these pages went to press, indicated that the British were inclining to back the Greeks against the Nationalist Turks of Mustapha Kemal Pasha, who was reported to be preparing for an attack upon Constantinople, now held by an interallied régime. The British, naturally, wished the French to join with them against the Turkish Nationalist leader. The French, however, who have been charged with being pro-Turkish, insist that they are war weary and wish to effect peace in the Near East. M. Briand stated this emphatically in the French Chamber on June 17, but refused to discuss the Government's plans.

The announcement made by Winston Churchill, British Colonial Secretary, in Parliament on June 14 of British plans for the establishment of Mesopotamia under the kingship of Emir Feisal, and of Transjordan, contiguous to French Syria, under the rule of Feisal's brother, came as a shock to the French political leaders. The French press denounced the scheme as a new British attempt to play the Arabs off against the Turks. It will be recalled that the French deposed Emir Feisal as King of Syria only last year, alleging that he had planned and tried to drive the French into the sea, and that the forces of Ger-

eral Gouraud expelled him from his new kingdom. The proposal, on this ground alone, was bitter to French pride, and the further project of elevating Feisal's brother to a kingdom side by side with French Syria could cause them nothing but alarm.

M. Barthou, the Minister of War, returned to Paris on June 5 from a week's visit to the Rhine occupation area, where he had made a detailed study of the moral and material conditions prevailing among the forces—some 130,000—guarding the French zone. In view of Germany's unmistakable efforts to fulfill the new agreements, said Minister Barthou, it had been decided to demobilize the entire Class 19 of recruits, beginning with the fathers of families, the sons of widows, and students. The Minister of Public Instruction at once took active steps to facilitate the taking of the July examinations for these returning soldier-students. It was hoped to return the peasant soldiers to their land in time for the new harvest. The French Army on the Rhineland, however, was to be maintained until France received tangible and convincing assurance that Germany would carry out the full program outlined for her. "France," said Minister Barthou, "can feel confidence in its army on the Rhine. It is in the hands of a great soldier and capable administrator—General Degoutte." The Government's strong feeling against the anti-militaristic propaganda which has been going on in France was shown in the passing of a penal law to punish all persons inciting French soldiers, recruits or reserves, against military service.

One of the most tragic incidents of the war came up for discussion in the French Chamber on June 22, when Deputy Berthon, Socialist, interpellated the Government concerning the execution of Lieutenants Herduin and Milan before Verdun. The Minister of War sought to have the interpellation postponed sine die, but Berthon, supported by former soldier Deputies from all sides of the Chamber, insisted on action, and Minister Barthou finally agreed to have the matter brought up before the Summer vacation, and also to present the case to the Cabinet. The two lieutenants in question were court-martialed by General Boyer and Colonel Bernard following the terrific struggle for Fleury on June 8, 10 and 16,

1918, when the Germans were nearer to victory than ever before since the opening of the battle for Verdun. The whole battalion commanded by these lieutenants was wiped out by the German fire. Herduin, however, had already been twice wounded, and decorated for gallantry in battle. When sentenced by the court-martial, he went to his death like a hero, himself giving the order to shoot to the unnerved and weeping firing squad which had been detailed to execute him. He was buried in Fleury Wood. In a letter to his wife, made public by her subsequently, Herduin said, in part:

Well, I must meet my fate, but I have no shame. My comrades, who know me, know I am no coward. \* \* \* Demand my pension. You have a right to it. My conscience is peaceful. When I am gone, raise your voice against the military justice of the chiefs, always looking for responsables to excuse their own errors. I kiss you madly, for the last time. \* \* \* I kiss, too, my eldest son, who will never have to blush for his father, who did his duty. Ah, that is the last time I say to you, my beautiful darling, be brave, forget me not. My hand is firm; I die with tranquil heart. Good-bye. I love you.

Herduin's wife sent to his grave this message: "Mort pour la patrie." (He died for his country). Too late, the authorities realized that justice had erred, and Mme. Herduin received assurance of her pension, and even an offer of compensation. Informed by her husband's comrades of the full facts, she persisted in her demand for a full rehabilitation. The case was actively pushed by the Socialists, and it was a shock to the Government to find many former officers taking the same view. There is every probability that Herduin and his fellow-victim will receive rehabilitation.

The French naval program presented to the Chamber of Deputies on June 10 was adopted, after some minority opposition. It called for the construction of six light cruisers, twelve destroyers, twelve torpedo boats, and thirty-six submarines at an approximate cost of 1,416,000,000 francs. Revision of the naval clauses of the Versailles Treaty was demanded by several Deputies. A similar demand for revision of the agreement to destroy all surrendered German submarines was nipped in the bud when it was announced that the submarines which had fallen to France under the settlement had already been destroyed.

Financially, France found herself facing a better prospect than in the past. Exports—especially food exports—were on the increase. M. Doumer, French Minister of Finance, announced on June 15 that the 1922 budget had been cut from 26,499,000,000 francs to 25,596,000,000 francs. He estimated the revenues for the forthcoming year at 25,514,000,000 francs, but stated that the deficit would be made up from the proceeds of the national defense bonds, the sale of war stocks, customs, the war-profit tax, and other sources. For the first time, the Finance Minister was able to revert to a single budget, instead of the double budget for the war years. France's foreign debt, in spite of adverse conditions, has been reduced about \$540,000,000. In April of the present year, France owed only \$6,506,000,000.

One great problem which the Treasury faced was the reconstruction of the devastated provinces. A conflict developed in June between M. Doumer, the Minister of Finance, and M. Loucheur, Minister of the Liberated Regions, over the question of municipal loans in this area. The triumph of M. Loucheur's view was shown on June 17, when the Government announced that it had authorized the City of Verdun to issue bonds to the extent of 60,000,000 francs. The organization of Co-operative Societies for Reconstruction was completed by the passing in the French Senate, on June 10, of a bill supplementary to the legislation of August, 1920.

The plan of M. Loucheur to obtain 25,000 wooden cottages from Germany was meeting with many obstacles on both sides of the Rhine. The French insurance companies objected to the risk involved in wooden structures. The cost, also, bade fair to be greater than the sum allotted to the French to cover this part of the war damage. The whole subject of reconstruction was discussed by M. Loucheur with Dr. Rathenau, German Foreign Minister, in an interview held on June 13 at Wiesbaden.

The French Senate on July 7 voted a credit of 10,000,000 francs for relief of the many thousands still unemployed. The Government was taking active measures to fight tuberculosis, to aid in infant relief, and to encourage marriage by legislative action, in order to make good the human losses, estimated at 2,000,000, occasioned by the war.

# ITALY UNDER A NEW CABINET

*Giolitti's Government falls because of a Parliamentary deadlock—Opposition forces too numerous to admit of constructive work—Ivanoe Bonomi, a war Socialist, invited to form a Coalition Government*

[PERIOD ENDED JULY 10, 1921]

AFTER the inauguration of Parliament on June 11, it soon became evident that the Giolitti Government was no more able to direct legislation in the twenty-sixth Legislature than it had been in the twenty-fifth. Although 200 Deputies of the latter had not been returned and the whole manner of the new Chamber appeared to be more serious and eager to put through the laws which the nation badly needed, yet the early sittings showed a resentment against extreme points of policy, particularly those which had been identified with certain Ministers. There was manifest unpopularity of Count Carlo Sforza, the Foreign Minister, and the manner in which he had executed the Treaty of Rapallo.

It became evident that the Government would again become the victim of obstruction, not Socialistic this time, but more or less general. Giolitti had made definite promises in regard to the program which had accompanied the demand for dissolution and a new Chamber on April 2, and each party looked to the carrying out of its own pet project of law in its own way. This could not be done, however, without compromises, and the pledges of the President of the Council permitted none.

The crisis came on June 27, when Filippo Turati, the leader of the United Socialists, proposed a resolution condemning both the foreign and the domestic policy of the Government. Before the resolution was put to vote, it had lost the clause in regard to the domestic policy and hence meant nothing to the Socialists, who had merely inserted the foreign clause to catch votes on a more popular question. They succeeded in doing this to the extent that the resolution was defeated by only 34 votes.

So it was neither a Socialist victory nor a Government defeat, but merely a strong condemnation of the Government's foreign policy as illustrated by the acts of the

Foreign Minister, which had recently been the subject of unfavorable debate. For Count Sforza had declared that Porto Baros, the most eastern harbor of the new State of Fiume, should be given to Jugoslavia as a matter of geography, of commercial equity, and quite in keeping with the spirit in which the Treaty of Rapallo had been negotiated and ratified. This aroused a strong nationalist sentiment in the Chamber, of which Signor Turati and the Socialists took advantage.

Giolitti could, of course, have allowed the Foreign Minister to resign, but the condemnation of the designation of Porto Baros was an entering wedge which sooner or later might have reached the treaty itself—the masterpiece of the Giolitti Administration. So, rather than appoint a new Foreign Minister, who might be forced to drive the wedge home, he made the censure of Count Sforza his own, and the whole Cabinet resigned.

Color was given to the suspicion that a strong Nationalist sentiment prevailed in the Chamber when the war Premiers Salandra and Orlando called upon the King and submitted their schemes for a new Government based on a reactionary program. The carrying out of this would, of course, not only have meant the repudiation of the Treaty of Rapallo, but of several projects of law found in the schedule of April 2 (see CURRENT HISTORY for May).

His Majesty was strongly opposed to representation of the extremists of either pole in the Government, and with this idea prevailing he managed to make arrangements with the leaders of the three parties most prone to obstructing that legislation with which each was not particularly identified. Don Sturzo, the leader of the Catholic or Popular Party, pledged the support of that party on the condition that the Treaty of Rapallo should not be tampered with. Benito Mussolini was ready to accept the

treaty as a fait accompli provided the projects of law for industrial co-operation should not be carried through in a communistic way. Turati pledged the neutrality of the United Socialists if the Government would invoke the laws for the preservation of public order against the Fascisti.

His Majesty then called to the Quirinal Ivanoe Bonomi, the Reformist or war-Socialist, as the man best calculated to select a Cabinet which could put forward all the projects of law most vitally needed in a moderate way. By July 5 Bonomi had completed his slate. Owing either to his own sagacity or that of Victor Emmanuel he selected a Minister for each portfolio whose party was particularly interested in the projects of law which would come under the jurisdiction of the particular department. How the parties are represented and how many seats each control are as follows:

*Two Reformists, or War-Socialists, with Twenty-One Seats.*

Ivanoe Bonomi, President of the Council and Minister of the Interior, who had had successively the portfolios of War and of the Treasury under Giolitti.

Alberto Beneduce, Minister of Labor and Social Economy, professor of Statistics in the University of Rome.

*Four Liberal Democrats with 106 Seats.*

Marchese della Torretta, dei Principi di Lampedusa, Minister of Foreign Affairs, a distinguished diplomat, latterly Minister at Vienna.

Senator Eugenio Bergamasco, Minister of Marine, once Under Secretary in that department and by profession an industrial engineer.

Senator Orso Mario Corbino, Minister of Public Instruction, Professor of Physics at the University of Rome.

Bartolo Belotti, Minister of Commerce and Industry, who was an Under Secretary of the Treasury during the first Nitti Administration.

*Three Nitti Liberals with Forty-one Seats.*

Marcello Soleri, Minister of Finance, who has been the unofficial financial adviser of several Governments.

Giovanni Raineri, Minister of the Liberated Provinces, who had held the same portfolio under both Nitti and Giolitti, and before that twice Minister of Agriculture.

Giuseppe de Nava, Minister of the Treasury, the war Minister of Industry and Transportation, who became Minister of Finance in the third Nitti Cabinet.

*Three Radicals, or Social Democrats, with Thirty-seven Seats.*

Luigi Gasparotto, Minister of War, a distinguished soldier, who had just been elected one of the Vice Presidents of the Chamber.

Giuseppe Girardini, Minister of the Colonies, who had been the first Minister for the Liberated Provinces under Orlando.

Vincenzo Giuffrida, Minister of Posts and Telegraphs, a well-known bureaucrat, who has been several times Under Secretary in various departments.

*Three Catholics, or Popularists, with 107 Seats.*

Angelo Mauri, Minister of Agriculture, a Vice President of the Chamber, who has written much on land co-operation and agricultural machinery.

Giuseppe Micheli, Minister of Public Works, one of the founders of the Catholic Party, who held the portfolio of Agriculture in the third Cabinet of Nitti and then in Giolitti's.

Giulio Rodino, Minister of Justice, who, having served in the third Cabinet of Nitti, held for a time the Portfolio of War under Giolitti.

It will be observed by the foregoing that the Government controls 312 seats in the Chamber. But the apparent Opposition of 223 is merely nominal—just as nominal as it was when the Giolitti Government placed the Catholics in the Opposition, owing to the distrust of the Catholic leaders and the fear lest their extremists should unite with the Socialists—for among the Opposition are the Progressives (Il Gruppo del Rinnovamento), who would vote with the Government on occasion; the Fascisti, who are pledged to support it in certain circumstances, and the United Socialists, who have promised neutrality.

The Bonomi Government, however, whatever may be its apparently strong moral and political status, whatever its ability to direct legislation, has not been received with praise by the political press. All agree that its Administration will be brief: The Conservatives distrust Bonomi because he was once a Socialist; the Socialists upbraid him as a renegade. All this is contrary to disinterested opinion, which is that the new Government possesses many elements of useful permanency which it will ultimately prove. It is a compromise Cabinet and for that very reason will be susceptible of compromise in presenting the necessary projects of law for which the nation is crying.

The policy of the Bonomi Government is based on the famous schedule of projects of law of April 2, several times mentioned. Two elements favor its being carried through with certain items in modified form: The compromises which the various

Ministers will be able to negotiate with their parties tending toward modification and hence gain the support of other parties, and the improvement in the general conditions, social, economic, financial, of the nation, which no longer needs the measures as the Giolitti Government was being forced to draft them.

The first item on the program of Bonomi is a reform of the public service, the burocracia, whose lamentable condition was

revealed in the April strikes. He wishes to receive full power to do this as Minister of the Interior. This is of immense importance, as it strikes at the very root of Italian political patronage. If he is successful in carrying it through, the rest should be easy; what politicians may lose in perquisites they may expect to make up in party legislation, now modified to gain outside support and to meet the changed conditions in the nation.

## AUSTRIA UNDER A NEW MINISTRY

[PERIOD ENDED JULY 10, 1921]

AUSTRIA obtained a new Government on June 21. It is headed by Schober, while Breitsky is Vice Chancellor and Minister of Education; Grimm is Finance Minister; Grünberger, Food Minister; Paltauf, Minister of Justice. The others are all unknown men, only Dr. Leopold Weber having occupied a seat in the National Assembly. The new Cabinet presented itself to Federal President Heinisch, who emphasized the fact that the Government's main task was not to create new things, but to hold what remains. The new Cabinet was elected by the National Assembly; the Christian-Socialists, the Pan-Germans and the Peasant Party cast 98 votes against the 62 votes of the Social-Democrats.

On July 1 the Council of Ambassadors requested the Government of the United States to postpone its claims against Austria for twenty years. These claims amount to some \$20,000,000, and are for food-relief advances. This is part of the League of Nations plan for the financial rehabilitation of Austria. The other great powers have agreed to such postponement.

Officials of the League of Nations are disturbed by German propaganda for Aus-

trian union with Germany. It is feared that Austria, after receiving all kinds of money grants and assistance from the Entente powers, would throw herself, along with her credits, gold, and new bank, into the arms of Germany.

After three months' investigation, Ignatius Trebitsch Lincoln was expelled from Vienna, June 24, for treasonable activities and fraud. He was charged with having sold State documents to Czechoslovakia.

The State ownership of industries, which was forced upon Austria by the social revolution after the war, has led only to disaster. The Government works are operating at a loss, and to avoid bankruptcy they have had to borrow from capitalists. It has been necessary to sell some of them to Poland, a country termed reactionary by the Socialists of Austria.

Ex-Emperor Charles has retired to the Abbey of Disentis, the oldest ecclesiastical establishment in Switzerland. The retirement is thought to interfere in no way with probable plans of restoration. A report that ex-Emperor Charles means to settle on the Isle of Corfu is denied by persons close to the former monarch.

# GERMANY'S EFFORTS TO MEET HER OBLIGATIONS

*Firm action of the Berlin Government aids in forcing peace upon the insurgents in Upper Silesia—Bavarian Home Guards profess to have complied with the disarmament order—War criminals get off easily—Government's taxation plan to raise reparation funds*

[PERIOD ENDED JULY 10, 1921]

WHAT threatened to bring about a crisis jeopardizing the existence of the "Reparation Government" headed by Dr. Wirth turned into a sort of victory for the German Chancellor and his policy of moderation when the leaders of the German and Polish combatants in Upper Silesia on June 25 accepted the plan for withdrawal worked out by Major Gen. Sir William Heneker, the British commander, and approved by the Interallied Commission at Oppeln. The extreme Nationalists in the Reichstag had been threatening to cause all manner of trouble for Dr. Wirth's Cabinet if he did not make a stand for German control of all the disputed plebiscite territory. On the other hand, the French Government had insisted that Berlin must compel General Hoefler, the chief of the German irregulars in Upper Silesia, to withdraw his forces from the neutral zone proposed by the Interallied Commission.

Although at first disclaiming responsibility for the actions of General Hoefler [see the July CURRENT HISTORY], the German Chancellor finally dispatched a commission, headed by Baron von Malzahn of the Foreign Office, to put pressure upon the leader of the irregulars and to convince him that an occupation of the Ruhr industrial district would be of greater injury to Germany than a backing down in Upper Silesia. These arguments had the desired effect, when backed by the firm attitude of General Heneker and of General Alberto de Marinis, Commander-in-Chief of the Italian forces in Upper Silesia, who insisted on evacuation of the plebiscite territory by both Hoefler's irregulars and Adalbert Korfanty's Polish insurgents. General Le Rond, the French commander, put similar pressure upon Korfanty, with a like result.

The plan of evacuation provided that the Poles leave the disputed territory, as far as

the towns of Gleiwitz and Beuthen, by June 28, while the Germans were to retire northward from the same region by June 30. By July 3 the Poles were to be out of the third zone, including Beuthen and Gleiwitz; and by July 5 both Poles and Germans must be out of the whole region.

There was some delay in putting this program through, and there was a clash between the German population of Beuthen and the French troops there on July 4, when the Polish insurgents were leaving the town, which resulted in the death of Major Montalière, a French officer, and four Germans. A dispatch sent from Kattowitz on July 7, however, announced that the evacuation of the whole district had been completed the day before. British troops were occupying the territory from Beuthen to the Polish border, while the French were holding Königshütte, Kattowitz and the southern district. Railroad traffic had been resumed throughout the plebiscite territory.

Several more or less serious disturbances accompanied the withdrawal of the contending Poles and Germans, and the Interallied Commission declared Gross-Strehlitz and Rosenberg to be in a state of siege. It was not thought likely that there would be another real revolt, however, despite alarming rumors from Berlin and Paris averring that when the final decision on the division of the disputed territory was arrived at by the Interallied Commission and announced by the Supreme Council of the Allies there would be further bloodshed. Adalbert Korfanty, on the eve of quitting the field, told a New York Times correspondent that, unless the Supreme Council's decision were "just," Upper Silesia would become a "second Ireland" and a constant source of trouble in Central Europe. The possibility of further trouble remains. Neutral observers charge that many of Korfanty's insurgents

merely scattered and concealed their arms, and that it would not be very difficult for General Hoefler to recruit a fresh German force in case he thought it advisable.

The Upper Silesian situation was complicated by the usual injection of Bolshevism on the one hand and extreme nationalism on the other. Some of the Polish insurgents had lost their patriotic enthusiasm and advocated a Soviet republic. Many Germans, who had come from Bavaria and other provinces to aid General Hoefler, declared that, after having made Upper Silesia "safe for Germany," they would march on Berlin in the name of real Germanism and "clean out the Republican nest" there.

Just how to divide the damages, estimated at from 3,000,000,000 to 4,000,000,000 paper marks, caused by the two months' shutting down of practically all the mines and metal plants, is expected to constitute a difficult problem for the Interallied Commission, and may delay the final decision on the results of last March's plebiscite.

#### FULFILLING THE TREATY TERMS

Definite progress by Germany in paying up the obligations laid upon her by the final terms of the reparation settlement was confined during the period to the redemption, in European money, on June 28 of the second of the twenty \$10,000,000 three-month Treasury notes handed to the Reparation Commission in Paris on May 30. This left \$180,000,000 to be paid by Aug. 31. Germany's accumulation of a credit equaling 150,000,000 gold marks in New York to pay the first instalment of the initial 1,000,000,000-mark payment called for by the reparation terms caused a flurry in dollar exchange; so the Reparation Commission approved, on June 25, a decision by the principal allied Governments that Germany might pay the remainder in European currency or its equivalent.

The personnel of the Committee on Guarantees, a subcommission of the Reparation Commission created under the final reparation terms for the purpose of controlling and supervising Germany's payments, was given as follows in the German press: Sir Hugh Leveck (Great Britain), General Manciere (France), Signor d'Amelio (Italy), M. Bemelmans (Belgium), M. Sekiba (Japan), and M. Diurich (Jugoslavia). The committee named Leith Bous (Great Britain), M.

Minost (France), Signor Graziadei (Italy), and M. Fredrichs (Belgium) as a Financial Advisory Committee, with power to represent their respective nations on the Committee on Guarantees in case of absence of the regular members.

Following the meeting of Walther Rathenau, German Minister of Reconstruction, with Louis Loucheur, French Minister for the Devastated Regions, at Wiesbaden, there was much cheerful talk in both Berlin and Paris about the possibility that these two practical business men might work out a feasible plan whereby German labor and materials, as well as money, could be applied to the task of restoration. On July 6, however, M. Loucheur told the Commissions of Finance and Foreign Affairs of the French Senate that the 25,000 wooden houses offered by the Germans could not be accepted, because the price asked was much too high. Not more than five-eighths of the instalments on reparations would be supplied in material and labor, said M. Loucheur.

Czechoslovakia is to receive 223,300 tons of barges, 21,000 horsepower in tugs and freighters and terminal facilities for River Elbe traffic under an award by Walker D. Hines, American arbitrator of Central European shipping, the deliveries to be made by Germany according to a plan not yet announced.

On June 26 the Yugoslav Government rescinded the 50 per cent. impost laid upon German goods under the terms of the sanctions.

#### DISARMING THE "ORGESCH"

The work of disarming and disbanding the 300,000 members of the Bavarian Home Guards was halted by the murder in Munich of Herr Gareis, an Independent Socialist member of the Bavarian Diet, and by the three-day general strike which was called as a protest against this political crime. Under pressure from the Allies and the labor forces at home, however, Dr. Wirth issued an order on June 27 dissolving the irregular armed bodies by June 30, under penalties of fine and imprisonment for those refusing to obey. On July 1 it was announced that the Allies' terms had been fulfilled and that the "Orgesch," as such, no longer existed. What progress had been made in gathering in the 220,000 rifles and some 2,600 machine guns in the possession

of the "Orgesch" was not reported. Dr. Escherich, the organizer of the "Orgesch," was quoted as saying that, while it might be possible to dissolve the form of his organization, its patriotic spirit could not be quenched. That scores of thousands of the former members of this reactionary organization have merely hidden their arms and would respond to a call for a coup d'état against the Berlin Government or an appeal to wipe out the German Bolsheviki is not doubted by neutral observers. An amendment to the army law passed by the Reichstag provides that the 4,000 officers of the regular army are to be included within the strength of 100,000 fixed by the Treaty of Versailles.

Following the acquittal, on July 6, of Lieut. Gen. Karl Stenger on a charge of having ordered the shooting of French prisoners during the fighting on the western front in August, 1914, the French Government recalled its judiciary mission from Leipsic and asked the British and Belgian Governments to do likewise. Major Benno Crusius, a subordinate of General Stenger, who was tried on a similar charge, and who testified that the General had issued the order in question, was found guilty of manslaughter by the Leipsic Supreme Court, sentenced to two years' imprisonment, and forbidden ever to wear the German uniform again. Lieutenant Laule, another officer on trial for war crimes, was acquitted of shooting a defenseless French Captain. General Stenger denied that he had ordered any defenseless prisoners slain, but related that when some of his soldiers had been shot from behind by apparently wounded Frenchmen he had said that such enemies must be wiped out.

German complaints against the Governing Commission of the Sarre Basin regarding the use of French money, the expulsion of German functionaries connected with the strikes of August, 1920, and the stationing of French troops in the district, were taken up by the Council of the League of Nations on June 20. After listening to explanations by M. Rault, President of the Governing Commission, the Council decided that the use of French currency and troops was justified, but asked the commission for a report on every case in which the expulsion of a German functionary had been maintained. It suggested that the commission try to re-

duce the 7,000 troops then stationed in the district.

The news of President Harding's signing the declaration of a state of peace between Germany and the United States on July 2 was joyfully received by the German press and public, although a few pessimists insisted that it did not make much difference, as little help could be expected from America. American flags were hoisted over several buildings, including the one in which the German-American Chamber of Commerce in Berlin has its offices. The German Government gave out no official expression of opinion and adopted a policy of watchful waiting.

On June 23 the German Government announced its decision immediately to release the remainder of sequestered American property in its hands, thus completing the Reichstag's action of last January.

#### GOVERNMENT'S TAXATION PROGRAM

Just before the adjournment of the Reichstag on July 6 for the Summer, Dr. Wirth presented the Government's taxation program, calling for the raising of about 80,000,000,000 paper marks during the coming year in order to cover the deficit in the German budget and meet the terms of the reparation agreement. In an effort to hold a balance between the Socialists on the one hand and the propertied classes on the other, Dr. Wirth's plan provides for direct taxation amounting to some 40,000,000,000 marks and for indirect levies of about the same amount. His program will be studied by the Permanent Subcommittee of Finance.

General business conditions were reported as improving materially, and the number of unemployed persons receiving full allowances from State was cut about 40,000, to 358,000, while 440,000 dependents were being helped. In approving an additional appropriation of 200,000,000 paper marks to pay unemployment benefits, the Federal Council noted on June 20 that the total expenditures for that purpose in the fiscal year of 1921 were put at 1,200,000,000 marks. At the same session an appropriation of 7,125,000,000 paper marks was added to the budget of the Ministry of Agriculture and Foodstuffs to help keep down the cost of foreign grains to the people. On June 17 the Reichstag passed a bill providing for the compulsory delivery at a fixed price of

2,500,000 tons of this year's grain harvest as a reserve stock to be handled by the Food Ministry, the surplus to be disposed of by the producers in the open market.

Though American exports to other countries have been falling off heavily, this has not applied to Germany, according to statistics made public in July by the United States Department of Commerce. Exports to Germany in May amounted to \$20,481,000, practically the same as in May, 1920, while the total for the eleven months ended May 31 was \$350,980,000, against \$182,475,000 during the corresponding period the year before. Imports from Germany in May were valued at \$6,455,000, against \$4,849,000 in May, 1920. Germany took more copper and lubricating oil from the United States in May than any other country, and stood second in purchases of cotton, bacon and flour.

Max Hölz, the thirty-one-year-old Saxon semi-bandit, who played a leading rôle in the communist uprising of last March, was tried in Berlin on charges of murder, high treason and about fifty other offenses, found guilty, and sentenced, on June 22, to

penal servitude for life. The extraordinary court refused to regard Hölz as a political offender, in contradistinction to its action the month before when Heinrich Brandler, National Chairman of the United Communist Party, was sentenced to serve five years in a fortress because his revolutionary activities were credited to idealistic, not criminal, intentions. In an attempt to restrict the political power of the Communists, the Prussian Minister of the Interior issued an order on June 20 prohibiting them from holding administrative office under the Prussian Government, even if elected to such office. The order applies to district chiefs, Mayors and heads of villages or communes. Among the German masses the revulsion of feeling against the Communists, due to the bloody March revolt, continued to be manifested by wholesale resignations from the party and defeats in local elections.

The German record for fines for profiteering was broken when a Hamburg court sentenced two merchants to pay 4,790,000 marks and serve a year in jail for illicit importation of and profiteering in 90,000 pounds of American lard.

## JUGOSLAVIA—OR WHAT?

[PERIOD ENDED JULY 10, 1921]

THE Belgrade National Assembly adopted the new southern Slav Constitution on June 29 by a vote of 233 to 35. The event was accompanied by the firing of artillery and a great demonstration in honor of Prince Alexander, the Regent. Curiously the most protracted debate on the Constitution concerned the name by which the new southern Slav State should be called. We are all familiar with the appellations "Jugoslavia" and the "Monarchy of the Serbs, Croats (Hrvatska) and Slovenes," the official name used hitherto; but there were members in the Assembly who even insisted on the "Croatian Peasant Republic" and others who met this claim by one demanding the name, "Greater Serbia."

The adherents to the name "Jugoslavia" are the Catholic Croats and Slovans and Bosnian Mohammedans. They supported their argument by six propositions: The name is shorter and therefore more convenient; it meant a single people; it had

become common usage abroad; it equitably suited all parts of the nation; the threefold name gave the idea of one part of the country being superior to the others; finally, the threefold name expressed federation, not union.

Against these contentions the advocates of the longer name (often shortened to S. H. S.) advanced the following arguments: It already had official acceptance and had been used in all documents and treaties with which the nation had been concerned; it had the authority of the Nish Government, December, 1914; of the Corfu Declaration of July, 1917, and of the Zagreb Council of 1918; the name was recognized by all Governments; it retained the historic names of the three peoples forming the nation, and the three peoples forming the nation; the name Jugoslavia was of German extraction; the word "monarchy" sufficiently showed unity. On June 23 the advocates of the long threefold name won the day.

# HUNGARY'S STRUGGLE FOR A SECURE FOOTING

*Premier Bethlen abolishes military investigations and the censorship of press telegrams—Resentment against Austria's border claim and the supposed menace of the Little Entente*

[PERIOD ENDED JULY 10, 1921]

THE Government is trying its best to put Hungary on a stable footing, but the task is inherently difficult because of the stern measures included in the Peace Treaty. About the middle of June the Cabinet's position became unstable because of the attitude of the Farmers' Party, the principal group in the National Assembly. For a short period it seemed that it would have to resign, but the danger was averted through a meeting of the Farmers' Party, at which the Premier and Count Gideon Báday, Minister of the Interior, appeared and gave satisfactory explanations, eliciting a vote of confidence.

When a budget was offered in the National Assembly for the first time since the war, the question of the abolition of certain exceptional measures required by the Bolshevik danger was much discussed. An overwhelming majority approved the Government's contention that precautions must still be taken against Bolshevism, although it was no longer necessary to maintain all the measures of that kind put into effect in time of acute danger. Count Bethlen, the Premier, announced that the system of military investigations would cease on July 1. He also stated that censorship of telegrams had been abandoned and that a special committee would shortly revise all orders for internment. There were only 700 persons still detained in internment camps, of whom half were Communists and the other half notorious profiteers and thieves, he said.

That Hungary has not recovered from the Bolshevik shock is indicated by a new Press bill, presented to the National Assembly by Minister of Justice Tomcsanyi. One section provides that all periodicals found guilty of advocating the overthrow of lawful government or social order by violence shall be suspended, and that in cases where great moral turpitude is fully

in evidence, such suspension shall be indefinite. This is in addition to heavy fines and imprisonment if circumstances warrant it. The act would also establish joint and several responsibility on the part of the author, publisher and managing editor. These provisions are drastic deviations from the old Press act, which knew no suspension, especially indefinite suspension, and prohibited only the vending and the sending through the mails of printed matter where immorality was involved. The bill is encountering much hostile criticism. Even the so-called Christian papers fail to hail it as a progressive measure and warn the Minister that the act would be a two-edged sword which could be turned upon any patriotic and really constructive press should power slip into the hands of vicious elements.

The finance wizard, as Minister Hegedüs is fondly called, for the first time since the war, has offered a detailed budget to the National Assembly. The deficit of the past financial year amounted to 6,500,000,000 Hungarian crowns. The larger part of this deficit accumulated before Hegedüs assumed responsibility, and he promises that through an intricate method of taxation he will stabilize State finances. When he accepted the portfolio, he said he would remain in office only one year, within which period he hoped to make a clean slate for his successor. His half year in office has brought about many a desired change. On the whole, the nation's confidence is unshaken in this masterful man, although he is not without critics. He has his own ways and proceeds unflinchingly.

The question of relinquishing dominion over the three western counties and ceding them to Austria is still a thorn in the side of Hungary. For a long time hope was cherished that this question would be left to the parties immediately interested, but

on June 26 Hungary was said to have received a note from the Entente commanding her unconditionally to hand over this territory to Austria. France and Czechoslovakia are mainly blamed for the order, since it is thought that France desires, by this "donation," to counteract the movement in Austria to align with Germany, while Czechoslovakia's motive is to effect immediate intercourse with the Jugoslavs through a corridor thus gained and so find access to the Adriatic. Hungary is bitter because she still maintains that she fought for Austrian interests in the war and that now she is compelled to enrich the very country to which she owes her downfall.

Completion of the Little Entente, to which Czechoslovakia, Rumania and Jugoslavia are parties, is causing Hungary to ask the nations of the big Entente whether it is their intention to stifle her. In the Hungarian interpretation the Little Entente can have no other object than to find an excuse for military action whenever the time seems ripe. Under such conditions, the leaders say, it is doubtful whether any Government could bring order out of chaos.

Hungary's application for membership in the League of Nations will be passed upon at the session scheduled for Sept. 5, in Geneva. The selection of Count Albert Apponyi as Vice Chairman of the Foreign Association, which assembled in Geneva early in June, is interpreted as a good omen for Hungary in her future association with the great nations. Apponyi's candidacy was endorsed by all the powers, but he declined the honor for ethical reasons. He assumed, however, the Chairmanship of the Hungarian-American Society in Budapest, which was created to foster good relations between the two countries, and began its activities by the observance of the Fourth of

July. At the statue of George Washington, in the City Park of Budapest, an inspiring address was delivered by Count Apponyi, to which Grant Smith, the American High Commissioner, made a suitable reply.

Transylvania having come under Rumanian administration, the fate of the Hungarian Unitarian Church, the Mother Church of Unitarianism, is endangered, according to Dean Nicholas Józán. Only 10,000 Unitarians are under Hungarian jurisdiction, he said, while the other 70,000 must stay under Rumanian rule, their religious liberties being trampled upon.

The spotlight was turned upon the activities of the so-called Hungarian emigrants in Vienna in a recent trial there in which Schuller-Sullay was indicted for forgery. In his testimony the accused declared that William Böhm, a high official during the communist régime in Hungary, hired him to forge State documents so as to show that the Hungarian "white" Government had put a price upon the heads of the escaped Communists and was preparing to make war upon the succession States. The defendant explained, under cross-examination, that the object of the whole conspiracy was to cast odium upon the Hungarian Government and furnish material for propaganda in the foreign press. The Hungarian authorities recently caught in Szeged a man named Reismann, alias Paul (Wieder) Telegdi, an emissary of the Hungarian Bolshevik colony in Vienna, who was commissioned to start agitation in military barracks against the Government, and especially to arouse discontent among farm hands, with a view to impeding the harvest. He had been active for many months and had sent reports regularly to the Vienna headquarters.

## NEGRO UPRISING IN THE BELGIAN CONGO

TRAVELERS arriving at Antwerp in June reported that unrest among American negroes employed by an American firm in the Belgian Congo was causing disquietude, although armed rebellion was at

an end. The negroes had been receiving a newspaper which, the travelers say, incited them to rebellion, and at the village of Kenshasa they organized a sort of army equipped with rifles and ammunition.

# BELGIUM NOW LUXEMBURG'S PROTECTOR

[PERIOD ENDED JULY 10, 1921]

BY a formal agreement, the text of which was made public on June 12, Belgium has displaced Germany as the protector of the Duchy of Luxemburg. All customs formalities between Belgium and Luxemburg are abolished, and wherever the Duchy is not represented by its own consular agents Luxemburg's interests will be placed in the hands of Belgian consular officers. All Luxemburg money is to be replaced by Belgian money, with the exception of bills less than 10 francs to a total of 25,000,000 francs. The Luxemburg railroad system is consolidated with that of Belgium and handled by a single administration. Luxemburg is to receive a loan of 175,000,000 francs, to be raised by a Belgian financial group, on which Luxemburg is to pay 2 per cent., the remaining interest to be paid by Belgium.

King Albert and Queen Elizabeth arrived in London on July 4 for their visit of state to England, accompanied by a numerous suite. A banquet was given for them at Buckingham Palace, and the next day they were guests of the city at the Guildhall. The first Court ball since 1914 was given at Buckingham Palace on July 7 in their honor.

Belgium, according to cabled reports on June 30, had received an order for 95,000 tons of steel rails for the Argentine Government. The bid entered by the United States was the largest, \$59.84 a ton; that of England came next at \$52.36. Germany bid the lowest, \$35.48, but the contract was given to Belgium for \$37.40 a ton.

The new American immigration laws are causing congestion at the port of Antwerp,

especially as regards Poles, a number of whom are being left behind by each steamer and are unable to find shelter. More than 3,000 emigrants were left stranded at Antwerp up to June 16.

The Belgian Red Cross on June 14 announced that it had purchased one gram of radium in Colorado for 1,000,000 francs, or about \$80,000 at the prevailing rate of exchange.

HOLLAND—Official announcement was made on June 18 of the resignation of the Dutch Cabinet, chiefly due to the defeat in the Second Chamber of an essential clause in the new army bill proposing a reduction in forces. The actual resignation, however, was postponed on account of the visit of the Crown Prince of Japan. This visit was believed at The Hague to be the preliminary to an effort of Japan to effect a rapprochement with Holland, more especially in the Dutch East Indies. In reply to Queen Wilhelmina's telegram, sent after the Prince had left, the Emperor sent a very cordial dispatch, expressing great hope for closer economic relations between Japan and the Dutch colonies. Some disquietude, however, was caused by the fact that Japan had followed America's example and demanded participation in the exploitation of the colonial oil fields. As in the case of the United States, Holland declined the request.

Dr. J. C. A. Everwijn was selected as Minister of Holland to the United States on June 22. He was head of the commercial section of the Ministry of Agriculture, Industry and Commerce, is 44 years old and belongs to an old aristocratic Dutch family.

## GERMANY TO RETURN AMERICAN PROPERTY

THE State Department at Washington issued a statement on June 23, 1921, regarding sequestered American properties in Germany. In compliance with the provisions of a decree of Jan. 11, 1920, the German Government had already released some of the property held by the Custodian of Enemy Property on the application of the legitimate owner. American cash hold-

ings, however, had not been generally released. The Washington statement announced that the German Government had decided to release all American properties still held. Requests for further releases were to be addressed to the Information Office of the Alien Property Custodian, Verlaengerichte Hedemapitzstrasse, 11, Berlin.

# THE CZECHOSLOVAK ALLIANCE WITH RUMANIA

[PERIOD ENDED JULY 10, 1921]

THE young Czechoslovak Republic is struggling to maintain a general economic, political and educational balance. Its foreign policies are shaped to obtain comparative national security. For this purpose it has entered into an alliance with Rumania, the terms of which were recently given out officially. Important provisions in the treaty are these:

Should Hungary, without being provoked, attack either Czechoslovakia or Rumania, the other contracting party will aid the one attacked.

Authorities of both Czechoslovakia and Rumania will, by mutual agreement, outline the military arrangements necessary to make the alliance effective.

Neither of the contracting parties shall enter into any treaty without first consulting the other.

To make sure that both Governments shall act in concert for realization of the peace program, they agree to inform each other about intended measures of foreign policy touching their relations with Hungary.

This agreement shall be in force for two years, beginning from the day of ratification by both parties. At the expiration of this time limit, either party is free to withdraw from the alliance, but in the absence of such declaration this alliance shall automatically continue in force for the period of six months.

This treaty, quite logically, spreads a sense of security so far as the territorial integrity of the new republic is concerned. Quite as logically it does not tend to allay discontent in the camps of the German, Magyar and Ruthenian population, and even among the Slovaks there is manifest disapproval. The Germans and Magyars wish to realign themselves with Austria and Hungary respectively. The Ruthenians and Slovaks are more anxious to obtain autonomy, even though many of them favor living under Hungarian rule, and they appreciate the fact that the foregoing treaty will bring them anything but realization of their wishes.

The Hungarian population of the City of Kassa staged a demonstration there on June 18, demanding autonomy for Slovakia. The mass meeting was called by the Christian Socialists, and Louis Kőrmendy-Ekes, a member of the National Assembly in

Prague, was the principal speaker. He charged that his party was abused, that un-Christian ideas guide the Government, that taxes are excessive, inasmuch as people engaged in industries and commerce pay 60 per cent. of their income and owners of land pay more than twenty times what they used to pay before the war. He charged also that all succession States honor war bonds, the only exception being Czechoslovakia. He criticised military preparations, charging that fully 5,000,000,000 sokols are expended for the maintenance of a large army, and that other State functions suffer in proportion.

Landowners of the country, especially those of Slovakia, eagerly look forward to the proposed land reform. According to plans, all tracts composed of more than 150 tillable hectares and woods of more than 250 hectares will be expropriated. No cash will be paid to the owner, but bonds given, which will draw 3 per cent. interest and amortization at the rate of one-half of 1 per cent. The bonds will mature in fifty years. The price to be paid will be regulated according to prevailing prices in the years 1913-15, and will be paid at the present rate of exchange. The land thus obtained by the State will be leased out to the legionaries, and only the remainder to others who can prove they have the necessary capital for cultivation. In meritorious instances the State would advance a loan to the extent of 90 per cent. of the official valuation, and the loan also is payable in fifty years. The land will be expropriated irrespective of its ownership. Although the law will apply to the whole country, it is charged that it is mainly directed against Hungarian landowners, against estates and churches in Slovakia and against German-Austrian owners in Bohemia. Comparatively few Czechs will lose their lands.

Dissatisfaction is increased in Slovakia because of the striking dissimilarity in prices of food and other necessities. While flour costs 4 sokols a kilogram in Prague and 6.24 in Bohemia, the populace in Slovakia is obliged to pay 7.73 for the same

staple. In general, it is charged that while articles produced in Slovakia cost but a trifle more in Bohemia, those imported from Bohemia cost from 35 to 40 per cent. more

in Slovakia. This is termed discriminative, and is mainly responsible for the existing discontent. (See also articles, pp. 834 and 844.)

## RUMANIANS AND MAGYARS

*To the Editor of Current History:*

The events which took place in the eastern corner of the former Austro-Hungarian monarchy are still too near in time to allow us to have a clear and far-reaching view of this new world issued out of the ruins of a broken empire. The repercussions of the desperate struggle which divided the Magyars and the non-Magyar peoples of old Hungary still last and, alas, will go on a long while, because there will always be pretexts and especially interests enough to prevent an amiable settlement.

Let us take the relations between Rumanians and Magyars. Each side is over-busy in accusing the other. The Rumanians accuse the Magyars of trying to incite the Magyar people of New Rumania against the Rumanian State; the Magyars complain that the Rumanian persecution in Transylvania is growing more and more intolerable.

Is there really a Rumanian oppression of the Magyars? I dare say, with the utmost sincerity, that no such oppression exists. These new citizens of Greater Rumania have, perhaps, many causes to complain of the Rumanian authorities; they have reasons enough to be discontented with the new situation, but these complaints are general, this discontent is no Magyar monopoly. You will find discontent among all classes; it is a universal sickness caused by the war and to be found in all the countries of Europe.

However well the Magyar complaints may be founded, they can hardly be ascribed to any Rumanian intolerance. This alleged oppression is rather a state of mind than a positive fact. It is based above all on the difficulty of forgetting, for the one as for the others. The Magyars cannot forget that they have ceased to be the masters, the omnipotents of yesterday; the Rumanians cannot forget that during many long centuries they had to suffer great injustice. These sentiments lead the Magyars

to consider each act of the Rumanian Government as persecution; and sometimes the same motives lead Rumanians to acts of individual vengeance, which, without being pardonable, are, nevertheless, human and comprehensible. There is by no means a change of parts; the oppressed of yesterday have not turned into the oppressors of today. There is only taking place a political expropriation of the overmighty to the profit of those who before have been deprived of rights—perhaps a forced expropriation, but a legitimate one. And can any new and just division of rights and duties be accomplished without the protest of those who must give?

I expect the remark that there is in question the expropriation of a whole people. Not at all. The Magyars are keeping all their national rights and are restoring to the Rumanians the rights they had taken—rights which are not necessary to the Magyars to live a free national life. They only are expropriated of their privileges.

A striking example: In a small Rumanian town the former Hungarian State had established a school. The language of this school was the Magyar, though the whole Magyar population of the town was not even fifty souls. Does it mean oppression of the Magyars if the Rumanian language is reinstated in its natural rights? But this town is only one among a thousand.

Magyar life has nowhere been hindered in its natural development. Only Rumanian life has begun to manifest itself, too. The struggle has been so violent, the heads are still so excited, that the voice of reason cannot be listened to. But anger and passion will pass and an understanding will come, because it must come. Let time act, and it will heal man-caused wounds. And above all, since it is impossible to do justice to all, let us try to do as little injustice to any one as can be done.

I. SCHIOPUL.

*Bucharest, Rumania, June, 1921.*

# ALBANIA'S FEUD WITH GREECE

*Conflict over territorial claims in Albania aggravated by the Greek war in Turkey—Spies caught distributing anti-Greek propaganda from Mustapha Kemal*

[PERIOD ENDED JULY 10, 1921]

ALL through the month of June the Council of the League of Nations listened to complaints of Albania about the encroachments of Serbs and Greeks upon her territory. Both the Greek and Yugoslav delegates pleaded guilty, but insisted that events subsequent to 1913 had made the London and Florence Treaties of that year, defining the Albanian frontiers, wholly obsolete. The matter came up before the Council on June 26 for decision. Considering the matter as one of adjustment of dead treaties rather than interpretation of living ones, the League Council decided to refer the matter to the Council of Ambassadors. Against this decision the Albanian delegation, headed by Bishop Noli, who is a graduate of Harvard University, strongly protested, declaring that the Council of Ambassadors dealt only with questions between victors and vanquished, whereas Albania had been neutral. A new memorandum of charges against the Greeks and Yugoslavs was filed by the delegation.

The friction between the Albanians and the Greeks has been especially bitter on account of the Greek war upon the Turkish Nationalist leader, Mustapha Kemal, with whom, Greece has alleged, the Albanians, who are the Turks' co-religionists, stand in a relation of complicity. The boundary dispute between Greece and Albania was presumed to have been settled in the Winter of 1919-20 by the exchange of protocols between the Governments of Great Britain, France, Italy and the United States. The arrangement then made, however, was modified in favor of Albania by the subsequent treaty between Italy and Albania, negotiated by the Italian diplomat, Count Manzoni, a year ago. Further adjustments remained pending. Meantime the town of Koritza, of mingled Greek and Albanian population, and a bone of contention between the two countries, was administered by Albania. The Greeks in the town complained of being pressed into the Albanian military service, of confiscation of the earn-

ings of returned Greek immigrants, with other similar charges.

In the first week of May the Greeks were outraged by Albanian attacks upon the Greek church of St. George. On the Thursday preceding Good Friday, first of all, some Albanian officers, led by an Albanian priest named Premiti, broke into the church during service and demanded that the mass be said in the Albanian language. The priests complied, but the next day the Greek Metropolitan protested to the Albanian Governor against this indignity. A day later the Greek Metropolitan mysteriously disappeared and an armed attack was made upon the Greeks during a procession, with the result that eleven Greeks were killed and several wounded; the Albanians lost about the same number.

Next came the trouble over Chimarra, also in Albanian territory. Chimarra is a small port opposite Northern Corfu, at the foot of the Acroceranian Mountains, and has been celebrated both by Horace, the Latin poet, and by our English Byron. Chimarra came out openly proclaiming its union with Greece. The Albanian Government at once sent an ultimatum, bidding the people recognize Albanian sovereignty. They were about to give way when Greek mountaineers flocked into the port and ordered them to defy the Albanians. The Albanian-Greek feud, thus intensified, was made still more bitter by an event which occurred in Greek territory, south of the frontier.

At this point some Moslem Albanians were arrested by the Greek authorities as spies. A search revealed the fact that these men carried Turkish propaganda literature, printed at Angora. The prisoners declared that they had received this literature for distribution from a certain French Senator, who had recently passed that way on a mission to Albania. Identifying this alleged distributor as Senator Godard, the Athens press at once began to accuse the French Government of inciting insurrection among

the Moslems of Greece. These attacks brought a denial from M. de Billy, the French Minister at Athens, who declared that Senator Godard had come on private business and had no Turkish propaganda material in his possession.

A further examination of the effects of the alleged spies revealed part of a speech delivered by Mustapha Kemal, the Turkish Nationalist leader, delivered before the Grand Parliament at Angora on May 10, which seemed to place the origin of the propaganda beyond doubt. The extract from the speech read as follows:

Owing to the geographical situation of Albania we cannot maintain direct communica-

tion with that country. But we gladly consented to the request of the Albanian officers, who asked our permission to return to their country and organize Albanian forces against the Greeks. We, as Mussulmans, take the greatest interest in Albanian affairs, and consider that Albania needs our assistance against Greek aggression. It is our sacred duty to give aid to our coreligionists. No Turkish officer has left Angora, but Nouredin Pasha, the commander of one of our Smyrna divisions, has proceeded to Albania with 200 Albanian officers who had come to Asia Minor to help us, but who, I judged, would do more effective work in their own land. Greece has become the enemy, not only of Albania, but of all the Levantine races, and the Balkan States should recognize this as Albania has already done.

## THE LITTLE ENTENTE'S PROBLEMS

[PERIOD ENDED JULY 10, 1921]

THE text of the three defensive treaties which form the backbone of "The Little Entente" — Czechoslovakia - Jugoslavia, signed Aug. 14, 1920; Czechoslovakia-Rumania, April 23; Rumania-Jugoslavia, June 8—is now at hand. All contain a preamble and six articles, and the last two follow the first (See CURRENT HISTORY for January, page 73) in all essential particulars. In each case should Hungary make an unprovoked attack upon one of the parties the other shall come to the rescue; meanwhile military conventions shall define that aid, and other conventions shall lay down a common foreign policy, which shall be based upon the execution of the Treaties of Trianon and Neuilly.

Almost simultaneously the "fathers" of "The Little Entente," Dr. Benesh at Prague and Take Jonescu at Bucharest, expounded the treaties along the foregoing lines; but the latter added, what had already been imparted privately to CURRENT HISTORY by the Rumanian Legation and printed in these columns:

The second part of the great political program will be the conclusion of an alliance between Poland, Czechoslovakia, Rumania, Jugoslavia, Greece, and, as-soon as expedient, Bulgaria.

In commenting upon this statement the Sofia Echo of Bulgaria, on June 16, re-

mindes its readers that the Bulgarian Government had three times attempted a rapprochement at Belgrade, but without avail. However, it had hopes of an invitation from Prague or Bucharest. Conversations with Rumanian, Serb and Czechoslovak diplomats reveal the fact that, while none questions the correct attitude of M. Stambolisky, the Bulgar Premier, which has gained for his country admission to the League of Nations and a good measure of esteem from several chancelleries, there are, nevertheless, elements in Bulgaria, whether reactionary or communistic, which, in the event of Greek reverses in Asia Minor, might seek to combine with Kemalist and Bolshevist elements to stir up trouble in Thrace. With this fear removed, it is added, the way will be open for Bulgaria to enter "The Little Entente."

As to the case of Greece, neither Dr. Benesh nor M. Jonescu nor M. Pashitch, the Serbian promoter of "The Little Entente," can be particularly enamored of Constantinian Greece—they who are the personal friends and admirers of Venizelos. However, they recognize the paramount importance to Balkan and European peace, and believe that no domestic changes in Greece should be allowed to upset a settlement by any other State desirous of fishing in troubled waters.

# SCANDINAVIA'S FIGHT AGAINST BOLSHEVISM

*How an elaborate revolutionary plot, subsidized with Russian money, was crushed by Sweden—Norway's effective way of handling a Bolshevik-led general strike—Russia's dissatisfaction with the Aland Island settlement leaves a cloud on the horizon*

[PERIOD ENDED JULY 10, 1921]

SWEDEN has been much commended in the press of the world for her loyalty in abiding by the decision of the Council of the League of Nations (June 24), that the Aland Islands shall remain under Finland's sovereignty. The islands are to be neutralized from a military standpoint, and the population is to receive the guarantees recommended by the Elkus commission. Hjalmar Branting, former Prime Minister of Sweden, protested against the decision, saying, in part:

The Swedish Government cannot refrain from expressing the fear that the Council has badly shaken the confidence of all peoples, and more particularly those who, like Sweden, long have striven for a realization of international law and who had felt that the League of Nations had been created to place the world under the reign of this law.

He agreed, nevertheless, to recognize the decision, regarding it as the duty of a member of the League to do so, even though it was a bitter disappointment to his country and to the Aland delegates at Geneva. Even so, the decision cannot be regarded as final; for the next day the Russian Soviet notified the League and all other parties concerned that Russia still considered itself interested in the Aland question and protested against its being settled definitely. The note of protest contained a reference to the treaty of 1856, made at the close of the Crimean war, after the British and French fleets had destroyed the Russian fortress of Bomarsund on the largest of the Aland Islands. By its terms Russia guaranteed that the islands should not be fortified, but broke its pledge early in the World War.

This demand of Russia to be considered in the settlement lends significance to the Bolshevik plot, detected by the Swedish police in the second week of June, to start a revolution simultaneously in Sweden, Norway and Finland. The precipitation of the

Norwegian general strike was regarded as the advance action of this movement. The chief conspirator in Sweden was a journalist, Jacobsen. The others arrested were all Finns, former members of the Finnish Red Guards, and all the persons in custody were considered members of a gang directed from Moscow. Among the documents seized were instructions to agents to get particulars about Swedish army, navy and air forces. Arrests continued through June 17, and investigations were expected to last for several weeks. Raids in Northern Sweden resulted in the arrest of four Finnish communists, suspected of having set fire to large sawmills, and in the flight of many communists to the coast in the hope of escaping by sea. In the State Council it was decided to expel Wallenius, the Finnish chief of the Stockholm organization, as a particularly dangerous person. Several of the Finnish Red Guards arrested had been living luxuriously in Stockholm. Others worked as miners in the northern iron-ore fields. It was found that extensive subterranean works had been carried out at Boden, Sweden's largest fortress, situated near the Finnish frontier.

This revolutionary organization in Sweden dates back to 1918, when many Finnish Red refugees came over the frontier on false passports. Later a committee of six was formed, and in April, 1919, a Red officers' school was established. For their equipment Lenin arranged to establish a special clothing factory. However, the pupils pawned their uniforms and arms, and that part of the scheme fell through. The committee of six arranged for the smuggling of jewelry from Soviet Russia into Sweden. Motorboats carried the goods to points on the Swedish coast, whence motorcars forwarded the goods inland, both boats and cars making regular trips for this purpose.

**NORWAY**—The general strike which grew out of the Norwegian seamen's strike went down in a fortnight to crushing defeat before the efficiency of the nation-wide Community Aid Organization. The workers were sent back to work on June 10 without conditions and without having gained anything. This event was hailed in the Norwegian press as "a unique victory for society." The Community Aid had kept the necessary industries going by furnishing volunteer social workers in all lines affected. The military was mobilized, but not used. The workers had to return to work individually, taking their chances of being re-employed. In the words of an editorial in *Aftenposten* (Christiania):

No strike was ever more lightly entered into, nor sooner ended with a more crushing defeat. Launched by a small band of Bolsheviki, the strike necessitated great sacrifices on the part of the laborers, but all in vain. The Bolshevist leaders learned that society is no plaything which they can beat to pieces like a child. The strike was broken by its own impossibility.

The Norwegian Government recently introduced a bill proposing to substitute a system of rationing liquor, like that adopted in Sweden, for the present temporary system of absolute prohibition. The provision in the measure that all profits from the sale of alcohol be used to further social reforms gives rise to many points of dispute.

The question of compensation for the fifteen Norwegian ships requisitioned in American shipbuilding yards by the United States on entering the war was submitted to the United States Senate, July 1, in the form of an arbitration agreement for ratification. This agreement was drawn up in conformity with the provisions of the arbitration convention between the two countries in 1908, and its negotiation followed the failure of the Norwegian claimants and the United States Shipping Board and Emergency Fleet Corporation to adjust the claims. These claims amounted to \$14,157,000. The Senate referred the arbitration agreement to its Foreign Relations Committee. Its text was not made public.

**DENMARK**—The marriage of Princess Margaret of Denmark and Prince René of Bourbon was solemnized in the Roman Catholic Church, Copenhagen, on June 10, in the presence of the King and Queen and other official personages. The Princess

was accompanied by her father, Prince Valdemar, and the Prince René by his mother, the Duchess of Parma. The drive of the bride and bridegroom to the Amalieborg Palace was a brilliant progress. The carriage was escorted by Hussars, and the cheering crowds covered it with flowers.

A resolution urgently appealing to the Government to intervene in the industrial crisis that lies heavily on Denmark was unanimously adopted at a meeting of repre-

(Times Wide World Photo)

PRINCESS MARGARET OF DENMARK  
Bride of Prince René of Bourbon

sentatives of various industries invited by the Danish Chamber of Industry, June 15, to discuss means for dealing with the matter. Influenced by the free-trade Agrarians, the Government had shown no desire to accede to the Social Democrats' demand that it summon the Rigsdag. The Social Democrats had lately joined the Conservatives in pointing to protection as a solu-

tion of the difficulties, in view of the stress of German competition.

The Fourth of July was made the occasion of a great Danish-American festival in the Rebild Hills of Jutland. Joseph C. Grew, the American Minister to Denmark, made an address which evoked great enthusiasm from the thousands of Americans, Danish-Americans, and Danes present.

## RUSSIA IN DESPERATE STRAITS

*Lenin's fight for economic reforms obstructed by radical Bolshevik leaders at the Third International Congress—Famine and rebellion faced by the Soviet—The trade movement from Europe still weak*

THE Soviet newspapers bear eloquent testimony to the desperate efforts of the Bolshevik Government to retain power until conditions improve so as to make for permanency. From these papers it is apparent that Lenin's far-sighted plans to improve the desperate state of affairs that now prevails have met with an ever-increasing opposition on the part of Bukharin, Zinoviev, Djerzinsky and other extremist leaders. Interesting information is given by the official organs of an extraordinary session of all the chief executive bodies held in Moscow on May 27, preparatory to the opening of the Third International in June. The following official organizations were represented: The Soviet of People's Commissaries, the Soviet Revolutionary Military Council, the Labor Defense Council and the All-Russian Extraordinary Commission, otherwise known as the Cheka.

The object of this extraordinary session was to discuss the crisis which faced the country. Since the beginning of May disquieting reports had been received from the interior, notably of a strong anti-Soviet movement, which was gaining momentum in the following provinces: Saratov, Orel, Ufa, Riazan, Vologda, Tambov, Cheliabinsk and Kursk. Food shortage was combining with the anti-Soviet propaganda of the Mensheviks, the Revolutionary Socialists and the White Guard elements. A certain number of Red Army units were being strongly disaffected by this movement.

The meeting was stormy. Lenin was bitterly attacked by the radical leaders, who

have made war on him since he declared for a partial return to capitalism and free trade. These leaders were for drastic action at home and for a continuance of the efforts of the Third International to work for revolution abroad. A speech by Lenin, pointing out the desperate economic condition of the country, declaring that "the economic life of Russia is on the eve of a complete breakdown," and implying that the only recourse was to work for reconciliation in Russia and to comply, at least for the time being, with the demands of the Entente for a cessation of propaganda for world revolution, was howled down, and Lenin left the meeting.

The extremists, led by Trotzky, Bukharin, Djerzinsky and Zinoviev, gave no sign of relenting in the drastic policy which they advocate. These leaders were all prominent in the new sessions of the Third International, which opened in Moscow on June 19. The majority of the foreign delegates brought glowing accounts of revolutionary movements in Germany, France, England, Italy and elsewhere. These stories were received with enthusiasm. The violent spirit of the extremists, however, was dampened by the conditions at home, alleged by Lenin and the conservative leaders to have been caused by the measures pushed through by the radicals. Leon Trotzky was greatly in the limelight. He led a procession of troops just before the Congress was opened. Effigies of Lloyd George, Premier Briand and other Entente leaders were greeted with jeers.

The Congress was attended by delegates

from the brown and yellow peoples of the Near and Far East. Women delegates were in the majority. Zinoviev, in his opening speech, reviewed the standing of communism abroad, and advocated an unrelenting struggle against capitalism. Both Trotzky and Bukharin, who is head of the Left Wing of the Soviet Central Committee, and editor of the Moscow Pravda, made speeches to the women delegates, urging them to take an active part in "the revolutionary front" abroad. Bukharin summed up the situation thus: "We, in Russia, are exhausted, but must hold on at all costs. You on the outside must help, and strain every effort to make the existence of capitalism impossible."

At a session reported on June 28 Trotzky was appointed to draw up a manifesto to the world's proletariat. Trotzky's assertions that a conflict might be expected between the United States and Great Britain, and between Great Britain and France, were contested by the German delegates, who charged that Trotzky was overstressing future perspectives and ignoring immediate possibilities. Zinoviev declared for the strengthening of the communist parties abroad, demanding more mass action. He announced that the Executive Committee had decided to admit the British Labor Party and the French Socialist Party. Referring to the "splits" in nearly all the communist groups abroad, he advocated iron discipline "to grapple with bourgeois tendencies."

Zinoviev's views on the latter point won out at the session of June 29, but only after a bitter contest. A number of delegates favored a compromise regarding the twenty-one points laid down by the 1920 Congress, but were voted down. As finally adopted, the resolution approved Zinoviev's view that the Third International must insist on the full twenty-one points as a qualification for membership, authorized the sending of a threat to expel the Italian Socialist Party unless it excluded all reformists, and threatened the Communist Labor Party of Germany with expulsion unless it united immediately with the more radical communist element. Further meetings of the Congress had not been reported up to the time when these pages went to press.

An alleged plot to start a simultaneous communist revolution was revealed by the

police of Stockholm on June 9, following the arrest of a notorious Bolshevik leader in Kiruna, situated in the iron-mining district of Sweden. Papers were found implicating 400 Bolsheviki staying in Sweden, all of whom were to be deported.

Grave conditions approaching famine were reported both in North and South Russia toward the middle of June. Food riots were going on at several points, and mutinies among the soldiers of the Red Army were feared, owing to a reduction of rations. Famine conditions in Kiev were said to be especially severe. In this district, Nationalist societies were active in hunting down and killing the Bolshevik commissaries. Hostility among the peasants and workmen was growing more and more open.

The dearth of food was caused, in part, by the interruption of communications in Western Siberia by insurgent anti-Bolshevik elements. The capture of Omsk and the revolutionary activities from there to Ekaterinburg had demoralized all transportation. [For the chaotic situation in Siberia following the capture of Vladivostok by the anti-Bolshevik Kappelites, see the article on Siberia].

The much hoped-for relief from Europe was slow in materializing. It was reported on July 21 that shipments from the Scandinavian countries, Germany and Great Britain were still insignificant. Lenin's plan to return some of the factories to private ownership was expected to result in the export of considerable raw material. Russia's import trade through Esthonia and Latvia amounted for the month of May to 50,000 tons, as compared with 35,000 tons for April. About half of the imports were food products. Royal honors were paid the Dutch steamer Alexander Polden when it arrived at Petrograd toward the middle of June with a cargo of herrings. Twenty carloads of herrings were immediately unloaded and dispatched to Moscow. The inhabitants of Kronstadt and Petrograd gave way to great rejoicing. Food conditions in the former capital were said to be distressing. Only the day before the Dutch steamer arrived the Ekonomitcheskaya Zhizn wrote: "The fate of the city is so tragic that no comparison can be found in the world's history." The mortality from famine and disease, this paper said, was greater than that caused by the engulfing of Pompeii.

## UNION OF THE CAUCASUS STATES

*Armenia, Azerbaijan, Georgia and Daghestan sign a compact of close economic and defensive union in the French capital, while their countries are held in Babylonian captivity by the Bolsheviki*

[PERIOD ENDED JULY 10, 1921]

A PECULIARLY interesting development, in view of the situation prevailing in the Caucasus, was the union in Paris on June 10 of the three main Caucasus States, Armenia, Azerbaijan and Georgia, and a fourth State—the North Caucasus Republic of Daghestan—into a close economic and protective confederation. Negotiations for such a compact had been under way for some weeks, both in the Caucasus and in France. The main movers in the agreement called on Premier Briand on June 22 and presented him with a copy of the articles of confederation. These delegates — M. Aharonian (Armenia), M. Topchibachev (Azerbaijan), M. Avalov (Georgia), and M. Tchermoyev (North Caucasus)—told M. Briand that the union had been formed in order to assure the various peoples of the Caucasus of their independence, to give them a democratic régime, and to make them economically self-sufficing. All four members of the group were to enjoy equal rights. All differences were to be submitted to arbitration. No foreign compacts were to be made without common discussion and consent. The four countries were to form a customs unit. Full freedom of international transit was to be accorded. No decrees or arrangements made by the Soviet régime now in power in the Caucasus were to be recognized by the new confederation.

The ironic interest of this compact lies in the fact that Soviet Russia is in actual possession of the whole Caucasus territory. The situation prevailing there is briefly as follows: Armenia, Azerbaijan and North Caucasus have been for some time in Russian hands. Georgia, after maintaining independence for a considerable period, fell, on March 17, 1921, before an advance of the Soviet armies, its Government was overthrown, and its political leaders were forced into exile. The Soviet rule is supreme in all these States. All the expelled Governments are fighting for return. The moun-

taineers of Daghestan, from their rocky fastnesses, periodically give the Soviet new trouble. The Armenians have several times retaken Erivan, the Armenian capital, and lost it again; the city was last re-entered by the Red forces on April 2. Notices received on June 5 indicated that the dispossessed Armenians had joined forces in the provinces of Karabagh and Zanghezur, on the border between Armenia and Azerbaijan, with the ousted Azerbaijani, who refuse to be reconciled to the despotic rule of the Soviet. The Georgian Government, headed by Schamyl, has taken refuge in the fortress of Gounib.

Many atrocities were committed by the Russians in their invasion of Tiflis, where corpses were piled in the squares. The Azerbaijani, who had worked against Soviet rule on Georgian soil, received especially cruel treatment. Many of them were executed. Reports from Georgia and Azerbaijan indicate that the Soviet rule is corrupt, despotic and inefficient. The price of everything has enormously increased. Transport and food conditions are deplorable. The temper of these two peoples is hostile in the extreme to the Soviet administration. Of this the Moscow leaders are very well aware, and they have shown a tendency to allow the local leaders more influence than elsewhere in Sovietdom. Of this the recent oil concession at Baku granted to England by Azerbaijan gives some indication.

Azerbaijan is particularly the object of anxiety on the part of outside Governments, who have long competed for the rich resources of the Baku oil fields. The French formerly controlled these. Then came the Dutch, and lastly the Bolsheviki, who are exploiting the oil product vigorously. Thousands of barrels of oil are being sent to Soviet Russia every month. The recent concession to England (reported from Latvia on June 11) shows that Great Britain intends not to be left out. Some observers

of the Caucasus situation declare that the union of Caucasus nations concluded in Paris shows that the French are again seeking for oil control. This view was repudiated by the Paris Temps, which commented as follows:

It goes without saying that the French Government has not tried to influence their negotiations, or to derive any special benefit from them. It is natural that they should work in France, for France is the traditional friend of those who fight for liberty. The Supreme Council of the Allies has recognized the independence of Armenia, Azerbaijan and Georgia, and the fourth republic, that of the mountaineers of the Caucasus, is showing to the Bolsheviki that they will never rule tranquilly upon its soil. We hope

that the Governments of these four Caucasus republics, when they shall have retaken possession of their countries, and even before, will succeed in establishing good relations with the Turkish Government of Angora. For the nations of the Caucasus, an accord with Turkey is an essential condition of their emancipation. Russia, their other neighbor, has need of emancipation herself ahead of everything else.

The answer which may be given to those who see little value in the new compact of exiled Governments is this: Not so very long ago the present rulers of Czechoslovakia and Jugoslavia were exiles in France and elsewhere. The plans and compacts which they made in foreign countries have now been translated into realities.

## THE ARMENIAN MASSACRES

*To the Editor of Current History:*

You have published, in your July issue, an article entitled "Why Talaat's Assassin Was Acquitted." The author of that article, George R. Montgomery, ought to have mentioned the book, "The Memoirs of Naim Bey," from which he has bodily lifted the facsimiles of the telegrams and their translations. "The Memoirs of Naim Bey," published by Hodder & Stoughton, London, was prepared by Aram Andonian, an Armenian journalist, who was deported from Constantinople to Der Zor. Andonian writes as follows in the introduction to his book as to how he secured these documents:

For two years and a half I had been pursued by persecution, living in hiding, now in Aleppo, now in Damascus and Beirut, and sometimes in the Lebanon, till the English entered Aleppo, bringing liberty with them. Some friends from Adana then reminded me of Naim Bey, and promised to satisfy my great desire to see him. Considering his long term of office in the General Deportations Committee at Aleppo, it seemed to me that he ought to know a great deal—everything, in fact.

"The departure of the Turks from Aleppo, after the arrival of the English, was something like the escape of criminals," he said to me.

"I, having a clear conscience, did not wish to join them, and I stayed."

As the Government of the Young Turks has caused the documents concerning the massacre of Armenians to disappear, we had no official evidence to show. It was this want which Naim Bey supplied by handing over to us a great many official documents, Ministerial telegrams and decrees to Governors sent on behalf of the Ittihad Committee, which had passed through his hands during his term of office under the General Deportations Committee of Aleppo, some of which he had kept, perhaps fearing future responsibility; one part of those documents he has written from memory, and the most important ones are photographed and published in the present work.

In justice to Mr. Andonian and to the authoritative standard of your magazine these facts should be set forth.

ARSHAG MAHDESIAN,

*Office of the New Armenian, 949 Broadway,  
New York, July 5, 1921.*

[The facsimiles of Talaat Pasha's telegrams were reproduced from Aram Andonian's "Documents Officiels Concernant les Massacres Arméniens," published in Paris by H. Turabian, and it was from this French volume that Mr. Montgomery drew the main substance of his interesting article in CURRENT HISTORY. "The Memoirs of Naim Bey" evidently is the English translation of the original work just mentioned.—EDITOR.]

# THE CURIOUS MUDDLE OF THE GRECO-TURKISH WAR

*A month of vanished hopes and intrigues over the problems of the Near East—Greece rejects intervention while sleeping on her arms—Angora playing off one power against another—Turkish hostility concentrating on Great Britain*

[PERIOD ENDED JULY 10, 1921]

THE situation in the Orient, down to July 10, became seemingly more muddled than ever—in spite of the reassuring words of Winston Churchill, the British Colonial Minister, uttered in the House of Commons on June 14 about the necessity of Franco-British unity in the Near East; nor was the muddle clarified when Earl Curzon, the British Foreign Minister, went to Paris and joined with M. Briand and the Italian Ambassador in drafting a formula by which the good offices of the Entente might be used to intervene with the Nationalist Turks on behalf of Greece—a formula which the Turks rejected.

The attempts at cordial co-operation by London, Paris and Rome were constantly thwarted by ignorance of the true situation, as shown by the press of these capitals reacted upon by the obvious intrigues there of agents sent out from Angora. The situation is so paradoxical that both Athens and Angora believe that each may profit by its continuance, as they imagine they observe the waning of the morale, if not the material strength, of the Entente. It will be shown, however, that both are nurturing an illusion: The seeking of an inexpensive formula on the part of the Entente really exhibits no signs of fundamental weakness.

There have been few changes in the purely military situation. The Greek and Nationalist armies still face each other, with periodic feint attacks at various points. The Greek evacuation of the Ismid Peninsula was followed by reported atrocities on both sides and the landing of American marines to protect American educational and missionary property and the lives of those identified with it. There was an unconfirmed report that General Gouraud, the French High Commissioner of Syria, had renewed hostilities against the Kemalists.

The British fleet came into full control of the strait and General Sir Charles Harrington increased his army at Constantinople; but there was no change in the proclaimed British neutrality, and the best the Greeks could believe from the situation was that an attack by the Kemalists on Constantinople would eventually bring Great Britain to their side. Indeed, Austen Chamberlain, the Government leader in the House of Commons, intimated as much on June 23. But Mustapha Kemal Pasha has been careful not to provoke that contingency.

The Greek army in Asia Minor, although arrayed in uniforms of various nations, possesses particularly good footgear, and a formidable, although varied, armament, and plenty of food. Its wages are not paid, but the Greek Government seems to have plenty of money for military necessities. Where does the money come from? Opinion is divided in Athens between private American and British sources and the hypothecation of the \$16,000,000 Greek balance still due on the Washington loan made M. Venizelos, the payment of which was stopped when King Constantine returned.

In default of a meeting of the Supreme Council, which could not at the moment be arranged, Lord Curzon went to Paris on June 17 and returned to London on June 20. Meanwhile, among other things, he had arranged, with the French Premier and the Italian Ambassador, an identical note to Greece. According to the account of Mr. Chamberlain in the House on June 23, this note expressed conviction that renewal of Greek and Turkish conflict in Asia Minor contained no prospects of enduring pacification of the East or a solution compatible with the real interests and ultimate capabilities of either party. So, as a mere discharge of international duty and as an ob-

ligation of friendship, they were prepared to attempt reconciliation if the Hellenic Government would place its interests in their hands. If outside intervention or advice was found unacceptable, the abandonment of an action thus made fruitless would make the Greeks responsible for the consequences of a renewal of hostilities.

The Greek Government was invited to return a prompt reply to this proposal. The three allied representatives then proceeded to discuss the terms in question and arrived at a general agreement as to the lines on which they would proceed.

On June 25 the Athens Government replied to the note declining politely to receive the intervention of the Entente at that time. It pointed out that Greece was merely striving to execute the Treaty of Sévres, to which all had been parties, and that the proposal of the Entente could not be considered unless it guaranteed the rights of Greece in Smyrna and Thrace as set down in that instrument. The rest was, of course, open to arbitration.

On June 6, Mustapha Kemal Pasha had issued a proclamation which read:

We absolutely refuse to enter into pourparlers with the British. Our military movement will have such repercussions that the liberation of the whole Moslem world will follow, and Egypt and India will become completely independent.

In spite of this, General Harrington sought a personal conference with Kemal, suggesting as the places of meeting a British warship and then Ineboli. The idea was abandoned on July 10, when it was reported that Kemal's reply "was of such a nature that it was deemed useless for the British commander to make the visit."

It had, nevertheless, been reported that, in certain circumstances, Great Britain would be willing to withdraw its support to the Sultan's Government at Stamboul and permit the Nationalists to occupy Constantinople. These rumors, as well as the assumption of power by General Harrington over the High Commissioners at Constantinople, encouraged the French press to advise its Government to take advantage of the situation and to assume the preponderant influence in the Near East supposedly about to be abandoned by Great Britain. It also suggested that General Harrington be rebuked for acting without consultation with the Interallied Commission. Rumors of the same doubtful character reached the

Paris press, on July 10, telling of a Balkan alliance with the aid of Kemal Pasha against Greece. It was said that this alliance had been hatched at Sofia and had found approval at Belgrade and Angora, and that its point of attack would be Thrace and Macedonia. It is obvious, however, that Bulgaria, which is on its good behavior toward the Entente, would not seriously instigate such an enterprise, and that Serbia, whatever its enmity toward the Greece of Constantine, would not engage in it.

Meanwhile, Bekir Sami Bey, the Foreign Minister at Angora, who was obliged to resign when the treaties he had negotiated with France and Italy at London were denounced by the Grand Parliament at Angora, has not been idle. He has been traveling from Angora to Rome and from Rome to Paris and London, adding to the confusion by conflicting interviews. Both in Rome and Paris he pointed out to interviewers that England alone was the obstacle which prevented a perfect understanding between his Government and Italy and France. Of more importance as showing the trend of intrigue was the statement made to the Paris press in regard to his mission by Dr. Nihad Rechad Bey, the Angora representative there. Dr. Nihad said:

Unfortunately, in Turkey there is a conviction that England has not yet given up the policy of utilizing the Greeks against the Turks, and has not yet decided to replace Greater Greece by the Ottoman Empire. \* \* \* An essential factor in the Turkish situation is the fact that all parties believe that Great Britain is the dominating influence in the situation. All Turkish parties are unanimous in believing that the recent Greek attack certainly found encouragement and even approval from certain British official quarters. \* \* \* We are still waiting a *geste britannique* which shall strike the imagination of the nation as of old. We wait in vain.

At Angora, while Italy is quite ignored, anti-French propaganda has been replaced by anti-British. The semi-official *Hakimiet Millie* vigorously urges the defeat of Greece because it will be "the first Moslem victory over Great Britain," and adds:

Outwardly powerful, Britain really resembles a palace of cards. It is undermined by strikes, most of her industries are idle, thousands are bankrupt, millions are unemployed. The British Empire is beginning to totter. In fact, savage fanatical Europe is already in decomposition, and the Great Powers are passing through their last days.

# HARD PROBLEMS IN PALESTINE AND MESOPOTAMIA

*An explanation of the new British policy in the Middle East, and of the obstacles it is encountering—French hostility to England's plan for making Emir Feisal King of Mesopotamia—Papal protest against the Zionist enterprise in Palestine*

[PERIOD ENDED JULY 10, 1921]

ALTHOUGH the problems of the Near and Middle East, so far as they affect France, Italy and Greece, still measurably depend upon the result of the conflict between the last-named country and the Turkish Nationals, those affecting Great Britain depend more directly upon the action of the British Parliament on the ratification of the Palestine and Mesopotamia mandates. Such ratification would shift the responsibilities now being borne by the Imperial War, Colonial and India Offices to the shoulders of the United Kingdom, until, with the mandates fully executed, the Foreign Office would alone be concerned.

Several events occurred in the last half of June which, while not perhaps bringing the day of ratification nearer, clearly revealed the drift of British policy away from its original conception and emphasized the nature of new responsibilities as well. These events were Pope Benedict XV.'s allocution in regard to Palestine, the speech of the British Colonial Minister on the situation, the publication of the text of the Mesopotamia mandate, and the antagonistic comments of the French press in regard to the change of British policy, although this change had been shown to be more favorable to French interests.

During the post-bellum régime of M. Venizelos in Greece, deductions made from the speeches of Lord Curzon and A. J. Balfour revealed that the primary conception of the British policy was, in the first place, to create an auxiliary Greek Empire controlling, by agreement with Downing Street, the whole littoral of the Aegean, and dominating the approaches to Constantinople; and, in the second place, to establish a series of dependencies, including Palestine, Mesopotamia, Persia and the Kingdom of Hedjaz. With the *volte-face* of Greece, this policy has gradually given way before the exigen-

cies of political events, and a new one has developed, which ignores the aspirations of the Constantine régime and leaves France and Italy pretty much to their own devices. At the present time this new policy has reached the point where the seemingly triumphant progress made in Palestine has encountered formidable obstructions to its primary object—the establishment of a home land for the Jews. This opposition, both internal and external, comes from the Catholic hierarchy, from Bolshevik propagandists and from the Arabs, who have just dispatched to London an important delegation of malcontents. The Mesopotamian policy, also, is now meeting with strong objections from both the British taxpayer and the officially inspired French press; and Persia, thanks to the attitude of the United States, the repudiation of the Anglo-Persian Treaty and the intrigues of Lenin, seems very remote indeed from Downing Street.

It is important to note that the diplomatic relations between the Vatican and the Quai d'Orsay, restoring to France the prerogatives of the protecting power over Catholics in the Levant, had been fully re-established when the Pope, in the course of an allocution addressed to the secret Consistory of June 14, made the following declaration:

The situation of Christians in Palestine not only is not improved, but has been made worse by the new civil arrangements which aim, if not in their author's intention, at least in fact, at ousting Christianity from its previous position to put the Jews in its place. We therefore warmly exhort all Christians, including non-Catholic Governments, to insist with the League of Nations upon the examination of the British mandate in Palestine.

This language is plainer than is usually customary in Papal diplomacy. Still, it is consistent with the policy of the Vatican

first enunciated at the Consistory of March 10, 1919, when the central idea was more or less veiled.

Ever since Winston Churchill's return from his mission to the Levant in early June, the British Parliament had eagerly awaited a statement from the Colonial Secretary. This statement was made in the House of Commons on June 14, and seemed to be the lecture of an observing traveler rather than the defense of an imperial policy. By deduction and inference, however, it proved to be a defense, a very eloquent defense.

#### COLONIAL SECRETARY'S STATEMENT

The Secretary reassured his hearers in regard to financial matters. Although the expenditures for the fiscal year 1919-20 for Palestine and Mesopotamia had been between \$350,000,000 and \$400,000,000, he said, those of 1920-21, if the present policy continued unchecked, would not be more than between \$45,000,000 and \$50,000,000. As a basis for his ethnic and religious observations on Palestine he stated the facts in regard to numbers—there were 500,000 Moslems, 65,000 Christians and about 65,000 Jews. He ignored the official complaints of Christians, but explained those of the Moslems on the ground that the enthusiastic declarations of the Zionist organizations through the world, with their ardent hope and aim of making Palestine a predominantly Jewish country, peopled by Jews from all over the world, had alarmed the Arabs, who particularly feared the Jews from Central Europe. This was a misconception, he declared. There had been brought into Palestine under the mandate only 7,000 Jews, and future immigration would be limited to the capacity of the industries of the country to absorb it.

At the beginning, the Colonial Secretary emphasized in a graphic manner the circumstances which had caused the empire to assume its present responsibilities, and indicated, rather than described, the change of policy already noted, by showing how the affairs of the Middle East were being transferred from the India and War Offices to the Middle East Department of the Colonial Office—a bureau of his own creation at the urgent solicitation of the Prime Minister. The following is the illuminating background for superimposed future events, as he sketched it:

During the war our Eastern army conquered Palestine and Mesopotamia, overran both these provinces of the Turkish Empire, and aroused the Arabs and the local inhabitants against Turkey. We uprooted the Turkish administration, and set up a military administration in its place. We gave pledges to the inhabitants that Turkish rule should not be introduced in these regions, and, in order to gain the support of the Arabs against the Turks, we, in common with our allies, made another series of promises to the Arabs that we would reconstitute the Arab Nation, and, as far as possible, restore Arab influence and authority in the liberated provinces.

In regard to Palestine, a third promise was made in 1917 of an important character, that Great Britain would, if successful in the war, use her best endeavors to establish a Jewish national home in Palestine. After the war we entered into the painful period of peace negotiations. The principle governing the disposal of the conquered Turkish provinces and of the German colonies was decided by the Supreme Council in Paris during 1919, and their conclusions were embodied in the Treaties of Versailles and Sèvres and in the covenant of the League of Nations. They were approved of on behalf of Great Britain by the whole Cabinet of those days, and acquiesced in by Parliament. Under these treaties we have solemnly accepted the position of mandatory power for Palestine and Mesopotamia. That is a serious responsibility.

He then described the conditions in Mesopotamia which had led to the nomination of Prince Feisal as the head of State:

First, a provisional native Government has been in existence for a good many months. It is our intention to replace this in the course of the Summer by a Government based upon an Assembly elected by the people of Iraq, to install an Arab ruler who will be acceptable to the Assembly, and to create an Arab army for national defense. We have no intention of forcing upon the people a ruler not of their own choosing, but as mandatory power we cannot be indifferent to the choice. The situation is not free from delicacy or uncertainty, but I think I am right in leaving these matters in the hands of Sir Percy Cox, British High Commissioner. He is accustomed to deal with Arab notabilities, and I hope under his guidance the people will make a wise and free choice, but I think it necessary to state the view which the British Government takes of what would be the best choice of ruler.

Broadly, there are two policies which can be adopted toward the Arab race. One is the policy of keeping them divided and, using the jealousies of one tribe against another. The other policy, and the one which is alone, I think, compatible with the sincere fulfillment of our pledges, is to attempt to build up around the ancient capital of Bagdad, in a form friendly to Britain and her allies, an

Arab State which can revive and embody the old culture and glories of the Arab race.

Of these two policies we have definitely chosen the latter, and if you are to endeavor so to shape affairs in the sense of giving satisfaction to Arab nationality you will, I believe, find that the best structure to build around—in fact, the only available structure of this kind—is the house and family and following of the Shereef of Mecca. It was King Hussein who, in the crisis of the war, raised the Arab standard against the Turks. Of his sons, who gathered around the standard, the Emir Abdulla and Emir Feisal are best known here, and both have great influence in Irak.

The adherents of the Emir Feisal have sent him an invitation to present himself to the people and the Assembly which is soon to gather together, and I have caused the Emir Feisal to be informed that no obstacle will be placed in the way of his candidature, and that, if chosen, he will receive the support of Great Britain. If he should prove acceptable to the people and the Assembly a solution will have been reached which offers, in the opinion of the highest authorities, the best prospects for a happy and prosperous outcome.

Mr. Churchill added that as soon as the Arab Government had been established and a ruler chosen, the British Government would then "enter into negotiations with that ruler to enable us to readjust our relations with Mesopotamia upon a treaty basis, thus recognizing in a more direct form their independence, and thus still further disengaging ourselves from the problems, burdens and responsibilities of those embarrassing regions."

According to his information, there was more danger in Palestine at the present time than in Mesopotamia, although in the former place the trouble, if it arose, could be more easily dealt with. In regard to the Balfour declaration about Palestine being converted into a national home for Jews, he said:

The difficulty about this promise of a national home for the Jews in Palestine is that it conflicts with our regular policy to consult the wishes of the people in a mandatory territory, and to give them representative institutions as soon as they are fitted for them, which institutions they would certainly use as a veto on all further Jewish immigration. I believe, however, that with patience and coolness and some good fortune we shall be able to find our way. The British Empire has been built up by optimists and by positive assertions rather than bad negations.

There are in Palestine 500,000 Mussulmans, 65,000 Christians and 65,000 Jews. There have been brought into Palestine this year under the Zionist scheme about 7,000 Jews.

This immigration, with the propaganda, has greatly alarmed and excited the Arab population. \* \* \* The Arabs believe that in a few years they are going to be swamped by scores of thousands of immigrants, pushed off their lands, deprived of the scanty food of the country, and gradually lose control of their institutions and destiny. As a matter of fact these fears are quite illusory. \* \* \*

The Jewish immigration is being watched both from the point of view of numbers and character. No Jews will be brought in beyond the number that can be provided for by the expanding development of the resources of the country. There is no doubt whatever that at the present time the country is greatly under-populated.

I defy any one seeing work of this kind not to feel that the British Government, having taken up their present position, cannot cast it aside or allow it to be rudely and brutally uprooted and overthrown by a fanatical Arab population attacking from outside. It would be a disgrace to allow this to take place. With a proper development of the resources of Palestine, and if Jewish capital is available for the creation of irrigation works on the Jordan, I have no doubt there will be, year by year, new means of livelihood for a moderate number of Jewish immigrants, and that will conduce to the general prosperity of the country.

I see no reason why there should not be a steady flow of Jewish immigrants into the country, accompanied by a general increase in the well-being of the whole population. We cannot possibly agree to allow the Jewish colonies to be wrecked or future immigration to be stopped without definitely accepting the position that the word of Britain no longer counts through the East or the Middle East.

The draft of the mandate for Mesopotamia follows the general scheme of the Palestine mandate (See CURRENT HISTORY for March, page 509), with the exception of certain details of procedure which will be pointed out, and the separate object for which each was made: the aim of the former is the establishment of an independent Arab Nation; that of the latter is the establishment of "a national home for the Jewish people."

Although the mandatory system has been introduced into the covenant of the League of Nations, the opposition in the British Parliament has not lost sight of the fact that there is nothing in the covenant imposing a duty upon the United Kingdom to accept a mandate. This point was emphasized the other day by Lord Robert Cecil in the House of Commons. But a mandate, when once accepted, cannot be modified in any way except by the consent of the Council of the League of Nations. For this rea-

son the British Parliament is scrutinizing the Palestine and Mesopotamia mandates with some care, lest the United Kingdom be committed to responsibilities beyond its strength.

#### THE MANDATE FOR MESOPOTAMIA

According to Article 1, the mandatary has the duty of framing, within three years from the date of the coming into force of the mandate, an "organic law" for Mesopotamia, which must be framed in consultation with the native authorities and contain "provisions designed to facilitate the progressive development of Mesopotamia as an independent State."

Article 2 defines the duties of the mandatary in regard to the maintenance of troops for defense and for the preservation of peace until the "organic law" or Constitution shall go into effect. However, the control of foreign relations is entrusted to the mandatary (Art. 3), who is made responsible (Art. 4) "for seeing that no Mesopotamia territory shall be ceded or leased to, or in any way placed under the control of, the Government of any foreign power."

The mandatary is to be responsible for observing that the judicial system established shall safeguard the interests of foreigners, the law, and, "to the extent deemed expedient," the existing jurisdiction with regard to questions arising out of certain religious beliefs (Art. 6); and the mandatary undertakes to insure to all "complete freedom of conscience and the free exercise of all forms of worship, subject only to the maintenance of public order and morals" (Art. 8). Articles 9 and 10 forbid discrimination against any religion, race or language and exact protection for missionary establishments. For these things the mandatary is responsible (Art. 11) as it is to see that there is no discrimination "against the nationals of any State member of the League of Nations (including companies incorporated under the laws of such State) as compared with the nationals of the mandatary of any foreign State in taxation, commerce or navigation, or in the exercise of industries or professions."

Upon the coming into force of the "organic law" an arrangement is to be made between the mandatary and the Mesopotamian Government "for settling the terms

upon which the latter will take over public works and other services of a permanent character, the benefit of which will pass to the Mesopotamian Government," and such arrangement is to be communicated to the League of Nations (Art. 15). An obligation is thrown upon the mandatary by Article 16 of making "to the Council of the League of Nations an annual report as to the measures taken during the year to carry out the provisions of the mandate."

#### FRENCH HOSTILE TO NEW POLICY

In the course of his speech, Mr. Churchill had taken pains to reassure France in regard to the change of British policy in the Middle East. He said:

The general policy which we are pursuing of working with the Shereeffian family is in no way opposed to the interests of France. On the contrary, it is the surest method open to us of securing France from disturbance in Syria by Arab influences, with which she has unhappily disagreed.

It would be deeply injurious to both if France and Great Britain should be unable to act together in the Middle East. It would be absolutely fatal to our joint interests if the impression were to continue, as it has done during the last two years, that one country was indifferent to Arab aspirations, and that the other was specially opposed to the Turks. In such a way we should unite all the forces in those lands in hostility against us at the very time when we wish to reduce our military forces and the heavy expense to which both countries are put thereby. If we wish to maintain our position and to discharge our responsibilities in the Middle East, England and France must show appeasement and friendship toward both the Turks and the Arabs.

Notwithstanding these words, there were serious critical articles in the Paris papers of June 15, with concentrated censure of Great Britain's patronage of Prince Feisal. The Echo de Paris observes:

Mr. Churchill announces that the Emir Feisal, traitor to the oaths he took and driven from Damascus by the French, will reign at Bagdad, while his brother, Abdallah, will act as Regent over the Transjordan country. We can scarcely rejoice over such news, which is contrary to certain assurances brought to us by Lord Hardinge on his arrival in Paris. \* \* \* So long as our British friends continue to make use of it (the Hedjazian theocracy) to flatter Pan Arabism, the East will continue to furnish us with unpleasant surprises.

The Temps said much the same in a milder tone, and so did Auguste Gauvain in the Journal des Débats.

# PERSIA'S PLANS UNDER NEW LEADERS

[PERIOD ENDED JULY 10, 1921]

**B**ETWEEN June 4 and June 11 Persia inaugurated a new Cabinet with the Shah's approval. The new Prime Minister emphasized the neutrality of the nation, and at once began to put into effect the financial clauses of the Moscow Treaty (see June CURRENT HISTORY, page 526) by first establishing the Russian Bank as the State Bank of Persia, with branches in the provinces. This is the first example of Lenin's recognition of capital in a treaty made with a foreign Government. The transfer of Russian gold has already begun across the Caucasus and the Caspian Sea. With this treasure at Teheran the Moscow Government will be in a position to play a new rôle in the Middle East. Few details of the affair have become known, but those few fill with concern both No. 10 Downing Street and the India Office, Persia's new Cabinet is made up as follows:

Prime Minister and Home Affairs—GHEV-AM-es-SALTANEH.

Foreign Affairs—MOHTACHEM-es-SALTANEH.

War—SARDAR-SEPAH.

Minister Without Portfolio—MOSTACHAR-ed-DOWLEH.

Education—MOMTAZ-ed-DOWLEH.

Posts and Telegraphs—MOCHAR-es-SALTANEH.

Justice—AMID-es-SALTANEH.

Public Works, Commerce and Agriculture—ADIB-es-SALTANEH.

Health—FAHIM-ed-DOWLEH.

In his speech from the throne, the Shah on June 22 outlined broadly the plans for the future. These included the convocation of the Senate, the organization of the army, administrative reforms, the balancing of the budget, agricultural development, and improvement in the living conditions of the peasants. In regard to foreign policy, Persia would seek friendly relations with all countries and would seek admittance to the League of Nations. The entente with England, based on the abrogation of the Anglo-Persian agreement of 1919, was to be consolidated. Closer ties with Soviet Russia and Afghanistan, following the conclusion

of the recent treaties with those nations, were to be established.

Ghevam-es-Saltaneh, the new Premier, explained these plans more at length in his ministerial statement issued on June 7. Here are the main portions of that statement:

My Government has firmly resolved to reopen Parliament, and to gain the support of the legislative authorities. My first efforts will be toward the development of the army on solid modern bases. My Government will strive, in addition to this program, to solve two great problems: (1) Social reforms, and amelioration of the lot of the peasants; (2) Economic reforms, the exploitation of agricultural and mineral resources of the country, the opening of roads, the creation of means of transportation and the gradual elimination of unemployment.

These two problems embrace the following reforms: (a) The engagement of experts and specialists, an extension of agriculture, reform in respect to the treatment of the proletarian peasants by landed proprietors; (b) The former Bank of Discount will be handed over to the Imperial Government, and will henceforth be recognized as the State Bank. It will be represented in all provinces, and its capital will be provided from all the country's resources; (c) Mining and other resources will be exploited by specially created Exploitation Societies under labor guarantees; (d) Necessary credit will be obtained, and a domestic loan will be issued in order to create institutions indispensable to the country; (e) Considering that financial reforms are an indispensable condition of all reform, the Government will endeavor to suppress all useless expenses, and to cover the budget deficit by new domestic revenue. The Government is firmly resolved to cover any eventual deficit by way of internal loans; (f) Public instruction will be developed, and if necessary the moneyed class of each region will be appealed to for aid in covering the deficit in the budget for primary schools; (g) All justified judiciary reforms will be carried through, preceded by the abolition of the capitulations; (h) Sanitary institutions will be created in all the provinces.

Animated only by the desire of attaining the moral and material welfare of the nation, my Government counts on the support of its beloved sovereign and on public confidence, and will strive to express faithfully these principles until the program laid down is fully completed.

# JAPAN FOR A CONCILIATORY FOREIGN POLICY

*Extraordinary Council in Tokio decides on withdrawal from Siberia and Shantung—  
Direct negotiations begun with the United States to solve all controversies—The Japanese  
movement for armament reduction*

[PERIOD ENDED JULY 10, 1921]

THE trend observable in Japanese foreign policy during the last few months is distinctly one of conciliation. As the time for the renewal of the Anglo-Japanese treaty drew nearer, the Japanese leaders showed unmistakable anxiety to allay the admitted feeling of hostility existing abroad on account of Japan's alleged imperialism.

One of the most impressive evidences of this new trend was the calling of a mixed military and civil colonial conference in Tokio. This council extraordinary opened on May 16. Although the sessions were not public, it was semi-officially understood that the whole colonial policy was thoroughly discussed with the high colonial officials especially summoned to attend the conference. The Government's policy in Manchuria, Korea and Siberia was given especial attention. Measures were considered to check the activities of the Korean insurgents in Manchuria, and it was decided—according to Japanese papers of a semi-official standing—to ask the Far Eastern Republic at Chita to co-operate in checking these activities. It was the sense of the council that a withdrawal from Siberia should be effected as soon as possible, and that trade and other agreements should be made with the Far Eastern Republic at Chita which would tend to stabilize the conditions prevailing. Proper control and supervision of the Koreans was to be made a condition of Japanese withdrawal ("and an excuse for remaining longer," comments the Japan Chronicle in its issue of May 26).

Regarding Japanese policy in China, it was decided to withdraw the Japanese troops in the interior of Shantung Peninsula, retaining a regiment only at Tsingtau as a proof to China of Japan's sincerity in offering to return the peninsula to Chinese sovereignty. The Maimichi, a paper pub-

lished at Osaka, stated that the necessity of withdrawing the Japanese garrison now stationed in the zone along the Shantung Railroad had long been recognized by the Japanese Government, and that delay in carrying out this withdrawal had been due solely to the failure of China to provide an adequate policing force. The new plan was to effect the withdrawal first, and then to press China again to begin negotiations for the retrocession of the territory. Besides the withdrawal, it was planned to abandon Japanese rights over collieries and other mines and salt fields, as well as other rights acquired under the Versailles Treaty, and to sanction the opening of the district as a commercial mart by China on her own initiative. It was proposed to obtain the consent of the Diplomatic Advisory Council and other official bodies concerned for the policy outlined, and strong hope was expressed that by making these concessions China would finally be persuaded to negotiate.

With regard to the controversy with the United States over the Japanese question in California and the Island of Yap, it was announced from Washington on June 15 that Japan had initiated new discussions through the Japanese Ambassador to Washington, Baron Shidehara, aiming at the settlement of all matters in dispute. Students of Far East policy saw in this move an attempt by Japan to place herself in a stronger position in respect to the renewal of the Anglo-Japanese Treaty, one of the great stumbling blocks to which, in the minds particularly of Canada and other British Dominions, has been the belief that the treaty embodied a threat to the United States. (Baron Shidehara has made a public statement denying that the treaty has any unfriendly meaning toward the United States. An appeal from prominent

Japanese residents in California asking Japan to send a representative Japanese statesman to give a series of lectures in California expounding Japan's pacific, non-militaristic purposes, had been received by Tokio on June 17. It was stated that a distinguished member of the House of Representatives would be chosen for this purpose.

A more or less unofficial delegation of Japanese Congressmen arrived toward the end of June. They came to repay the visit of American Congressmen to Japan last year. Received and entertained cordially, these visitors declared that all controversies between the two countries were susceptible of adjustment. They further stated, after an extended visit to California, that the conditions there were much more favorable to the Japanese than they had been led to believe before leaving Japan. Mr. Nakanishi, Chairman of the delegation, denied that Japan, in seeking a renewal of the treaty with England, had any thought of future hostilities with the United States. One of the purposes of his mission, he stated, was to report on the possibilities for a reduction of armament, which the people of Japan desired, as one means of lightening their taxes.

Much has been done to spread this desire for reduction by Mr. Yukio Ozaki, former Minister of Justice, who for a number of months has been conducting a campaign for disarmament covering 10,000 miles of territory in Japan. Mr. Ozaki ended his long speaking tour—an event unparalleled in the history of Japan—on July 4. He had spoken in almost all the important cities and towns from Kyusho in the furthest south to Hokkaido in the furthest north, addressing more than 100,000 people at 100 meetings. Postcards distributed and returned showed that 94 per cent. of his hearers favored limitation of armament.

Speaking specifically for the United States, Mr. Ozaki said.

I should like to convey this message to the people of the United States. If the American Government proposes an international conference to discuss restriction of armaments, it will surely be the beginning of a solution of all the diplomatic questions between Japan and the United States. If we are unable to prevent the clearly unnecessary wasteful naval competition, how can we expect to solve other irritable and more complicated questions between our two countries? The

latter will easily adjust themselves when the former has been settled.

A resolution urging Japan to take the lead in bringing about armament reduction was adopted by the Osaka Chamber of Commerce on June 24. A copy was handed to the Japanese Cabinet. It advocated that both the United States and Great Britain be approached with a proposal for reduction. A similar move was made by the Japanese League of Nations Union on June 29, in a resolution which also urged a settlement of the cable controversy with Washington over Yap, and the Shantung question, which it declared to be a source of prejudice to Japan throughout the world. The Chugai Shogyo, on the other hand, a Tokio daily, declared that it was for the United States to take the first step toward armament limitation, and declared that Japan could not understand the action of the United States Senate in passing the Borah amendment for naval reduction, and at the same time voting for an increase of the naval appropriations passed by the House of Representatives. The Yomiuri of Tokio came out with an article declaring that war was more than likely if the present causes of irritation continued, and suggesting that the only remedy was a mutual agreement for disarmament, whereby all suspicion of Japan's alleged militarism would be eliminated.

Viscount Kaneko, member of the Japanese House of Peers and former representative of Japan to the United States, in a contribution to Japan-America, the organ of the American Japan Society, published in June, urged the appointment of a joint High Commission to meet in Washington and to study the Japanese-American problem with a view to finding a solution satisfactory to both nations.

In contrast with this and other conciliatory suggestions, the American Federation of Labor went on record on June 21 as favoring total exclusion of Japanese and other Orientals from the United States, and the absolute repeal of the "Gentlemen's Agreement." "In California alone," said the resolution, "there are over 100,000 Japanese. This peril is not only a serious condition for California, but it is a positive menace to our entire nation." (The recent census showed only 71,942 Japanese in Cali-

fornia. These figures were contested by the Japanese Exclusion League on June 25, which declared that the figures of the California Bureau of Vital Statistics showed the real number to be 109,000, and that approximately 38,000 had escaped the census.)

Hanzo Yamanashi, Lieutenant General in

the Japanese Army, was appointed Minister of War to take the place of Lieutenant General Tanaka, who resigned late in April. The new War Minister was Chief of Staff of the Japanese Army during the siege of Tsing-tao, captured from the Germans in the World War.

## VLADIVOSTOK CAPTURED BY ANTI-BOLSHEVISTS

*The maritime capital is seized by armed forces formerly under Kappel, and they set up a new Government hostile to the Far Eastern Republic—Moscow's protest to Great Britain meets with a rebuff—The Chita Government's struggle for existence*

[PERIOD ENDED JULY 10, 1921]

THE chaotic situation in Siberia has been rendered more chaotic still by the success of the partisans of General Kappel, a former leader under Admiral Kolchak, in taking Vladivostok and expelling the Socialist Government established there and ruling as a branch of the ambiguous Far Eastern Republic functioning at Chita. Strong in its backing by Moscow, the Chita Government had repeatedly called on Japan to withdraw her forces and leave the Russians to manage their own affairs without interference from the outside. Similar demands had been made by Krasnoshchekov, the Chita Premier, on the British and French representatives. But just as Japan gave signs of being impressed by the growing strength of the buffer State, when it seemed as though she would recognize the de facto existence of Chita, and open trade agreements with her, the ever-active and menacing activities of the Kappelites culminated in the capture of Vladivostok, an anti-Bolshevist, anti-Chita Government was established over Vladivostok and the Maritime Province, and Japan's reputed intention to effect at least a partial withdrawal was nipped in the bud.

The Chita Government's violent protests to Japan, to Great Britain, and even to the United States, had no effect. Moscow, incensed by this new danger to her protégé, sent an intemperate protest to the British Government, charging that the overturn in Vladivostok was engineered by

Japan. This protest was answered by a curt note and the return of Tchitcherin's letter, on the ground that such charges against another nation, supported by no proof, were unprecedented in diplomatic procedure.

In addition to this menace of a new anti-Bolshevist movement, which might spread out from Vladivostok and engulf all Siberia, Chita had been confronted by an advance by another anti-Bolshevist leader, General Ungern Sternberg, from Mongolia, with a motley army of Mongolians, low-class Japanese and Russian soldiers of fortune. The Republic's army had defeated Ungern, but future attacks were feared. Chita also turned an anxious eye to the West, in view of the capture of Omsk by anti-Bolshevist elements, which cut off the small republic, ostensibly non-Communist, from the "mother-country," viz., Soviet Russia. This, in the large, was the parlous situation which faced the Far Eastern Republic at the time these pages went to press.

Eastern Siberia is so far away that few people realize the bewildering series of kaleidoscopic changes that are occurring there. Bad as the political situation in European Russia may be, and it is bad enough, it is favorable as contrasted with Siberia. The original Japanese force which joined with the British and Americans in the original occupation and remained behind after Japan's allies withdrew, has

grown into a formidable army. Unmoved by the protests of the Russians and the Chita Government, the Japanese militarists have maintained and strengthened their grip, have extended their line of occupation, have taken over the Saghalin fisheries and, if the charges of the Vladivostok and Chita Russians be believed, have pursued a policy of favoring every element opposed to peace and order in Siberia. Every faction which opposed the Japanese, it was charged, was disarmed, while those which favored the Japanese were allowed to retain their arms, and secretly encouraged. To such a policy was attributed the tolerance by the Japanese of a large army of Kappelites at Grodekovo, in the Ussuri region between Harbin and Vladivostok, an army variously estimated as between 12,000 and 25,000 unoccupied, predatory and law-defying soldiers, whose behavior had made them a source of terror to all the inhabitants of the district.

To understand the gathering of this anti-Bolshevist army at Grodekovo, it is necessary to follow the movements of Kolchak's scattered army following the overthrow of the Omsk Government. While Kolchak was still waging his war with the Bolsheviki two of his strongest adherents in the Far East were the Cossack Ataman Semenov in the Trans-Baikal region, and Ataman Kalmykov in the Amur Province. After Kolchak's fall Ataman Kalmykov was the first to be eliminated. Defeated by the Partizan Russian forces at the end of 1919, he was forced to flee into China. He was thrown into prison by the Chinese and was shot while attempting to escape. A part of his forces then gathered at Grodekovo, under the command of General Savitzki, and organized themselves anew for a continuance of the struggle with the Bolsheviki. Meanwhile they sought the protection of the Japanese and abstained from any aggressive attitude toward the population.

Ataman Semenov continued his reign of desperate deeds in Chita and the Trans-Baikal. After the elimination of Kalmykov and the withdrawal of the Japanese forces from this region, Semenov's position became precarious. His forces, unsupported by the Japanese, were easily defeated by the Partizans in the Fall of 1920, and Semenov himself was forced to take flight. He went first to Vladivostok, and

then to Port Arthur, where he was said to be living under the protection of the Japanese, and where he issued various orders as "Commander in Chief of the Far Eastern Army and Navy"—a title he had assumed on the downfall of Kolchak—in which he declared his intention to continue the struggle against Bolshevism. Meanwhile his dispersed troops, headed by General Saveliev, made their way through Manchuria and, drawn by the forces of attraction, joined with the remnant of Kalmykov's army at Grodekovo.

Several months later, a new stream of Kolchak soldiers poured into Grodekovo. This was the army of General Kappel, another Kolchak leader. After suffering defeat by the Bolsheviki in the region of Omsk in the Fall of 1921, Kappel led his shattered army on a spectacular and dramatic march to the East. Through nearly the whole of Eastern Siberia, across frozen snows and through bitter cold, decimated by typhus, suffering hunger, this ragged army marched, losing thousands on the way by cold and disease. General Kappel himself perished as the result of having one of his feet frozen. His men, or rather what was left of them, finally reached the goal of their long Odyssey—Grodekovo—and a certain part of them there joined with the remnants of the Kalmykov and Semenov armies, which, thus reinforced, made up a host approximating 8,000 seasoned warriors. New accretions brought this number much higher, and it has been estimated even as high as 25,000. According to the Vladivostok News of April 13, this large force continued the reign of atrocity which has been deemed by competent observers to be the cause of Kolchak's downfall, pillaging, burning, shooting, whipping, and so on, deeds which had already stained Semenov's reputation in the Trans-Baikal long before Kolchak fell. The whole Ussuri region was terrorized, and many of the population fled to Vladivostok, bearing with them harrowing tales.

Under the impression of these reports, the Provisional Government at Vladivostok strove to take measures to end these abuses. They sent a formal complaint to the Japanese command, which was suspected of favoring the armies at Grodekovo, and received no reply. The Russian Chairman of the Russo-Japanese Truce

Committee dispatched a long memorandum to the Chairman of the Japanese section of this committee, stating that he had reported the outrage at the last meeting of the Truce Committee, and that the Japanese representatives of the Truce Committee had expressed surprise, and stated that they had no knowledge of the existence or activities of the Grodekovo forces. The memorandum then cited a number of specific outrages which had been committed by the Grodekovo forces and outlined a program of military action to be carried out by the Vladivostok Government, and with which it asked the Japanese to make no interference.

This campaign, however, was never carried out and the Kolchak elements waxed strong and flourished. The bulk of the Kappel army was interned by the Japanese in and around Vladivostok. They had many friends and partisans in Vladivostok itself, and in April last this element made an attempt to seize the city and overthrow the Government. This attempt failed, and about 100 of the leaders were ignominiously deported. The activities of the group, however, continued, assuming a monarchist trend, and former officers of Kolchak swanked and swaggered, not only in Grodekovo, but in Vladivostok, boasting that the end of the Vladivostok-Chita régime was in sight. The Japanese commander, General Tachibana, in a statement issued late in April, denied absolutely that the Japanese were favoring the Kappelists, either those at Grodekovo or those in and around Vladivostok, and in view of the report of a coming overthrow in Vladivostok, declared that he had sent warnings both to Grodekovo and to General Semenov that Japan would not countenance such an upheaval. In case it should occur, he added, Japan would show strict neutrality between the factions, and would disarm all armed groups found in the Japanese sphere impartially.

The rumors of a coming cataclysm proved to be well founded. On the morning of May 26, the Kappelites, under the leadership of General Verzhbitski, advanced from Nikolsk and seized the city. The railroad stations and several public buildings were taken over, and the old imperial flag of Russia raised. The Japanese maintained their previously announced policy of neutrality.

The chief of staff announced that the Kappel troops had entered the city at the request of the non-Socialist organizations. The invaders disarmed all the local militia. The streets were filled with Kappel soldiers. The towns of Razdolnoe and Pokrovka, near Vladivostok, had also been occupied. Members of the National Assembly in Vladivostok were arrested, but subsequently released.

A new Government was at once set up under the leadership of M. Merkulov, a native Siberian, and a mining engineer domiciled in Blagoveshchensk before the war. A proclamation issued by him at the end of May declared that the main object of the new Government was to maintain order and to establish a democratic Government. The Assembly was dissolved, but a new Assembly was summoned to meet in July. Communists would not be urged to serve. The leaders of the former Government had placed themselves under Japanese protection. The policing of the city was shared by the Japanese and the Kappel troops. Order was restored by June 6. Declarations of allegiance to the new Government were pouring in from towns and villages in the whole maritime province.

One curious development was the refusal of the new Government to allow General Semenov to land. Semenov arrived by ship on June 4, soon after the revolution was effected, accompanied by a large staff. His entrance to the city was opposed, and negotiations proved fruitless. The new Government denied emphatically that Semenov was the anti-Bolshevist Commander-in-Chief. The Japanese command supported the new Government in refusing him entrance to the city, and sent the former leader a message saying that the Japanese military authorities deeply regretted that Semenov had timed his arrival at Vladivostok at a moment when his presence there could not do otherwise than augment the already chaotic state of affairs in the maritime province. His landing, said the note, could not but create the impression that the Japanese were assisting him. Semenov finally departed, it was said, to Grodekovo.

The Chita Government, in the face of these developments, showed great alarm, and sent a message to Moscow asking for assistance. A special meeting of the Chita leaders was held late in May, but no action was taken other than dispatching a note

to the Japanese authorities asking them to maintain neutrality. The possibilities of an armed clash between the Chita forces and those of Vladivostok were thoroughly discussed. Though the Chita army greatly outnumbered the Kappelites, there were many factors to be considered. The existence of the Grodekovo forces was one of these.

#### MOSCOW'S PROTEST

The Moscow Government, however, on being notified of these events, was aroused, and M. Tchitcherin, the Bolshevik Foreign Minister, dispatched a triplicate protest to the British, French and Italian Governments. This protest read in part as follows:

The struggle of the toiling masses of Russia for peace and for the right of self-determination has been subjected to a fresh trial. After gigantic efforts and miracles of heroism, after having valiantly repulsed the united attacks of the internal counter-revolution and of the majority of the foreign powers, they have won the right to govern themselves by their own Soviets of workmen and peasants. They hoped that henceforward they would be able to devote themselves freely to the internal reconstruction of Russia, while co-operating with other countries in their mutual interests in order to attain the economic aims which lay before them. Unfortunately their hope has been shattered by a fresh attempt at intervention from outside, and a fresh combined attack of the Russian counter-revolution and foreign Governments.

Under the protection of Japanese bayonets the White Guards of Vladivostok, who are only a handful, suddenly seized power in that town, and a similar coup has been carried out at Nikolsk, Oussouriisk and in other localities in the Japanese occupation. The extreme counter-revolution has thus been re-installed by the Japanese military power in the district under their occupation. The masses of Russian workers and peasants of the Far East have done all in their power to secure an acceptable peace with Japan. They have formed a separate democratic Republic in order to render this peace possible, and with this object the Independent Republic of the Far East signed an agreement with Japan, who was prepared on this condition to withdraw her troops from these areas or (sic) to restore their liberty to the Russian masses of the Far East. In the name of these latter the Government of their republic has made indefatigable efforts to secure a complete agreement with Japan, so that it might live with her in peace and in good neighborly relations; but the Japanese Government replies to its efforts after peace with a fresh violent attack on its internal liberty and its external independence.

The worst enemies of the Russian masses, the extreme reactionaries, whose avowed aim is to conquer Siberia with the aid of Japanese bayonets, and there to become the lieutenants of the Japanese conquerors, have been raised to power by violence in those places where the domination of the Japanese armies extends. But this first step toward an attempt at the conquest of Siberia is not an isolated instance. The Japanese Government has distributed to the capitalists of its own country fishing rights in the waters of Kamchatka, which hitherto belonged to the Russian co-operatives and to others of our citizens. Japan is introducing her control, she is seizing the dues imposed on the fishing areas of Kamchatka; this is an arbitrary seizure, and a pillage of the wealth of Russia, which the Russian Government regards as a violation of the elementary rights of the Russian masses. At the same time, it is with the aid of the Japanese military power that the remains of the counter-revolutionary bands of Semenov and Kappel are maintaining themselves on the borders of China and are occupying the Chinese Eastern Railway, and it is with the assistance of Japanese auxiliaries that the bands of Ungern are terrorizing Mongolia, and are there preparing their attacks against the Russian Republic. The agents of Japanese imperialism are penetrating even into Central Asia, where they are trying to propagate their sedition, and the emissaries of the counter-revolutionary elements of Turkestan are hastening to Japan to elaborate their plans together.

The Russian Republic time after time has reiterated its peace proposals to the Japanese Government, but in spite of all its efforts after peace the Japanese Government is at the present time the instigator of a fresh campaign of intervention against the power of the workers and peasants. The Soviet Government, which represents their will, warns the Japanese Government that the mighty Russian masses who have taken their destinies into their own hands, and have repulsed all the attacks of their enemies, will know how to wage to a victorious conclusion this fresh struggle, and will not fail to make their vigor felt by those who attack them. But the responsibility for these hostile acts cannot be confined to the Japanese Government alone. There are proofs in existence that the French Government, in its implacable hostility against the power of the workers and peasants in Russia, is an active instigator of this fresh campaign of intervention, and is participating in the plan of Japanese conquest in Siberia. Soviet Russia cannot but regard all the powers of the Entente as morally responsible for this fresh link of the interventionist system, which is the joint work of the powers of the Entente. It sees in it, on the part of the British Government, a hostile activity not in accordance with the Anglo-Russian Treaty. The Russian Government protests in the most energetic fashion against these acts directed against Russia, either directly or through the medium of the

friendly republic of the Far East, and reserves the right to draw from it the obvious conclusions.

To this long and vituperative message the British Foreign Office on June 9 sent a crushing reply. This communication, not signed by Earl Curzon, the British Foreign Secretary himself, but by one of his subordinates, was transmitted through M. Krassin, through whom the Moscow message had been delivered. The text of the reply follows:

Sir—I am directed by Earl Curzon of Kedleston to return to you as unacceptable your communication of the 4th instant respecting recent events at Vladivostok. It is neither customary nor conducive to good relations that one Government should in this manner, and without adducing any corroborative evidence, address entirely baseless charges to another, and his Majesty's Government must therefore decline to enter into any correspondence with you on the matter.

The Left Wing of the British Liberal Party and the Laborites, however, did not allow the matter to rest there, but protested and sent a deputation as representatives of the "Hands-Off-Russia" Committee to the Japanese Ambassador in London to protest directly against Japanese encroachments in the Siberian Republic, and to declare that unless the Japanese withdrew, organized British labor would take a strong stand against the renewal of the Anglo-Japanese alliance. The Japanese Ambassador denied categorically that the Japanese had participated in the Vladivostok coup, and also denied reports that the Japanese were undertaking to transport the scattered forces of General Wrangel—former anti-Bolshevist leader in South Russia—to the Far East to join with the Kappelites. The Ambassador promised to obtain a reply from the Japanese Foreign Office to the allegations.

Meanwhile the Chita Government on its own behalf transmitted to the American representative at Peking a strong protest against the alleged intervention of Japan in the Vladivostok upheaval (June 23). M. Agarov, the Chita representative, in this note asked both the United States and Great Britain to induce Japan to withdraw her forces. The Chita leaders further pro-

claimed the followers of M. Merkulov to be outlaws and enemies of the Russian people.

What the immediate effect of the coup would be could not be foretold, but the possibilities of an armed clash could not be lost sight of. One effect was to arouse the hostility of the Chita Government to Japan. Hitherto the policy of the Chita leaders has been to bombard the Japanese Government with protests against the continued occupation of Siberia, on the one hand, and to carry on negotiations with Japan for recognition and a renewal of trade relations, on the other. Four separate protests against the occupation were sent between January and May. The Japanese withdrawal became even more remote in consequence of the upheaval, and if the new situation precipitated comes to a clash, the chance of Japan recognizing Chita and opening trade relations seems even more remote. Japan's whole contention has been that she could not withdraw her forces until the situation in Siberia became stable. At present, following the Vladivostok coup, it is worse than chaos. The Chita Government may be snuffed out like a candle flame by the Kappelites and other Kolchak forces. Moscow, whose resentment against the Japanese was eloquently expressed in the note to London, may come to Chita's aid. The situation is dangerous, and some new event may act as a spark to produce some new explosion.

Meantime an American mission, sent by President Harding soon after he assumed office, and headed by Lieut. Col. William J. Davis, left Manchuria on July 7 on its homeward way, bearing a favorable report of the Chita Government based on weeks of personal investigation of the conditions prevailing there. The picture presented is that of a small, courageous and struggling republic beset by a ring of enemies, whose army, ragged and unpaid, fights without hope or glory for the freedom of the new republic. Though admittedly defective, the Government is said to be quite successful in maintaining orderly conditions. The Chita people, though Russians, are said to be greatly afraid of being absorbed by Soviet Russia.

# THE MEXICAN OIL CONTROVERSY

*Imposition of 25 per cent. export duties on petroleum followed by closing down of many American companies in Mexico—Noteworthy statement by President Obregon—Deadlock over the oil tax question causes indefinite delay in American recognition of Mexico*

[PERIOD ENDED JULY 10, 1921]

TWO United States warships, the cruiser Cleveland and the gunboat Sacramento, suddenly appeared off the Mexican port of Tampico early in July. The usual request for permission to visit the harbor of a friendly nation was omitted, perhaps because the vessels anchored just beyond the three-mile limit. On July 5 the Secretary of the Navy announced that the vessels had been sent there to guard against any possible trouble in the oil fields. There were small detachments of marines aboard. The respective commanders had full authority to land forces.

American representatives of the International Association of Machinists, who were attending a convention of the Mexican Federation of Labor at Orizaba, telegraphed to Samuel Gompers, President of the American Federation of Labor, requesting him to enter protest against the statement that American warships were at Tampico to fight labor unions. Mr. Gompers telegraphed the protest to Secretary Hughes, adding that it was "a fair inference" that the warships were "being exploited by the employing interests for the avowed purpose of overawing the workers who are now engaged in a lockout imposed upon them." As a result, it was announced in Washington on July 8 that the warships had been ordered away. They left on the 12th. Meanwhile the Mexicans took the visit calmly, the ships were allowed in port and the sailors enjoyed shore leave for two days.

Washington officials explained the presence of the vessels as due to the desire to protect American oil companies in the event of damage through possible labor troubles, owing to unemployment caused by the oil men's ceasing to export their product. Many members of the Association of Mexican Oil Producers, which represents practically all the American concerns in the Mexican field, had decided to discontinue the shipment of

oil from Mexico after July 1, because of the increase of export taxes effective on that date.

The Mexican Government, instead of being coerced by this action into rescinding the export tax, announced on July 5 that oil companies which had closed down operations in the States of Tamaulipas and Vera Cruz (including the Tampico district) without sufficient justification, had been ordered to pay indemnification to employes thrown out of work. This is similar to a law in France which forbids the dismissal of employes without previous notice or the payment of a month's wages.

British companies, according to Mexican advices, apparently do not fear the 25 per cent. export tax, as they are reported to be speeding up operations instead of decreasing their working forces. Stoppage of shipments by the American companies, it was estimated, would cost them many millions, besides taking away almost 35 per cent. of world tankerage.

President Obregon, in a statement to the press on July 6, said he did not regard the situation seriously, as the oil companies were only trying to make the Government give in. But the Government was unwilling to change the taxes. In regard to the American warships sent to Tampico the President said he had not been notified by the American Government, and Washington had not asked permission, as was customary. General Manuel Pelaez, on July 5, was appointed Commander-in-Chief of the Mexican Government forces at Tampico and was sent there to keep order, which would obviate the necessity of landing American troops for that purpose. On July 6 Senator La Follette at Washington introduced a resolution protesting against such action without the express authority of Congress. Senator Lodge objected to its immediate consideration, and the resolution went over.

A noteworthy statement from President

Obregon was published in The New York World on June 27, in which he declared that Mexico would meet every just obligation without evasion. Mexico, he said, was determined to establish a full partnership between the Government and the people for the public good. Her policy was to finance the national progress through the medium of the national resources. Mexico had been called the treasure house of the world, yet 90 per cent. of the Mexican people had lived in horrible poverty, compelled to suffer and die from sheer lack of the necessities of life. Common humanity dictated a change. The country stood today on the principle that the natural resources of a nation belong to the nation. "Foreign capital will be invited and given every justice. What it will not be given is excessive privileges at the expense of the people's rights," the President declared.

In this policy [he continued] there is not even a hint of confiscation. This falsehood is the work of those who resent our policy

of nationalization because it blocks future campaigns of exploitation and monopoly. Every private right acquired prior to May 1, 1917, when the new Constitution was adopted, will be respected. Article 27, one clause of which asserts the nation's ownership of sub-soil rights in petroleum, will never be given retroactive effect.

Coming to the question of taxation: habitual protests and interference force the conviction that the investors of more powerful nations have the idea that we should submit our taxation plans to them for approval. I will not attempt to conceal the bitterness that this course has aroused. Every Federal tax is applied with absolute equality to natives and foreigners alike. The increase in petroleum taxes is for specific application to our foreign debt. To call the tax confiscatory is absurd.

President Obregon next quoted statistics to show that the Doheny oil group pumped close to \$28,000,000 net profits out of the soil of Mexico in 1920, and yet flooded the United States with complaints that the tax policy of the Mexican Government was crushing and ruinous. With regard to land

PRESIDENT OBREGON OF MEXICO (IN ARM CHAIR) CONFERRING WITH ENRIQUE BERMUDEZ, THE NEW CHILEAN AMBASSADOR. CHILE HAS GIVEN FORMAL RECOGNITION TO THE MEXICAN REPUBLIC

monopoly, he said honest taxation would force the landlord either to cultivate his holdings or to sell or lease to the small farmer, hitherto barred from the land.

President Obregon's statement, it was hinted in Washington, had been prepared with the assistance of George Creel, former head of the Bureau of Public Information in Washington, who was in Mexico City.

Although a majority of Mexican Deputies are in favor of establishing clearly the non-retroactive effect of Article 27, the Chamber on June 29 decided to drop the debate for a time and take up the agrarian law instead. Thus a settlement of the oil question appears to be deadlocked until the Mexican Congress meets in regular session in September.

Although it was announced that the increased export tax on oil would be used solely to make payments on Mexico's foreign debt, and these would be begun on July 1, that date passed without any action to this end. The only funds available for interest payments are those in the National Treasury, as oil export tax receipts will not be available until August. The International Bankers' Committee has decided to send no emissaries to Mexico until Obregon is recognized. Pierre Mali, Belgian Consul in New York, has been designated to represent Belgian bankers on the committee.

President Obregon's reforms have made Mexico quieter than it has been for a dozen

years. No real revolutionary movement is afoot, and the Government apparently is able to cope with minor uprisings and bandit attacks. General Rafael Pimiento, who commanded the guard which shot President Madero, was arrested on June 23. Colonel Reyes Salinas, a nephew of Carranza, who took part in Murguia's attempted revolt, was shot on July 3. The League of Nations was shocked on June 18 to learn that an arms factory in Danzig was making 10,000 gun barrels for Mexico. It was explained that the order had been received last October, before the Constitution of the free city was adopted, and the Council of the League dropped the subject.

Mexico, by a vote of 35 to 4 in the Senate, has prohibited the immigration of all alien labor, owing to the large number of unemployed persons in the republic. An international trade conference was opened in Mexico City on June 30. American exports to Mexico in the fiscal year ended June 30 were double those of the preceding year and six times as much as the annual average prior to 1918, approximating \$280,000,000 now. Mexico, for the first time since before the war, is importing American coal, and is buying great quantities of American cattle, significant of the trend to agriculture. The Department of National Property has asked for bids on a new hotel to be constructed in Mexico City to cost no less than 4,000,000 pesos.

## THE POTASH MINES IN ALSATIA

BEFORE the war there were three German companies and one French-Alsatian group working the potash deposits in the Mülhausen district of Alsatia. The German companies, which held concessions for two-thirds of the district, were placed in the hands of Senator Helmer for liquidation, and he is said to have accomplished miracles in the way of increased production. M. Helmer found the methods of production hopelessly out of date. He at once introduced a modern system, with the following result: Under the German régime the greatest quantity of crude salts produced was 325,886 metric tons in 1914; under the new French régime in 1920 the same mines produced 1,222,615 tons. It is confidently

expected that the product in 1922 will be more than half a million tons.

The German potash producers sought vainly to regain control of the world market, but their offers to the French Alsatian group were indignantly rejected. When Great Britain, in agreement with France, sought to impose a 50 per cent. duty on German exports, Germany threatened to cut off all further potash supplies. The Alsatian producers at once came forward and offered all the potash required at reasonable cost. Alsatia is now appealing to Great Britain and the United States for an agreement which will eliminate all further danger of German profiteers regaining control.

# LAUNCHING THE CENTRAL AMERICAN UNION

*Costa Rica stays out, but Nicaragua seeks admission while insisting on protection of its treaty with the United States in regard to a Nicaraguan Canal*

[PERIOD ENDED JULY 10, 1921]

THE Provisional Federal Council of the Central American Union began functioning in Tegucigalpa, Honduras, on June 17. Vicente Martinez, delegate from Guatemala, was named President of the Council, and Martinez Suarez of San Salvador, Secretary. A National Constituent Assembly was called to meet in Tegucigalpa on July 20 to arrange for the signing of the Federal Constitution on Sept. 15, the centenary of Central American independence. Foreign Governments were notified of the installation of the Federal Council and Nicaragua was invited to join the union.

The Federal Council, on July 3, gave out a communication from the Foreign Office of Nicaragua, announcing that republic's willingness to join the Central American Union and urging that obstacles to her entry be removed. The chief obstacle was a demand for the abrogation of the Bryan-Chamorro treaty with the United States, which gives the latter authority to construct an interoceanic canal. Nicaragua, before joining the union, will insist that the treaty be fully protected. She also wants a definite undertaking by the union that each State in the federation be permitted to negotiate loans for its own internal use, just as the separate States of the United States may make loans without reference to the Federal Government.

Although the Costa Rican delegates had ratified the Central American compact of union, the Costa Rican Congress refused to confirm their action, hence that country still remains outside. It was announced from San José on June 24 that a protocol preliminary to a definite treaty by which Costa Rica will cede to the United States rights along the San Juan River had been signed by the Costa Rican Government. This treaty will remove obstacles to the work of constructing the Nicaragua Canal and, in view of Secretary Hughes's recent declaration in favor of the Central Amer-

ican Union, it was believed both Nicaragua and Costa Rica would soon join. Emiliano Chamorro, former President and now Nicaraguan Minister to the United States, presented his credentials to President Harding on July 6.

Another possible difficulty for the new federation is a boundary dispute between Honduras and Guatemala. The former claims a strip of territory south and east of the Motagua River, which has always been in possession of Guatemala. With the building of the railroad from Puerto Barrios to Guatemala City, settlements sprang up in this strip of land. Honduras bases its claims on some old Spanish maps and surveys said to have existed when the whole of Central America was known as the Kingdom of Guatemala and was governed by a viceroy.

Dr. Rafael Montufar, former Justice of the Supreme Court of Guatemala and President of the Central American Liberal Congress, says the support of the United States is needed to help the Central American Union. He considers the federation a necessity if the five countries are to be freed from their quarrels and rivalries. "Panama," he says, "which is geographically to be considered part of Central America, should be invited to form part of the union."

Narcisco Garay, Panama's Secretary of Foreign Affairs, who arrived in Washington in June, has been making every effort to settle the boundary dispute with Costa Rica without accepting the White award, which the American State Department holds Panama must accept. He suggested the formation of an American League of Nations to operate in the Western Hemisphere, to which the Costa Rican dispute would naturally be referred. The State Department intimated that the suggestion was not welcome. Next Señor Garay suggested two plebiscites, one in the Atlantic and the

other in the Pacific region in dispute, which were also discarded.

The formal protest of Panama was presented at Washington on June 27, and Secretary Hughes on June 30 decided that Panama must accept the White award, but said the United States had no objection to Panama's dealing directly with Costa Rica to obtain her consent to reopen the award and settle the boundary between them amicably. The Panama mission, on July 7, issued a statement that Secretary Hughes might extend the time granted to Panama in order that a peaceful settlement with Costa Rica may be arranged.

Concessions for oil lands and exploration for other subterranean deposits have been canceled by Costa Rica, according to a dispatch from San José on July 6. The reason given was that the persons who got the concessions had been speculating with them.

Thirty Guatemalan students to be edu-

cated at the expense of the Guatemalan Government have been sent to the United States and Europe by President Herrera.

Salvador's Congress on June 25 approved a contract for the establishment of a bank of issue sponsored by Americans with a capital of \$1,000,000, the concession to run for fifty years; coined gold to the amount of \$5,000,000 is to be imported, and the bank will have authority to issue paper money to double its paid-up capital.

Notwithstanding the reduction of the United States Army, Secretary Weeks, on June 18, announced that the force on duty in the Panama Canal Zone would be maintained at its present strength. A special commission appointed to investigate the civil administration of the zone arrived at Panama on June 18. The tender Beaver and six United States submarines arrived at Cristobal on June 24. John Findley Wallace, Chief Engineer of the Panama Canal in 1904, died suddenly in Washington on July 3.

## FROM THE PERSIAN MINISTER

*To the Editor of Current History:*

Ever since I have been in this country I have taken great delight in reading your CURRENT HISTORY MAGAZINE, because I find that it covers thoroughly all important international questions without exaggeration. I noticed that you had an article on the Persian Cabinet in your issue of June, but I found nothing in your July issue. There have been quite a few important changes in Persia. On June 7 a new Cabinet was formed to succeed the one that had been set up by a coup d'état of the militarists, who held Persia under militaristic powers for over three months. I am happy to say that the new Cabinet, which is headed by his Highness Ghavam-es-Saltaneh, is of very stable form, because the Prime Minister and all the members of his Cabinet are good, sound men, who have held high positions on former occasions.

What I would like to impress upon you is the great importance of the abrogation of the Anglo-Persian agreement of 1919. That agreement was abrogated by mutual agreement with the British Legation at Teheran. Lord Curzon remarked at the time that he esteemed Persia's friendship more highly than any agreement; he also offered any assistance that Persia might need.

I have noticed on different occasions that Persia is referred to as a Soviet Government. Such a statement is absurd, as their Mohammedan religion does not allow Persians to have such a form of government. A denial by you will be highly appreciated.

ABDUL ALI KHAN SADIGH-ES-SALTANEH.

*Imperial Legation of Persia, Washington,  
D. C., July 9, 1921.*

# GERMANY UNDERBIDS ALL RIVALS IN SOUTH AMERICA

*While the whole continent suffers the severest depression in its history, the Germans are making use of the advantage of cheap coal and cheap labor—Steps taken by Brazil and Argentina to encourage immigration—Celebrating Peru's independence*

[PERIOD ENDED JULY 10, 1921]

FROM the Isthmus to the Strait of Magellan the countries of Latin America are experiencing an almost complete cessation of business incident to the collapse in prices, and every country in South America is passing through the most critical period of its economic history, according to Louis H. Kiek, General Manager of the Anglo-South American Bank. Despite this condition there is considerable rivalry to get hold of the trade and natural resources of the different countries. Hugo Stinnes, the German capitalist, has put three big steamers—the Hindenburg, Ludentorff and Tirpitz—in service to carry German cargoes from Hamburg to South America. Owing to the fact that coal is only half as costly in Germany as elsewhere, the ships are carrying enough for a round trip; this fact, combined with the low wages of the sailors, enables German vessel owners to underbid American lines.

Several parties of American prospectors are engaged in trips of exploration to the west coast of South America. One party of engineers is bound for the wilderness of Esmeralda, Colombia, looking for oil, gold and other minerals. Another party has left for the mountains of Ecuador.

ARGENTINA—The Hispanic Society of New York gave a dinner on June 24 to celebrate the centenary of the birth of General Bartolome Mitre, first Constitutional President of Argentina. President Harding joined in the tribute in a letter to Jorge Mitre, Director of the Nacion of Buenos Aires, a newspaper founded by the General, whom the President called "one of the foremost statesmen of all America in the epoch in which the independence of the continent was achieved." \* \* \* The general strike called to support the port workers proved a failure. To prevent recruiting by the port union from incoming

ships a Government decree was issued requiring the crews of all ships entering Argentina to carry the same identification documents as are expected from passengers, including passports and photographs; it became effective on July 19. \* \* \* Argentina, however, is making every effort to attract desirable foreign labor, giving free land to settlers in certain parts of the country. The newcomers live as guests of the nation at the Pasco de Julio, the immigrants' hotel, where they receive free board and medical treatment while waiting for location on lands or for the free State employment bureau to provide them with jobs. Their baggage, agricultural machinery or tools for their trades are admitted free of duty. \* \* \* An anti-trust bill, designed to prevent the formation of monopolies and combinations to fix prices, was passed by the Argentine Chamber of Deputies on July 8.

BRAZIL—A dispatch from Paris, dated July 8, announced that Brazil had chosen Elihu Root as one of its candidates for election as Judge of the Permanent Court of International Justice, the other candidates being Ruy Barbosa of Brazil, Joaquin Gonzalez of Argentina, and Professor Alejandro Alvarez of Chile. \* \* \* The North American Chamber of Commerce of Rio de Janeiro and the Brazilian Federation of Commerce on July 4 signed an international arbitration agreement. Contracts have been made with the German Immigration Syndicate for the colonization of 2,000 German families in Santa Maria Magdalena, in the northern part of the State of Rio de Janeiro, their passage money being advanced by the Brazilian Government. Three ships carrying Russian refugees were reported to have left Constantinople for Marseilles, where they were to embark for Brazil. On the other hand, the Imparcial of

Madrid, on June 26, published a list of complaints from Spaniards who had emigrated to Brazil, and who were asking the Spanish authorities for transportation home, because Brazilian employers seemed determined not to engage foreign workers.

**CHILE**—The resignation of Antonio Hueneus as Chilean delegate to the League of Nations was accepted by the Government on July 2. He resigned because Augustin Edwards, Chilean Minister to Great Britain, had been appointed Chairman of the Chilean delegation. \* \* \* President Alessandri, on June 15, sent to the Chilean Congress the budget for 1922, amounting to 320,000,000 pesos currency and 65,500,000 pesos gold. It showed that the Treasury deficit is expected to reach 121,500,000 paper pesos in 1922, owing to the small amount of nitrate being exported. The nitrate producers, on June 30, decided to reduce their price from 17 shillings a quintal to 14 shillings, and to make a further reduction to 9 shillings 9 pence next March. The Government had threatened to take control of the business unless producers lowered their prices. To avert the threatened deficit the Chamber of Deputies, on June 30, passed a bill providing for an internal loan of 100,000,000 pesos paper and 50,000,000 pesos gold. Reductions in the budget of 60,000,000 pesos were planned, and new revenue bills were expected to raise 60,000,000 more. \* \* \* Beltran Mathieu, Chilean Ambassador to the United States, has signed the issue of \$25,000,000 of bonds to be used by Chile for railroad improvement. It is proposed to construct a new transandean railroad line on a southern route to Northern Argentina, connecting with the principal Chilean coal fields. Argentina, it is believed, would become a good customer for the coal, which could be sold cheaper than that from the United States or Great Britain.

**COLOMBIA**—President Schultheiss of Switzerland has consented to act as arbitrator in the long-standing boundary dispute between Colombia and Venezuela. As the Swiss President is prohibited from leaving the country, he will appoint experts to visit the disputed districts, and will give his decision after they report. Both Colombia and Venezuela have agreed to accept it as final.

**PERU**—The dreadnoughts Arizona, Okla-

homa and Nevada, under command of Rear Admiral Hugh Rodman, left New York on July 9 to take part in celebrating the centenary of Peruvian independence, beginning on July 24. Major Gen. Hunter Liggett, representing the army, and four civilians—W. B. Thompson, Dr. William C. Farabee, Stephen G. Porter and A. Robert Elmore—with Rear Admiral Rodman, compose the American Commission. The Rear Admiral was taken on at Hampton Roads. The vessels were to remain at Callao one week. Lord Dundonald was designated to represent Great Britain at the celebration in Lima, and left England on June 22. General Mangin, heading a French mission, on board the cruiser Jules Michelet, stopped at Fort de France, Martinique, on June 20, en route to Callao. Ecuador officially declined the invitation of Peru to take part in the celebration on the ground that Peruvian soldiers who killed a number of Ecuadoreans in a border action had subsequently been decorated by Peru. As a result of her declination Alberto Bressani, Peruvian Chargé d'Affaires in Ecuador, was instructed to quit his post. The Ecuador newspapers advised similar action in retaliation. \* \* \* J. Fernando Gazzani, formerly Secretary of State of Peru, and Jorge Prado, a member of the Chamber of Deputies, arrived in New York on June 23 aboard the steamer Sixaola from Central America. They are two of the twenty-two Peruvians who were ordered deported to Austria by President Leguia, and whose practical seizure of the ship and landing at Punta Arenas, Costa Rica, were related in *CURRENT HISTORY* for July. They deny conspiring against the Government, and expect to remain in the United States until Peru's attitude changes. \* \* \* Fire in the Government House at Lima on July 3 destroyed the northwest wing, containing the Presidential suite and official records. The police reported that the fire was of incendiary origin, and that bombs had been planted or thrown into the part destroyed. Several arrests were made on suspicion. \* \* \* Several British subjects went to Peru early this year through offers of free passage and employment by the Peruvian Government, and failed to obtain it. The British Government, on their behalf, demanded compensation, but Peru neglected to comply, according to a statement in the

House of Commons. Lieut. Col. Amery, Parliamentary Secretary to the Admiralty, said further urgent representations would be made to Peru. \* \* \* The will of John Celestin Landreau, filed for probate in Washington on June 11, appointed Norman B. Landreau, his grandson, heir to the famous claim of the testator's brother, Theophile Landreau, a French scientist and explorer, against Peru for having discovered guano and nitrate deposits in Peru between 1844 and 1856. The original claim for \$100,000 was first recognized by Peru in 1865, but the money was never paid. A protocol was recently signed submitting the claim to the arbitration of a commission. Barton Smith, a Toledo attorney, was named American arbitrator on June 21, and Carlos Prevost, a Peruvian residing in the United States, was named by Peru. These two are to select as a third member a subject of Denmark, Great Britain or the Netherlands to decide on the claim.

VENEZUELA—Dr. Esteban Gil-Borges, Foreign Minister of Venezuela, who pre-

sented the statue of Bolivar to the City of New York last April, sailed for South America on June 15, after receiving the freedom of the city from Mayor Hylan. At the ceremonies Rodman Wanamaker handed the envoy a gold wreath to be placed on the statue of George Washington in Caracas. During his stay Dr. Gil-Borges appointed commercial agents in New York, Chicago and Boston to stimulate trade in Venezuela. \* \* \* An economic survey of Venezuela by a group of eighteen students in the School of Foreign Service of Georgetown University, under direction of Professor G. A. Sherwell, was made public on July 4. It says American goods have always been welcome in Venezuela, but the greatest obstacle to trade has been American selling methods. German and British merchants, the students report, "have always evinced a readiness to adapt their goods to meet the requirements of the Venezuelans, while it has been the policy of Americans in general to attempt to force their customers to alter their requirements to fit American goods."

## CUBA'S TRIBUTE TO A FORMER PRESIDENT

*Honors paid to the late General Gomez culminate in a riot at his funeral in Havana—Passing of Cuba's financial crisis—Affairs in Haiti and other islands*

[PERIOD ENDED JULY 10, 1921]

THERE was a riot at the funeral of General José Miguel Gomez, former President of Cuba, on June 19, in which one person was killed and scores more or less injured. The death of General Gomez in New York on June 13 was recorded in CURRENT HISTORY for July. Religious services were held in St. Patrick's Cathedral on June 16, after which the body, escorted by a battalion of infantry with full military honors, was taken to the Pennsylvania Station and, accompanied by the General's family, was transported to Key West, whence it was taken to Havana in a Cuban cruiser. The rioting occurred at the gates of the old Colon Cemetery, when the General's admirers broke through the police cordon and tried to reach the coffin to carry it on their shoulders into the cemetery. The funeral was one of the greatest popular demonstrations ever seen in Havana. The cortège,

which was two miles long, passed through streets strewn with flowers, while airplanes dropped flowers at the cemetery. President Zayas was the nation's chief mourner, following close behind the General's widow and children.

The worst of Cuba's financial crisis is believed to have been passed with the ending of the moratorium on June 15. Only one bank, the Banco del Proprietario, failed to meet its obligations. Relief is looked for through financial legislation by Congress, which President Zayas called to meet on July 18. Plans for a banking institution similar to the Federal Reserve System of the United States were prepared as one of the suggested remedies. President Zayas was hopeful the credit of Cuba could be restored to a point that would make possible the floating of a foreign loan. Government limitation of the next sugar crop to 2,500,-

000 tons was also proposed, which would be a reduction of 36 per cent. from this year's estimated crop of 3,900,000 tons.

American bankers, who discussed a loan to Cuba, decided to await word from Washington as to its advisability. A report from General Crowder was in the hands of the Government on July 10, and it was expected that the decision would be largely guided by his advice. One proposal discussed by President Zayas and his Cabinet was to issue a loan for \$40,000,000, and with the proceeds buy up the surplus sugar and dispose of it on long-term credits to foreign countries. There was little hope of selling in the United States, owing to the new tariff of 2 cents a pound on imported sugar. At such a rate, Cubans say, they cannot compete against Porto Rico, Hawaii and Louisiana sugar or against beet sugar.

Cuba is endeavoring to offset losses on sugar by increasing her pineapple crop, which, for this year, is estimated at 900,000 crates, valued at \$4,500,000. She is also curtailing Government expenses, the budget being reduced from \$104,000,000 to about \$65,000,000. Government bonuses to public employes are eliminated, the War Department appropriation has been cut from \$1,500,000 to \$940,000, and \$1,000,000 has been saved in the Treasury Department.

HAITI—Harris Lipschitz, formerly of New York, who had been engaged in land deals in Haiti, was murdered at Cavaillon, a small community near Aux Cayes, on June 13. The murder was reported to Washington the next day by Colonel John H. Russell, commandant of the Marines at Port-au-Prince. The Colonel indicated that the murder was the result of an attempt at robbery. In a letter to Ambrose L. Welch of New York, Lipschitz had predicted that he would be murdered as a result of a long-standing disagreement with certain marine officers, one of whom he accused of attacking his wife and sister-in-law. He said natives were being incited against him by officers, and that he expected to be assassinated. He was preparing to leave the island pursuant to an order of deportation issued by the Haitian Civil Government, at the direction of the American military forces, because he had complained against their treatment.

Secretary Denby issued an official statement on June 15 that Lipschitz's charges had been declared false by a board of in-

quiry, which met last year. Representative Isaac Siegel of New York wrote to Secretary Hughes, asking for a full inquiry into the murder. Mr. Siegel said that in the investigation of the charges last year Lipschitz was regarded rather as the defendant than as a prosecutor. Investigations into the murder have been started by both the State and Navy Departments.

On June 13 the Navy Department made public an order of Colonel Russell prohibiting articles or speeches attacking the American forces in Haiti, the President of Haiti or the Haitian Government. Trials of persons accused of making trouble were transferred from the Haitian courts to those established by the American forces under an order issued by Colonel Russell on May 26. This action was under authority given by the Secretary of the Navy. Representative Siegel characterized it as military despotism, "in contravention of every fundamental principle upon which the United States Government is supposed to rest."

SANTO DOMINGO—An enormous demonstration in favor of the unconditional withdrawal of the United States military forces from the Dominican Republic was held in Santo Domingo City on June 19. The desire was expressed that Santo Domingo assume no further obligations than the convention of 1907, providing for assistance by the United States in the collection and application of the customs revenues. The Archbishop, members of the Supreme Court, lawyers and the Faculties of the university took part in the meeting and protested against the American offer of conditional withdrawal. [For extended treatment of the subject of American withdrawal see pages 809 and 813.]

BRITISH WEST INDIES—Canada is not complete commercially or geographically unless associated with the West Indies, Winston Spencer Churchill, British Colonial Secretary, declared at a banquet given to the Prince of Wales in London on June 18 by the West Indies Committee. \* \* \* Jamaica has been suffering from the slump in sugar, and unemployment is increasing. Some estates have suspended operations, and others intend to close unless the Government grants a loan. Hundreds of Jamaicans are returning from Cuban cane fields, and many will have to be brought back by the Government.

# PUTTING BUSINESS ON ITS FEET AGAIN

*An analysis of the complex causes that retard the return of prosperity in both foreign and domestic trade—Goods overproduced in the high-price era now a handicap to readjustment—Figures showing decline of exports from various countries*

**I**T would be a comfort, indeed, to bankers, exporters and manufacturers who must take the foreign markets into account in even the smallest way—to all the innumerable interests, in fact, whose plans must give consideration to trade conditions in countries other than our own—if it were possible to read the changes in international conditions as a barometer is read, and to say, for instance, there seems to have been in July a 10 per cent. improvement over June. Many attempts have been made to reduce the complex factors which determine international conditions to some single index which would make such a determination possible. No one has yet met with success.

Great dependence is placed upon the condition of the exchanges. Daily records are kept and published in the financial sections of newspapers and in periodicals devoted to foreign trade. Over some periods the alterations in the exchange situation have indeed seemed to reflect changes in general business conditions, and justification seems to exist for the effort to forecast future movements from those of the immediate past and present. How wide of the mark such prognostications are frequently apt to strike was well illustrated by the recent remark of F. A. Govett, Chairman of the British Zinc Corporation, when he told his stockholders: "It sounds Gilbertian, but there is the solemn fact that until you can rectify the exchange by putting these countries on their feet, and by re-establishing them in normal relations to ourselves, they are going to take the trade and make the profits, until equilibrium again results, while the victorious country whose credit still is good is going to suffer all the misery and poverty of broken trade and unemployment."

## ADJUSTING THE ECONOMIC CHAOS

Mr. Govett referred, of course, to the Central European Powers. Comment of The Economist upon this remark cannot be im-

proved upon. Of it The Economist said:

This view that a depreciated exchange benefits the country that suffers from it was much in evidence during the debate on the "Safeguarding of Industries" bill. It was stated by Sir Alfred Mond, who attended on May 31, to be "the fact, which every economist will admit, that the country with an abnormally low exchange is receiving indirectly an enormous subsidy on exports. My honorable friend surely will not deny a proposition which is to be found in every shilling textbook on political economy." However this may be—and Sir Alfred might well oblige the world with a list of all these shilling economic textbooks that explain things so clearly—Sir Godfrey Collins, speaking on June 7, was able to cite some facts which seemed to show that this alleged subsidy is sometimes singularly ineffective, and that, at least under present circumstances, the direct contrary of depreciation can be accompanied by wonderful export activity. He showed that while Italy, with a depreciated currency, exported in 1920 about one-third—in 1913 values—of her pre-war total, America, with an appreciated currency, increased her export trade by 60 per cent. in pre-war values over her pre-war total. Clearly the rate of exchange is only one item in a very tangled problem, now, as always, not of those countries which have most vigorously debased their currencies. The world's trade seems to be in the hands, not of those whose organizers and workers will work hardest and most efficiently for the lowest profit and wages. If it were merely a question of currency debasement, Russia, Poland and Austria would be our most formidable rivals.

This aspect of the question was very clearly brought out by Mr. McKenna in the important address delivered to the Institute of Chartered Accountants on the subject of international debts, with special reference to the economic effects of the German indemnity payment. The Chairman of the London City and Midland Bank did not touch at all on the question of exchange. "At this moment," he said, "wages in Germany—I speak, of course, of real wages—are not more than half those paid in this country, and yet the German workman is laboring for long hours with great efficiency and with apparent contentment, or at any rate acquiescence. We may

perhaps find the reason for this industrial docility in the superiority of his present lot over his recent conditions. Though the German workman may be ill paid now, by comparison with what he endured in the war he is tolerably well off." In Mr. McKenna's belief this acquiescence in a low standard by the German worker may continue—"provided he receives such bare means of subsistence as will maintain his energy, it is possible that he will submit until the national obligation is discharged." If so—and it is a large assumption to which Mr. McKenna was careful not to commit himself—the position that arises is one that should be very seriously considered by our labor leaders and by all those responsible for the conduct of our industry; for in any case, even if the German workman is less docile than Mr. McKenna expects, there can be no doubt that the stimulus given to German industry by the need for meeting the indemnity payment will produce competition in neutral markets, which will seriously affect those of our enterprises which produce goods of a kind which our late enemy is best able to export.

Industry, whether agricultural or other, cannot pay the worker more than he helps to produce without very soon going bankrupt. As Sir George Touche told the meeting of the Trust Union:

"Many wage-earners took too literally the rhetorical promises of politicians at the last general election about a greatly improved standard of living for all. After enjoying dreams of a great national prosperity, and enjoying the uneconomic rates paid out of capital and loans during the war, it was hard to come down to a wage which each industry could afford to pay. Resistance was inevitable, but the alternative was no wage at all. It was time some statesman of commanding influence took his courage in his hands and told the people, who were ready to face facts, the plain, uncompromising truth."

Unfortunately, our statesmen of commanding influence, having deluded the electorate in 1918, now prefer to mend matters by not telling the truth—perhaps because they know they would not be believed after the failure of the former promises—but by a system of protection giving industry the hothouse treatment which is most unlikely to brace it to meet German competition. By their safeguarding industry measures they admit that they will raise prices, and they embitter labor's already exasperated feelings by raising prices at a time when the workers are called to accept wage reductions.

With such leadership as this the country is heavily handicapped in facing the problem that Mr. McKenna has stated for it so clearly—perhaps to the point of rather overstating it. His belief that the German Government can always keep down the workman's standard by issuing more paper money seems to assume that the latter will

consider only the money rates of his wages and not their real buying power; and his conclusion that "if Germany is able to meet her obligations, she will in doing so gravely impair our own international trade," assumes a limitation on the world's power of consumption which need not exist if the world will have the sense to leave off quarreling and devote a little attention to developing and enjoying its resources. The remedy that he proposes—of demanding payment from Germany in coal, timber, potash and sugar—can only, as he admits, be applied to part of the reparation payment, and its effect on our coal industry would seem to be the same as that of payment in manufactured goods on our manufacturing enterprise. We are bound, in order to meet our American debt, to export goods and receive none in return, and the sale of our investments during the war means that we shall have less goods to receive on interest account. Goods and services that we can claim from Germany for reparation will help to fill this gap, and although the industrial competition of a great debtor is a new feature in the economic landscape, it should stimulate rather than terrify us if we can secure industrial peace and if our rulers will refrain from dosing our enterprise with unwholesome quack remedies.

#### THE ONLY ROAD TO PROSPERITY

The conviction that hard work, more hard work and only hard work will put the world again on its feet is held universally by the economists and thinkers of all nations. There is no other easier path to what we call normal conditions, although, unfortunately, the belief is still widely held in too many and too varied quarters that some such path does exist. The fact that a little knowledge is a dangerous thing has perhaps never been exemplified better than by present conditions. Before the World War few persons, except those whose profession it was to be informed, made pretense to much knowledge of international banking or economic conditions.

Today the economist has found a place in many of our leading banks and businesses. It is a step in advance for business, but it is a beneficent development of a situation which has at the same time less desirable features. Just as corporations have come to an appreciation of the value of the economist and his work, so the smaller business man down the line, even to the so-called man in the street, has acquired a notion of economy and its purposes; a notion so hazy, however, as to be apt to do him more harm than good. To too many men

economics implies some necromancy by which results may be accomplished without labor, some device by which ends may be attained without the effort which was once recognized as essential to achievement.

This nation, like other nations, is passing through that phase of the economic cycle which ordinarily would have been marked by business failures, and, before the creation of the Federal Reserve System, probably by a financial panic. The banks prevented both the one and the other. Businesses which once would have collapsed into the hands of a receiver were tided over by the banks, and the process of deflation, which, under other circumstances, might have resulted in a general rapid crash, was slowed down to a gentle pace, which enabled worthy businesses to weather the storm, but which, unfortunately, at the same time persuaded unworthy enterprises that they could avoid paying the price of their speculative ventures.

International prosperity can come, of course, only when Europe recovers industrially from the effects of the war. A much greater degree of prosperity than exists at the moment can be attained here, however, by a proper understanding of existing conditions, and the right effort to put them under proper control. Liquidation and deflation, which it was the part of wisdom to slow down at the outset, have now apparently been slowed down too much; it would seem that the time had come when pressure should be exerted to bring into line those industries which have been slow to recognize the trend of the times, and which seem hopeful even now of holding on until the mistakes of their own overproduction at a time when price was no object may be passed on to the ultimate consumer at approximately those same high prices.

#### HIGH PRICES A HANDICAP

Steel prices and the prices of building materials, goods at retail and finished manufactures have lagged too far behind raw materials in the price decline, and wages and railroad rates are clearly in need of sharp revision downward. B. M. Anderson Jr., economist of the Chase National Bank of New York, commenting upon those conditions said recently:

The general credit situation is strong and thoroughly under control. The losses consequent upon the drastic decline in prices

have been great, but they have been widely diffused. Moreover, the immense surpluses accumulated by great businesses of the country during the war and post-war boom have constituted a buffer to break the shock of readjustment. That is what surpluses are for.

The organization of our banks under the Federal Reserve System has made possible a degree of intelligent co-operation in handling the credit problems of readjustment which no one could have anticipated a few years ago. Our banks have extended credit freely to all solvent business men, and no unnecessary insolvencies have occurred. In previous crises the sheer inability of banks to advance additional credit often meant that, in addition to the necessary insolvencies, many solvent businesses were also pulled down. In the crisis through which we have just passed, it has been possible for solvent men to bring their slow assets into play and to borrow from banks what they needed to meet their quick liabilities.

Despite the strength of the credit situation, however, business stagnation is very great; and while some lines are improving, other important lines, notably steel, are on the down grade. There is a great deal of unemployment, and a great deal of work on part time. Profits also are dwindling. Every day that this continues makes the general situation less satisfactory, since it cuts under the buying power of the public, making further readjustment necessary. It is highly essential that something be done to break the deadlock and to start activity again.

It must, of course, be recognized that we cannot have really satisfactory business in the United States until European conditions improve. But it is possible for us to have much better business in the United States than we now have without improvement in Europe, if we will speedily complete our own domestic readjustment. The consuming power of our one hundred-odd million people in this richest country of the world is enormously great, even in periods of depression. And both consumption and production in the United States today are much below what they need be if certain domestic obstacles can be got out of the way.

The thing that is needed is a leveling down of certain elements of prices and costs which have so far resisted the general downward move. We must restore the price and cost equilibrium. The greatest resistance to readjustment has been in retail prices, steel and its products, building materials, wages, especially in the building trades and on the railroads; finished manufactures, as compared with raw materials; and railroad rates on bulky articles. When these things shake down in line with the general price decline, a substantial general revival should speedily follow, and a real building boom is probable. From a boom in the building trade, activity in many other

lines would grow. This leads to the question what the banker can do to facilitate a revival of business. We have, on the one hand, the clamor for more abundant bank loans and cheap money rates. Cheaper money is desirable, when, and if, it comes naturally, as a consequence of the liquidation of loans and the accumulation of funds in the banks through liquidation. Artificially cheap money as a substitute for real capital is undesirable. Those who are urging most vigorously the policy of easy credits seem to want them for the purpose of delaying liquidation and delaying readjustment. The chief idea seems to be that, if goods can be withheld from the market, they can be sold at a later time for higher prices. In other words, the call is for bank money to be used for speculative purposes. We have had enough of that in recent years. We must get down to bedrock and fundamentals, and strike a level of prices and costs which the markets will trust and on the basis of which goods will move. We must not make loans which will permit the withholding of goods from the market. We should, on the other hand, make loans freely to those solvent business men who have markets in sight.

The danger of a money panic is over now. The credit system has proved its strength. Moreover, the last few months have led to the accumulation of an immense body of accurate credit information. The banks of the country know, as they have never known before, the condition and standing of their customers. They know where the strength is, and they know that, on the whole, the situation is immensely strong. They know, on the other hand, where the weak spots are, and they know with accuracy and precision just how weak they are. They know which concerns can really pull through and which ones cannot. They know which of their customers are maintaining prices that are too high and are borrowing money in the vain hope of avoiding losses through later improvement in prices. It is possible, therefore, for the banks today to do what they could not have done with safety three or four months ago. They can safely and intelligently put on additional pressure in the direction of liquidation.

We can now recognize that, in averting a panic, we have taken care of too many weak concerns. We have slowed down the readjustment too much, as we have lessened its severity. The time has come, in the interest of the country as a whole, to put additional pressure on the weak spots, to clean up the wreckage, to clear the decks, and to get ready for the next upward move. Nothing so begets confidence in the markets as a knowledge that, through forced liquidation of substantial stocks of goods, bottom prices have been reached. Nothing will so promote the revival of business activity as the creation of the open, competitive markets which such a process

involves. Those markets which have kept most actively competitive have seen their worst. Forced liquidation in wheat, for example, brought low levels a good many weeks ago. The wheat market has had a very substantial improvement since. The same appears to be true in silks and in other lines. Those industries which have delayed their readjustment longest have done themselves harm and have done the country harm. The existing stagnation, with the steady pressure of overhead charges and with the steady curtailment of the buying power of the public, is much worse than the losses which prompt readjustment would involve. The duty of the banker under these circumstances is clear. He should not be party to policies which will continue the stagnation, and he should not lend funds to enable shortsighted men to delay the recognition of inevitable facts. We can have substantial business revival in a reasonably short time if we will force the pace of readjustment faster.

#### A "RAGGED" SITUATION

Meantime, what is the condition today? Economic tendencies have been conflicting: that is, some have tended to lower the level of business activity, while others have served to hasten the movement of recovery which has been noticeable in some lines for the last few months. The situation at best, however, must be called ragged. Some lines have reached a point of recession where whatever changes occur should be for greater activity and increased prices. At the same time, it is clearly evident in other lines that the period of readjustment is nowhere near its close, and for these the outlook should be continued recession, with prices and wages discovering ever lower levels. Unemployment is still widespread. Conditions in some lines—notably agriculture and the basic industries—seem, however, to be improving; but at best it cannot be said that stabilization has been reached, or that deflation in industry has reached a point where buying for the future can be bold and unhesitant. This failure of buying activity tends to delay stabilization in various lines, just as it was occasioned by this lack of stabilization; and a so-called "vicious" circle seems to have developed, which large interests, among them New York bankers, are striving to break by assistance in a movement to "Sell Now." The present period is certainly one of transition, and the time is not yet when courageous buying for the future will be undertaken by any other than the most daring

In the international field, trade seems to be upon the decline. The last Board of Trade figures for the month of June—Great Britain's foreign trade—show total imports of £38,180,000; exports of British products, £38,150,000; reimports of foreign merchandise, £7,080,000; total exports, £45,230,000, and excess of imports, £42,950,000. Details of this showing follow:

The British foreign trade in June makes the following comparison with June of 1914:

	June, 1921.	June, 1914.
Exports of British products .....	£38,150,000	£39,872,976
Re-exports of foreign goods .....	7,080,000	8,753,434
Total exports.....	£45,230,000	£48,626,410
Imports .....	88,180,000	58,281,653
Excess of imports.....	£42,950,000	£9,655,243

For France figures are available in detail only as late as April, although totals are at hand for May. These show imports in April of food 390,345,000 francs, raw materials 887,151,000 francs, manufactured articles 501,593,000 francs, total 1,779,089,000 francs, as against exports of food 176,333,000 francs, raw materials 468,453,000 francs, manufactured articles 1,179,683,000 francs, parcel post 107,799,000 francs, total 1,932,268,000 francs, an excess of exports over imports of 153,179,000 francs. For May total imports were 1,565,504,000 francs and exports 1,648,644,000 francs, an excess of exports of 83,140,000 francs. For Germany figures are not available.

DECREASE OF BRITISH EXPORTS FOR THE MONTH OF JUNE

Compared with May of 1921, the June statement shows the following changes:

Expts. British products..decreased	£4,938,410
Re-expts. foreign goods..decreased	151,836
Total exports .....	5,090,254
Imports .....	1,871,692
Excess of imports.....increased	6,961,946

Compared with June of 1920, the changes are as follows:

Epts. British products..decreased	£78,202,350
Re-expts. foreign goods..decreased	13,043,928
Total exports .....	91,246,278
Imports .....	82,311,230
Excess of imports.....increased	8,935,048

The trade for June, 1921, compares as follows with June, 1920, and June, 1919:

Exports of	1921.	1920.	1919.
British products	£38,150,000	£116,352,350	£64,562,465
Re-exports of foreign goods	7,080,000	20,123,928	11,963,960
Tot. expts.	£45,230,000	£136,476,278	£76,526,425
Imports	88,180,000	170,491,236	122,874,390
Excess of imports	£42,950,000	£34,014,952	£46,347,975

For the six completed months of 1921, the changes from the same period of the previous year are as follows:

Exports of British products .....	decreased	£268,574,095
Re-exports of foreign goods .....	decreased	86,158,123
Total exports .....	decreased	354,732,218
Imports .....	decreased	461,570,737
Excess of imports.....	decreased	106,768,519

The trade for the six months ended with June 30, 1921, compares as follows with the same period of 1920 and 1919:

Exports of	1921.	1912.	1919.
British prod'ts	£368,892,789	£637,466,884	£334,756,132
Re-exports of foreign goods.....	49,682,925	135,841,048	55,434,295
Tot. expts.....	£418,575,714	£773,357,932	£390,190,427
Imports.	571,763,947	1,033,334,684	716,787,426
Excess of imports.....	£153,188,233	£259,956,752	£326,596,999

Exports of British products during the last twelve months compare as follows:

	1921.	1920.	1919.
June .....	£38,150,000	£116,352,350	£64,562,465
May .....	43,088,418	119,319,422	64,344,632
April .....	59,867,585	106,251,692	58,482,412
March .....	66,808,961	103,699,381	53,108,521
Feb. ....	68,221,731	85,964,130	46,914,921
Jan. ....	92,756,094	105,879,909	47,343,281
Dec. ....	96,630,523	90,858,233	38,282,035
Nov. ....	119,364,994	87,110,531	43,218,879
Oct. ....	112,295,474	79,061,145	42,820,724
Sept. ....	117,455,913	66,500,628	40,152,143
Aug. ....	114,903,335	74,773,597	43,522,237
July ....	137,451,904	65,315,691	43,644,398

Imports during the same periods compare as follows:

	1921.	1920.	1919.
June ...	£88,180,000	£170,491,230	£122,874,390
May ...	86,308,308	166,414,032	135,612,488
April ...	89,995,504	167,129,955	112,065,823
March ...	93,741,654	176,647,515	105,752,979
Feb. ....	96,973,711	170,434,526	106,689,341
Jan. ....	117,050,783	183,342,988	134,456,436
Dec. ....	142,785,245	169,602,637	116,243,378
Nov. ....	144,260,183	143,545,201	116,770,580
Oct. ....	149,889,227	153,500,587	117,629,803
Sept. ....	152,692,339	148,588,572	97,995,688
Aug. ....	153,169,259	148,217,624	110,179,501
July ....	163,342,351	153,065,760	109,139,238

For the twelve last months the monthly excess of imports after allowing for imported merchandise re-exported, compares as follows:

	1921.	1920.	1919.
June .....	£42,950,000	£24,014,952	£46,347,975
May .....	35,988,054	26,834,532	59,772,504
April .....	21,604,257	40,470,844	40,236,953
March.....	18,044,688	56,916,777	43,695,209
Feb. ....	20,747,677	61,866,607	54,655,263
Jan. ....	14,339,568	51,998,602	82,643,136
Dec. ....	33,455,666	52,584,473	74,848,636
Nov. ....	11,780,330	36,168,261	70,634,051
Oct. ....	21,460,193	54,797,840	72,690,437
Sept. ....	21,885,818	68,389,266	53,154,317
Aug. ....	23,897,577	58,133,102	64,379,929
July ....	8,041,968	75,992,955	63,472,534

## AMERICAN TRADE FALLING OFF

June figures for the trade of the United States are not available at this writing, but those for May's trade show a falling off similar to that experienced by Great Britain. Here are the details:

Exports to Europe during the month aggregated \$177,000,000, compared with \$384,000,000 in May of last year, while for the eleven months ended with May, the total was \$3,231,000,000, as compared with \$4,568,000,000 for the same months of 1920.

Exports to South America during May aggregated \$48,000,000, against \$58,000,000 in May of last year, while for the eleven months' period the total was \$506,000,000, as against \$445,000,000.

Imports from Europe for the month amounted to \$61,000,000, as against \$92,000,000 the same month last year, and for the eleven months the total was \$883,000,000, as compared with \$1,061,000,000.

Imports from South America aggregated \$23,000,000, as compared with \$63,000,000 in May of last year, while for the eleven months the total was \$466,000,000, as against \$780,000,000.

Exports and imports by principal countries during May as compared with May, 1920, follow at the head of the next column:

## EXPORTS.

To—	May, 1921.	May, 1920.
Britain .....	\$80,000,000	\$152,000,000
France .....	10,000,000	58,000,000
Germany .....	20,000,000	21,000,000
Italy .....	23,000,000	33,000,000
China .....	8,000,000	12,000,000
Japan .....	12,000,000	44,000,000
Argentina .....	8,000,000	17,000,000
Brazil .....	4,000,000	14,000,000
Chile .....	1,000,000	4,000,000

## IMPORTS.

From—	May, 1921.	May, 1920.
Britain .....	\$19,000,000	\$44,000,000
France .....	12,000,000	10,000,000
Germany .....	6,000,000	5,000,000
Italy .....	7,000,000	6,000,000
China .....	8,000,000	22,000,000
Japan .....	23,000,000	31,000,000
Argentina .....	5,000,000	23,000,000
Brazil .....	7,000,000	10,000,000
Chile .....	3,000,000	15,000,000

## INTERESTING BANK STATEMENTS

The bank statements of Great Britain, France and Germany are of especial interest in view of the relation of these countries to the gold standard. The relation of Germany, of course, to any such standard is purely an academic one. Her issues of paper money have thrown her so far off the gold standard that it is highly doubtful if

she will ever be able to regain it. England and France, on the other hand, retain the gold standard in their calculations, anticipating a return to it, England with a better chance of success in the opinion of unbiased observers. At left is the most recent Bank of England statement compared with the previous week and the corresponding week in 1920.

From the most general viewpoint the situation today may be said to be one in which improvements of the future are clearly to be foreseen in industry and finance along the indicated lines which experience lays down for them, but these improvements are still in the future, and too much cannot be expected from day to day as progress toward this goal is slowly made.

## The latest Bank of England statement:

	July 7, '21.	June 30, '21.	July 8, '20.
Circulation .....	£129,108,000	£129,006,000	£122,743,000
Public deposits .....	19,720,000	15,296,000	17,886,000
Private deposits .....	129,041,000	131,739,000	117,035,000
Government securities ..	63,798,000	61,202,000	52,424,000
Other securities .....	85,102,000	85,827,000	83,894,000
Reserve .....	17,710,000	17,810,000	16,443,000
Propor. res. to liab.....	11.90%	12.11%	12.20%
Bullion .....	128,369,000	128,366,000	120,737,000
Bank rate .....	6%	6%	7%

The statement of the Bank of Germany is for the weeks of July 7 and June 30, and is in marks:

	July 7, '21.	June 30, '21.	July 8, '20.
Coin .....	1,102,700,000	1,102,100,000	1,102,100,000
Gold .....	1,091,500,000	1,091,500,000	1,091,500,000
Bills .....	1,565,400,000	1,632,300,000	1,632,300,000
Treasury bills .....	79,607,700,000	64,434,100,000	127,600,000
Advances .....	6,000,000	258,500,000	3,531,200,000
Investments .....	282,700,000	5,647,300,000	7,581,200,000
State deposits .....	5,647,300,000	14,744,900,000	10,477,000,000
Private deposits .....	14,744,900,000	8,311,200,000	4,700,000
Treasury certificates .....	8,311,200,000	1,700,000	6,163,900,000
Notes of other banks.....	1,700,000	70,321,000,000	71,986,700,000
Securities .....	6,050,200,000	912,700,000	830,200,000
Circulation .....	70,321,000,000	8,706,600,000	8,656,000,000
Other liabilities .....	912,700,000		
War loan notes.....	8,706,600,000		
Bank rate .....		5%	5%

That for France is in francs and gives the same comparison as the British statement:

	July 7 '21.	June 30, '21.	July 8, '20.
Gold .....	5,520,500,000	5,520,300,000	5,588,500,000
Silver .....	274,500,000	274,300,000	274,400,000
Loans and disc'ts.....	5,108,100,000	5,194,200,000	4,295,700,000
Circulation .....	37,667,000,000	37,422,000,000	38,012,100,000
Deposits .....	2,689,300,000	2,770,500,000	3,408,100,000
War advances to State .....	25,300,000,000	25,000,000,000	26,100,000,000
Bank rate .....	6	6	6

# Tools of Industry

In industry, art, science, in fact in all kinds of work, good results require good implements kept in good condition.

If the right sort of implement is important to an individual workman, efficient tools for industry and commerce are a vital necessity to the nation.

Telephone service is one of the tools of American industry and commerce in most common use and upon which much depends. The American public cannot afford to let this tool get dull.

To provide over twelve million subscribers with telephone connection; to transmit the vibrations of the human voice thirty million times a day and from any point to any other point throughout the land, demands an expensive mechanism of the highest order of scientific precision, and an efficient organization.

It is the aim of the Bell Telephone System, with the cooperation of the public, to be the most dependable tool of American industry.

European Director for the American Relief Administration, the Hoover organization which has undertaken to save the starving millions in Russia. He faces the task of combating the most appalling famine known in history.

# A HUNDRED YEARS OF ITALIAN LIFE

BY GUGLIELMO FERRERO  
Foremost of Italy's Living Historians

*A rapid sketch of how the original policy of the House of Savoy, in the course of an eventful century, has developed into the present dangerous situation in Italy—Deeper causes of the proletariat's threatening attitude*

JUST a century ago, in the year 1821, a revolution broke out in Piedmont. In the service of the House of Savoy were a number of Italian officers who had fought under Napoleon Bonaparte in 1814. They were bored with the routine of barrack life and disgruntled at the policy of the Holy Alliance, which gave no early promise of war. They came to an understanding with the Liberals and university students of Piedmont, whereby the army was to lead an uprising on a platform demanding—in addition to a constitution—war against Austria and independence for the Italian nation. At that time military men in Europe generally were inclining toward liberal ideas and the rapidly developing sentiment of nationalism. Their position and influence, they figured, would be more brilliant under a liberal regime than under the absolutism re-established on the ruins of Napoleon's empire.

The revolt was suppressed without much difficulty. Monarchy was really much more firmly established than had been supposed. But that was not the end of the matter. It was discovered that the Prince of Carignano, head of the junior branch of the House of Savoy, not only knew of the plot in advance but had actually encouraged it, at least in the beginning. He was so far compromised, in fact, that when the mutiny

failed he was obliged to leave the Court in Piedmont, take refuge first with his father-in-law, the Grand Duke of Tuscany (he lived a life of elegant luxury in the splendid villa of Poggio Imperiale in Florence), make amends by fighting in Spain for the restoration of the Legitimists and cool his heels for a long time in expectation of an eventual pardon—which was not granted without onerous conditions.

This indiscretion of the Prince, nevertheless, created the policy of the younger branch of the House of Savoy, which, in 1831, was to succeed the senior line, left without an heir by Charles Felix. Though he had failed in 1821, the Prince of Carignano was to prosecute the same policy under conditions much more favorable, when he ascended the throne. That policy consisted not in a frontal attack on revolutionary ideas—as was the practice of the Holy Alliance—but in making use of them (without at all believing in them) in running governments and expanding territories, thus transforming the radical parties into props, more or less stable, of public order at home, and, abroad, into instruments of diplomatic and military schemes “of broad purview.”

The Prince became King in 1831. Till 1848 Austria kept watch on him so closely that he could not think of squaring accounts for that little af-

fair of 1821. The work cut out for Charles Albert, as he was now called, was to be a good boy and a good King in the eyes of the Holy Alliance. But when the Monarchy of July, so called, collapsed in Paris, he did not hesitate an instant. On the fourth of March he proclaimed the Constitution, and three weeks later he declared war on Austria, thus carrying out at last his original program: an alliance of militarism, liberalism and nationalism—the program of 1821.

His effort came to grief at the battle of Novara. Even with the support of European Liberalism Piedmont was too small a country to whip the Austrian Empire. But the son of Charles Albert continued the same policy and brought it to success. Victor Emmanuel II. broke away from the old Absolutist nobility of Piedmont, which, since 1789, had been loyal to Legitimist monarchism. He did not break with the Church, but he accepted the revolutionary doctrine that politics must be an exclusive business of the laity. He joined the liberal nobility and the wealthy bourgeoisie against the nobles and clergy, who were partisans of reaction. He tried to be a constitutional sovereign, ruling with a Chamber and a Senate (elected on a basis of restricted suffrage) and with a relatively free press. He was so little afraid of republican ideas that he used both Mazzini and Garibaldi for his own purposes. He was so little afraid of the devil that he did not halt at the threshold of Rome. He succeeded in expelling Austria from Lombardy and Venetia, in conquering the rest of Italy, in founding a large kingdom and in building up a great military machine. Militarism, liberalism, nationalism! The alliance conceived by Charles Albert in 1821 produced, just fifty years later, the great things expected of it.

#### HUMBERT'S TROUBLED REIGN

King Humbert continued that policy. Just as Victor Emmanuel had governed with the Right (liberal no-

bility and bourgeoisie) against the Absolutists, Humbert governed with the Left against the Right. The Left was a group of varied elements, numerous among them the old republicans who had rallied to the monarchy in 1860, and who, in the name of "the people" and of "democracy" attacked the Right and its policies as unjust toward the masses. The Left laid special stress on the doctrine of popular sovereignty, of which the liberalism of the Right had been the first expression. It derived its main support from the middle classes and the intellectuals. King Humbert used the Left by exchanging a more democratic constitution, and a much more general suffrage, for an alliance with the Germanic empires, an increased army and navy, and the beginning of a colonial domain. His reign witnessed a more vigorous foreign policy on the part of Italy, which was to give the country, as a great military power, a louder voice in the concert of Europe. The man chosen to execute this policy was Crispi, a friend and a pupil of Mazzini, who had come over to the monarchy in 1860 without breaking his friendly connections with the Republicans and with the elements of the Extreme Left.

Humbert did not succeed as well as his father succeeded. The latter years of his reign, indeed, were very much disturbed. A sort of general law seems to govern all the movements springing from the French Revolution. They develop in successive and ever-widening waves, the wave behind trying to submerge the waves in front of it. The Liberal Right thus gave way to the Democratic Left. But during Humbert's reign two new waves sweep out on the political horizon of Italy, "Radicalism," so-called, and Socialism, the former bent on obliterating the Left and the Right, the latter determined to destroy not only these, but Radicalism also. The Radicals accused the Left of "betraying the people," just as the Left had accused the Right; and of the same crime they were in turn accused by

the Socialists. The result was a deal of confusion in the last five or six years of Humbert's life. In the turmoil the traditional policy of the younger branch of the House of Savoy seemed in danger of collapse. At one moment the King became quite alarmed and seemed disposed to adopt a policy of frank reaction. But principles cannot be compromised and at the same time kept vigorously alive. When Humbert looked about for tools to enforce a policy of extreme conservatism, he found them either entirely lacking or very rusty indeed.

#### THE MISTAKES OF GIOLITTI

Crowned in tragic circumstances—the assassination of his father—Victor Emmanuel III. resolutely went back to the traditions of his family. The situation was difficult, but he was keen enough to find just the man to adapt the policy of the younger branch of the House of Savoy to that situation. Mr. Giolitti comes from a respectable middle-class family of Piedmont, and he was born at a time when the Monarchy was virtually a sacred ikon in that province. Mr. Giolitti is one of the few politicians in Italy in whom devotion to the House of Savoy is sincerely and deeply rooted. Add to that feeling the patriotism rampant in the generation that grew up in the days of Victor Emmanuel's glory; and to them both a complete indifference toward the principles and doctrines of modern democracy. Free from any taint of these doctrines, Mr. Giolitti has been free to use them cold-bloodedly as an instrument of government, in the keen if at times disappointed hope that they could be turned to the interests of the country he loves and of the Monarchy to which he is still respectfully loyal.

Giolitti, in fact, succeeded in striking a bargain with the Radicals and the Socialists, whereby, with their assistance or at least without their opposition, he was able to develop, during the first fourteen years of

this century, a policy of militarism and nationalism, so far as such a policy, given general conditions in Europe, was at all practicable. He invited Radicals into his ministries, and tried to induce Socialists also to accept portfolios; but never was foreign policy more completely a mystery, more wholly a matter of backstairs intrigue, than during his days in power. In Humbert's time, the Triple Alliance had been the point of violent attack from the parties of the Extreme Left; but Mr. Giolitti twice renewed that alliance after calling the Extreme Left "to power"—renewals made without public discussion, under the veil of strictest secrecy, and with conditions which are but vaguely known even to this day. He gave the vote to the masses, though they were not demanding universal suffrage, and though everybody, Socialists included, was afraid of it. As has been well observed, he threw the key of the State into the street, in the hope that friends would pick it up and hand it back to him. But he conquered Tripoli, giving a final push at the already tottering peace of the world. He increased the army and the navy to the limit of his resources. If both army and navy were ill-prepared in 1915, the fault lay less with the policy of Mr. Giolitti than with the absurdities of the modern military system, which asks peoples to do the impossible.

In short, Mr. Giolitti worked zealously, however unwittingly, to help the men in charge of Europe between 1900 and 1914 prepare the great catastrophe. When the World War broke out he recoiled, indeed, from the possible consequences. He understood that Italy and the House of Savoy were risking their existence on one throw of the dice. But Italy was dragged into the war by the momentum of the whole political movement which began with the mutiny of 1821, and of which he had been the last and most skillful artisan. Was not the Kingdom of Italy built up, after 1848, on the policy of the

younger branch of the House of Savoy to exploit the jealousies and discords of the great powers of Europe? Were not the vital interests of the Kingdom of Italy inseparably bound up with those quarrels and conflicts? How then free Italy, overnight, from entanglements which only powers that had remained neutral in all the struggles of the previous fifty years could avoid? Mr. Giolitti was unable to stay the avalanche he had himself contributed to let loose upon the world. To make such an attempt even was to risk his very life.

#### TURMOIL UNDER NITTI.

The mistakes of Mr. Giolitti's successors, notably the supreme incompetence of Mr. Nitti, saved him and brought him back to power. On re-entering Palazzo Braschi after five long years of war, Mr. Giolitti found the State profoundly stirred by a gale of revolution blowing from two directions, from the Socialists on the one hand and the Nationalists on the other. In judging the present situation in Italy, we must not forget the origin of the disturbances at present raging in the country. Up to June, 1919, everything was quiet. Good order had been preserved till Mr. Orlando's Ministry fell (as the result of his defeats at the Peace Conference), and the King called on Mr. Nitti to form a new Cabinet. The Nationalists thought the moment ripe for reviving the tradition of May Day; and they tried to prevent the organization of this Ministry by demonstrations of violence in all the great cities. Praiseworthy the intention underlying this agitation: to save the country from a Ministry of monumental incapacity. But the means employed were decidedly revolutionary. The signal for nationwide turbulence was given.

Mr. Nitti managed to get his Ministry together; but early in July, when it had hardly begun its career of maladministration, another revolutionary movement, of far vaster proportions and emanating this time

from Socialist centres, was launched upon the public. From one end of Italy to the other stores and shops were raided. Goods were transported in great masses to the Labor Chambers and thence distributed to the populace at absurdly low prices. The authorities, in this revolt against the High Cost of Living, were compelled to lay the most capricious and arbitrary taxes upon sales. Days of frightful chaos, in short, during which Italy had a first and fortunately a fleeting taste of the Dictatorship of the Proletariat!

But the Nationalists were not slow in coming up abreast of their rivals on the Extreme Left. In September the raid on Fiume was pulled off. If all the agitation now going on in Italy leads in the end to a revolution, history will fix d'Annunzio's Fiume expedition as the beginning of it. There, for the first time in the history of the Kingdom, groups of soldiers resisted and disobeyed the Government. The effect on the imminent elections was tremendous. The Socialists won a victory that eventually turned the heads of leaders and rank and file alike. Revolution seemed for a moment in full view. All the bitterness, hatred, uneasiness, all the eagerness for revolt and change, which long and harsh repression during the war had intensified to pent-up violence, now broke forth, completely paralyzing a Government, weak and indecisive by temperament, and completely given over to inefficiency and lack of intelligence. Strikes, riots, violence on small and on large scale, arson, pillage, assassination! That is the story of the next months. Railroad men reached a point where they dared refuse to transport troops and munitions to destinations they chose to declare suspect. Mr. Nitti just sat around looking on, with his arms folded!

The public at first felt as helpless as the Government. Then gradually reaction got under way. The White Revolution took form in opposition to the Red. The famous Fasci began to

organize in different towns, mostly in connection with the interminable affair at Fiume. The object of the Fasci seemed at first to be support of d'Annunzio in every possible manner. But soon the Fascista movement was engaged in a hand-to-hand tussle with the Socialists and the communists. When Mr. Giolitti took hold of the Government again (in June, 1920), he found the communist agitation in full swing and the Fascista movement in the first phase of its development.

### DOINGS OF THE FASCISTI

Whether because he would or because he could do nothing, Mr. Giolitti did not interfere with either party. He successfully attacked a number of problems left in a muddle by Mr. Nitti—financial organization, the Adriatic question notably, and peace. But on the matter of keeping domestic order, he adopted a policy of watchful waiting, allowing the two revolutionary movements to mature to their mutual intoxication. The Socialists promptly took all the rope allowed them, finishing with the seizure of the factories in September, 1920. But when the country went to the polls for the local and municipal elections in November the Socialists bumped their noses on the Fusion bloc, which offered much more tenacious resistance than had been the case a year before. The Socialists held their ground, but no more than that. In 1919 they elected one-third, in round numbers, of the Chamber. In 1920 they captured about a third of the municipalities. But episodes incident to the inauguration of the new local councils, especially the terrible murders that took place in the Council at Bologna, were the signal for the avalanche of Fascista violence to break upon the country.

On all hands the Fascisti came forward to replace an absent or a timid public authority. At times they went far beyond anything that official action would have held in view. They conducted searching parties and made

arrests. Not being able to seize the newspapers of the Reds, they destroyed the printing plants. They attacked and dismantled Labor Chambers. They broke up Socialist meetings and Socialist parades, interfering everywhere with Socialist propaganda. They did their best to make life intolerable for leading Socialist Deputies. Finally, they began their punitive expeditions, their so-called "reprisals." When a town treated itself to some Socialist excess or other, the Fascisti would visit the place to exact "reprisals." Most often their fury was vented on Labor Chambers, Socialist headquarters, or Socialist "leading citizens." As is the case usually with "reprisals," innocent people suffered for the guilty.

The Government made no serious effort to check the Fascista movement. Indeed, it would have been difficult to repress the Fascisti without at the same time taking the Socialists in hand. To deal with both movements at once would have necessitated the proclamation of martial law. From this drastic measure Mr. Giolitti shrank, for a variety of reasons, some of them weighty, others of lesser importance. His policy was to let the movement wear itself out. He was waiting for general discomfort to make itself felt in the country and for an inclination to frown upon all revolutionary agitation to develop. He dissolved Parliament.

By a curious coincidence, the elections ensuing fell just a century after the revolution of 1821, a coincidence with a certain symbolical meaning. The recent elections were one more application of the policy of the younger branch of the House of Savoy, the most complicated, the most hazardous application of it that perhaps has ever been made.

Down to 1914, the dynasty and the Government rested on a solidly grounded Europe where the monarchical system still constituted the framework of the social order. They had gotten along by making concessions to the personnel and to the plat-

form of the revolutionary party most noisy at the moment—the Republicans before 1890, the Socialists thereafter. Thus they had found support against all opposition and their policy had consolidated the Italian Kingdom and enlarged it to its present boundaries. In all this intriguing, concessions to individuals were always more important than concessions to principles; and this explains the greater success of the policy with the Socialists than with the old Republican Party of Mazzini. Mazzini had principles as clear, as definite, as frankly stated, as those of the Socialists are vague, formulistic and superficial. It was no mean task to bring the old Republicans around to support the monarchy. The Socialists trooped up to the Quirinal at the first call, leaving their principles and their doctrines at the gate.

#### GIOLITTI'S PRESENT PLAN

But the present situation is far different from this. The dynasty no longer has a solid Europe to fall back on. Like all other Governments on this side of the ocean, it feels itself cut off on a patch of quicksand surrounded by a flood of social revolution; and it has before it, not one revolutionary movement, but two, and both hostile to the present Government, the Fascisti more bitterly hostile, even, than the Socialists. To be sure, there has of late developed in the Italian Socialist movement a faction disposed to restore the ancient doctrines and the ancient methods of revolutionary socialism. On the other hand, a large number of "leaders" have had a great admiration for Mr. Giolitti and would ask for nothing better than to come to an agreement with him. Among them secret aspirants to power are numerous. The Fascisti, on the other hand, detest Mr. Giolitti, who in their eyes is the "hangman" of Fiume; and for the King, as well, they have little use. It is apparent that the old policy which brought the House of Savoy from Turin to Rome, a policy requir-

ing the most adroit and subtle of piloting, can no longer progress on the basis of the traditional charting.

What was Mr. Giolitti's recourse in the circumstances? His first thought was to crush the Socialists by giving a free hand to the Fascisti. Everywhere the latter were given, and are still being given, a free hand to terrorize and disorganize the Socialist revolutionary movement.

And his second thought—which requires a still more delicate touch to execute—is to come to an understanding with the much-chastened Socialists, transform them into elements of order, and use them for a legal repression of the Fascisti.

This plan is an intricate one; and it will seem deeply and darkly Machiavellian to those who are unfamiliar with the history of the Italian Kingdom and who study Italian politics from an English or French standpoint. This method is a method made respectable by a century of successful use, and which therefore enjoys historical prestige enough to promise well even in the tangled situation at present prevailing.

It is a risky thing to prophesy the outcome. I can only venture an impression born rather of intuition and of instinct than of any convinced foresight. It is that the manoeuvre here contemplated is too involved to be capable of execution in times of agitation like the present. I believe that 1921 will mark the beginning of the end of the policy of 1821.

In the first place, the Fascisti will not be so readily attached to the fusion of the constitutional parties as Mr. Giolitti hopes. The Fascisti do not recognize the Treaty of Rapallo; they are bent on abrogating it. How, then, can they co-operate with elements committed to the support of that treaty? But there is also a more general question. The policy of overcoming two revolutionary parties by beating one with the other can indeed succeed, but only on one condition: that the Government using that policy have both parties so well in

hand that it can bend either as it wishes at the strategic moment. Has Mr. Giolitti or the man who has succeeded Mr. Giolitti, that masterful control over Socialists and Fascisti alike? Well, then, what will happen if, at the shown-down, the cards go against that policy?

Here again let me venture my own guess. I should not be surprised if as the result of combined efforts of Government and middle classes, the Socialist Party in Italy were reduced to harmlessness. People abroad will rub their hands with delight at this and enjoy in foretaste an era of order and prosperity for Italy. But the permanent restoration of order, not in Italy only, but in all Europe, is a much more serious business than has been supposed. If we could get the millennium by beating a Socialist ticket, how cheap millennia would be!

#### CAUSE OF EXISTING CHAOS

As a matter of fact, the disorder rampant in Europe, as a result of the war, has much deeper causes than Socialist propaganda, which is itself only in part a cause, and in larger part an effect of forces that have been working in Europe since the French Revolution to create the chaos of the present. Our pitiable condition is the work, more or less, of all the parties and groups that have governed Europe since the fall of Louis XVI., with the exception of those in control between 1815 and 1848. The Restoration, the reaction really tried to lay a solid, a coherent underpinning to the social fabric of Europe. All the other parties have tried to stimulate the spirit of discontent and revolt in the masses by pushing the military system of the French Revolution to monstrous absurdities, and by destroying in the consciousness of the nations the concept of an inviolable international law and the notion, as well, of a sacred, inviolable legality governing the internal relationships of peoples.

The great States of Europe have

been conducting ferocious struggles for military, political and commercial hegemony, fighting for domination over land and sea and for the aggrandizement of territories. To utilize the masses in this shameful struggle they have held out promises of all the wealth of the earth—riches, political power, knowledge. The parties who have been in control of Europe are responsible for the rapacious selfishness now raging in the masses. High wages, wages reaching the incredible figures recently prevailing, have filled the laborers with greed. Universal suffrage has given to mass stupidity the upper hand over intelligence. Popular education has developed vanity in the populace far in advance of good sense. Not content with this, the masters of Europe have finally put arms into the hands of the mob! A militarized proletariat! None of the civilizations preceding ours ever dreamed of committing such a bad mistake. And now the people, who think themselves the real people, affect astonishment, and ask whether there is not something wrong with the world, because the masses, rich, powerful, vain—and armed—refuse to obey the little oligarchies which assert the right to send them forth to be massacred by millions in the name of patriotism!

If today the Socialists, in spite of their ignorance and incompetence, are masters of half of Europe, they owe that eminence less to Proudhon and Karl Marx than to Napoleon and Bismarck. That is why something more than an election or a change of Ministries is necessary before Italy, or any other country in Europe, can return to normality. A long, a careful, a painful course of spiritual hygiene is essential.

To show how difficult the process will be, an anecdote will be sufficient. Some days ago I met an important public man—with years and honors laden—who is regarded in Italy as a pillar of the throne and a bulwark of public order. Conservatives never pronounce his name without a hush

of awe in their voices. This gentleman is at present engaged in organizing a national commemoration of the events of 1821. I said to him:

"But has your Excellency reflected on one thing? Is it prudent in times like these, when people are so generally anxious for a revolution, officially to unveil a monument in honor of a group of soldiers who mutinied against their legally constituted superiors? I am well aware of

the gratitude and worship we should accord to history. But isn't it wise to recall that old proverb which recommends avoidance of the word 'rope' in the presence of relatives of a condemned criminal?"

The stately personage, this high-priest of Conservatism, contented himself with a placid smile. He thought that I was joking \* \* \* as I pretended to be.

## ALBANIA'S REPLY TO GREEK CHARGES

*To the Editor of Current History:*

In connection with your statements in the August CURRENT HISTORY under the heading, "Albania's Feud with Greece," I wish to point out certain grave errors:

The affair of the seizure of the St. George Church of Korcha or Koritza by the Albanians in the first week of May last is entirely different from what has been depicted by the news coming from Greek sources. I was visiting Korcha at that time, and I can assure you that there was not the slightest disturbance in connection with the seizure of the church. The Greek Metropolitan—who is not a Metropolitan at all, but only a salaried Greek propagandist who draws generous emoluments from the Greek Foreign Office—not only did not "mysteriously disappear," but was in the city all the time, being closely guarded by the Albanian authorities against the just indignation of the native population.

The rest of the mendacious Greek report that the Albanians made an armed attack upon the non-existent Greeks of Koritza, and that massacres ensued, is so scandalous that it hardly deserves a denial. I can assure you again that not even a shot was fired or a sword drawn.

The next item of "Albania's Feud with Greece," that is, the question of Chimarra, is also entirely different in character, and it so happened that I was again an eye-witness to that event. The truth is, then, that the population of Chimarra itself sent to Valona, where I was staying at that time, a deputation of six men to secure from the Albanian Government certain privileges and immunities which they had

been enjoying in the past. I had a very pleasant conversation with the men myself at the villa of the Governor of Valona, whose guest I was, and I was so convinced of the justice of their demands that I took their side, even though I was and still am an official of the Albanian Government. The result was that the Albanian Government granted all their reasonable claims.

Coming to the more tender point of the alleged complicity of Albania, or of certain Albanians, in the alleged plot of having my country align itself against Greece as an ally of Mustapha Kemal Pasha, I beg to state officially that the Albanian Parliament, by a special act of June 20, empowered the Government to prosecute any Albanian accused of having dealings with Mustapha Kemal, as well as to adopt the most severe measures against any propaganda favoring Turkey or Mustapha Kemal. There may be some Albanians who think, rightly or wrongly, that it is to the interest of Albania to help Mustapha Kemal against Greece, in view of the fact that the latter power has never ceased to intrigue in Albania, as shown by the St. George and the Chimarra affairs; but this is no ground upon which to accuse the Albanian Government of favoring Mustapha Kemal, any more than the United States Government could fairly have been accused of complicity with either belligerent prior to its entry into the World War because there were Americans who sympathized with one or the other side.

C. A. CHEKREZI,

Albanian Commissioner to the United States.  
Washington, D. C., Aug. 4, 1921.

# THE DISARMAMENT CONFERENCE

*President Harding's invitation to Great Britain, France, Italy and Japan formally sent and accepted—Japan's misgivings as to subjects to be discussed—Facts as to the comparative size of navies and other questions at issue*

**A**FTER many months of isolation, so far as Europe's efforts to establish the world's peace on a firm basis are concerned, the United States has acted on its own initiative in calling a conference of the principal naval powers for the purpose of discussing the limitation of armaments, as well as all vexed questions which obstruct the way to the attainment of this almost universal aspiration.

The civilized world experienced a thrill of hope when President Harding on July 10 sent out his invitation to Great Britain, France, Italy and Japan to participate in a formal conference, preferably in Washington. Though the text of this preliminary invitation was not made public, the State Department gave the substance of it, and the President's view was made plain that the whole disarmament question was closely linked with Pacific and Far Eastern problems. China, it was stated, had also been included in the invitation. This first and general invitation was promptly accepted by all the powers addressed except Japan. The formal invitation was not sent out until Aug. 11. The text, identical in each case, read as follows:

suggestion that there should be a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions should also be discussed.

Productive labor is staggering under an economic burden too heavy to be borne unless the present vast public expenditures are greatly reduced. It is idle to look for stability, or the assurance of social justice, or the security of peace, while wasteful and

PACIFIC POSSESSIONS OF VARIOUS NATIONS CONCERNED IN THE PROBLEMS TO BE DISCUSSED AT THE WASHINGTON CONFERENCE. THE MANDATES OVER GERMANY'S FORMER PACIFIC POSSESSIONS ARE INDICATED BY THE BLACK OUTLINES

The President is deeply gratified at the cordial response to his

unproductive outlays deprive effort of its just reward and defeat the reasonable expectation of progress. The enormous disbursements in the rivalries of armaments manifestly constitute the greater part of the encumbrance upon enterprise and national prosperity; and avoidable or extravagant expense of this nature is not only without economic justification, but is a constant menace to the peace of the world rather than an assurance of its preservation. Yet there would seem to be no ground to expect the halting of these increasing outlays unless the powers most largely concerned find a satisfactory basis for an agreement to effect their limitation. The time is believed to be opportune for these powers to approach this subject directly and in conference; and while, in the discussion of armament, the question of naval armament may naturally have first place, it has been thought best not to exclude questions pertaining to other armament to the end that all practicable measures of relief may have appropriate consideration. It may also be found advisable to formulate proposals by which in the interest of immunity the use of new agencies of warfare may be suitably controlled.

It is, however, quite clear that there can be no final assurance of the peace of the world in the absence of the desire for peace, and the prospect of reduced armaments is not a hopeful one unless this desire finds expression in a practical effort to remove cause of misunderstanding and to seek ground for agreement as to the principles and their application. It is the earnest wish of this Government that through an interchange of views with the facilities afforded by a conference, it may be possible to find a solution of Pacific and Far Eastern problems of unquestioned importance at this time, that is, such common misunderstandings with respect to matters which have been and are of international concern as may serve to promote enduring friendship among our peoples.

It is not the purpose of this Government to attempt to define the scope of the discussion in relation to the Pacific and Far

East, but rather to leave this to be the subject of suggestions to be exchanged before the meeting of the conference in the expectation that the spirit of friendship and a cordial appreciation of the importance of the elimination of sources of controversy will govern the final decision.

Accordingly, in pursuance of the proposal which has been made, and in the light of the gracious indication of its acceptance, the President invites the Government of Great Britain to participate in a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions will also be discussed, to be held in Washington on the 11th day of November, 1921.

The text of the separate invitation sent to the Chinese Government to participate in the disarmament conference was also made public as follows:

The President is deeply gratified at the cordial response to his suggestion that there should be a conference on the subject of limitation of armament, in connection with which Pacific and Far Eastern questions should also be discussed.

It is quite clear that there can be no final assurance of the peace of the world in the absence of the desire for peace, and the prospect of reduced armaments is not a hopeful one unless this desire finds expression in a practical effort to remove causes of misunderstanding and to seek ground for agreement as to principles and their application. It is the earnest wish of this Government that through an interchange of views, with the facilities afforded by a conference, it may be possible to find a solution of Pacific and Far Eastern problems, of unquestioned importance at this time—that is, such common understandings with respect to matters which have been and are of internal concern as may serve to promote enduring friendship among our peoples.

It is not the purpose of this Government to attempt to define the scope of the dis-

DIAGRAM SHOWING HOW THE GREAT NAVAL POWERS COMPARE AT THE PRESENT TIME. THE BRITISH NAVY IS SEEN TO BE FAR THE LARGEST, AND THE JAPANESE THE SMALLEST

RELATIVE AMOUNT OF NEW WAR SHIP CONSTRUCTION INVOLVED IN PRESENT BUILDING PROGRAMS. THE DIAGRAM SHOWS HOW MUCH LARGER THE AMERICAN PROGRAM IS THAN THE JAPANESE OR BRITISH

cussion in relation to the Pacific and Far East, but, rather, to leave this to be the subject of suggestions to be exchanged before the meeting of the conference, in the expectation that the spirit of friendship and a cordial appreciation of the importance of the elimination of sources of controversy, will govern the final decision.

Accordingly, in pursuance of the proposal which has been made and in the light of the gracious indication of its acceptance, the President invites the Government of the Republic of China to participate in the discussion of Pacific and Far Eastern questions, in connection with the conference on the subject of limitation of armament, to be held in Washington on the 11th day of November, 1921.

Messrs. Lloyd George and Briand, the British and French Premiers, announced that they would represent their respective countries at the conference. Italy, though her interests in the Far East are of much less importance, was equally cordial in her acceptance. The acceptance of China was also received.

Japan, however, the fourth of the allied powers addressed, presented an

unexpected obstacle. The tone of the Japanese press indicated that the invitation had come as somewhat of a shock. The outstanding difficulties between Japan and the United States, involving the Californian issue; the objection of the United States to the Pacific mandates north of the Equator accorded Japan by the Peace Conference, especially as regards the cable rights of the island of Yap; the disapproval of Japan's policy toward China and Siberia, and the alleged tendency of the United States to encourage the Chinese in their anti-Japanese campaign — all these, complicated by mutual distrust and the increase of naval armaments on both sides, made President Harding's invitation a not altogether agreeable surprise for Japan. The Japanese Government delayed its decision for some days, holding secret conference as to what answer should be returned.

Finally, on July 14, a conditional acceptance was received from Tokio.

HOW THE THREE NAVIES WILL COMPARE IF THE PRESENT PROGRAMS ARE CARRIED TO COMPLETION. THE UNITED STATES NAVY WILL BE PRACTICALLY AS LARGE AS THE BRITISH

Japan expressed her willingness to accept an invitation to the conference on the limitation of armament, but desired to be advised as to the scope and nature of the subjects to be discussed in connection with Pacific and Far Eastern matters. It was semi-officially stated in Tokio that the Government would not consider discussion of such matters as the allocation of the Pacific mandates to Japan, or the Shantung controversy with China, on the ground that these had been settled at the Peace Conference.

The Washington Government, however, accepted the Japanese reply as in effect an acceptance, and sent on July 23, through the Charge d'Affaires at the American Embassy at Tokio, the following message:

The Government of the United States deeply appreciates the readiness of the Imperial Japanese Government to accept the invitation to attend the conference on the limitation of armaments.

The Secretary of State of the United States in the course of informal conversations with His Excellency, the Imperial Japanese Ambassador at Washington, has expressed the hope that the Imperial Government would not press its inquiry as to the nature and scope of the Pacific and Far Eastern problems to be discussed at the proposed conference in view of the fact that it is desirable that the full acceptance of the invitation of the American Government leave this matter open for adjustment in the precise agenda to be arrived at later.

The Secretary of State is willing to proceed with exchanges of opinion regarding the agenda prior to the meeting of the conference. He considers it inadvisable, however, at the present moment, to hamper the program and in particular to delay the arrangements for the conference pending an agreement regarding this matter.

The Japanese answer to this, received on July 27, was as follows:

The Japanese Government have taken note of the contents of the American memorandum of July 23, received through the American Chargé d'Affaires, in reply to the Japanese memorandum of July 13, on the subject of a conference on the limitation of armaments to be held at Washington.

It has been brought to the knowledge of the Japanese Government that the Government of the United States is willing to proceed with exchanges of opinion regarding the agenda prior to the meeting of the conference, and that it considers it advisable to adjust in that agenda the nature and scope of the Pacific and Far Eastern ques-

tions to be discussed at the proposed conference. The Japanese Government, on that understanding, are happy to be able to inform the American Government that it is their intention gladly to accept an invitation for a conference which shall embrace the discussion of the Pacific and Far Eastern questions.

The Japanese Government have been made aware, through the communications and the published statement of the American Government, and the conversations between the Secretary of State and Baron Shidehara, that the proposition of the American Government to discuss the Pacific and Far Eastern problems is based on the close bearing they have on the question of the limitation of armaments, which is the original and principal aim of the conference, and that therefore the main object of discussing these problems is to reach a common understanding in regard to general principles and policies in the Pacific and the Far East. Desiring, as they do, to contribute to the establishment of an enduring peace and to the advancement of human welfare, the Japanese Government earnestly hope that the proposed conference may attain the expected results, and that their ideals may thereby be brought nearer to realization.

In order to insure the success of the conference, the Japanese Government deem it advisable that the agenda thereof should be arranged in accordance with the main object of the discussions as above defined, and that introduction therein of problems such as are of sole concern to certain particular powers, or matters that may be regarded as accomplished facts, should be scrupulously avoided.

Though the underlying intent of the last paragraph was obviously to exclude the Japanese Pacific mandates, including Yap and the Shantung controversy, from the contemplated discussions, the fact remained that Japan had consented to sit in the conference called by the American President specifically for the purpose of effecting a mutual obligation to cease the financially ruinous and war-breeding competitive increase of armaments. This was considered alike in the United States and in Europe as a most encouraging augury. Following receipt of this last acceptance, the Washington Government proceeded to complete the arrangements for the conference. The date set for the opening—Nov. 11—had been chosen by the President more for sentimental, than other reasons. All the nations

invited had accepted this date by the end of the first week in August. It was announced by the State Department on Aug. 12 that President Harding had appointed Secretary of State Hughes to act as head of the American delegation to the conference. It was generally understood that Mr. Hughes would preside over the discussions, and that the President would turn over all the details of its organization and procedure to him. On Aug. 15 it was further announced that Senator Lodge would be one of the American delegates at the conference.

Though the invitations sent out had been restricted to the five main powers, China had also been invited to be present, and the State Department indicated that other nations, whose interests might be involved, such as Belgium and Holland (the Dutch colonial population in the East Indies, totaling 60,000,000 souls, makes this explainable), would be given an opportunity to attend the discussions. It was explained at the Dominion Conference in London that both the Australian and New Zealand Premiers, in view of the distance of their home lands and the six weeks' journey required, would probably be unable to attend the conference, and that these dominions would be represented by the British delegates. A sledge-hammer speech made in London in July by Premier Hughes of Australia, declaring that the proposed conference would be successful only if the conferring nations looked the facts in the face, and cleared up by definite understandings the dangerous conflicts of policy in the Pacific, made a sensation. The Australian Premier was emphatic when he discussed the question of Japanese immigration to Australia. No settlement would be accepted, he asserted, which tended to impair Australia's absolute sovereignty as "a white man's country."

M. Tchitcherin, the Foreign Minister of Soviet Russia, sent to the United States Government a demand that not only Russia, but also Moscow's protege—the Far Eastern Republic—be invited to attend the conference. Another uninvited Government—the newly formed Canton Re-

THE HUMAN FIGURES SHOW THE COMPARATIVE SIZE OF THE ARMIES NOW MAINTAINED BY THE FIVE GREAT POWERS

public of Dr. Sun Yat-sen—sent a special appeal for participation, declaring that the Peking Government, which had received an invitation, was representative only of Chinese militarism, not of the Chinese people, and that the Canton Government should at least be allowed to send delegates; for this solution he found a precedent in the attendance of both the Constantinople and Angora delegates at the recent London conference on Turkey.

The coming conference is pregnant with possibilities. What will be its outcome? Issues of tremendous importance are involved.

The three nations most deeply involved in the competitive increase of naval armaments, of course, are Great Britain, the United States and Japan. The British Parliament recently decided not to abandon the building program for the four post-Jutland battleships. Both Japan and the United States also are continuing their own costly naval programs. The United States, with its twelve great battle-

ships building, will be almost abreast of Great Britain by 1924. The Japanese are similarly committed with their "eight and eight" naval program. It seems, therefore, that even if the objects of the conference are attained, the effect will not follow for some years to come. The present comparative relation between Great Britain, the United States and Japan is shown by the following table and by the diagrams on preceding pages:

*Comparative Gun-Power Obtaining at Present.*

Great Britain .....	1,588,442
United States .....	779,173
Japan .....	340,596

*Comparative Tonnage Under Construction.*

United States .....	842,109
Great Britain .....	328,890
Japan .....	328,460

*Comparative Relation After Construction Is Completed.*

Great Britain .....	1,665,332
United States .....	1,621,282
Japan .....	669,056

It was with the desire to bring the ever-increasing power of these arma-

ments to a halt that President Harding called the Washington conference. Speaking at Lancaster, N. H., on Aug. 4, the President told a large throng of hearers that the whole idea of acquisition by might was fundamentally wrong.

The story of the world [he said] is one age after another of developing warfare, until we of this generation have witnessed the most gigantic conflict of all time, and this conflict was so gigantic, so colossal in treasure and so costly in sacrifice, that I believe that we of today are standing in a conviction and a determination that the whole development has been wrong, that the acquirement through might is contrary to human justice, and we of America and all the world are resolved today that wars ought to come to an end.

I am happy to bring you word that your Government is doing all it can to bring about a conference of nations and have their spokesmen here and come to an understanding that will remove the causes of war—not a surrender of nationality, not a surrender of our liberties or our rights to determine the ways we will pursue, but to remove the reasons for war and put an end to costly armament. I believe we shall succeed.

## A WORLD WITH TOO MANY SHIPS

SHIPPING throughout the world since the end of the war has increased from the 49,000,000 tons existing when the war opened to 61,974,653 tons. So says the new edition of Lloyd's Register Book, just published in England. This seems surprising, in view of the 15,000,000 tons lost by enemy action and marine risks during the conflict. It is explained by the rush of many nations to acquire new merchant shipping after the lessons of the war. The economic reactions of the war, however, seen in high wages, low output, disordered exchanges and falling credits, have brought a corresponding depression in shipping conditions, and the world's harbors are filled with ships that are idle for lack of cargoes.

The largest increases in ship tonnage as compared with 1914 are as follows: United States, 10,500,000 tons—an increase of 570 per cent.; Japan, 1,421,000 tons; France,

1,128,000 tons; Italy, 950,000 tons; Holland, 736,000 tons. The figures given for Great Britain, France and Italy include ex-enemy tonnage allocated to these countries in the post-war settlement. Taken together, the Scandinavian countries show an increase of a little over 500,000 tons. Germany, which possessed 5,000,000 tons of sea-going steel and iron steamers before the war, now has only 654,000 tons. Austria has lost all. Greece, for reasons unexplained, has dropped from 820,000 to 576,000 tons. From the figures given, sailing ships and wooden steamers are excluded. The future lies with the iron and steel steamer, while the oil-burning ship looms large on the horizon. The new Chairman of the American Shipping Board, who faces a difficult task, has declared that if he cannot dispose of the wooden ships on his hands he will break them up for firewood.

# AIRPLANE BOMB

VS.

# BATTLESHIP

BY GRASER SCHORNSTHEIMER

*Story of the recent Army and Navy bombing tests, in which the former German warships Frankfurt and Ostfriesland were sunk, with some conclusions drawn from the results—Mastery of the airplane over the battleship by no means proved*

THE joint Army and Navy bombing tests, which were held off the Virginia Capes in July, 1921, were to test the efficiency of aircraft and bombs against surface warships. Three phases of these tests proved to be of prime importance, as they brought out points which have long been debated, but not generally understood.

Possibly the most important test, from a technical standpoint, was that of the wireless-controlled battleship Iowa. The target vessel was controlled from another battleship, the Ohio, which was specially fitted for the purpose. The object was to ascertain the probabilities of bomb hits from reasonable altitudes on a moving target. Out of a total of eighty dummy bombs dropped, only two scored hits. The planes were required to come no nearer the Iowa than 4,000 feet, as it is certain that anti-aircraft fire would destroy any squadron bombing from a lower altitude. The Iowa was capable of making nine knots, but the naval officers in charge did not think it necessary to use more than four and a half, because of the very apparent inability of planes to hit a moving vessel. The ship zigzagged almost in the precise manner prescribed for avoiding submarine attacks.

Anti-aircraft gunnery experts declare that it is possible to keep planes away from the bombing area above the ship up to an altitude of 6,000

feet. If this is true—and there is certainly reason to believe that it is, for never has an air attack been successful, even to the extent of a single hit, in the face of anti-aircraft fire—it would seem that the planes in the recent test had entirely the better of the conditions in point of altitude. Had there been any anti-aircraft opposition they would probably have had to go at least another thousand feet higher, and the difficulties of hitting would have been raised by at least 15 per cent. Then, again, had the Iowa used her full nine knots, it is very possible that not a single hit would have been made even from the 4,000 foot altitude.

Weather conditions surrounding the tests threw a bright light on the efficiency of aircraft as naval weapons. If even a slight squall arose, bombing operations were suspended. If even a light fog drifted over the sea, it was also necessary to suspend them, as the low visibility precluded hitting. Then, again, it was impossible for the planes to locate the Iowa and her controlling ship when in a known hundred-mile area. This failure postponed the Iowa tests for a day. However, the planes were able to locate the ship the following day. Ideal weather conditions, not at all average sea weather, prevailed on the day the ship was bombed.

In consideration of the foregoing facts, it is only too plain that aircraft are at a disadvantage when pitted

against a battleship. During the war it was easy to bomb cities like London or Paris, even from extreme altitudes, because the targets were so large that a miss was impossible. However, anti-aircraft fire forced the bombing to be from extreme heights in these cases, and little damage was done. To bomb a warship or a fleet of warships is a much more difficult matter.

The second important test was conducted against the former German scout cruiser Frankfurt on July 18. The Frankfurt was a weak vessel, built very lightly, and carrying little or no armor. When she was surrendered to the British she was badly damaged by her crew, who sank her shortly afterward at Scapa Flow. She was raised and turned over to the United States for experimental purposes. Some of her fittings had been removed, and at the time of the test none of her coal bunkers, located on the sides of the vessel in a protective manner, were filled. This frail shell should have been sunk by almost the first bomb, according to all reasonable theories.

Bombs up to 600 pounds in weight were used. Seventy-eight were dropped, and of these only twelve scored direct hits on the ship's deck. Five of those that hit were "duds," and six exploded, tearing up things a bit on deck, but not one penetrated to the vitals, although the ship's protective deck was less than two inches thick. The twelfth "hit," the bomb which broke the little vessel's back, did not really hit, for it exploded alongside, abaft the mainmast and the two 19.7-inch submerged torpedo tubes. Experts of the British Navy have been contending that submerged torpedo tubes greatly weaken the structure of a much larger and heavier vessel than the Frankfurt, and it is understood that they do not intend to use them in future warships. This weakness may have contributed not a little to the sinking of the Frankfurt.

While this test was really to determine the efficiency of bombs, the les-

sons of the Iowa experiment should be applied before arriving at any such startling conclusions as did the various press representatives witnessing the tests. The Frankfurt was a thirty-knot cruiser and had an anti-aircraft battery of 4.1-inch guns. All the bombs were dropped from altitudes of less than 4,000 feet, and if the ship's anti-aircraft battery had been firing, it is extremely doubtful if the planes would have come so close. Then, too, had the Frankfurt been speeding through the water at a speed of 36 land miles an hour and zigzagging at regular intervals, it would have been still more unlikely that bombs could have been landed on her or near her from any reasonable altitude.

#### THE OSTFRIESLAND TEST

The sinking of the former German dreadnought Ostfriesland off the Virginia Capes on July 21 was widely commented on by the press. Six Martin bomber planes of the army and one Handley-Paige plane participated in the final attack. Each of the former dropped one bomb weighing two thousand pounds. The exploding missiles started the seams of the dreadnought, and after the fifth bomb had been dropped the vessel was seen to be sinking. One more demolition bomb was dropped, and the ship went down by the stern, the seventh and final bomb from the Handley-Paige reaching the water after the Ostfriesland had disappeared. While the test varied from the conditions of actual warfare in that the vessel had no opportunity to manoeuvre, or to reply with anti-aircraft guns, some experts regarded it as of great significance in its bearing on the future of the battleship. General Williams, United States Chief of Ordnance, was quoted as declaring: "The bombs that sank the Ostfriesland will be heard around the world."

The impression went abroad that the Ostfriesland was sunk after twenty minutes of bombing. It really took nearly two days. The twenty-minute period in question was the

time during which the 2,000-pound bombs were dropped. In the course of the first day fifty-two bombs of different weights were dropped at very low altitudes. Thirteen hits were scored, only four bombs exploding. One exploded close to the forward twelve-inch gun turret. It did not damage the turret in the least, although a whole side of the latter had been removed for Navy ballistic tests, making it extremely vulnerable. This would seem to contradict the contention that even though bombs should fail to pierce a warship's deck they would kill every one upon it. Many bombs exploded alongside the vessel, and it is certain that they were the cause of some serious leaks in the hull.

It should be remembered that the *Ostriesland* was a warship of a type now obsolete because of her light battery and poor underwater protection. In addition to this her German crew badly damaged the vessel before turning her over to the British and ultimately to the United States. While crossing the Atlantic on her last voyage she sprung a serious leak, and it was doubtful for a time if she would reach New York. Since she has been in this country parts of her machinery and protection had been removed by the Navy.

During the night after this bombing, the strained bulkheads aft opened enough to let the stern down two feet. In this weakened condition the ship was a target for large bombs in the morning.

By noon the airmen were working at a range of slightly less than 3,000 feet with 2,000-pound bombs. At this range they should have been able to hit with almost every release if they were to prove their contentions of accuracy, but the best that could be done was to land bombs alongside the ship. In all, eight big bombs were dropped, one of which, however, was a dummy for ranging purposes. Some of the live bombs fell 300 feet away from the ship, doing no damage. One, which shook the ship, landed just abaft the mainmast on the starboard

side. The vessel trembled with the tremendous concussion, but other than this no ill effect was observed.

At this time the vessel was observed to have gone down another foot at the stern, though the bow seemed to be in as good condition as ever. Another bomb was dropped near the starboard side of the bow, which must have strained the hull in some way, as it shook the ship. The aviators had the advantage of knowing that the vessel was badly damaged at the stern. The propellor shafts were probably taking in water at a great rate, if the bulkheads themselves had not given way. Finally a bomb was dropped just a few yards over the port side of the stern. A veritable mountain of water shot upward, swamping the ship. She shook with the impact, and when the water had cleared away it was noticed that the stern was lower. This was the bomb that "was heard around the world." The ship was now filling rapidly. A further bomb exploded near the port quarter, drenching the sinking vessel. However, this bomb seemed to have had no effect, the bow appearing to be intact.

Great bubbles were coming from the stern and the bow rose slightly out of the water. For four minutes the vessel hung in this position. Then the stern went lower and the bow higher as the vessel started to list to port, showing that some of the starboard bulkheads still held, even at the stern. Finally the ship turned slowly over and sank, only great air bubbles marking the spot she had just occupied.

#### SIGNIFICANCE OF THE RESULT

The conclusions to be made on this test are extremely difficult to reach. In the first place, it is the first time a really large ship has ever been sunk by bombs, and so there is no precedent upon which to base any judgment. The reports of the examining boards on this and earlier tests and the actual battle experience of the

war are the only things which throw any light on the matter.

It must be remembered that the Ostfriesland was in a weakened state when the tests were started and that she was in a still more weakened condition when these latter bombs were dropped. The question really is, "Did the ship sink as a result of the direct punishment by these bombs, or as a result of different occurrences before and during the bombardment—these last bombs simply hurrying a certain end?"

During the battle of Jutland, the British battleship Marlborough had a large hole torn in her side by a German torpedo hit. Despite this damage, the vessel was able to hold her place in line and keep on fighting. After the battle she returned to port under her own steam and was soon repaired. The vessel was kept afloat in this manner: Her vitals had not been harmed throughout the action, and so when she was torpedoed it was possible to pump her out without loss of time; and this could be done even faster than water entered the ship. Because of this the crew could repair the minor strains caused by the explosion, so that the damage was partly repaired while the ship was actually in battle. It is certain that a direct torpedo hit causes more damage with its one big hole and many major leaks as a result of the strains than could any non-piercing bomb exploding near the ship.

No one was aboard the Ostfriesland to lessen the damage done by the bombs. Her decks were not pierced by a single bomb, and thus her machinery was intact and would have been kept going in a real action. Had the vessel been properly pumped out and repaired the first day, it is entirely probable that she would not have sunk that second noon. Probably she could have been kept afloat for several days or a week longer than was the case, for strains in one or more places cannot be compared to one huge hole plus such strains, had there been a complement aboard and

the engines kept running. The ship seemed to resist bombs forward, where the hull is not pierced by propeller shafts or anything else, to perfection.

#### DEFINITE CONCLUSIONS

Before reaching any definite conclusion, transpose the situation to its war phase. The Ostfriesland was a twenty-three knot boat and carried a large anti-aircraft battery of 4.1-inch guns. Imagine just such an air attack under average weather conditions, when the visibility is poor for aircraft. The ship is zigzagging at a speed of twenty-five land miles per hour and her anti-aircraft barrage is up. The Ostfriesland had a rudder under her forefoot, which enabled her to turn almost within her own length, at her extreme speed. With the anti-aircraft guns holding the planes off at an altitude of from 4,000 to 6,000 feet and the ship zigzagging at this speed, considering the weather or not, could the airmen have hit her at all? If they did hit her—which seems to me to be almost impossible under these conditions—the tests proved that their bombs could not pierce her decks, and so her vitals would be intact. Then suppose bombs were dropped close enough to the ship to strain her sides. With a crew on board and the machinery undamaged, what would prevent pumping her out and effecting repairs, as in the case of the Marlborough?

In almost every navy there are ships afloat today that are entirely superior to the Ostfriesland in underwater protection. Could these ships or those now building, which will be even more superior to the Ostfriesland, be sunk by bombs under actual war conditions?

One of the most puzzling points seems to be the problem of why the bombs failed to pierce the thin armored decks of both the Frankfurt and Ostfriesland. The answer is that the bomb lacks velocity, and velocity is necessary to penetrate. The bomb is dropped, not fired, and it gains ve-

locity during the drop. According to the timing done aboard the destroyer Graham, the bombs took ten seconds to drop between 3,000 and 4,000 feet; that is, they had a velocity between 300 and 400 feet a second. In order to pierce the decks against which they were pitted, a velocity of at least 1,500 feet per second is required. The planes could not get it even if flying at an altitude of close to 15,000 feet, and planes do not fly at this altitude for fun or for business. At a practical altitude for bombing, a hit cannot be scored for the same reason—lack of velocity—and even should one hit be made by accident, it would not be able to pierce.

The old battleship Massachusetts was sunk in a few minutes of big gun

coast artillery fire. Does that mean that the battleship is useless?

EDITORIAL NOTE—In order to complete the record of recent naval tests it may be added that on July 15, under orders of "shoot to sink," the navy engaged in gun-fire attacks on the former German destroyers V-43 and S-132, sixty miles east of the Virginia Capes, and sent them to the bottom in 56 fathoms of water. One target, the V-43, after being attacked first by the destroyer Leary and then by the dreadnought Florida, hoisted its stern in the air and disappeared beneath the waves at 4:50 o'clock. The S-132 was attacked first by the destroyer Herbert and afterward by the dreadnought Delaware, which riddled her hull so badly that she sank at 7:02 o'clock. Sixty shots were fired by the two destroyers, which made 8 hits. Approximately 280 shots were fired by the Florida and Delaware, so enveloping the ex-German destroyers in smoke that it was impossible for observers to count the number of hits.

## A WARM ANSWER FROM THE PHILIPPINES

[From Mohammed, a non-partisan newspaper published in Jolo, P. I., June 4, 1921]

WE want to make comments on an article published in the CURRENT HISTORY MAGAZINE in its number of March, 1921, under the caption, "Filipino Independence and Moro Domination." Same was written by Donald S. Root, formerly Lieutenant in the Philippine Constabulary, whose station before he resigned from Government service and left for the States was the municipal district of Taglibi. We would have kept ourselves silent after reading it, and let the humorous attitude of Mr. Root to the relation of our Mohammedan brothers to Philippine independence pass with smiles over our faces were it not for the fact that this friend, this budding writer, has been in active service as a man of the khaki for four years, detailed precisely in the South.

Referring to the terror that is alleged the Mohammedans have instilled into the hearts of the Christian brothers, the author concludes by asking: "What would be the result, do you think, if that power (that of American arms) were suddenly removed?" To satisfy Mr. Root we ought, no doubt, to answer by quoting Prescott F. Jernegan in his short history of the Philippines, Page 228, where he says, in speaking of the possibility of a Filipino Republic: "The Moros

would become pirates again." What an absurdity of ideas indeed! It can hardly be conceived how these American imperialists can still entertain such belief. Moro piracy is a matter of the past, long forgotten. \* \* \* Since civil government has been implanted in Mindanao and Sulu the aspects of what was formerly known as the Moro problem have changed, and we Christians in the South conscientiously believe that the way for the unification of the Christian and Mohammedan elements has been solidly paved, and it is but a question of time that the fruit of our labor will be crowned with complete success.

The public schools have been accepted by the mass of the Mohammedans, and their children are sent to schools to gather even the rudiments of primary instruction alone. In the Sulu archipelago there are many Mohammedan teachers, among whom are a number of princesses. Girls likewise receive instruction in a dormitory established in Jolo for the purpose, and some of those that graduate from there are sent to Manila for further training, after which they go back to their respective homes and become school teachers. Order is enforced without the least aid of the U. S. Army.

# THE MONTH IN THE UNITED STATES

*Progress toward a separate peace treaty with Germany—Problem of the deferred interest on allied loans—New peace-time policy for the army—Reducing the burden of taxation—Wood as Governor General of the Philippines*

[PERIOD ENDED AUG. 15, 1921]

IT was stated officially at Washington on July 19 that Ellis Loring Dresel, the American Commissioner at Berlin, had been instructed to negotiate with the German Government a treaty for the resumption of diplomatic relations between the United States and German Governments. Whether these negotiations were to result in a separate treaty of peace with Germany or were to be based in part on the Treaty of Versailles was not stated. Although President Harding on July 2 approved the Congressional resolution for peace with Germany, Austria and Hungary, the promised proclamation that peace exists had not been issued up to Aug. 15, owing to the many difficulties confronting the Administration in determining the subjects to be covered in the document.

The Secretary of the Treasury, Mr. Mellon, stated to the Senate Finance Committee on July 20 that the understanding reached by the Wilson Administration, deferring interest payments on a loan made by the United States to one of the Allies, would be binding upon the present Administration. The understanding related to \$1,500,000,000 loaned to Great Britain from the proceeds of the first Liberty bonds. The agreement was that the payments were to spread over a period of twenty-five years, the final payment coming in 1947. The interest, it was said, was to be consolidated with the debt.

The present situation, which Secretary Mellon called embarrassing, was caused by discussions in 1919 between Albert Rathbone, Assistant Secretary of the Treasury, and Mr. Blackett, representing Great Britain, with the result that the "understanding" was reduced to written memoranda. These conferences, the committee was informed, were held after Secretary Glass and his successor, Secretary Houston, had decided that there was authority in law for the deferment of interest payments.

## PAYMENT TO GREAT BRITAIN

Some surprise was occasioned by the announcement of the Treasury Department on July 16 that, despite Great Britain's debt of \$4,500,000,000 to this country, payment of \$32,688,352 had been made by the American Government to the British Ministry of Shipping in settlement of a claim against the War Department. The British claim was for transportation services arising out of the war and constituted a final settlement between the War Department and the British Ministry of Shipping, covering all claims of either party against the other for transportation services.

Secretary Mellon asked Attorney General Daugherty for a ruling as to whether the act of March 3, 1875, which requires the Secretary to withhold payment of any judgment against the United States where the

claimant is indebted to this country in any manner, applied to such a claim. The Attorney General held that the act did not apply, as it was the practice of sovereign nations not to prosecute their claims against one another in the courts and obtain judgment, but to adjust such matters through diplomatic channels. If it should be construed to apply to the case in question, it might seriously interfere with the Government in its conduct of foreign relations. The British transportation claim, it was explained, was for what was regarded during the war as "current expenses." Among the Allies, it was said, there was a general understanding that all current expenses would be paid one another without awaiting the settlement of international debts.

#### COST OF ARMY OF OCCUPATION

In response to a resolution by Senator Borah, Republican, of Idaho, Secretary of War Weeks sent to the Senate on July 28 figures showing that the total cost of the American occupation forces in Germany from Dec. 18, 1918, to April 30, 1921—the latest date for which accounts were available—was \$275,324,192. Of this amount, Germany owed the United States for maintenance \$240,744,511. It was stated that there were now in the American Rhine forces 500 officers, 13,241 enlisted men and 54 nurses.

On July 29 a letter written by Secretary of State Hughes to President Harding was made public, in which, dealing with the subject of communication facilities in the Pacific, the Secretary asserted his belief that the cable from Guam to Yap would be allocated to the United States. "The allocation of the German cables centering at Yap," the latter said in part, "has been the subject of discussion at the preliminary communications conference, and negotiations are still proceeding. The American delegates to the conference have contended that the service which we enjoyed in the past should be restored, and it is prob-

able that the cable from Guam to Yap will be allocated to the Government of the United States."

#### NEW ARMY POLICY

Secretary of War Weeks gave to the press on July 24 the text of a formal memorandum to General John J. Pershing, Chief of Staff, containing President Harding's interpretation of the act of June 4, 1920, in which Congress provided for a peacetime organization of the national defense. "It is the first time in the history of the country," the Secretary added, "that the President has promulgated a military policy for the United States."

The President interpreted the law

W. W. HUSBAND  
New Commissioner General of Immigration,  
succeeding Mr. Caminetti

as meaning that future wars, like those of the past, would be fought mainly by citizen soldiers fighting temporarily. The regular army, he held, should be maintained ready for action, and in event of war should be reinforced by a National Guard and an organized reserve, already mobilized for immediate action and as near full strength as possible.

General Pershing was instructed to have the regular army concentrated into a limited number of organizations, each of effective military strength, and assigned to the various "corps areas" into which the country has been divided geographically. Through the reduction of the number of regiments thus entailed, many regular army officers will be released from service with troops, and these will be assigned to train the National Guard, the organized reserves, the Reserve Officers' Training Corps and the Citizens' Training Corps. There will also be a surplus of enlisted men, and these will be assigned to assist in training the non-regular organizations.

#### FEDERAL EXPENDITURES

The total Government expenditures during the fiscal year ended June 30 dropped off \$9,000,000,000, as compared with the preceding year, representing a decrease of \$1,387,000,000 in ordinary disbursements and a reduction of \$7,846,000,000 in payments on the public debt, according to the annual statement issued July 19 by the Treasury Department.

Ordinary expenditures for the year amounted to \$5,115,927,689, compared with \$6,403,343,841 for the fiscal year of 1920, while disbursements on the public debt totaled \$9,182,027,170, as against \$17,038,039,723 in the previous fiscal year.

During the last year ordinary expenditures were heaviest in the month of March, when \$536,476,360 was expended, and public debt disbursements were greatest in June, when \$1,605,816,001 was applied on the national debt. Of the ordinary

expenditures for the year the War Department led with a total of \$1,101,000,000, representing a reduction of \$500,000,000 compared with the previous year. Interest on the public debt was the second largest item, amounting to \$999,000,000, a drop of \$21,000,000, while payments on account of Federal control of the railroads ranked third in volume, with \$730,000,000, representing a decrease of about \$300,000,000.

Of the public debt disbursements for the year \$8,552,000,000 was applied to the redemption of certificates of indebtedness, a decrease of about \$5,000,000,000, as compared with the previous year, while the next largest item was \$431,000,000 in Liberty bonds and Victory notes retired, representing a decrease of about \$762,000,000.

#### INCOME TAXES FOR 1919

A preliminary report of income tax returns was published on July 24 by Internal Revenue Commissioner Blair. It showed that the Government obtained a total of \$1,269,000,000 in revenue from personal income taxes in 1919, an increase of \$141,900,000, as compared with 1918.

The Commissioner's report showed that there were 5,332,760 personal returns filed in the calendar year 1919, representing a growth of 907,646 from 1918, while the total amount of net income reported for 1919 was \$19,859,000,000, an increase of \$3,934,000,000 over the previous year.

The average net income per return for 1919 was \$3,724.05, the average amount of tax \$238.08 and the average tax rate 6.39 per cent.

There were filed 65 returns of net income of \$1,000,000 and over, 189 of 500,000 to \$1,000,000, 425 of from \$300,000 to \$500,000, 1,864 of \$150,000 to \$300,000, 2,983 of \$100,000 to \$150,000, 13,320 of \$50,000 to \$100,000, 37,477 of \$25,000 to \$50,000, 162,485 of \$10,000 to \$25,000, 438,851 of \$5,000 to \$10,000, 1,180,488 of \$3,000 to \$5,000, 1,569,741 of \$2,000

to \$3,000 and 1,924,872. of \$1,000 to \$2,000.

### ACCORD ON TAX BILL

A conference was held at the White House on Aug. 9, presided over by the President and attended by Secretary Mellon, the Republican members of the Ways and Means Committee and Representatives Mondell, Madden and Campbell. A solution of the tax problem was reached, by which internal taxation, it was estimated, would be reduced about \$600,000,000, while the excess-profits tax would be repealed and cuts made on transportation and income surtaxes. It was figured that the total expenditures of the Government in the next fiscal year could be held down to \$4,034,000,000.

The revenue bill now being prepared, it was stated, would raise \$3,075,000,000 instead of the \$3,570,000,000 collected under the present law. Transportation taxes will be cut in half, to be effective in January, 1922, and will be wholly repealed in 1923. The bill, if passed, will repeal the excess-profits tax as of Jan. 1, 1921; reduce the income surtaxes to 40 per cent., as of Jan. 1, 1921, and to 33 per cent., to take effect Jan. 1, 1922. The repeal of the soft drinks and luxury taxes was contemplated by the program, while the loss from the repeal of the excess-profits taxes would be made up in part by increasing the tax on the net incomes of corporations from the present 10 per cent. to 12½, instead of the 15 per cent. previously planned.

The program was adopted as a result of President Harding's insistence on economies and the carrying over of a number of "hang over" war debts. It was understood to be a compromise between the views of Secretary Mellon and those of Republican House leaders. According to the President, who announced the decision after the conference, it will be necessary for the Government to practice the most rigid economy in all departments.

### FORDNEY TARIFF BILL

By a vote of 289 to 127 the Fordney Tariff bill was passed by the House of Representatives on July 21. The bill carried hides, oil, cotton and asphalt on the free list, and omitted the expected embargo on dyestuffs. Seven Republicans voted against the measure and seven Democrats voted for it. On three out of five contested schedules which came up for a separate vote, backed by most of the Republican members of the Ways and Means Committee, the Democrats, aided by dissatisfied members of the majority, were able to win. The bill was sent to the Senate, where it was predicted that many changes would be made and considerable time consumed before it would be put on its final passage. It was expected that the President would exert pressure to have the Tax bill passed in advance of the tariff measure.

A vigorous debate took place before the vote on the bill was taken in the House, Representatives Fordney and Mondell supporting the measure, while Representative Garrett, acting Democratic floor leader, denounced the bill, which he termed a "monstrosity," declaring that a day of retribution would come for the men who had framed and passed it.

### CURB ON LIQUOR RAIDERS

The Senate on Aug. 8, by vote of 39 to 20, passed the supplementary Prohibition Enforcement bill, amended in such a way as to make it a misdemeanor for any official or agent of the United States to search the "property or premises" of any person without having previously procured a warrant, and to make it a felony for any person not an authorized official agent or employe of the Government to cause "under color or claim to be acting as such" any person to be deprived of any of the rights or immunities guaranteed by the Constitution. The penalty for the first offense named is a fine not exceeding \$1,000 or imprisonment not

exceeding a year, or both. For a violation of the second clause the penalty is a fine not exceeding \$10,000 or imprisonment, not exceeding five years, or both.

### ROADS REJECT WAGE PLEA

Presidents of Eastern railroads delivered to the four railroad brotherhoods and the switchmen, on Aug. 11, a flat refusal to terms which the union chiefs had outlined. These terms included requests for information as to whether or not "the operating officials of the railroads will restore the wage rates in effect on June 30, 1921; second, if all demands for further decreases will be withdrawn; third, if all demands for the elimination of time and one-half time for overtime and radical schedule revision will be withdrawn and not again pressed for a certain period." The answer to the brotherhoods was brief, merely stating that "conditions make it impossible to grant the request." Twenty-seven executives of the Eastern lines concurred in the action.

### WAR RISK BUREAU ABOLISHED

The War Risk Bureau, whose functions included the handling of insurance papers taken out by soldiers and sailors in the World War and the care of disabled ex-service men, went out of existence on Aug. 9, when President Harding signed the legislative measure transferring to a new department of the Government, created by the act, all the activities of the War Risk Bureau and, in addition, the Federal Board for Vocational Education and certain branches of the Public Health Service. Following his approval of the bill, the President sent to the Senate the nomination of Colonel Charles R. Forbes of Seattle, Wash., to be Director of the new Veterans' Bureau, which the law created. The nomination was confirmed on the same day.

Under the new bureau the country will be divided into fourteen regional offices, each of which has authority

to act quickly without waiting until the Washington headquarters sanctions its course. The three different branches of the Government, which have hitherto acted independently in hospitals and districts in caring for disabled veterans, will now function under one head in each regional area.

### PANAMA CANAL TOLLS

According to The Panama Canal Record, a total of 11,599,214 tons of commercial cargo was carried through the Panama Canal during the last fiscal year, or 23½ per cent. more than in any preceding year, while the tolls amounted to \$11,276,890, or 32½ per cent. more than any preceding year. In addition, Government vessels which passed through the canal, tolls free, carried 453,769 tons of cargo. American, British and Japanese vessels carried 89 per cent. of the total commercial tonnage, the American business amounting to 45 per cent., British to 32 and Japanese to 7 per cent. The total number of ships passing through the canal was 2,892, of which 1,212 were American, 970 British, 140 Norwegian and 136 Japanese.

### RACING OF IMMIGRANT SHIPS

Frantic midnight racing of immigrant ships into American harbors in order to land monthly quotas in the first minutes of the first day of new months having developed into a scandal, Commissioner General Husband of the Immigration Bureau announced on Aug. 6 that he was willing to "wipe the slate clean," admit under bond the August quota excess of 400 or more then in the harbors, and begin all over again if the companies would reach a binding agreement among themselves not to exceed quotas thereafter. There was excuse for the exceeded quotas in June, when the Italian quota was exceeded by 2,500, the Commissioner said, but none for repeated disregarding of the rules by certain lines. Since June 30 probably not more than 400 aliens

had arrived in excess of quotas, but these had practically taken all the time of the immigration officers to handle.

The Secretary of State on July 20 received nineteen new appointees as Consuls, Vice Consuls and Consular Assistants, who were about to proceed abroad to represent the United States at their various posts after completing the course of instruction at the State Department designed to familiarize them with all the details of their duties. Secretary Hughes made a felicitous address, a part of which follows:

Of course I need not tell you that the character of the American people will be judged by countless numbers of those who live in other countries by the impression you make on them. We don't want representatives who are bombastic, boastful, unreasonable, severe or autocratic—who are disposed to make a great deal of their authority at the expense of those who are making polite inquiries; who are disposed to be nervous and petulant. The man who succeeds is the man who can keep quiet and placid when there is very severe pressure, who can keep his head and intelligence, at the same time giving the impression of a man adequate to the exigency. If you can give that impression you will do a great deal for your country.

#### ARREST OF ILLINOIS GOVERNOR

Governor Len Small of Illinois was placed under arrest at the Executive Mansion, Springfield, Ill., on the afternoon of Aug. 9. Despite the Governor's protests and those of his attorney, he was forced to accompany the Sheriff to the Court House, where he furnished bonds of \$50,000 as surety for his appearance in the Sangamon County Court on the first Monday in September to answer to three indictments charging him with having, when State Treasurer, embezzled half a million dollars of State funds, entered into a conspiracy to defraud the State of \$2,000,000 of the taxpayers' money, and embezzled, jointly with Lieutenant Governor Fred E. Sterling and Vernon Curtis, \$700,000 of interest on public funds. The indictments had been found on

July 20, but the Governor had protested that he was immune from arrest by virtue of his office, and when this plea failed kept out of the reach of the Sheriff until the day of his arrest. It was the first time in the history of Illinois that a Governor of the State had been arrested on a criminal charge while in office. The Governor declared that he was innocent and that the charges were due to the unscrupulous machinations of political enemies.

#### GENERAL WOOD TO RULE IN THE PHILIPPINES

Secretary Weeks announced on Aug. 11 that Major Gen. Leonard Wood would be appointed Governor General of the Philippines, provided that the University of Pennsylvania consented to his release as Provost of that institution. The decision of the Administration to name General Wood for the Philippine post had been held in abeyance for some time, the Secretary said, in order to permit the General to submit his report on conditions in the island possessions. A preliminary report had already been submitted by him as head of the Wood-Forbes Commission, which for some months past has been investigating Philippine conditions. General Wood has indicated his willingness to accept the post, notwithstanding the fact that prior to his departure for Manila he declined it on the ground that he had already seen too much service in the tropics. It is understood that he became so interested in the Philippine situation as a result of his investigation that he reversed his original decision. No official announcement was made as to the tenor of his preliminary report, but it was understood that conditions as seen by him did not warrant the immediate granting of independence to the Philippines. As Governor General of the islands General Wood will receive a salary of \$24,000 a year, with a residence at the Government's expense.

# IS THE CHURCH ON A DECLINE?

BY GUSTAVUS MYERS

*Results of the recent religious census in the United States indicate that the membership, especially of the Protestant denominations, is steadily increasing—Percentage of Roman-Catholic growth considerably less—Problem of city churches*

WHAT has been the experience of religion and the Church in the general upheaval which has changed or shattered so many institutions? Superficially, church and religion seem of minor importance compared to the engrossing interest in other affairs. Yet they are far more vital and durable. Political and economic systems have come and gone, but through all these changes religion and its church establishments have survived.

Within particular faiths there have been schisms, but the great main religions have preserved their identity through all vicissitudes. The striking difference between modern and past times is that the Church and its functionaries no longer command the acute interest that they did in former ages. They were then the arbiters of political as well as religious policies. Had newspapers been published five centuries ago they would have given the same large space to the doings and sayings of prelates that they now do to those of statesmen and parliamentary bodies. That little is now reported of the plans and edicts of church hierarchies is taken as proof of the insignificance, if not decrepitude, of the Church.

Experience has taught that the apparent condition of a church at any one time is not to be accepted as indicative of its final condition. Many

a time did the Jewish Church seem throttled by persecution, but it eventually emerged strong in some other place. Before the Protestant Reformation the Christian religion, as embodied in the Roman Catholic Church, spiritually was in a low state. But it was revitalized and became robustly militant. During the French Revolution the Roman Catholic Church appeared to be overwhelmed, yet it came forth from the ordeal a re-established power. The actual point, however, is not the career of the Church, but the hold of religion. Under the fluctuation of events the fact has persisted that vast numbers of the different races have always believed in some one of the religions and revered the religious spirit. Has this attachment increased or decayed?

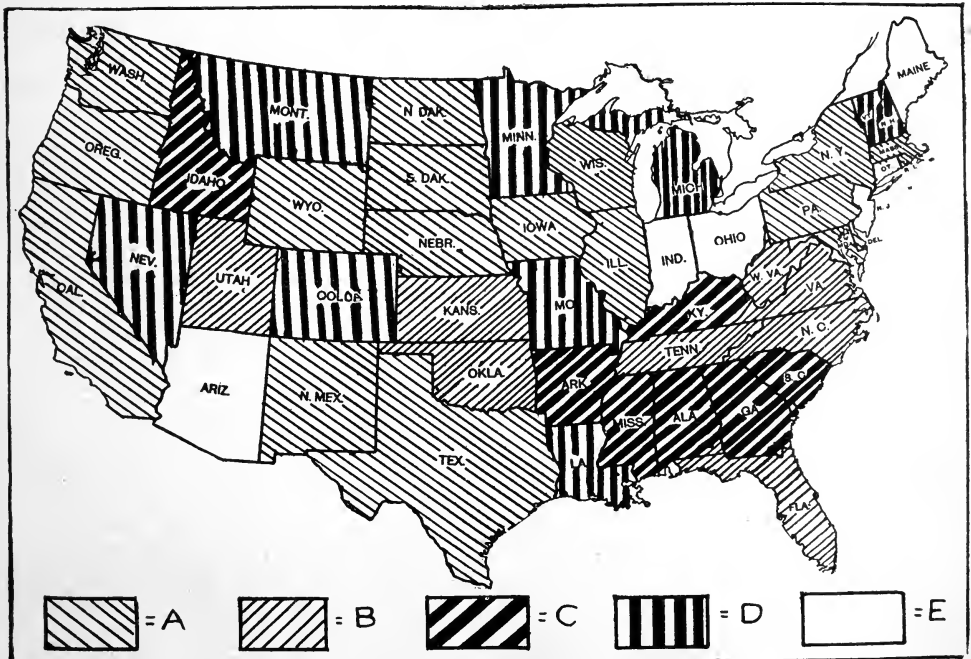

It is becoming a fashion to date all great changes from the World War. So immense an impression did that conflict make upon mankind that this attitude is understandable, even if fallacious. Religion, however, went through its great conflict long before the World War. The so-called rationalistic writers of the eighteenth century assaulted it, and their work was continued in another direction by the materialist scientists of the nineteenth century. Discoveries made and facts adduced seemed to be irrec- oncilably opposed to all that ortho-

dox religion taught. A quarter of a century ago the phrase "the conflict of religion and science" was common, and religion seemed to be worsted. It could, its opponents charged, only offer dogma and assertion to combat what appeared to be irrefutable proofs of the evolution of life and the composition of the universe. As the writings and lectures of scientists and their followers permeated large sections of society, particularly in Europe and America, religion seemed to be undermined. Doubt and skepticism prevailed as to church doctrines, and frequent complaints were made by ministers in America that church attendance had become perfunctory. In Switzerland Professor Elie Gournell expressed a widespread view of the clergy when he declared that churches were no longer filled with worshippers, but with audiences.

ALIENATION OF WORKINGMEN

While religion thus came into collision with science, the Church itself was openly attacked. From time to time labor organizations and mass meetings of workingmen in both America and Europe passed resolutions denouncing the apparent indifference of the Church and the clergy to the interests of the working people.

Undoubtedly large numbers of working people, believing this charge of indifference, were alienated from the Church, which was slow in realizing that the labor movement was one of the most powerful and significant movements in modern times. In 1906 Dr. Josiah Strong published figures showing the alarming increase in the number of barren churches, and pointing out that while the estimated

MAP OF ROMAN CATHOLICISM'S GAINS AND LOSSES, 1906-1916

Explanation of lettered key at bottom of map: A—Eighteen States with increase of Roman Catholics, 1906-1916, but not large enough to keep up with Protestant increase. B—Thirteen States where single religious bodies exceed Roman Catholic population in their mere communicant membership lists. C—Seven States of preceding group with smaller Roman Catholic population in 1916 than in 1906. D—Nine other States where the Roman Catholic population in 1916 was less than in 1906. E—The six unshaded States, Maine, Connecticut, New Jersey, Ohio, Indiana, Arizona, are the only ones in which the Roman Catholic Church, 1906-1916, had an absolute gain.

annual increase of population in the United States was 2.18 per cent., the increase of the entire church membership was only 1.69 per cent., the lowest on record.

In England the Rev. Arthur Jephson, vicar of St. John's, Walworth, declared: "The Church is largely to blame for the alienation of the working classes. The Church is almost always the friend of the landlord and employer. The Church has allied itself with land and capital, and generally with the master against his workmen. Its clergymen have dined with the rich and preached at the poor, instead of doing the exact opposite." Other English clergymen expressed themselves similarly. In Germany Dr. Stocker of Berlin complained that the middle classes—the educated, industrial, commercial people—and the artisans and small tradesmen were, with few exceptions, opposed to the Church; that the Church's only friends were the aristocracy and peasants. In Roman Catholic countries outspoken priests and lay leaders expressed the same views; in France Count de Mun, a Catholic leader, demanded that the Church actively support a specific program for the improvement of labor conditions.

Since then individuals and groups within church bodies have sought to create support for workers' movements. These efforts have not seriously changed the view of large numbers of workingmen and other groups. These look upon the institutional Church as concerned with the past instead of participating in present movements and as preaching a visionary instead of a practical religion. Such criticisms are often unjust, and much may be said for the view that religious faith has its own special field. Despite all attempts to win over these adverse elements in the cities, the Interchurch World Movement of North America in a recent review admitted that the Church found it an increasingly difficult task

because it seemed unresponsive to their conditions and aspirations and talked to them virtually in a dead instead of a live language.

Normally one might reasonably conclude that, confronted by the dual opposition of an aggressive science and a detached industrial array, church organization and membership would suffer pronounced losses. True, science is not the confident, attacking force it formerly was. Explorations into various realms have caused it to modify its dicta, and in some cases have brought out the admission that science and religion may not, after all, be irreconcilably opposed. Nevertheless the teachings of science's exponents of former years deeply impregnated the minds of many people, and their effects are still widespread.

#### CHURCH MEMBERS INCREASING

Remarkable as it may seem, church membership in the United States has grown instead of diminishing. At least, this is what formal census returns show. Previous to 1880 census inquiries dealt very little with churches. The census for 1880 gave no statistics, and that for 1890 was very incomplete. The first real gathering of facts as to churches was in 1906, under the provisions of an act passed by Congress in 1902. This act required a census of churches to be taken every ten years, in between the regular census periods. There was accordingly a church census in 1916, the results of which were published in 1919. The next census of churches will be taken in 1926.

The latest returns showed that church membership in the continental United States had increased from 35,068,058 in 1906 to 41,926,854 in 1916, a gain of 19.5 per cent. During that decade the population had increased 17.1 per cent. Apparently the proportionate growth of church membership had outstripped that of population.

In outline the different religious organizations in the United States stood thus:

	1906	1916	Gain	Per Cent.
Protestant	20,290,014	25,025,990	4,735,976	23.4
Eastern Cath- olic	164,968	313,626	148,658	90.1
Roman Cath- olic	14,210,755	15,721,815	1,511,060	10.6
Jewish	101,457	357,135	255,678	...
Lat-ter Day Saints	256,647	462,329	205,682	80.1
Other Re- ligions	44,217	45,959	1,742	3.9
Total	35,068,058	41,926,854	6,858,796	19.5
Population	86,646,370	101,464,014	14,817,644	17.1

Two particularly surprising features were revealed by the latest census. The supposition has been general that the membership of the Roman Catholic Church has been rapidly growing while that of the Protestant churches has been fast declining. But according to its own figures, the membership of the Roman Catholic Church increased during that decade 1,511,060, which, as above noted, is 10.6 per cent. During the same period the Protestant church membership increased much more. Membership of Protestant churches practicing infant baptism increased 23 per cent.; that of Protestant churches practicing adult baptism 28.2 per cent.; and membership of Protestant churches having both rituals 17.2 per cent.

The difference of growth is all the more striking when it is considered that the Roman Catholic Church reckons its membership upon the basis of its estimate of its population, while the Protestant churches, as a rule, count only communicants. As the census report points out, church membership in the Roman Catholic Church begins with baptism in infancy. In that Church there is no method of induction into formal membership corresponding to confirmation or admission to the Church in Protestant bodies except as there is a renewal of baptismal vows connected with the first communion and confirmation. In general, Protestant churches, on the other hand, admit baptized children to membership only when they have arrived at an age

when they can make for themselves an actual profession of personal faith. The Roman Catholic Church counts as members infants as well as adults, while Protestant churches include only grown-up children and adults.

#### DECREASED CATHOLIC GROWTH

Noting how crowded Roman Catholic churches are, the casual observer may be inclined to dispute the statement that their membership has not been fast growing. But the census report explains that it is seldom that there are as many Roman Catholic churches in a community in proportion to the number of communicants as is the case with other religious bodies. There are comparatively few Roman Catholic churches, the report says, which are large enough to accommodate at one time the entire parish membership. It is because of this fact that the custom has grown of holding a series of Sunday services or masses, one succeeding another at different hours.

One explanation of the decline of Roman Catholic membership may be the return of considerable numbers of immigrants to Europe after the outbreak of the World War. But this does not by any means account for the whole change. The census figures show that it has not only been failing to maintain a proportionate growth in States where there is much immigration, but that it has not grown in States where there never were many immigrants. In sixteen of the forty-eight States the Roman Catholic Church reported a smaller membership in 1916 than in 1906. These States were New Hampshire, Vermont, South Carolina, Georgia, Louisiana, Arkansas, Alabama, Mississippi, Kentucky, Michigan, Minnesota, Missouri, Colorado, Montana, Idaho and Nevada. In this list of declines must also be included the District of Columbia. In eighteen other States Roman Catholic membership increased from 1906 to 1916, but in

the same States the percentage of Protestant membership had grown, while that of the Roman Catholic Church fell off. In such heavy receptacles of immigration as New York, Massachusetts, Pennsylvania and Illinois, as well as in other States, the Roman Catholic Church did not show a growth proportionate to that of the Protestant Church. There were only six States in which the Catholic Church actually advanced, both in membership and in percentage of membership of religious bodies. These States were Arizona, Connecticut, New Jersey, Maine, Ohio and Indiana. It is believed that a relatively higher foreign element accounts for the increase in those States.

When, in 1920, the Army Reorganization bill was passed, the question came up as to how many army Chaplains each denomination should have. The War Department asked Dr. Walter Laidlaw, the executive secretary of the New York Federation of Churches, to make a computation based upon the Government census. Dr. Laidlaw made an unbiased analysis, and his report was accepted. In this report Dr. Laidlaw brought out many striking facts.

Of the reported 4,327,369 members of the Roman Catholic Church, 3,219,732, or 74.4 per cent., were under 13 years of age. Roman Catholic organizations reporting gave figures showing that nearly 25 per cent. of their membership was composed of young children. Of the total membership of religious bodies in continental United States the Roman Catholic Church had 37.5 per cent., and comprised 15.5 per cent. of the total population, a quarter of its membership being children. In contrast, there was only 5.31 per cent. of children under the 'teen age in Protestant churches. Protestant churches had a total membership in the United States of 59.7 per cent. of religious membership of all bodies. Although their membership in general included only those above the 'teen age, Prot-

estant churches had 24.5 per cent. of the entire population on their communicant rolls.

#### ERA OF CONSOLIDATION

According to a recently published report, it was expected that 10,000 Protestant pulpits would be vacant in 1921 because of the lack of students for the ministry, as shown by the records of attendance at theological seminaries. This was taken in some quarters as an indication that interest in religious matters was fast waning. But this assumption was hasty and sweeping. It entirely ignored relevant factors.

In the first place, as the census report shows, recent years have been a period of consolidation of Protestant churches. This process, the report says, "does not indicate any weakening of the actual strength of the churches." The Methodist Episcopal Church, for example, reported 601 less organizations in 1916 than in 1906, while the membership reports showed an increase. The uniting of the Free Baptist churches with the Northern Baptist Convention also reduced the number of organizations. The same result followed the union of the different bodies of the Presbyterian Church.

Furthermore, economic reasons have had their influence. While the cost of living in recent years has been excessive, ministerial salaries have remained paltry. According to a recent survey of the Interchurch World Movement of North America, only 1 per cent. of ministers in the United States receive \$4,000 or more, and not quite 1½ per cent. \$3,000 to \$4,000. The larger salaries are, of course, paid in the cities, where only one-sixth of the ministers live. Less than 5 per cent. get from \$2,000 to \$3,000, and not quite 10 per cent. \$1,500 to \$2,000. Nearly 33 per cent. of American ministers receive \$1,000 to \$1,500, and nearly 39 per cent. \$500 to \$1,000 salary a year. About 13

per cent. are paid \$500 a year or less. No doubt, faced by the inexorable disparity between income and cost of living, many eligibles have had to abandon plans of studying for the ministry.

#### GROWTH OF OTHER CREEDS

The second noteworthy feature of the religious census is the growth of the Mormon Church. In every one of the thirty-nine States where it had members in 1906 it gained, except in Wisconsin. Its largest proportionate gains were in some States contiguous to Utah. In Idaho, for instance, it made a gain of 40,280 members in ten years. In other States there were lesser increases, diminishing eastward, yet, nevertheless, gains.

It would be interesting to know the progress of the Christian Science movement, but that Church declined to give information. The census law of 1920 accordingly was drafted to cover such refusals. It provides that when the next religious census is taken, any religious body failing to report will be subject to legal proceedings.

Judging from the nominal census figures, the membership of the Jewish Church has made only a very slight increase, compared to the great growth of the Jewish population in America. But in another section of the report this apparent anomaly is partially explained. It says that Jewish congregations variously interpret what constitutes members. Some consider in membership only seat or pew holders; others allow widows but not wives or maidens as members; still others regard all women as ineligible. The report continues:

If, however, we broaden the definition of "member" to mean one who shows his interest in Judaism by making even a small yearly contribution to some ecclesiastical entity, and by visiting, for participation in religious exercises, at least once a year, a synagogue or similar place of worship, we shall find that the total number of Jewish "members" is very large.

Thus it has been estimated that in order

to accommodate the 1,500,000 Jews of New York City who are able and of proper age to attend divine services on the Day of Atonement, a million sittings would have to be provided. Actually, in that city in 1917, about half of this number of seats was available in the permanent and temporary places of worship open to attendance during the high holidays. \* \* \* In other words, about one-half of the Jews of New York City attended divine worship on the "day of days." We may say, therefore, that about one-half of the Jews of New York City are, in one sense of the word, "members." Nor is there any good reason to suppose that outside of the metropolis Jewish religious conditions are very different, taken all in all, from those within the great city.

The census report further explains that Jews in the United States are confronted by a number of difficulties. Frequently they cannot, for economic reasons, attend services on their Sabbath, which is often the busiest commercial day. The struggle for existence, effectively interfering with their going to services, makes it appear that Jewish membership is much smaller than it is both actually and potentially. Hence, the report declares, attendance on the almost universally observed holidays is a far better criterion of real membership in the Jewish Church.

From another aspect—at least as indicated by census figures—it appears that religious influence has not declined. The number of Sunday schools in the United States increased in ten years from 178,214 to 194,759; the number of officers and teachers from 1,648,664 to 1,952,631; and the number of scholars from 14,685,997 to 19,935,890. These statistics relate solely to what is called the Sunday school. They do not include parochial or other institutions which supplement and often take the place of Sunday schools.

In view of these instructive facts, what becomes of the criticism often made that religious teaching has sunk nearly to zero? Only recently Bishop Philip M. Rhinelander of the Episcopal Diocese of Pennsylvania complained that "the almost universal tendency is to teach ethics or morals

without any direct relation to the Christian faith, so that the average boy or girl comes out of school with the notion that Christianity is an interesting but outworn philosophy, and that even its ethical and moral standards are not final and of no particular authority." But if the official returns are to be accepted, vast numbers of children receive in Sunday schools the religious training that some zealous ecclesiastics would like to see established in the public schools.

#### PROBLEM OF CITY CHURCHES

Apart, however, from official compilations, there are other and deeper phases of the subject of church and religion disclosed by the investigations of church bodies themselves. Students of city conditions have often remarked the noticeable absence of interest of large numbers of city people in church affairs. They find it hard to believe official statistics which show an increase of religious interest, when among city people they see evidences to the contrary.

This apparent enigma is explained, although deplorably, by church organizations. In the survey made by the Interchurch World Movement the explanation given is that "the appeal of the city church is largely to the rural folk that have migrated to the city. Counts made of those attending city churches indicate that they are largely made up of rural emigrants. Seventy-five per cent. of those present are frequently found to have been born in the country. The city ministry is largely recruited from rural territory, and this means that the message of the city church is largely in the thought language of the rural emigrant. It is intelligible to him, but unintelligible and ineffective in reaching either the alien immigrant or the indigenous city folk." Inasmuch as the census of 1920 shows that for the first time in the nation's history urban population exceeds ru-

ral, this condition presents a critical problem to religious denominations.

Turning to Europe, the same phenomena are found. The appeal of the Church is in the rural districts. It was estimated that in Paris in peace times only about 3 per cent. of that city's population attended church on Sunday, and in other European cities church attendance was comparatively small. At the outbreak of the war there was a certain amount of renewed interest in the Church, but this did not last long; fatalism generally took the place of faith. In England the spiritualism giving assurances of survival of personality after death became popular and in a large measure has remained so.

#### THE SITUATION IN EUROPE

The war also left the various churches in Europe with diminished personnel and depleted financial resources. In France between 25,000 and 30,000 French priests and students and nearly half of the total Protestant ministry were mobilized. In other European countries conscription of church forces was also heavy. The huge losses of men, clerical and lay, weakened church forces of every creed, while training for the ministry and priesthood was suspended in many countries throughout the war years.

In some respects of organization power, the Church has gained. The French Government, after a fifteen-year severance, has resumed diplomatic relations with the Vatican, and the Italian Government is on the verge of doing the same. In other respects the power of the Roman Catholic Church has been weakened, notably in Czechoslovakia, where 360,000 former Roman Catholics, headed by eighty priests, have broken away from the Roman Church and established a National Church. This, while retaining the general Roman Catholic faith, has renounced adherence to the Pope. The creation of this new church gradually followed

the refusal of Pope Benedict to permit the election of Bishops by laity vote, to allow priests to marry, and to grant the use of the Czech language instead of Latin in the liturgy. In Russia the Greek Church, despite Bolshevik opposition, has retained its organization, which, however, is said to have become liberalized in point of attitude and customs. Reports from Russia assert that if the Soviet power is overthrown the Russian Church will be the only organized power capable of taking its place.

### GENERAL CONCLUSIONS

Summing up the general condition of church and religion, these conclusions may be reached: In the United States, churches as a whole have gained in formal membership, power and accretion of property, but the hold of most of them upon the city populations has been progressively diminishing. Religion does not have the vital appeal to city people that it does to rural folk. In Europe various church bodies have enhanced their organization power, but there, too, they encounter indifference or hostility in the cities.

Is this because city populations are less spiritually minded than rural? Church representatives do not say so. They believe that underneath the exterior the religious spirit is strong in city people, but that the Church has not yet found the right means to give it spiritual expression and to direct it to church affiliations. The more advanced churchmen recognize that the cities have their own peculiar problems and ways, greatly differing

from those of the country, and urge that outworn ecclesiastical methods be discarded to make way for new ideas, bringing the Church into a more harmonious relation with city dwellers.

Another phase of the problem about which churches everywhere—both in America and Europe—are perplexed, is the probable action of women. Hitherto women have been more assiduous than men in church attendance, and, in fact, have often constituted the bulk of active adherents. The usual assumption that, therefore, women are more religious than men is not the view of many church spokesmen. They think that heretofore more women than men have gone to church because the Church gave woman virtually her opportunity to express her social instincts.

But what will woman's attitude be, now that she has attained the fullest rights to express herself politically, industrially, professionally and in many other ways? Will she grow lukewarm toward the Church, perhaps abandon it altogether? Some clerics are strongly inclined to think this a possibility. They regard it as not unlikely that a time may come when men inside the Church will be as much disturbed about women who are outside the Church as women have been about absentee men. Their suggested remedies for obviating such a development are to open the way for the fuller participation of women in the control of churches and denominational boards, and to allow women to minister on an equality with men.

# THE RIGHT OF CZECHOSLOVAKIA TO INDEPENDENCE

BY CHARLES PERGLER

Member of the American Bar Association and of the Iowa State Bar; formerly Commissioner of the Czechoslovak Republic to the United States, Minister to Japan, &c.

**T**RADITION and history are so interwoven with the concept of nationality that in considering the right of a nationality to independence and statehood it is always advantageous and even necessary to indulge in a historical retrospect. This is especially true of the Czechoslovaks.

As early as the seventh century, when the historical data relative to Bohemia begin, we find evidences of an established Czech State. In the eleventh century Bohemia, Moravia, Silesia and Poland were united under Bretislav I., King of Bohemia, and, in the words of Count Luetzov, the eminent historian, "The idea of a West Slav empire seemed on the point of being realized, but the Germans stepped in to prevent the formation of a powerful Slav State on their borders." Otokar II., of the House of Premysl, for a time extended Czech rule from the Adriatic to the Baltic. Under the "National King," George of Podebrad, in the fifteenth century, the lands of the Bohemian Crown, as the Czech State was then known, were a European power of the first order.

The lands of the Bohemian Crown, almost four centuries ago, were Bohemia, Moravia and Silesia (with the two Lusatias), and constituted an independent realm, just as Hungary was then an independent kingdom. In 1526 the Czechs called to the throne of their State the Hapsburg dynasty for practically the same reasons and on the same conditions as the Magyars (commonly known as Hungarians). Together with the Pragmatic Sanction, the terms under which the Hapsburgs were called to the Hungarian throne formed what can be called the legal foundation of the Hungarian revolution in 1848. The Czech case of 1915-18, historically and legally speaking, is every bit as strong as was the Magyar case in 1848, if not stronger. The compact of 1526, to-

gether with the coronation oaths and a large number of other historical documents, form the legal basis of the Czech revolution during the great war.

The foundations of the late Austro-Hungarian Empire are to be found in a purely dynastic union (1526) of the Czech State with Austria and Hungary. The Hapsburg dynasty, disregarding its pledges, endeavored to centralize and Germanize this union. In 1526 most of Hungary, indeed all of it except the Slovak part, was subjugated by the Turks, and its liberation required almost 200 years of fighting by Austria and Bohemia. The Czechs at the same time defended their independence against the Hapsburgs, but were defeated in 1618, as a prelude to the Thirty Years' War, and later severely persecuted by the dynasty. But they never submitted, and even as late as 1775 the peasants of Moravia defended their national church. The Moravians, of course, are Czechs; to hold otherwise would be as sensible as to say that while New Yorkers are Americans, Pennsylvanians are not.

The Czechs rebelled against Austria in 1848, but were unsuccessful, while the Hungarian revolution was suppressed with the aid of the Russian Government. But in 1867, following defeats by Italy and France (1859), and by Prussia (1867), Austria became Austria-Hungary (the Dual Empire) by making concessions to the Magyars.

The Czechs claimed the same rights as the Magyars. Failing to overcome their opposition, the Emperor Francis Joseph promised to concede these on various occasions, saying especially, in a rescript to the Bohemian Diet on Sept. 12, 1871: "We are aware of the position of the Bohemian Crown founded on her constitutional law, and of the splendor and the power which it has brought to us and our predecessors. We are happy to acknowledge the rights

of the kingdom and we are ready to renew this acknowledgment with our Coronation Oath." These promises were never carried out, largely owing to the opposition of Budapest and Germany, the latter particularly desiring Austria-Hungary to be her vanguard in the Balkans.

Louis Kossuth, the famous Magyar revolutionary leader, in a letter to Helfi, editor of the paper Magyar Ujsag, dated Nov. 8, 1871, declared:

Between the legal titles which form the foundation of the right of the dynasty to the throne in Hungary and Bohemia there is not merely an analogy, but a complete identity. That is true of their origin and time, method, conditions and principles, as well as their literal wording. The Bohemian land is not a patrimonium, no so-called hereditary land, no mere appendage of Austria, but a country that may appeal to diplomatic negotiations and mutual agreements. It is a State, just like Hungary.

Legally the Czech-Austrian case was not dissimilar to that of Norway and Sweden in 1905. In both instances there was merely the common bond of a dynasty. Such bonds may be severed by either country, or by operation of different laws determining dynastic succession. Hanover was separated from Great Britain in the latter manner.

Slovakia was occupied by the Magyars and separated from Bohemia and Moravia at an early date. A strong case could be made for the proposition that at one time the Magyars were culturally dependent upon the Slovaks. Their language teems with Slovak terms which they borrowed because of the backwardness of their own idiom. During more recent decades the Magyars barbarously persecuted the Slovaks and endeavored to Magyarize them. They have a saying: "The Slovak is not a human being."

The Slovak language is really a purer form of the Czech. A Slovak understands Czech, the latter understands Slovak. There is not as much difference between a Czech and a Slovak as there is between a West Virginia mountaineer and a New Englander. The Slovak hero of the World War, and the first Czechoslovak Minister of War, General Stefanik, was fond of saying: "The Czech is a Slovak living in Bohemia or Moravia, the Slovak a Czech living in Slovakia." In the late war Czechs

and Slovaks fought faithfully for a united Czechoslovak State. The story of the Czechoslovak legions in Siberia, France and Italy will never be forgotten.

All this makes the Czechoslovak case unassailable, whether one looks at it from the viewpoint of history, of law or of self-determination. Both the Czech and the Slovak claim could rest purely upon the principle of self-determination. But it is also worth pointing out that there is no inconsistency between the legal rights which the Czechs have to independence and the claim of Czechs and Slovaks to unity as a result of the application of the principle of nationality. The Czech State never ceased to exist legally; Czechoslovak claims to independence were recognized before the armistice by all the European powers as well as by the United States. Our State was not created by the Paris Conference—the latter simply acknowledged an existing fact. The republic was a participant in the peace conference as a sovereign power.

The Carpatho-Russians (briefly called Ruthenians) form an autonomous province of the Czechoslovak Republic with as much self-government as the individual States of the American Union, and, consequently, their representatives in the National Assembly vote only upon questions common to the republic; and this autonomous province, Carpatho-Russia, came within the fold of the republic upon the demand of the Ruthenians themselves. Just as it cannot be said, in view of the foregoing facts, that the republic is an artificial creation of the peace conference, so it cannot be maintained that the Carpatho-Russians were allotted to it by the Paris gathering; they came in voluntarily. As accident has it, most documents relating to the matter passed through my hands before they were forwarded to Paris.

Historically, legally, ethnically and morally, the Czechoslovak Republic rests upon unshakable foundations. Economically, when the difficulties of the formative years are surmounted, it will be practically self-sustaining, as far as any modern State can be so. It has a stable, progressive Government, and a peaceful, non-aggressive, non-imperialistic foreign policy. Without exaggeration it can be said to have fulfilled the expectations of all its American friends.

# CZECHOSLOVAKIA'S PLACE IN THE SUN

To The Editor of *Current History*:

In your August issue you published an article written by Anthony Pessenlehner, to which you give the title, "Czechoslovakia's Right to Statehood Assailed." *CURRENT HISTORY* ought never to give space to such communications. In the first place, the author does not assail Czechoslovakia's right to Statehood. Secondly, in all he says there is no history whatsoever. Even your footnote, stating that you do not indorse the attack, is not a sufficient defense of *CURRENT HISTORY* in this case.

We do not doubt for a moment that the writer intended to assail Czechoslovakia's right to Statehood; but, instead, he confirms that right at the beginning of his essay when he admits the "calling into life of Czechoslovakia," and does not attempt to show that those who brought into life the Czechoslovak State were without authority to do so or that their action is not now valid or legal.

What he does is to assail the *makers* of the Czechoslovak State, claiming that they have "rudely cast aside historic, political, economic and even ethnographic considerations," and also that:

The coup was accomplished through deliberate falsifications of past history and the misleading, but a thousand times disproved, theory of the racial identity of the Czechs, the Slovaks and the Ruthenians.

It seems to us that after our sons fought and won the war, and liberated peoples, it is entirely out of place for any one to say that our country and its associates "accomplished the coup through deliberate falsifications of past history," &c. No condemnation is thrown by Mr. Pessenlehner upon the Czechoslovak Republic, but upon its *makers*, among whom the foremost is our United States. This fact is attested in passages such as this from the same August issue of *CURRENT HISTORY* (p. 844):

The attitude of Czechoslovakia toward America is one of admiration and emulation. This new republic is grateful to the great Republic for the part America played in gaining Czechoslovak liberty and in founding the

Czechoslovak State. Ex-President Wilson is still immensely popular in Czechoslovakia. The great railroad station in Prague is called the Wilson station. Pictures and bronze medallions of Mr. Wilson are coupled with pictures and medallions of President Masaryk in offices, schools, hotel lobbies and elsewhere all over the country.

Let me call the attention of your readers to the "history" which Mr. Pessenlehner succeeded in placing in *CURRENT HISTORY*:

1. He admits that there once was a "Czech Kingdom," also a "Moravian Duchy," but continues: "There never was an independent country known as Moravia, Slovakia, Ruthenia or Rusinia." Suppose this were true—as it is not—how is this to react against the present Czechoslovak Republic? There never was and never will be an independent country of Pennsylvania, but there is and always will be an independent country of the United States of America, including the State of Pennsylvania; so there is and always will be the independent Republic of Czechoslovakia, including Moravia, Slovakia, &c.

2. The historian Pessenlehner tells you further that "the country known as Hungary in 1896 was the same as in 1914—not an inch having been added to it by conquest or otherwise," and "more than a 1,000 years ago the Magyars were driven out of their original European settlement—and organized the State of Hungary." Are we to understand that the Magyars were "originally" European settlers? If not, why does the historian Pessenlehner not mention how long the Magyars occupied their "original European settlements," and when and whence they came?

Then he states that when the Magyars moved into and organized the State of "Hungaria" no rights of other nations were violated, for the reason that when a land is uninhabited it is no nation's land. Is it not a strange "historical" coincidence that Magyars moving from their "original European settlement"—(what was its name?)—into "an uninhabited land," organized it and named it "Hungary"? Why "Hun-

gary"? And in order that readers shall be induced to believe him he quotes as authority "the historian, Alfred the Great, King of England." Suppose it were true—as it is not—that Alfred the Great wrote such "history," why, pray, should the historian of Youngstown, Ohio, believe the old King of England more than the new King of England, and his historians and Ministers and their associates of the United States, who called into life the Republic of Czechoslovakia?

Our historian tells us that "the Czechs began to appear in this part of Europe in the fifteenth century." Then he continues: "In later times the white Croatians, ancestors of our present-day Slovaks, were settled \* \* \* this happened at about the eleventh century. \* \* \*" Those are the very words of historian Pessenlehner. May we not call attention to his great invention and addition to "history" that we have now a nation in old Europe, namely the Slovaks, who were produced on the spot—after the coming of the Magyars—by the "white Croatians"; and now they are good

Slovaks of Czechoslovakia—and they even want autonomy. Who in America would ever have believed that we should learn of a new nation of old Europe, born less than a thousand years ago, or, as the case may be, after the fifteenth century?

If Mr. Pessenlehner would read *CURRENT HISTORY*, or any other history, he would by this time know all about the oppressions by the Magyars and the Hapsburgs, and all about the hatreds of the Czechs, Slovaks, Moravians and Russians; he would know that after brutal sufferings and bitter resistances of centuries—and after the great war had cleared the way—these oppressed nationalities revolted and declared themselves independent; and he would also well know why some of these nationalities have united in the new and substantial State of Czechoslovakia. May we not encourage our historian to inquire for more history?

Rev. C. L. ORBACH,

President and Editor-in-Chief, *Daily Slovak-American*, New York.  
*Wallington, N. J., Aug. 5, 1921.*

## ANOTHER DEFENSE OF CZECHOSLOVAKIA

*To the Editor of Current History:*

In an article in the August issue of *CURRENT HISTORY* ("Czechoslovakia's Right to Statehood Assailed"), Dr. Anthony Pessenlehner asserts that "the Czechs were quite content with their lot within the confines of Austria," that "they were the most willing tools in the hands of the Hapsburg despot," that "they had been useful spies of the Hapsburgs against the Hungarians." Like the professional propagandist, he discerns "grave signs that the Slovaks and Ruthenians do not wish to be included in the Czechoslovak State," &c.

He puts the entire blame on the Czechs for having abducted the Slovaks from the Hungarian State, but has not a word of censure for the old Hungarian Government, which was responsible for the Slovak walk-out. He is clear and precise as to what took place in 896, the year the Magyar conqueror is reputed to have entered Slovakia. The victors, we are assured, treated the vanquished with the utmost consideration

and chivalry. But as to the treatment the Slovak grandfathers received at the hands of the Magyar grandfathers after 1867, when Hungary became free, the writer is not so clear. This chapter, singularly enough, he forgets to tell.

Within the territory of the present Slovakia there were, in 1905, 33 gymnasia (Latin secondary schools), 6 "real" schools (these prepared the pupils for technical careers), 4 law academies, 1 mining academy, 1 school of forestry, 2 Protestant, 5 Catholic and 1 Greek Catholic theological seminary, 140 trade, commercial and other schools. In all these schools Magyar was the language of instruction. Not one was Slovak. What is more, students of Slovak nationality were prohibited to converse in public in their mother tongue. A student suspected of Pan-Slavism—a Pan-Slav was one who read Slovak or Czech books or newspapers—was put on the black list by his professor. Unless he mended his Pan-Slav ways he was summarily expelled.

Before 1914 only 6 per cent. of the people of Hungary voted. In 1910 out of 413 members of the Chamber of Deputies only seven were non-Magyars—of the seven three were Slovak—though the Magyars constituted a meagre half and the Slovaks 10 per cent. of the entire population.

Let us examine the record of the Czechoslovak Government in the matter of schools for the Slovaks. Since October, 1918, when Czechs and Slovaks became free and independent, the Government has organized and opened 2,372 Slovak public schools, 102 so-called citizen schools, 37 gymnasias, 5 "real" schools, a number of girls' academies, 13 normal colleges for the training of teachers and a university at Bratislava, the capital. In addition, the Government has provided the Magyars and Germans with ample educational facilities.

All the responsible ethnologists agree that the Czechs, Moravians and Slovaks are racially identical, but Dr. Pessenlehner insists they are not. This is like maintaining that the Yankees of Connecticut and the Yankees of Massachusetts are not racially identical. The Czechs and Moravians are one nation, they speak one language, with local brogues, to be sure, and they have common traditions and history. The cultural development of the Slovaks was somewhat different from that of the Czechs of Bohemia and Moravia, owing to their separation. The Czechs fell under the sovereignty of Austria, the Slovaks became subjects of Hungary. Yet the two groups have not lost their racial identity. So closely related are they that the Czechs and Slovaks can carry on a conversation and can readily read each other's newspapers. Since the war Czech papers make it a practice

to run columns of reading matter in Slovak and vice versa. The Slovaks of Protestant faith use the Czech version of the Bible.

Dr. P.'s assertion to the contrary notwithstanding, the Slovaks, not the Magyars, are the aborigines of Slovakia. This is the opinion of the greatest living authority on Slavic antiquity, Professor L. Niederle. The Slavic nomenclature of rivers, mountains and villages proves irrefutably who settled in those regions first.

That the "Slovaks never wanted to get out of the Hungarian State" is a fiction; as much so as that the French of Alsace-Lorraine never wanted to get out of Germany. What was the use of wishing it? That there is discontent in Slovakia is true. But discontent exists in Hungary, unrest prevails in Germany, grumbling is heard in Italy, restlessness is reported from Spain. The principal breeders of discontent in Slovakia are army ex-officers, officeholders of the old régime and masters who are masters no longer.

The doctor is in error when he says that the Battle of White Mountain was fought in 1647. The correct date is 1620. The heraldic title of Moravia is not duchy but margravate. Moravia never belonged to Poland.

The Magyars and the Czechoslovaks are now next-door neighbors. As things look, they will remain neighbors. The time may even come when they will want to play in each other's backyard. Don't you think, then, it's a poor policy to make faces at your neighbors living on the other side of the fence, and to call them names? C.

[The writer of the foregoing is the author of several books and at present is in a position of great responsibility and importance in the business world.]

## CZECHOSLOVAKIA'S ALLIANCE WITH RUMANIA

AS Yugoslavia allied herself by treaty with Italy in an anti-Hapsburg compact, so Czechoslovakia, who has so much to fear from Hungary, sought by an alliance with Rumania to attain the common aim of the Balkan States—security pending a permanent settlement of the whole Central European situation. The Czechoslovak-Rumanian pact was signed at Bucharest on April 28, 1921. The object of the treaty, as declared in the first paragraph, was to

secure the full execution of the Treaty of Trianon with Hungary, and, specifically, to unite defensively in case of any unprovoked attack by Hungary upon either of the high contracting powers.

The hostility of the Magyar Government to Rumania, whose troops invaded Budapest a year ago, and who, in the Banat territory, acquired overlordship over many thousands of Magyars, is well known. To Czechoslovakia Hungary is no less hostile,

and similarly for territorial reasons, as the newly constituted State of the Czechs on Hungary's northern boundary was, on its outer fringes, made up of territory occupied by a certain percentage of Hungarians. The Hungarians have for some time been engaging in a violent propaganda to undo the work of the Peace Conference and to regain these territories. The double motive for the alliance of Rumania and Czechoslovakia is thus made plain. The text of the treaty follows:

Firmly resolved to preserve the peace secured by such great sacrifices and anticipated in the pact of the League of Nations, as well as the conditions established by the treaty concluded at Trianon on June 4, 1920, between the Allied and Associated Powers on one hand and Hungary on the other, the President of the Czechoslovak Republic and his Majesty the King of Rumania, have agreed to conclude a defensive alliance, and to this end have appointed as their plenipotentiaries, to wit: The President of the Czechoslovak Republic, M. Ferdinand Veverka, Envoy Extraordinary and Plenipotentiary of the Czechoslovak Republic at Bucharest; his Majesty the King of Rumania, M. Take Jonescu, his Secretary of State for Foreign Affairs, having communicated their full powers found in good and due form, these plenipotentiaries have agreed as follows:

*Article 1.*—In case of an unprovoked attack by Hungary upon one of the high contracting parties, the other party engages to come to the defense of the party attacked in the manner determined by the arrangement anticipated in Article 2 of the present convention.

*Article 2.*—The competent technical authorities of the Czechoslovak Republic and the Kingdom of Rumania shall determine by common agreement the dispositions necessary for the execution of the present convention in a military convention to be concluded later.

*Article 3.*—Neither of the high contracting parties shall conclude an alliance with a third party without previously informing the other.

*Article 4.*—In order to co-ordinate their efforts for peace, the two Governments engage to consult upon questions of foreign policy with reference to their relations with Hungary.

*Article 5.*—The present convention shall remain in force for two years from the day of exchange of ratifications. At the end of that period each of the contracting parties shall be at liberty to denounce the present convention. But it shall remain in force for six months after the date of the denunciation.

*Article 6.*—The present convention shall be communicated to the League of Nations.

*Article 7.*—The present convention shall be ratified, and the ratifications shall be exchanged at Bucharest as soon as possible.

In faith of which the said plenipotentiaries have signed it and have affixed their seals.

Done at Bucharest, in two copies, on April 28, 1921.

(For Czechoslovakia)

DR. FERDINAND VEVERKA.

(For Rumania)

TAKE JONESCU.

*Bucharest, Apr. 28, 1921.*

#### JUGOSLAVIA AND RUMANIA

The text of the Defensive Convention signed at Belgrade on June 7, 1921, between Jugoslavia and Rumania—another of the Little Entente treaties—is as follows:

Firmly resolved to maintain the peace won by such great sacrifices, and the order established by the treaty concluded at Trianon on June 4, 1920, between the Allied and Associated Powers on the one part and Hungary on the other part, as well as by the treaty concluded at Neuilly on Nov. 27 between the same powers and Bulgaria, his Majesty the King of the Serbs, Croats and Slovenes and his Majesty the King of Rumania have agreed to conclude a defensive convention.

*Article 1.* In case of an unprovoked attack by Hungary or Bulgaria, or by both these powers, upon one of the contracting parties with the object of subverting the order created by the Treaty of Trianon or that of Neuilly, the other party engages to go to the defense of the party attacked in the manner determined by Article 2 of the present convention.

*Article 2.* The competent technical authorities of the Kingdom of the Serbs, Croats and Slovenes and of Rumania shall determine by common agreement as quickly as possible the necessary dispositions for the execution of the present convention.

*Article 3.* Neither of the high contracting parties shall conclude an alliance with a third party without previously informing the other.

*Article 4.* In order to unite their efforts for peace the two Governments undertake to pursue a harmonious foreign policy in their relations with Hungary and Bulgaria.

*Article 5.* This convention shall remain in force for two years from the date of the exchange of ratifications. At the end of that term each contracting party shall be at liberty to denounce the present convention, which, nevertheless, shall remain in force for six months after the date of the denunciation.

*Article 6.* This convention shall be communicated to the League of Nations.

*Article 7.* The present convention shall be ratified and the ratifications shall be exchanged as soon as possible.

(Signed)

TAKE JONESCU,  
NICHOLAS PASHICH.

(From *Le Journal des Debats*, July 19, 1921.)

# HOW TWO U-BOAT CRIMINALS WERE CONVICTED

*An account of the most interesting case that has come before the German War Criminal Court at Leipsic—Conviction of subordinate officers who helped to sink a hospital ship and fired on the helpless survivors in lifeboats*

WHEN the Allies at the Peace Conference decided to entrust to Germany the trial of her own war criminals, simply furnishing lists of the accused and all available evidence against them, the plan was regarded with many misgivings, especially by France. In due time the court was set up at Leipsic, and the trials began early in the Summer of 1921 in the presence of commissions sent by the various allied Governments to observe the proceedings. From the first it became apparent that the German court would not punish any criminal of high military rank, whatever his misdeeds. A few light sentences were imposed on scapegoats of inferior position. After General Stenger had been acquitted (July 7) of the charge of shooting French prisoners, the French Government indignantly withdrew its commission from Leipsic, and Belgium did the same, though the British commission continued to stay and follow the proceedings.

The next case was that of German submarine officers charged with having torpedoed and sunk the British hospital ship *Llandovery Castle* on the night of June 27, 1918. Not only had the U-boat commander deliberately violated international law by sinking what he knew to be a hospital ship, but he had also given orders later to fire on the lifeboats with intent to murder every survivor and thus leave no trace of the crime.

Though the Leipsic court did not alter its policy of letting the man

higher up escape, this case was so flagrant and the evidence so irrefutable that it resulted in a prison sentence for two subordinates. The men thus singled out for punishment were Lieutenants Ludwig Dithmar and Johann Boldt, who had been serving as officers on the German submarine U-86 under Captain Helmut Patzig at the time of the sinking. Captain Patzig, the chief criminal, on hearing of the impending prosecution, had taken refuge in Danzig, which is now a free State, and the German Government—which had done nothing to prevent his escape—thereupon announced its inability to extradite him, though his exact place of residence was known. Instead, it indicted—on its own initiative—the two subordinate officers who seem to have had most to do with carrying out Patzig's ghastly and inhuman orders.

The trial began on July 12. Dithmar, a keen-faced man of 28, of a quiet and impassive demeanor, and Boldt, who was only 21 when the British hospital transport was sunk, faced their judges, scowling and defiant. Dithmar, who was still in the German Navy, was in full naval uniform. Boldt, who had become a business man, was dressed in a frock coat, on which he wore an Iron Cross. The indictment declared that, together with Captain Patzig, the two accused officers deliberately killed an unknown number of persons escaping in boats from the sinking ship, in order that there should be no English wit-

nesses alive to tell the tale, and that the men on trial had themselves fired on the Englishmen striving to escape their doom.

Invited by the Court to speak in his own defense, Dithmar refused to testify, declaring that he had promised Captain Patzig to be silent. This attitude he obstinately maintained to the end of the trial. Boldt, however, proved loquacious in the extreme, and in loud and menacing tones launched into an impassioned defense of Patzig, under whom, he declared, he was proud of having served. Triumphantly he narrated the sinking of the *Cincinnati*, a troopship. "If all German submarine officers had been like Captain Patzig," Boldt asserted, "England would not have been able to bring about the armistice by murdering thousands of Germans through the hunger blockade." Like Dithmar, however, he refused to reveal the facts regarding the Llandoverly Castle, alleging the pledge of secrecy made to Captain Patzig.

The first witness called was Leslie Chapman, second officer on the Llandoverly Castle, who was in the lifeboat which managed to escape after the Germans had twice called the men aboard the U-boat, questioned them, and then tried to ram their lifeboat and sink the last evidence of the crime. "It is my day now," said Lieutenant Chapman, as he passed the sullen German officers on his way to the witness stand. His story, told in a cool and convincing way, made a deep impression on the Court. The evidence of other officers of the ill-fated ship was taken, including that of Major Lyons, chief medical officer, who had come all the way from Vancouver to testify. The clear and definite picture given by all the British witnesses was supplemented and amplified by the evidence of German witnesses on subsequent days of the trial. From the combined evidence the whole tragic crime emerged as follows:

When the submarine rose to the

surface on the night of June 27, 1918, in an area which had been declared by Germany to be a "free zone," viz., a zone in which torpedoings would not occur, it sighted the Llandoverly Castle, which it had been following under water, and discovered at once that it was a hospital ship, shown by its luminous markings. Patzig was then in the conning tower, with the accused Lieutenant Dithmar and the Coxswain Popitz. Popitz declared that both he and Dithmar had advised Patzig not to torpedo the ship, as she was in the free zone. Patzig, however, who was of a reckless and ambitious type, and of a vindictiveness enhanced by the possession of certain German Admiralty reports, which contained false espionage information regarding the English hospital ships which he was likely to encounter, including the Llandoverly Castle, consulted with Dithmar and Boldt, and decided to sink her. At Patzig's order, two torpedoes were fired, one of which sent the ship to the bottom within a few minutes.

Chapman, the main British witness, told how he saw seven lifeboats clear, and two of them capsize. His own boat was the third. Four other boats disappeared, and all the evidence of the German sailors pointed to the fact that they had been fired on and sunk by Patzig, Dithmar and Boldt, working with the U-boat's gunner, Meissner, whose death had occurred before the trial. It appeared that Patzig, realizing that his only hope of exculpation for the torpedoing would lie in evidence that the hospital ship was in reality a ship of war, called at least two of the fleeing lifeboats to the side of his submarine, including Chapman's boat, summoned the crews aboard, questioned them searchingly as to the supposed combatant character of those on board the Llandoverly Castle, and asked if the ship carried munitions.

One of the boats—that of Chapman—was twice summoned. On the first occasion the occupants of this

boat—the only one which escaped—were endeavoring to pull aboard a number of their comrades who had been capsized and were struggling in the water. From the submarine came orders couched in English to come at once alongside. Chapman vainly protested, explaining that they were trying to save their comrades. The German reply was that if they did not come at once, a big gun would be turned on them. They were forced to abandon their compatriots, who were left to drown. After the examination, they departed, and were again summoned. On this occasion Dr. Lyon was pulled aboard the submarine so roughly that his leg was broken. He was taken to the conning tower and questioned, then lowered again into the lifeboat. On departing, one of the German officers—Dr. Lyon, in testifying, believed it was Dithmar, but was not certain—told him in a low tone behind Patzig's back that it would be wise for the boat to get away quickly.

No evidence in support of the "armed ship" theory having been obtained, it was clear that Patzig, realizing his position, decided to remove all traces of his crime. He gave orders for all hands, except the officers, to proceed to the diving stations, as if the submarine were about to immerse. The U-boat, however, remained upon the surface, with Patzig, Dithmar and Boldt on deck. These three then and there agreed upon the plan of action. Patzig outlined his desires, and his subordinate officers aided and abetted. For some time the U-86 cruised about. It was then, according to the testimony of Chapman and the other British witnesses, that the Germans tried twice to ram and sink the lifeboat of which Chapman was in command. The second attempt almost succeeded. The sole survivors then hoisted a sail and managed to slip away in the darkness.

It was then, according to the German testimony, that Patzig ordered Meissner on deck to man the

after gun. Dithmar is alleged to have handled the forward gun. Chapman's boat was fired upon, but escaped uninjured. The submarine crew heard the firing, and it was assumed by Popitz and all the rest that the commander was firing on the survivors of the Llandoverly Castle. This was common gossip on the submarine the next morning. It was noticed that Boldt's hand was injured, presumably while serving one of the guns. There was much depression on board, and all were worried about the consequences. Patzig called the crew before him in the control room and said to them: "You know what has happened, and I beg you to keep silent about it. I take the responsibility on my own conscience."

Such is the story reconstructed from all the evidence. The case was completed by July 16. Dr. Schmidt, President of the Court, pronounced sentence on Lieutenants Dithmar and Boldt. They were found guilty of aiding and abetting manslaughter (*Beihilfe zum Totschlag*), and sentenced to four years' imprisonment (without hard labor), in conformity with the penalties for this crime prescribed by the Criminal Code. Lieutenant Dithmar was dismissed from the navy, and Lieutenant Boldt was deprived of his civic rights and the right to wear uniform.

In pronouncing sentence, Dr. Schmidt made it clear that the accused were not held guilty for the torpedoing, which, though plainly a violation of international law, was the act of their superior, whose orders they had executed. Their guilt was in taking part in firing upon the helpless survivors in open boats. The opinion of the Court was that these boats had been deliberately fired upon in order to get rid of witnesses of the criminal attack upon the hospital ship. The commander's injunction to the crew to keep silence was beyond question in reference to the firing upon the lifeboats. Though the Court did not believe that the ac-

cused officers themselves had actually served the guns, they had been parties to the crime of their commander. The only doubt had been as to whether the killing was premeditated or not. The Court's view was that Patzig had acted under great excitement, on impulse, driven by the desire to conceal his crime. His accessories came under the same category; they were, therefore, held not for first degree murder, but for manslaughter, this verdict also being influenced by the difficulties of their situation had they attempted to disobey the orders of their ranking officer. Their act, however, had cast a shadow on the German Navy, especially on the conduct of the U-boat warfare.

The two officers listened to this verdict with impassive faces. A great demonstration occurred after the verdict, many Germans, both men and women, crowding around the two "heroes," shaking their hands, and showering praises upon them. The reactionary German press howled disapproval of the "drastic" sentence. The saner organs, however, were inclined to view the verdict as a vindication of German justice for a crime which injured Germany in the eyes of the world, and of which many Germans were in ignorance. Somewhere in Danzig skulked Patzig, a fugitive from justice and the real criminal, while his subordinate officers were made the scapegoats of his crimes.

## FATE OF THE RUSSIAN INTELLECTUALS

THE death of that matchless singer, Enrico Caruso, leaving a fortune of considerably over \$1,000,000, brings out vividly in contrast the present fortunes of his former colleague, the great Russian baritone, Shaliapin. Caruso earned thousands of dollars a night for one performance, as Shaliapin earned thousands of rubles, marks or francs for his triumphal tours through Europe. The salary earned by Shaliapin under the Soviet Government, which is still keen for the fine arts, though it lets its most eminent scientists die of starvation, has been stated to be 200,000 rubles for one performance. This seemingly huge figure, however, is deceptive, in view of the worthlessness of Soviet paper, and amounts in reality to only \$150. In comparison with the fate of Russia's most eminent men in other lines, however, even such an income represents affluence. The Soviet paid it in order to encourage the arts. It was only when Shaliapin's pretensions rose so high as to lead him, in lieu of his salary, to demand a sack of flour, a basket of eggs or a couple of chickens, that the Government began to count the cost.

Literature in Russia has gone by the

board. Vainly has Maxim Gorky, now harnessed to the Soviet machine, sought to alleviate the lot of the intellectuals by creating a food centre in the so-called House of Science, installed in the former palace of Duchess Maria Pavlovna. Glazunov, former Director of the Conservatory of Petrograd, is wasting away with hunger, and has not even the consolation of composition, as he has no paper. The academician Kotliarchesky is in rags, and starving; the poet Blok has the scurvy; the famous printer Benoit is starving; many of those whose names are greatest in Russian science, history, philosophy, have already succumbed. The intellectuals of the world, now fully realizing the tragedy, are working to send their comrades assistance. A Finnish committee is soliciting subscriptions from all Europe. The intellectuals of France are rallying in Paris. The famine conditions in the Volga region, recently revealed, will undoubtedly make the situation worse. Now, however, that Herbert Hoover, in response to an appeal from Maxim Gorky, has begun active measures to relieve the famine conditions in Russia, it is to be hoped that the Russian intellectuals will derive some benefit.

# THE IRISH PEACE NEGOTIATIONS

*Terms of the truce and progress of the three-cornered negotiations that followed—Chasm between the British Government and the Sinn Fein leaders apparently less difficult to bridge than that between the North and South of Ireland.*

[PERIOD ENDED AUG. 10, 1921]

THE decision of Eamon de Valera to meet Premier Lloyd George in a London conference looking toward peace was followed by actions of immediate relief to the well-nigh desperate situation into which the country had fallen. At 3 o'clock on July 9 General Sir Nevil Macready, military commander in Ireland; Colonel Brind and A. W. Cope, Under Secretary in the office of the Chief Secretary for Ireland, acting for the British Army, and Commandants Robert C. Barton and E. J. Duggan, representing the Irish Republican Army, met at British Military Headquarters. They agreed upon the terms of a truce as follows:

1. That there be no incoming troops of the Royal Irish Constabulary and Auxiliaries and no shipments of munitions into Ireland and no movements for military purposes except in the maintenance of drafts.

2. That there be no provocative display of forces, armed or unarmed.

3. That all provisions of the truce apply to the martial law area just as for the rest of Ireland.

4. That there be no pursuit of Irish officers and men or search for war material and military stores.

5. That there be no secret agents noting descriptions or movements of, and no interference with the movements of, Irish military men and civilians, and no attempt to discover the haunts and habits of Irish officers and men.

6. That there be no search for, or observance of, lines of communication.

7. That there be no search for messengers.

Other details connected with courts-mar-

tial, motor permits and similar matters to be agreed to later.

On behalf of the Irish Republican Army it was agreed:

1. That attacks on Crown forces and civilians cease.

2. That there be no provocative displays of forces, armed or unarmed.

3. That there be no interference with Government or private property.

4. The discountenance and prevention of any action likely to cause disturbance of the peace and which might necessitate military interference.

Upon the announcement of the truce, General Headquarters of the Irish Republican Army issued an order to "officers commanding all units" that "active operations by our troops will be suspended by noon Monday." At the same time the British authorities lifted several restrictions. Mr. de Valera also gave out a proclamation, which read:

Fellow-citizens: During the period of truce each individual soldier and citizen must regard himself as the custodian of the nation's honor. Your discipline must prove in the most convincing manner that this is a struggle of an organized nation.

In the negotiations now initiated your representatives will do their utmost to secure the just and peaceful termination of this struggle, but history, particularly our own history, and the character of the issue to be decided are a warning against undue confidence.

Unbending determination to endure all that may still be necessary and fortitude such as you have shown in all your recent sufferings—these alone will lead you to the peace you desire. Should force be resumed

against our nation, you must be ready on your part once more to resist. Thus alone will you secure the final abandonment of force and the acceptance of justice and reason as the arbiter.

With the striking of the clock at noon on the 11th the truce went into effect amid a general demonstration of relief and rejoicing. A few minutes after the hour a noteworthy incident occurred by which British sincerity to keep the pact was made evident. A private yacht in Kingstown Harbor hoisted the Irish Republican tricolor in honor of the event. Thereupon four soldiers rowed out to the yacht and hauled down the flag. When a complaint was lodged by the owner of the yacht with the military authorities at Kingstown naval base a British officer visited the yacht, personally hoisted the Irish flag and saluted it before returning to shore, where a great crowd cheered the amende honorable.

On the evening of July 12 Eamon de Valera arrived in London, accompanied by Arthur Griffith, Vice President of the Sinn Fein; Austin Stack and R. C. Burton, both Irish members of Parliament, as peace envoys, and Lord Mayor O'Neill of Dublin, Count Plunkett and Erskine Childers. The first meeting between Premier Lloyd George and the "President of the Republic of Ireland" was held in the Cabinet room of 10 Downing Street at 4:30 P. M., July 14. They took tea together and conversed for two hours. On the following day the two leaders were again closeted for an hour and a quarter, with the agreement made that nothing was to be disclosed regarding the conversations. On the same date Sir James Craig, the Ulster Premier, arrived in London, and in the afternoon had a long interview with Premier Lloyd George, after which the Ulster Cabinet was summoned to London.

In the absence of any official information regarding these meetings it was learned that while Premier Lloyd George had obtained from Mr. de Valera a waiver of the inadmissible demand for an independent re-

public so long as Ireland was given the status of a nation, the difficulty to be overcome lay in Mr. de Valera's insistence that there must be one Parliament for all Ireland, though willing to grant a local assembly to Ulster, subordinate to the Dublin Parliament. On the other hand, for the Ulster side, Sir James Craig was understood to be equally insistent upon the independence of the Northern Parliament. Hence the plan of a conference of the three parties was temporarily held up. The Northern Irish Premier later granted an interview in which he declared that the British Government must reach its own agreement with de Valera, and that Ulster was determined to maintain its present status. This practically repudiated the whole Sinn Fein argument that Ulster was in the minority and must bow to the majority in Ireland. The same evening Sir James Craig and his colleagues left for Belfast "to carry on the work of the Government."

At a British Cabinet meeting on July 20 plans for an Irish settlement were discussed, after which Premier Lloyd George laid before King George agreed-upon proposals to be submitted to Mr. de Valera. These proposals, in the form of a typewritten document, were handed to Mr. de Valera on the day following. He and his associates then returned to Dublin for consultation, arriving on July 22. In addressing a large gathering outside the Mansion House the Sinn Fein leader said:

The lesson learned in the last couple of years in Ireland is that acts, not talk, achieve nations' freedom. If we act in the future as for two years past we shall not have to talk about freedom, for we shall have it.

A considerable period of waiting then ensued, during which it was understood Mr. de Valera held numerous conferences with his colleagues and communicated with Premier Lloyd George on minor points. From meetings of the Ulster Cabinet it was gathered that a firm stand was being

maintained not even to entertain overtures which threatened to diminish the powers of the Northern Parliament. A decisive step, however, was taken by the Sinn Fein leaders on Aug. 5, when notices were sent out for a full meeting of the Dail Eireann, the Irish Republican Parliament, on Aug. 16. This action automatically called for the freedom of all the members still in prison. On Aug. 6 the British Government responded through Dublin Castle by announcing the unconditional release of all members of the Dail Eireann except J. J. McKeown, convicted of murder. Upon representations by Mr. de Valera, however, McKeown was ordered released on Aug. 8.

The authority of the Sinn Fein had been remarkably illustrated by the cessation of all hostilities against the British the moment the truce went into force. On the other side, some complaints came from Cork that the police and military under General Strickland continued to act in a manner likely to exasperate the people, but generally throughout the South of Ireland the British lived up to not only the letter but the spirit of the truce, especially in withdrawing the unpopular Black and Tans from duty and in subordinating the military to the civil power in such matters as

staying executions, liberating prisoners, &c.

In Ulster, however, where the truce did not immediately obtain, rioting broke out in Belfast on the night of July 9 and continued with violence for several days. According to police accounts, the firing at patrols by Republicans in the Falls district precipitated the outbreak. By daybreak of the 10th the tide of battle reached Townshend Street, where the Unionists in force entered the fray. By the 11th incendiarism added one of the worst features to the savage tumult, and the situation became so alarming that Colonel Carter-Campbell, after consultation with the city authorities, decided to reimpose the curfew. On the 14th the sniping and rioting again increased; streets were closed to traffic, tramway service suspended, and motor cars ventured into the fighting areas only at top speed. Ambulance workers were kept busy taking wounded persons to the hospitals. Then the whole disturbance ceased suddenly at curfew hour on the 14th, due, it was believed, to an understanding reached to extend the truce to Ulster. During this outbreak twenty-two persons had lost their lives, many were wounded, and over a hundred houses were destroyed by fire in a single district.

## THE DOVER PATROL MEMORIAL

AT Dover, England, the Prince of Wales on July 27 unveiled a memorial obelisk erected in honor of the men of the allied navies who participated in the patrol which kept the Dover Straits free from U-boats during the World War. The Germans, better than any one else, know how effective was this patrolling fleet. The obelisk was completed on June 20, 1921. Built of Norwegian granite and weighing 700 tons, it is 84 feet high, with a base 21 feet square, tapering to about five feet at the top. A corresponding obelisk is being

erected at Cape Blanc Nez, near Calais, France.

An exact duplicate also is to be erected in New York Harbor, for which purpose the British Memorial Association gave \$23,000. The City of New York has given a site for this memorial at the foot of Eighty-sixth Street. After the unveiling of the Dover obelisk the Prince of Wales sent a cable message to Secretary of the Navy Denby in which he transmitted the cordial greetings of the officers and men of the British Navy "to their American comrades."

# IRELAND'S PROSPERITY A FORCE FOR PEACE

BY J. ELLIS BARKER

*Impressive facts and figures showing that the Irish people, despite the recent turmoil, are enjoying the greatest prosperity in the island's history—How the war stimulated their agriculture and industries—Ireland's economic dependence on England*

**E**CONOMIC causes have brought about the great majority of revolts, revolutions and civil wars in the history of mankind, and economic considerations have welded together many States on both sides of the Atlantic. The economic factor is largely responsible for the strained relations between the Irish and the English, but economic causes seem likely to bring these two peoples once more together. After all, Ireland is rather an economic than a political dependency of England.

One of the greatest of Irish grievances is economic. Many Irishmen assert that England, actuated by jealousy and selfishness, has deliberately ruined the Irish industries. To this they ascribe the fact that between 1841 and 1911 Ireland's population has decreased from 8,175,124 to 4,390,219. In a surface view of the case, indeed, England is responsible for the decline of Ireland's industries and the consequent diminution of population; in reality, however, this extraordinary shrinkage has been caused by circumstances over which England had no control, especially by the industrial revolution and by the advent of the steam engine.

It should be noted, first of all, that Ireland long enjoyed a favored position as regards both agriculture and industry. As a consequence of England's various wars with France,

under Louis XV., under the Republic and under Napoleon, as well as with France's allies on the Continent, the price of food products, which had become difficult of importation, rose greatly, and agriculture flourished throughout all Great Britain, including Ireland. This continued after the Peace of Vienna in 1815, owing to the ruined condition prevailing in Europe. The Irish manufacturing industries were similarly prosperous, and Irish silks, linens, woolens, cottons, glass, metal wares, &c., all of excellent quality, were much in demand.

This lasted till toward the middle of the last century, when the invention of the steam engine and steamship revolutionized the whole situation, alike agricultural and manufacturing. Agricultural products on the Continent increased. The products of Russia and America now became available. The prices of foodstuffs declined rapidly. Ireland's prosperity speedily waned. The disastrous potato blight, still a bitter memory, gave Ireland the finishing blow. The extreme precipitation caused by the moisture gathered from the Atlantic was the cause for this tragedy, as a consequence of which the Irish farmers abandoned the planting of potatoes and emigrated in large numbers.

Moreover, Ireland could not share England's phenomenal expansion of manufacturing, because her soil, though rich, has no coal or iron mines.

The skilled Irish artisans, who had produced such splendid work on a small scale, were forced to go either to England or elsewhere to make a living. Ireland's agriculture and manufacturing industries were thus ruined simultaneously, not by English selfishness and greed, as has been charged, but by the advent of the era of steam and the appearance of the potato blight in its worst form.

### THE COMING OF PROSPERITY

As a matter of fact, England has striven to make Ireland prosperous and contented by appropriate political and especially economic measures. Year by year Irish self-government has been given greater scope with a view to conciliating the people, and money has been lavishly spent on both the agricultural and industrial development of the country. One of the most important measures instituted was the purchase of large Irish estates, and their sale on easy terms to the farmers, who thus became absolute owners of the soil. This transfer of property proved exceedingly popular, and led to a vast increase in agricultural production, especially as improved methods of cultivation were introduced at the same time. E. J. Riordan, Secretary of the Irish Industrial Development Association, has acknowledged this in his recently published book, "Modern Irish Trade and Industry." The improvement apparent from the figures he gives for the last twenty years is certainly remarkable, and is an earnest of future and still greater improvements. In the opinion of those best qualified to judge, Ireland ought to be able to double her per capita production, which, according to the 1908 census, stood at only £56, as compared with £113 for England and Wales, and £109 for Scotland.

Previous to the war Irish agricultural production had already vastly increased in quantity, and had also very greatly improved in quality. Gradually the Irish farmer's old

prejudice against scientific methods is being overcome. A powerful and very ably managed Agricultural Department is spreading the knowledge of improved cultivation far and wide, and its exertions are ably supported by the rapid development of rural co-operation. In the past, Irish agricultural produce was notorious for its inferiority. The country produced small bony cattle, scrawny poultry, eggs of doubtful freshness, badly made butter, which often was weighted with hidden stones, &c. That old reproach is rapidly disappearing. From year to year Irish produce is improving and is commanding better prices. The influence of the co-operative movement in Ireland may be gauged from the fact that the sales of butter made by the co-operative societies increased from £4,363 in 1889 to £3,167,686 in 1915.

In order to safeguard the position of Ireland, the production of wheat and potatoes has been greatly reduced. Root crops, grass and fodder plants are grown instead, and Ireland has become a very important cattle-raising country. Ireland possesses about half the cattle kept in the British Isles. Millions of young animals are sold to England, where they are finished for the market. Of recent years, many new branches have been added to Irish agriculture, such as the making of cheese and margarine. Between 1904 and 1918 Ireland's cheese exports increased from 1,142 cwts. to 136,452 cwts, or more than a hundred-fold, while margarine exports grew from 28,318 cwts. to 126,353 cwts., or six-fold.

The recent war has been as beneficial to Ireland's agriculture and manufacturing industries as was the Napoleonic war a century ago. During the ten years preceding the war, too, Ireland's progress had been exceedingly satisfactory; between 1904 and 1913 Ireland's exports increased from £49,815,000 to £73,877,000, or by 50 per cent. The most important commodities exported from Ireland show considerable progress. Be-

tween 1904 and 1913 exports of linen and cotton goods, which are made principally in Protestant Ulster, and especially in Belfast, have practically doubled, while those of steamers and of woolen goods have trebled. While exports of sheep increased only slightly, and those of horses showed a small decline, the exports of pigs were reduced by nearly £600,000. We must allow for the fact that the Irish farmers have lately concentrated upon the more profitable pursuits, such as the production of butter, poultry, eggs, bacon, &c. Between 1904 and 1913 the exports of cattle and of butter nearly doubled, while the exports of bacon and poultry increased nearly two-and-a-half fold. The reduction in the exports of pigs was accompanied by a vastly greater increase in the exports of bacon. It should be mentioned that the export trade is of the very greatest importance to Ireland because it is so highly developed in that country. In 1919 the export trade came to £39 3s. 5d. per head of population in Ireland, while it came only to £17 6s. 8d. in the whole of the United Kingdom, and to £9 10s. 11d. in France.

PROGRESS SINCE THE WAR

During and since the war Ireland's prosperity has increased at a particularly rapid pace in consequence of the insatiable demand for food and manufactures, which were, and are, sold at very high prices. Ireland was one of the greatest beneficiaries of the war. Only a relatively small portion of her able-bodied manhood took part in the fighting. The British Government treated Ireland practically as a neutral country. Compulsory military service, the rigid rationing of food, &c., were enforced in England, Scotland and Wales, but not in Ireland. Between 1904 and 1919 Ireland's exports increased from approximately £49,785,000 to £176,031,000. The war led also to the rapid expansion of Irish agriculture. That may be seen from the following

figures relating to the production of the staple crops:

	Wheat, Bushels.	Oats, Bushels.
1914	3,237,560	51,927,683
1918	5,688,000	83,200,000
	Turnips, Tons.	Potatoes, Tons.
1914	4,433,491	3,445,770
1918	5,303,000	3,863,000

As these greatly increased crops were sold at vastly increased prices, it is obvious that the prosperity of rural Ireland increased very greatly during the war. Industrial Ireland, also, was enriched by the struggle.

The fact that Ireland has been enjoying great prosperity may be seen also in the figures relating to banking and finance. The number of branches of the Irish banks increased from 661 in 1900 to 809 in 1910, and to 1,255 in 1920. Bank deposits in Ireland increased from £49,449,000 in 1890 to £200,441,000 in 1920. In other words, bank deposits since 1890 have grown five-fold in Ireland, while they have grown only three-fold in Scotland. Between 1915 and 1920 bank deposits have a little less than doubled in England and Wales and in Scotland, while they have almost trebled in Ireland. These increases are particularly noteworthy if we bear in mind that the Irish farmers put their savings into land and improvements, while many of the people of small means place money into the co-operative societies or hoard it.

The fact that Ireland has enjoyed unprecedented prosperity and that that country has progressed more rapidly than England and Scotland is confirmed by other statistics, which show that poverty and crime have diminished far more rapidly in Ireland than in Scotland and England. Ireland is obviously on the road which leads to prosperity, and the progress of the country should become accelerated when its political troubles have been overcome.

Ireland's economic future depends on her natural resources and on the activities of her people. Her resources, though limited, are exceedingly promising. The disadvantages of overmuch rain are, to some extent

tent, being neutralized by draining the land, and by afforestation. The country yields per acre a considerably greater quantity of wheat, barley, oats, turnips and mangolds than can be obtained in England. More intensive cultivation, the application of science to agriculture and the extension of co-operation are bound to benefit Irish agriculture very greatly.

Ireland has suffered in the past from insufficient communications. These are being improved as rapidly as possible. Roads and railroads are being constructed, canals and rivers are being deepened, harbor works have been undertaken all around the coast, schemes for deriving electrical power from waterfalls are being studied. Everything is done to accelerate Ireland's advance. The aspect of the country greatly resembles that of Denmark, Holland and Belgium, where production per acre is greater than anywhere else in the world. Irish experts are studying the progress of these countries, and are endeavoring to apply similar methods in their own land. Rural Ireland should be able to support in time a population twice as great as the present number.

Unfortunately, Ireland has poor industrial resources. Practically all the coal used in the country comes from England. The mineral resources of the Irish are trifling. The only resource available for fuel is peat, of which there is an abundance. Hitherto it has not been possible to exploit it commercially. If some suitable method should be discovered, it would be of the greatest value to the country.

#### DEPENDENCE ON ENGLAND

Many Irishmen speak recklessly about cutting the connection with England, not realizing how very dependent Ireland is upon England from the economic point of view. The great towns are the eyes of a country. The three principal towns in Ireland—Dublin, Belfast and Cork—are on the east coast, and look toward England. Ireland, as shown, has per

head of population the largest foreign trade in the world. That trade is carried on almost exclusively with England. If we bear in mind the fact that Ireland is relatively poor, it will be obvious that foreign trade is to that country far more important than it is to England. Ireland receives from England practically all her coal and various raw materials and manufactured goods. The iron used in the great shipyards comes from England. Ireland's exports consist principally of perishable foodstuffs, especially meat, butter, eggs, &c., for which England is the natural market. Owing to the configuration and position of the country, Eastern Ireland, which looks toward England, is densely populated and well-to-do, while Western Ireland, which faces the Atlantic, is thinly populated, wild and barren.

Before the war Ireland ranked immediately after the United States as a supplier of foodstuffs to Great Britain. In 1913 Great Britain received from the United States £39,000,000 of foodstuffs, from Ireland £36,000,000, from Argentina £31,000,000, from Denmark £22,000,000, from Canada £19,000,000, from British India £17,000,000, from Holland £16,000,000, from Australia £15,000,000, from Russia £15,000,000, from New Zealand £9,000,000. While England was by far the most important market to the Irish farmer, the produce of the Irish farmer can, in case of need, be replaced without difficulty from elsewhere. Ireland is obviously far more dependent upon England than England is upon Ireland. A stoppage of the Anglo-Irish trade would inconvenience England only slightly, but it would ruin Ireland speedily. The Irish farmers would not be able to sell their produce elsewhere, except at a very great disadvantage, and the Irish industries could not survive were they deprived of English coal and iron.

The Irish have considerable ability for agriculture, industry and commerce. Hence the country has some extraordinarily prosperous industries. The foremost shipyards in the

United Kingdom are situated in Belfast. The firms of Harland & Wolfe, and of Workman & Clark, which together employ 30,000 workers, have produced many of the best liners in the world. The Irish linen industry, which is mainly located in the north-east, is world famous. Irish thread and Irish lace are known everywhere. Messrs. Guinness of Dublin are supposed to possess the largest and the most prosperous brewery in the world. Ireland produces excellent biscuits, mineral waters, woollens, manufactured tobaccos, clothing, furniture, &c. All these establishments depend upon England for their raw materials, their finance and the sale of their goods. Irish business men have attained eminence in all countries. The awakening of Irish nationalism may cause many noted Irishmen to devote their energies to their country and may lead many rich Irishmen to return to their native land, provided, of course, that peace and order are maintained.

The country is singularly well supplied with large natural inlets. These are Blacksod Bay, Killary Bay, Galway Bay, the Shannon Estuary, Berehaven and Queenstown. Proportionately, Ireland is far better supplied with natural harbors than England. The most important trade route in the world is that between England and the United States. The Port of Liverpool is cramped and not sufficiently deep, and the St. George's Channel, which leads from that port along the east coast of Ireland to the Atlantic, is overcrowded with shipping, and suffers from fogs. If it should be possible to create a great ocean harbor on the Irish west coast, the sea journey from England to America might be reduced to three and one-half days. Certain Irish leaders are working in this direction. Emotion and common sense are strangely blended in the Irish character. Sentiment and passion are apt

to carry the Irish people away. Thoughts of past grievances have rankled deeply with them, and foreign agitators, especially Russians and Germans, have done their utmost to poison their minds against the English. The campaign of crime will come to an end; perhaps the truce now existing is the end. The vast majority of the Irish people wish to live in peace and to look after their farms and families. They realize that the outlook is exceedingly hopeful, that peace is necessary to the country and that Ireland depends for its existence on the connection with England. The King's speech in Belfast has made a deep impression. The great majority of the Irish are anxious for a permanent settlement. They realize that prolonged strife will ruin them in the end. These considerations should lead to the permanent pacification and to the rebuilding of the country.

Ireland has enjoyed a period of unparalleled prosperity. The progress of the country has been checked only slightly by the outrages and the destruction committed. The Irish people in general are certainly at present far more prosperous than they have ever been before, notwithstanding disorder and crime. There is every indication that Ireland is entering upon a new era in her history. Self-government will give to the Irish that sense of responsibility which they have lacked hitherto. It should be a steadying and a sobering influence, and independence will show them that their economic dependence upon England is greater than they have ever realized in the past. England is certainly anxious to make Ireland's experiment in self-government a complete success, and to all appearances it will prove successful unless foreign agitators should succeed in ruining the country for their own ends.

TYPICAL SUMMER SCENE IN THE INTERIOR OF ALASKA, WITH ABUNDANT FLOWERS BUT NO TREES. THE MOUNTAIN IN THE BACKGROUND IS PILLSBURY DOME, ON THE LOWER DELTA.

## WHAT AILS ALASKA?

BY COLONEL W. P. RICHARDSON

For more than twenty years in the service of the United States War Department in Alaska, and for twelve years President of the Board of Road Commissioners for Alaska; former commanding officer of the United States Army Division at Archangel, Russia

*Popular misconceptions concerning the Territory set right by an authority on the subject—Alaska's Government-built railroad may be another of the mistakes of Congress in the Far Northern Territory—Population reduced since the war*

**E**ARLY in the Summer of 1897 there came from out the Canadian Yukon, near the Alaskan boundary, a story of gold which at first seemed incredible. It was the story of the Klondike. The fever of excitement which immediately stirred the United States and spread to the remotest parts of the earth has since died out, and even its memories have been dimmed by subsequent world upheavals. But for those who took a personal part in that frenzied rush into the Far North the impressions of those days are still fresh and vivid.

The stage for the Klondike drama could not have been more admirably

set. Business in 1897 was stagnant, capital was held close, money everywhere was scarce, as evidenced by the campaign for free coinage of silver in the preceding Summer. Throughout the world there was no cloud of war. The psychological conditions were right for some new impulse of romance, and the extraordinary richness of the gold deposits discovered deep under the frost of the Far North stirred the imagination to a high degree. Men of every station in life, from city, town and village, began to move toward this newly discovered gold field, though with scant knowledge of routes and less care for difficulties they might

meet on the way. The larger part, to the number of 20,000 or more, made their way with infinite labor and hardship during the Winter of 1897-98 over the Chilkoot and White Passes to the headwaters of the Yukon. Others sought to find shorter or easier routes by way of Edmonton and the Mackenzie River, or up the Stikine, while still others took the longer but better-known route via St. Michael and the mouth of the Yukon.

My connection with the movement and with Alaska began Aug. 1, 1897, when I left Cheyenne, Wyo., with Captain P. H. Ray of the 8th Infantry as his assistant (I was then a Lieutenant in the same regiment), for Seattle, Wash., under orders of the War Department to proceed by way of St. Michael and the Yukon to investigate the conditions attendant upon this movement of people to the new gold fields. We

sailed from Seattle on Aug. 5 supplied and equipped for a stay of eight months in the North. The incidents of this journey and of the following Winter at Fort Yukon, though full of interest, do not constitute a part of this story. Suffice it to say that they formed for me, unexpectedly, the beginning of twenty years' work in Alaska.

The lure of the country was beyond description. The wildness and beauty of its natural scenery, its mountains and waterways, its newly discovered wealth, and its vast, untracked areas which might, in the imagination of the adventurers, hold in their secret bosoms other and greater gold deposits than the Klondike, all served to create an enthusiasm rarely, if ever, equaled by any similar movement. It was a joyous crowd that floated down the river in the Spring of 1898, or built boats on the shores

ALASKA'S ONE RAILWAY—WITH THE EXCEPTION OF THE SHORT LINE FROM SKAGWAY INTO THE CANADIAN YUKON—STARTS AT SEWARD AND IS BEING BUILT NORTHWARD THROUGH THE MOUNT M'KINLEY RANGE TOWARD FAIRBANKS, ON THE TANANA RIVER

of St. Michael's Bay and challenged the swift current of the Yukon in the long pull up to Dawson.

In the Fall of 1898 Nome was discovered. Here on the desolate and wind-swept shores of Bering Sea, 1,200 miles to the westward of the Klondike, more than \$3,000,000 worth of gold was washed from the sands of the beach, and many times that amount has since been taken from the mines a short distance back from the shore. A few years later came the discovery of the rich Fairbanks district on the Tanana River, lying almost midway between Dawson and Nome. A few years passed. The great low-grade gold properties in Southeastern Alaska were being worked; the salmon and other fish industries were being developed; rich copper deposits were being opened up; extensive coal areas were being located; agriculture had begun. All in all, the future prosperity of Alaska seemed assured.

#### UNFULFILLED HOPES

The hope of those days is not being fulfilled; Alaska is not progressing. The rich fields at Nome and Fairbanks, like other placer fields, have had their richest deposits taken out, and the present population in these towns is only a fraction of what it was in their days of high production. In fact, the white population of Alaska is less than it was ten years ago, and even less than twenty years ago. The old buoyant confidence and enthusiasm are no longer present.

What is the matter with Alaska?

Articles written in answer to this question sometimes charge the fault to the Congress of the United States, or to various bureaus in Washington. They frequently contain statements concerning the resources of Alaska which give the impression that these resources are not developed and that the population of Alaska is not increasing because of the restrictive measures passed by Congress, or because of departmental inefficiency.

This is unfair. I have found in my experience with Congress on matters relating to Alaska, and with the departments as well, a desire at all times to do for Alaska what was needed, so far as the situation could be understood upon the presentations made, which were frequently conflicting; I have found a helpful spirit rather than one of interference.

The only possible exception to this general tendency might be found in the application of the policy of so-called conservation. Undoubtedly, the application of this policy in extreme form to Alaska, along with the discouragement to capital, has been hurtful to the Territory. However, it may be said, on the other hand, that if the stories which are told of Alaska's resources and of the opportunities which she offers to investors and settlers were strictly true, then no restrictive regulation whatsoever could keep an independent people like our own from going to the Territory and taking advantage of these "rich opportunities." My own further answer to the question is that overadvertising, exaggeration and propaganda along misleading lines have done much to confuse the situation. In one of the annual reports of the Board of Road Commissioners for Alaska the statement was made that "the truth about Alaska is good enough." That statement has been quoted more than once, and I believe today that it is worth repeating and emphasizing.

#### PREVAILING MISCONCEPTIONS

Many erroneous impressions of our Northern Territory prevail. One of these is that Alaska is an agricultural country. This is not true in the sense commonly understood. More farm products could be grown in a few rich counties of Kansas, Oklahoma or Texas than in the whole vast Territory of Alaska. Moreover, the expense of opening up a farm in Alaska is enormous, and there is at present no market for farm products other than

(Underwood &amp; Underwood)

PART OF THE GREAT REINDEER HERD OF ALASKA, THE OUTGROWTH OF THE FEW HUNDRED ANIMALS WHICH THE GOVERNMENT INTRODUCED FROM SIBERIA SOME YEARS AGO TO SAVE THE INDIANS FROM STARVATION. FOUR PACKING PLANTS ARE NOW BEING BUILT IN ALASKA TO REFRIGERATE AND SHIP REINDEER MEAT TO THE UNITED STATES.

that offered by the small mining towns or fishing villages.

There is more truth in the other statement, frequently made, that Alaska, lying within the same parallels of latitude as Norway, Sweden and Denmark, has the same general climate as Northern Europe. The two regions owe their mild climate to two great ocean currents, both of which originate in warm tropical waters and flow first northward and then eastward along approximately the same parallels of latitude. The Gulf Stream in the Atlantic divides as it approaches Europe, and part of it flows northward, west of the British Isles, passes around the North Cape of Norway and on eastward until it is lost in the Arctic Basin. This stream warms all Northern Europe, because there are no mountains between it and the interior of the Continent. The Japan current in the Pacific likewise divides as it approaches

America, a portion going down the Washington and Oregon coast, the rest eddying back toward Yakutat, Prince William Sound and Cook Inlet. This stream is first deflected from entering Bering Sea by the Aleutian Islands and the Alaskan Peninsula, and the warmth of the portion that eddies back toward Prince William Sound is walled off from the interior of Alaska by high mountains, which extend all the way along the coast from Ketchikan to Cook Inlet.

The moisture-laden clouds, swept in from the warm ocean upon this mountain range and its glaciers, produce a heavy precipitation of rain in Summer and of snow in Winter. There results, it is true, a comparatively mild climate all along the coast, but one of excessive moisture, which is the principal handicap to agriculture in this region. The climate of the Aleutian Islands is not severe, but there is so little sunshine that these

islands are useless for agriculture or even for the growth of timber, which exists only in very small quantities west of Cook Inlet. The heavy snowfall and lack of sunshine on the coast are the greatest handicaps in Southeast Alaska and along the coast westward as far as Cook Inlet, although there are many small and protected valleys where much garden stuff is grown.

#### CLIMATE OF THE INTERIOR

Crossing the coast range to the interior of Alaska, an entirely different climate is found. Here the snowfall is comparatively light. Throughout the valleys of the Yukon and its tributaries very low temperatures are experienced in Winter, together with short, hot Summers. The ground is frozen in most of the valleys to a great depth, and it is thawed only on the surface during the Summer. On the hillside slopes it frequently happens that but little frost is encountered. When the moss covering is stripped from the ground it thaws down in Summer, and in many places all the hardier vegetables and grains can be raised. The Summer, although short, is quite warm, and with the sun in the mid-season shining nearly twenty-four hours, all plants grow rapidly. Also, the quality of the products is of high order, especially in the matter of grains. Wheat has been grown to a certain extent, but it cannot be said by the most enthusiastic friends of Alaska that it is a wheat country. However, expensive experiments have been made in the breeding of wheat, and I know that some excellent results have been obtained.

I spent some months in North Russia with the American military expedition there, and in an article on that subject (*CURRENT HISTORY*, February, 1921) I made some observations on the climatic and agricultural conditions in that part of Russia. In all comparisons of Alaska and North Europe it must be remembered that

agriculture in Europe has been developed under necessity, by the pressure of population through many hundreds of years; not until all the land has been taken up in the United States, producing a similar pressure upon our people, will the agricultural possibilities of Alaska be developed as fully as the climate allows.

There was created a belief throughout the country at one time that certain capitalists were about to seize the richest of Alaska's resources and use them in development for their own benefit. This also has not helped Alaska. I hold no special brief for capital or "big business," but I am, on the other hand, uninfluenced by any quibbling consideration of class bias, and I do say that Alaska's paramount need is for aid in the way of capital for its development. Capital should be invited to take the venture in Alaska, giving it a fair chance for liberal returns, and if it should later become necessary to curb its activities to protect the resources, there will still be time to impose the necessary regulations upon it.

#### THE GOVERNMENT RAILROAD

The Government is now building a railroad across Alaska, which will cost more than \$50,000,000. My view regarding this project was that private capital should have an opportunity to bid upon the construction of the necessary railroads in Alaska under such Government restriction and regulation as might be necessary—that capital should take the chance instead of the Government. The Government, however, has made the venture, and the present outlook is not encouraging. Many plausible arguments were set forth for Government construction at the time when the decision was made; and unquestionably the Administration was actuated by an earnest desire to do something helpful for Alaska. On the basis of long experience and twenty years' observation, however, I was constrained to state at that time that such a venture by the Gov-

SUMMIT LAKE, ON TOP OF THE ALASKA RANGE. THE EXCELLENT WAGON ROAD IN THE FOREGROUND HAS BEEN BUILT BY THE GOVERNMENT FROM VALDEZ UP THROUGH THE MOUNTAINS TO FAIRBANKS, ON THE TANANA RIVER

ernment was likely to prove a failure, or at least to fail to bring about the results that were hoped for. As early as 1913, and before the Railroad bill passed, in the report of the Board of Road Commissioners for Alaska to the War Department, the following statement was made:

In the Great Plains country of the Middle West and Northwest, where travel across country was generally safe and easy without road or trail of any kind, development naturally followed the construction of trunk lines of railroad, and a similar development, it is predicted, will follow the construction of one or more trunk lines in Alaska. Here, however, the conditions are entirely different, and the attractive figures of probable tonnage and earnings of such lines presented by interested and enthusiastic supporters of immediate railroad construction are not justified on any logical grounds nor by the history of the railroads already constructed in the Territory, \* \* \* and no rapid or general development will follow the construction of trunk lines of railroad to the interior unless preceded or accompanied by the construction of numerous wagon roads and trails as feeders, and even then the development will be slow.

Unlike the great West in another respect, Alaska has a wonderful system of waterways, both coastal and interior, and though the interior system is open only about five months

of the year, during this open period supplies can be distributed to almost every part of the Territory by means of its various ramifications. Short roads between the deep-sea channels of the coast and the streams of the interior will, however, be necessary. This was further emphasized in my report of 1914. From the 1917 report of the Board of Road Commissioners I quote the following:

For more than a generation the people of the United States almost forgot the need and value of wagon roads. This was the great period of railroad building, which spanned the continent with numerous lines and crossed great stretches of prairie that had little need for wagon roads to stimulate development. Any hope that a similar rapid development will follow the construction of the Alaska railroad is foredoomed to disappointment.

A vast sum of money, however, is now invested in the permanent property of a Government railroad, and, whether this expenditure was a wise one or not, the problem now is to protect the investment and if possible make it self-sustaining and permanently beneficial to the Territory.

During the period when the Railroad bill was under discussion I regret to say that more than once I

heard the argument that in case the Government could be induced to make this expenditure, whether wise or not, it would be compelled thereafter to support further appropriations to take care of the investment and thus develop Alaska. Such a policy I, of course, as an official of the Government, could not countenance in any way, although I recognized, and recognize now, the force of the contention.

#### FURTHER DEVELOPMENT NEEDS

So it now comes to the proposition that it will be necessary for the Government, in order to save this investment, to make large appropriations in the future, or provide funds by some other method, not only for the operation and maintenance of the railroad, if it is to be maintained until tonnage can be developed, but also for the construction of feeders to the railroad, the development of industries which will furnish tonnage, and some kind of special inducement to people to go to Alaska. Population and tonnage are absolutely necessary to give support to the railroad. A certain tonnage was expected and may be developed in the near future from the coal beds of the Matanuska fields for naval purposes, and also for use in the Territory and along the coast. This, however, I understand, is still uncertain. Beyond the coal fields there is no tonnage in sight at this time worth mentioning.

In the days of Fairbanks's prosperity, when the Tanana Valley placer gold fields were at their high point of production, as much as 26,000 tons of machinery, supplies and merchandise of various kinds were shipped into the Tanana Valley. I have been reliably informed that during the past season only 8,000 tons were sent in for the whole valley of the Yukon, which is only a fractional part of the tonnage required to maintain the struggling steamship lines operating in these interior waters. In fact, from the

present outlook, it seems hopeless to expect to develop a tonnage that will even approximately support the operation of the railroad beyond the coal fields and adjacent mining properties about the head of Cook Inlet for a long time to come.

It was stated in one Road Commission report that at least 80 per cent. of the resources of Alaska, as now known, lie within a strip of territory including Southeast Alaska and extending to the 141st meridian west longitude, and beyond that meridian to Cook Inlet, reaching an average of about one hundred miles to the interior. These resources are mostly timber, fish, coal and copper. This does not mean, of course, that some large-tonnage-producing field may not be discovered within reach of the railroad further inland. So far as the support and maintenance of the railroad is concerned, the agricultural probabilities, however encouraging they may be for some distant time, cannot be counted as a tonnage asset in the near future. It will be necessary, therefore, to study the area which may be reached by the railroad, determine the various fields that may produce tonnage, build spurs of railroad or wagon road and trails to develop this tonnage, encourage capital to enter such fields, and give as wide opportunity and encouragement as possible to the individual prospector and home seeker.

When the Railroad bill was pending and appeared certain of passage, the Board of Road Commissioners made a general analysis of the situation and an estimate of funds for the construction of wagon roads and trails to go forward with the construction of the railroad; this estimate totaled \$7,250,000 and was to extend over a period of ten years. It failed, however, to receive favorable consideration. Something of the kind is absolutely necessary now in connection with the railroad, as well as for other parts of Alaska in order to develop the Territory's resources.

The physical conditions, with respect to travel in Alaska, have been

touched upon, and it is these conditions that have done much to keep Alaska a wilderness. The country is broken and rugged in many portions, buried under deep snows for a great portion of the year, with the ground in the Summer thawed only a short distance below the surface, and covered with a blanket of moss, with dense and tangled underbrush, throughout the valleys, intersected by many swift and dangerous glacier streams fed by the ice-cold waters from the snows and glaciers of the mountains. Travel, therefore, has always been extremely difficult and dangerous, even to pack animals and men on foot, and practically impossible for wheeled vehicles.

#### URGENT NEED OF ROADS

One of the wisest provisions ever enacted concerning Alaska was the creation of the Board of Commissioners for Alaska under the War Department, for which the chief credit is due to the wisdom of Senator Knute Nelson of Minnesota, who was a member of the Senate committee that visited Alaska and studied its needs in the Summer of 1903. Whether the work of this commission has been successfully and satisfactorily carried forward is hardly for me to say, but it is pertinent to remark that the commission readily recognized the great need for the construction of a system of wagon roads and trails, and sought for years to get sufficient appropriations for this work, under many difficulties, and I regret to say at times against opposition where the board should have had encouragement and support. The difficulties of the situation were set forth in the following passage from the commission's 1917 report:

The board at the outset found itself confronted with a problem the magnitude of which was little short of discouraging. There presented itself as the field of operations a vast wilderness region of nearly 600,000 square miles, untracked for the most part by the foot of white man, and possessing throughout all the Territory less than a dozen miles of what might be called wagon road, with a few hundred miles of

pioneer trail, mostly constructed by expeditions under the War Department prior to this time. On the other hand, the very character of the country carried with it an inspiration, and the manifest need for roads and trails throughout this Territory opened an interesting and fascinating field of effort and one calculated to evoke one's best energies toward accomplishment.

Up to June 30, 1917, the board had constructed 980 miles of wagon road, 623 miles of Winter sled road, and 2,291 miles of pioneer trail. This has since been increased to a total of nearly 5,000 miles of wagon road, sled road and trail at a cost of approximately \$5,000,000. The need for further extension of this system is greatly emphasized by the building of the railroad.

But aid should be given also to other industries. The production of wood-pulp from the forests of South-eastern Alaska, for instance, should be encouraged, and proper protection should be given to the fisheries, which, outside of the salmon, are scarcely touched so far. All aid to these and other industries that need development will help to give the Territory a stable and permanent population. One resource—the reindeer—is especially worthy of attention. There are vast tracts in Northern Alaska and the region bordering the Bering Sea and Arctic Ocean which furnish pasturage for these animals, and these regions are not suitable for other purposes. The reindeer industry is not likely ever to become a prime source of food supply for the States, but when it is properly developed, with the necessary shipping facilities, it will furnish a very desirable addition in the way of game variety and will be profitable to the Territory of Alaska.

I do not undertake to set forth in detail just what steps should be taken to accomplish the results which are desired for the development of Alaska, or suggest specifically the changes that might be desirable in extending laws or regulations. Each particular industry will have to be considered separately, and the different sections of Alaska, differing

greatly in climate and other conditions as well as natural resources, will have to be studied and dealt with according to their peculiar needs.

No one can deny the fact that the conditions of life are difficult, the climate severe and trying. Some persons who live in Alaska may and do assert that they prefer that climate to any other; but we all know that the majority of the citizens of the United States prefer to live in a more temperate climate and under more comfortable conditions than can be found at present, with few exceptions, in Alaska.

Nor should mere scenery be confused, as it has been confused by occasional visitors, with the serious business of life. Huge snow-capped mountains and great glaciers, which make for cool Summers on the coast, are not an asset to the prospective farmer. What he needs is arable land, which can be cleared and brought under cultivation without prohibitive cost, a market for his product, and transportation facilities to reach that market—all of which conditions exist only to a very limited degree in Alaska at the present time. Romantic interest also should be put into the discard in considering the practical question. The lode properties of Southeastern Alaska, the placer gold in the ocean sands of Bering Sea, the rich copper mines of Kennicott, the beautiful inland waterways, the salmon fishing, the existence of big game, are all special features, most of which have no connection with the general development of the Territory.

The actual facts existing at present must also be borne in mind. Alaska has suffered from the war.

Her population has diminished and is diminishing; her young men, called to join the overseas armies, are not returning, because they see no sufficient inducement to take them back. The old enthusiasm of the early days is gone, and capital is discouraged, for reasons already indicated. Owing to the increased cost of materials for mining operations, combined with the new scarcity of labor, the working of low-grade gold properties, which had been one of the principal industries in the Territory, has in many cases ceased to be profitable. Alaska received no compensating benefit by any war industry, such as existed in many parts of the States.

#### THE PRESENT SITUATION

But all these various factors, however important, have only emphasized a downward trend of conditions already observable before our people entered the war. The time has now come, it seems to me, to cease experimenting in Alaska, and to give the Territory an opportunity along the line of practical frontier experience of former days, while recognizing the fact that development will not follow quite the same course as in the past, nor proceed as rapidly. The present article is an appeal for a more liberal policy in dealing with Alaska, coupled with every measure of encouragement and freedom of action to persons who are willing to go there and invest their capital and settle permanently, consistent with the proper conservation and progressive development of Alaska's resources; especially must the physical conditions of the Territory be recognized and taken into account.

# MEXICO AND THE UNITED STATES

BY FRANK BOHN PH. D.

*Serious aspects of the diplomatic conflict over Mexican taxation of American holdings—While the oil interests complain of confiscation, Mexico says her independence is threatened—The nation's recent progress toward democracy*

TO the American mind the most misunderstood people in the world today is the Mexican Nation. The Mexicans have recently experienced a political and social revolution. This revolution has opened the way for democracy, instead of the feudalism and autocracy under which Mexico has suffered since the conquest of the country by the Spaniards in the sixteenth century. This is the one essential fact which must be known before the Mexican situation can be understood; and the meaning of this fact has apparently been grasped neither by the American people nor by their Government.

Upon a recent visit to Mexico I had the opportunity of meeting with not only the President and members of his Cabinet, but also with large numbers of the Mexican people. I met repeatedly the chief of her educational system and Rector of her National University, Dr. Vasconcelos, as well as some of his teachers and students. At the various sessions of the Pan-American Labor Congress I had occasion to observe the national and provincial leaders of her labor movement as they joined in the discussions with their Latin-American and North American confrères. Nothing is more apparent to the observing American in Mexico than that the entire mind and purpose of this people have been pro-

foundly revolutionized during these ten years of civil turmoil. Mexico faces her future with much the same self-possession and high confidence in democracy as did the American people after the reorganization of their Government in 1787-89. The whole matter of our relations with Mexico requires the greatest discernment and care on the part of our Government and people.

The crisis has been rather gradually precipitated. The attitude of the State Department at Washington remains much the same as it was before March 4 last. The new régime in Mexico has now been in power for about fourteen months. President Obregon has been in office since Dec. 1, 1920. For over six months his Government has craved recognition by Washington. On June 7 Mr. Hughes, Secretary of State, published the final views of the American Government. His statement is evidently a resumé of the ultimatum recently presented to President Obregon by Mr. Summerlin, our Chargé d'Affaires in Mexico City. In his public statement Mr. Hughes says:

The fundamental question which confronts the Government of the United States in considering its relations with Mexico is the safeguarding of property rights against confiscation. Mexico is free to adopt any policy which she pleases with respect to her public lands, but she is not free to destroy without compensation valid titles which have

been obtained by American citizens under Mexican laws.

More than a hundred years ago Alexander von Humboldt declared that Mexico was a "beggar sitting on a bag of gold." Today the picture evolves with the times. We may now imagine the beggar, still barefooted and clad in rags, perched on the crest of an enormous pile of bags, boxes and barrels. The unhappy creature struggles to keep his place on the unsteady mass of gold and silver, copper and zinc, oil and coal, lumber and henequen. Round about stand those who seek to pull the unfortunate wight off the top of the pile and place him at the bottom.

In natural resources the Mexican patrimony is no doubt one of the richest areas in the world. Its mineral wealth has only been scratched at the surface. If we suppose that the gold of California and Colorado, the silver of Nevada, the copper of Montana, the oil of Indiana, the iron of Lake Superior, and the coal of Pennsylvania as yet remained unexploited and largely outside the claim of private ownership, we have some idea of the hunger on the part of the foreign prospectors and investors in Mexico. The wide variety of this mineral wealth is suggested by a recent report of the Mexican Government covering production for the first six months of 1920. During that period there were mined and smelted the following values: Gold, \$15,699,996; silver, \$75,824,183; copper, \$19,466,005; zinc, \$3,434,339; lead, \$17,465,673.

In 1919 Mexico exported a million dollars' worth of lumber to the United States alone. Yet the lumber industry of Mexico has, in reality, hardly begun. The State of Durango alone produced, in 1918, more than 2,000,000 feet. Besides pine and cedar, there are enormous areas of hardwoods, including mahogany. A great many varieties of these hardwoods of Mexico are unknown in the United States. The total timber areas which will yield merchantable lumber are esti-

mated at 25,000,000 acres, much of this being dense tropical growth. Our own diminishing timber resources will mean the more rapid exploitation of those of Mexico. Before the revolution Mexico was already producing 20,000,000 pounds of rubber for export annually. This industry, almost destroyed during the ten years of civil war, is now being quickly revived. Accessibility to the American market will now make for rapid large scale promotion of the rubber plantations. The same is true of cotton and henequen, coffee and sugar.

#### OIL AND ARTICLE XXVII.

The souls of the forty-niners have now turned from the search for gold to seeking after oil. Every ounce of gold must needs be dug and washed or milled and smelted, but oil, once the well is drilled in the soil of Mexico, flows freely. Several wells in the Tampico district have produced as high as 100,000 barrels a day. One well produces regularly 600,000 barrels a month, and its total production has thus far been nearly 800,000,000 barrels. The prices of crude oil, of gasoline and the by-products during the war period and after, make such a producer a source of wealth beyond the dreams of even the recent past. No gold mine in the history of North America can compare with it.

Mexico's total production of oil, which was 3,000,000 in 1910, was 40,000,000 in 1917, and increased to 183,000,000 barrels last year, of which 153,797,036 barrels were exported to the United States. So we import from Mexico an amount equaling 35 per cent. of our home product. What this means may be fully imagined if we but take into careful consideration the fact that, outside the United States and Mexico, the total product of the whole world last year was only 37,000,000 barrels. The amount of the Mexican product will very likely be doubled as soon as

there is a market for an increased product.

The people of Mexico are today unprepared, technically and financially, to exploit their natural resources. The machine process, modern transportation and scientific large production methods generally have made mining one of the most highly developed of the industries. Great amounts of capital are required, and the disposition of mineral products generally demands wide technical knowledge of the world's markets. As yet the Mexican cannot play at this game. For a time the natives toiled as unskilled laborers while their Government watched the oil flow like rivers down grade through relatively short pipe lines to the sea-ports and then by ship to the markets of the world.

In 1917 the Mexican revolution wrote its principles into the Federal Constitution. Around Article XXVII. of this document, which deals with the possession and use of subsoil wealth, the battle now rages. The crux of the controversy is found in the following paragraphs of the article:

In the nation is vested direct ownership of all minerals or substances which in veins, layers, masses or beds constitute deposits whose nature is different from the components of the land, such as minerals from which metals and metaloids used for industrial purposes are extracted; beds of precious stones, rock salt and salt lakes formed directly by marine waters, products derived from the decomposition of rocks, when their exploitation requires underground work; phosphates which may be used for fertilizers; solid mineral fuels; petroleum and all hydrocarbons, liquid, solid or gaseous.

Legal capacity to acquire ownership of lands and waters of the nation shall be governed by the following provisions:

1. Only Mexicans by birth or naturalization and Mexican companies have the right to acquire ownership in lands, waters and their appurtenances, or to obtain concessions to develop mines, water or mineral fuels in the Republic of Mexico. The nation may grant the same right to foreigners, provided they agree before the Depart-

ment of Foreign Affairs to be considered Mexicans in respect to such property, and accordingly not to invoke the protection of their Governments in respect to same, under penalty, in case of breach, of forfeiture to the nation of property so acquired.

The issue turns largely upon the policy to be pursued by the United States Government. From the first our Government has taken a positive stand against the Mexican interpretation of Article XXVII. Certain documents written in connection with the execution of this policy are most interesting. They throw much light not only upon our immediate relations with Mexico, but also upon a much greater matter—the evolution, by the Government and people of the United States, of a policy of economic imperialism.

In a note presented on behalf of the Foreign Department of the United States Government April 2, 1918, Mr. Fletcher, at that time our Ambassador to Mexico, made, in part, the following statements:

While the United States Government is not disposed to request for its citizens exemption from the payment of their ordinary and just share of the burdens of taxation so long as the tax is uniform and not discriminatory in its operation, and can fairly be considered a tax and not a confiscation or unfair imposition, and while the United States Government is not inclined to interpose in behalf of its citizens in case of expropriation of private property for sound reasons of public welfare, and upon just compensation and by legal proceedings before tribunals, allowing fair and equal opportunity to be heard and giving due consideration to American rights, nevertheless the United States cannot acquiesce in any procedure ostensibly or nominally in the form of taxation or the exercise of eminent domain, but really resulting in the confiscation of private property and arbitrary deprivation of vested rights.

The amounts of taxes to be levied by this decree are in themselves a very great burden on the oil industry, and if they are not confiscatory in effect—and as to this my Government reserves opinion—they at least indicate a trend in that direction.

Moreover, there appears not the slightest indication that the separation

of mineral rights from the surface rights is a matter of public utility upon which the right of expropriation depends, according to the terms of the Constitution itself. In the absence of the establishment of any procedure looking to the prevention of spoilation of American citizens and in the absence of any assurance, were such procedure established, that it would not uphold in defiance of international law and justice the arbitrary confiscations of Mexican authorities, it becomes the function of the Government of the United States most earnestly and respectfully to call the attention of the Mexican Government to the necessity which may arise to impel it to protect the property of its citizens in Mexico divested or injuriously affected by the decree above cited.

President Carranza's reply to this was a statement that the provisions of Article XXVII., by including all concessions made before 1917, were based upon an ancient and well-known principle of law in Spanish-America. According to this principle mineral wealth of every kind was, in colonial times, reserved to the King of Spain. The Government of Carranza insisted that the general legal provision had never lapsed and that it was merely restated by Article XXVII. This standpoint is maintained by the present Administration in Mexico.

There is no doubt that the late President, Carranza, and his Government drew upon themselves a great deal of resentment because of their attitude toward the citizens and Government of the United States. Carranza would have been the better pleased had no American business man come to Mexico. He strongly manifested that natural nativistic tendency which leads to suspicion of all foreigners, especially of Americans. No American business enterprise ever expected co-operation from Carranza, and no such enterprise was therefore disappointed.

With the coming of the present régime all this has been changed. In his first public statement following his election to the Presidency, Obregon declared that "Mexico wants,

needs and will seek, by all means in its power, to secure and deserve the friendship and close co-operation of America and all other countries." On that occasion he stated particularly that foreign capitalists would be welcomed and assisted.

Following ten years of civil war, with all its attendant evils, the new Administration takes up a most difficult problem. The Mexican population is 85 per cent. illiterate. The masses of the people live under conditions which, in their poverty and inefficiency, are inconceivable to Americans. The Mexican people now crave nothing so much as internal peace and the opportunity to produce the necessities of life. Candid observers unite in declaring that President Obregon and his associates have undertaken their difficult task with patriotic ardor and a deep sense of responsibility. In their efforts to lay the foundations of a true democracy, they outspokenly seek and expect the help of every liberal mind in the United States.

#### TAXES AND TEMPERAMENTS

The Mexican Federal taxes on oil include a royalty of 15 per cent., in kind, at the place of production, and a further tax of 10 per cent., in specie, on the selling price of exports. In considering the amount of this tax one must reflect upon the truly marvelous output of the Tampico oil district. While, at the beginning of this year, the average productive well in the United States yielded about five barrels per day, the average production of the 184 wells in operation in Mexico was 6,855 barrels per day. Of course, in the United States, with a total of 228,700 wells, the average is brought down by the diminishing output of many old and well-worked districts. Yet the enormous output places the Tampico district in a class by itself. The total of the Tampico district for last year was enormous, even though many of its richest wells were temporarily

shut down because of the condition of the market. These included the famous Cerro Azul, the greatest producer in the history of the industry. At the comparatively low rate of a dollar per barrel, twelve days' flow will pay for the drilling of the average well. When the well flows for twelve years, as some of them have done, the profits are considerable.

When, last Summer, the present Mexican Government, in its slow way, at last set about the collection of arrears in taxes, it encountered all sorts of difficulties. Naturally enough, during repeated revolutions, there developed a habit of laxity and irregularity in connection with tax collection and tax paying. When there were two Governments fighting for control no one could blame an American corporation for refusing to pay taxes to either. Certain large foreign concerns paid a regular sum, estimated as averaging for some years \$30,000 a month, to "General" Palaez for protection from the Government of Carranza. Palaez was plentifully supplied with arms and ammunition from the United States. He became a large shareholder in one of the greatest of American companies. With the incoming of the present Mexican régime, however, following the death of Carranza, Palaez realized that, for the future, discretion would be the better part of valor. He surrendered to the Government and was in turn made commander of the Federal forces in the Tampico district.

Many foreign oil companies have declared their willingness to abide by the provisions of Article XXVII. in connection with concessions secured since 1917, while bitterly objecting, however, to the application of the provisions of the Constitution to properties acquired by purchase or lease before the Constitution was adopted. They base their claims upon well-known principles of American or English law, and in support of their contention they naturally call to their assistance the

diplomatic power of their home Governments. In the case of the United States this appeal is all the more effectual because the new Mexican Government desires immediate recognition by Washington. To secure that recognition the Mexican President and his Ministers have declared that they are only too willing to accept any reasonable compromise which is possible within the limits set by the Constitution and the laws of their country.

Meanwhile, the concessionaires claim exemption according to the provisions of Article XIV. of the Constitution of 1857, which is rewritten, in principle, in the new Constitution. Article XVI. states that "No law shall be given retroactive effect in the prejudice of any person whatsoever." The appeal lies to the Supreme Court of the nation, but this body has now waited for four years in the matter of trying a test case and rendering a decision. Perhaps international political considerations have been effectual in postponing action by the court; for, should the Supreme Court decide in favor of the Mexican Government before a satisfactory diplomatic settlement has been reached with the Government of the United States, the Mexican Government will be placed in a very difficult position indeed.

Numerous other taxation difficulties beset the agents of the Mexican Government. Next in importance to the refusal of certain interests to pay the 15 per cent. in kind on concessions prior to 1917 is the disagreement as regards the 10 per cent. ad valorem tax on exports. There has never been any difference of opinion concerning the legality of this tax. However, some of the companies are making use of the old and well-known American method of organizing "wheels within wheels." The same institution will incorporate half a dozen subsidiary companies. One of these will own the wells, another the pipe lines, and still another the tank-

ers for ocean transport. Sometimes a few more corporations are involved—purchasing agencies, holding corporations, selling concerns, &c. The representative of the Mexican Government notes, on a certain day, that crude oil is selling for \$1.50 a barrel. The "producing company" in Mexico is very much pained, however, to state to the Mexican Government agent that it receives but 40 cents per barrel. The shipping corporations are extortionate, and give so little to the "producer." The banks have charged so very much for financing the industry. Really, only 40 cents per barrel is actually received in the district, as shown by the books with a "complete record" of transactions and balanced accounts. The Mexican Government declared repeatedly that when oil was \$1.75 a barrel in New Orleans it would accept the 10 per cent. tax on a valuation of \$1 per barrel. "We should be ruined," replied the agents of some of the concessionaries. "We are being squeezed on every side. We get but 40 cents a barrel, and this would leave us but 30." Wherewith the concessionaire shows a face expressive of the complete ruin he seems to visualize. Last Summer and Autumn the Mexican Government actually compromised a second time on the price of oil and the amount of the taxes.

The Mexican people are a very simple-minded folk. They do not understand these strange methods of having half a dozen different corporations with interlocking directorates functioning under one head, and yet each organization denying responsibility for the activities of all the others. All they see is that the oil goes out and they want their tax per barrel and per peso. In August last, in order to get its first taxes, the Mexican Government was forced to declare that if payment were not made by Sept. 1, no more oil would be permitted to leave Mexico.

For some mysterious reason there then entered as a party in the situation the United States Government.

American naval vessels at Key West were ordered under steam. The pretext was that the tankers sailing from Tampico and Tuxpan were under the jurisdiction of the United States Shipping Board and that the board needed the oil for fuel. A crisis was finally averted through the statement of Mr. Foley, who was in charge of the fuel department of the United States Shipping Board. Mr. Foley observed that he had abundant supplies of oil on hand and that the Shipping Board could conduct its operations even if the Mexican Government prevented the sailing of every oil tanker from the Mexican ports. So the companies surrendered and the first tax was paid. It amounted to \$3,000,000, being the first lawful sum paid by this group of concessionaires to the Mexican Government for the many hundreds of millions of barrels of Mexican oil they had extracted from the soil of that nation.\*

#### MEXICO AGAINST IMPERIALISM

We now come to the larger aspect of the controversy. As above quoted, Article XXVII. contains the following statement: "Foreign concessionaires must agree \* \* \* not to invoke the protection of their Governments \* \* \* under penalty \* \* \* of forfeiture \* \* \* of property so acquired." The issue here raised, the Mexicans claim, is greater even than considerations of international peace. It has to do with the whole matter of the political independence of the Mexican people. If the American, British and French Governments insist that the Mexican people and Government alter their Constitution in order to comply with

\*Since this article was written new complications have arisen for American companies that have oil wells in Mexico. Congress for a time contemplated placing an import duty of 35 cents a barrel on crude petroleum and 25 cents on fuel oil. Thus oil crossing the Mexican boundary would be taxed heavily on both sides of the line. The Standard Oil Company of New Jersey announced on July 1 that it would discontinue all shipments of oil from Mexico and withdraw all its tankers from the Mexican service. The reason given was that under present conditions even the existing taxes were confiscatory and prohibitive.—EDITOR.

our conception of the law of contracts, Mexico, like Cuba, will have become only an economic colony of the United States. With an evident sense of this drift of events the Mexican Government replied to the British note of 1918 (which was almost identical with the American note) in a spirit suggested by the following words:

In virtue of its freedom of fiscal legislation, it is opportune to declare that the Mexican Government does not recognize the right of any foreign country to protest against acts of this nature coming from the right to exercise interior sovereignty, and, in consequence, cannot accept the responsibility which it is pretended will be charged to her account as supposed damages as a consequence of this legislation.

During the past six months the leading British oil interests have entirely reversed their previous policy, thus disengaging themselves from the sanctions of their home Government. Following the specific declarations of the Aquila Oil Company (British) that it would obey all Mexican laws, it received certain concessions on Mexican Federal lands. A most curious incident followed. A secretary of the United States Embassy at Mexico City called on Acting President de la Huerta in November and presented a note containing the following: "I am instructed by my Government to inquire by what right the Mexican Government is granting concessions for drilling for oil on Federal lands." De la Huerta returned the note and left the American official without giving any answer whatever.

As regards the policy of the present Administration, it is generally believed that the Secretary of the Interior, Mr. Fall of New Mexico, is the special adviser of the President and of the Secretary of State with regard to our relations with Mexico. The general views of Secretary Fall are well known. Furthermore, he has recently made a specific statement of policy. Forty-eight hours before the inauguration of Mr. Harding, Mr. Fall, then a member

of the Senate Foreign Relations Committee, gave an interview to the press, in which he observed:

That Article XXVII., or any decree or law issued or enacted thereunder, should not apply to deprive American citizens of their property rights theretofore legally acquired:

I have opposed, and shall continue to oppose, any recognition of any Mexican Government until all pending questions between the two countries and the people of the two countries shall be in course of settlement under the terms of a written agreement.

It is argued in many quarters that the political as well as the economic control of Mexico by the United States would be in every way the best solution of the question. Since the Mexican people have proved, it is said, by so long a period of civil war and anarchy their unfitness to rule themselves, they themselves would be happier in the long run if entire responsibility were assumed by the United States. Less than a year ago a publication favoring intervention quoted what it claimed to be an important newspaper in each but one of our forty-eight States. In an article by Mr. Chester Wright in the American Federationist of June, 1920, we read that "twenty-two of these editorials out of forty-seven demand some kind of policing policy, nine demand a 'firm hand' in dealing with Mexico, six criticize President Wilson and his policy toward Mexico and seven scold Mexico on general principles." Undoubtedly these papers were selected because of their pro-interventionist attitude. But the bare fact that in every State of the Union but one an important newspaper could be found so severely critical of Mexico is in itself an indication of the drift of journalistic opinion at that time.

The Mexican Government maintains—and in this it is solidly supported by an intelligent portion of the people—that Mexico's claim to independence is not at all disproved by her ten years of civil war. On the contrary, her representatives say, the results of the revolution prove

exactly the reverse, since it has made the way clear toward freedom and progress. With reference to the claims of foreign investors that Article XXVII. of their Constitution is "confiscatory," they point to the Nineteenth Amendment of the Constitution of the United States. It must be admitted that no American who happens to be in Mexico as resident or visitor can do otherwise than recognize the humor of this counter-

claim. "If the American people," said a Mexican citizen to me recently, "can place in their Constitution an amendment which destroys the value outright of billions of property, including enormous investments by foreigners, how, then, can Americans, at the very time the Nineteenth Amendment was promulgated, criticize Mexicans for seeking to enforce Article XXVII. of their own fundamental law?"

## JERSEY AND THE KING OF ENGLAND

THE recent visit of King George, Queen Mary and their daughter to the Channel Islands, Guernsey and Jersey, was one of the great events in the history of those islands, and was attended by ceremonies which go back to the time of William the Conqueror. To understand the significance of what occurred at St. Helier, Jersey, on July 12, 1921, one must recall some very old history. Jersey was formerly a part of the English Dukedom of Normandy. When Normandy was lost, Jersey remained faithful to its English rulers. Many Jersey families trace their ancestry to these ancient days and beyond. The very names tell of feudal stock. The Lempriere (l'Empereur) family goes back in unbroken male line to the Conqueror. The de Carteret sent Frey de Carteret to fight with William at Hastings. These families—who once divided up the whole island between them—and many others still hold their lands in fief to the King of England.

The address of the Island Government leaders to the King on his arrival recalled these historical antecedents, and added:

Today, as of yore, the people of Jersey, in their unswerving fidelity to the Throne of England, deem no sacrifice too great to uphold that connection. From time immemorial every Jerseyman owes service to the King on need arising for a call to arms. Throughout the great war Jersey has unsparingly given her sons. The women of Jersey, too, have done their duty. This very day, Sire, by a most gracious act your Majesty has further added to the justifiable pride of the survivors of those who have fought for their country.

King George, in replying, similarly referred to the ancient ties, and stated that

6,000 men of Jersey had done noble service in the war with Germany. Of this, he said, he had personal knowledge, as he had presented a Victoria Cross and other military distinctions to soldiers from Jersey.

In the Royal Court, subsequently, the King attended the old Assize d'Homage, or Court of Homage. The King and Queen sat on a raised platform, the King in the identical oaken chair on which Sir Walter Raleigh—a former English Governor of Jersey—used to sit and smoke his pipe. Each in turn the noble scions of the old Norman-French nobility came to him, knelt on a raised cushion, and placed their hands between those of their liege lord, saying: "Je suis votre homme lige, a vous porter foy et hommage contre tous" (I am your liegeman, who will give you loyalty and homage against all). These ancient words were uttered amid a solemn silence. In the dark and austere hall, with all the scarlet and other bright hues of military and civil uniforms standing out in vivid contrast with the black gowns and wigs of the advocates, and the advancing line of seigneurs, kneeling one by one, and repeating these words formulated centuries before, the Middle Ages seemed to live anew. Only once or twice in Jersey history has this old ceremony been performed, and the island has no memory of ever receiving its monarch and liege lord in person and doing him this verbal homage.

After these ceremonies, the King reviewed the Officers' Training Corps, and visited Mont Orgueil Castle, a naked ruin against the deep blue sky and the blue tumbling waters of the English Channel.

# THE CASE OF CONSTANTINE AND THE ALLIES

BY N. J. CASSAVETES

Vice President of the League of Friends of Greece

*An indictment of the past acts of King Constantine of Greece, and a statement of reasons why neither the United States nor the Entente Allies should recognize his Government—His hostile and pro-German acts, with legal and other obstacles to recognition*

SHOULD the Allies and the United States recognize Constantine as the ruler of Greece? This is a question which the students of international politics are asking themselves. The Royalist Greeks maintain that Constantine is the legitimate King of Greece because he was recalled from exile by a majority of the voters of the Kingdom of Greece, and that the Allies are not justified in withholding their recognition of him. To the argument of the Allies and America that Constantine cannot be recognized by them on account of his pro-Germanism during the great war, and that Constantine was no less an enemy to the allied cause than were Kaiser Wilhelm, Charles of Austria, and Ferdinand of Bulgaria, the Royalist Greeks reply that Constantine never was pro-German, and that he kept his country out of war through fear of the German power, which he honestly believed was invincible.

Now, there are several reasons why Constantine is not recognized by the Allies and the United States. Nor are these reasons alike for all the allied countries. France, for instance, refuses to recognize Constantine because on Nov. 1, 1917, he ordered the Royalist troops at Athens to open fire upon French and Italian detachments, which were landed there to remove certain stores of arms with the previous parole d'honneur of Constantine

that the Royalist Greeks would not fire upon them. No French Government, therefore, could remain in power after granting recognition to a monarch who broke his word of honor to the French commander and had French sailors assassinated in the streets of Athens. France will never recognize Constantine, whatever the other powers may do about it.

Great Britain, like France, is pressed by a strong public opinion not to recognize Constantine. The British remember Constantine's aid to the German cause; they do not readily forget his treason to Serbia, to whose aid he was, by a specific treaty, bound to go; they remember even that Constantine not only did not permit Greece to honor her signature to the treaty with Serbia, but that he even refused the unfortunate, retreating Serbian troops a free passage through Greece, and compelled them to cross the virtually impassable fastnesses of hostile Albania, hard pressed by Austrians and Bulgarians. To an Anglo-Saxon, treason or cowardice—the refusal to honor solemn agreements—is a very repulsive thing.

The British, trusting the great Greek statesman, Eleutherios Venizelos, shaped their Near Eastern policy at the Peace Conference in a way which took into the British plan a Greater Greece as an ally of the British Empire. Mr. Lloyd George could trust a Venizelist Greece to act

honorably and to abide faithfully by her agreements. He had in mind the unsurpassed example of the loyalty of Mr. Venizelos, whose entire political career has been guided by a policy based on the higher conception of political morality.

Great Britain helped Mr. Venizelos to create a Greater Greece which should be an ally of Great Britain in the Near East. What guarantees can Lloyd George have that the same Constantine, who betrayed Serbia in her direst need and scrapped the treaty which compelled him to go to her assistance, will not likewise betray Great Britain in her hour of need? Who can trust a monarch who not only opposed the will of the Greek people to remain faithful to their obligation to Serbia, but even went so far as to assure Bulgaria and Germany that in case of an attack upon Serbia, he, Constantine, would not permit Greece to attack Bulgaria and thus fulfill the treaty obligations toward the Serbian people?

#### OBSTACLES TO RECOGNITION

But there are also other reasons for which France and Great Britain cannot recognize Constantine. These reasons are of a legal nature. Constantine and his Government refuse to recognize the legality of the reign of the late King Alexander. The Allies recognized Alexander as a rightful King of the Hellenes; they also recognized the revolutionary Government of Mr. Venizelos at Saloniki, to which they advanced funds for carrying on the war against the Central Powers. Constantine, in refusing either to honor the obligations of the Saloniki Government or to recognize Alexander as King of Greece, clearly indicates his purpose to induce Greece to waive her obligation to pay the Allies and the United States the moneys lent to Mr. Venizelos and to the Government of King Alexander.

This last argument, namely, that so long as Constantine refuses to recognize the legality of his son's reign, Greece may legally waive her

obligations to the United States, is the reason so far publicly advanced by our American Government for the non-recognition of Constantine.

But the Allies and the United States are compelled by another very serious reason not to recognize him. This reason is the fact that the present Greek Assembly is illegal. Constantine summoned a National Assembly to revise the Greek Constitution. According to this Constitution, the delegates have no right to form themselves into a Constituent Assembly. Thus, every act of the present Government can be declared null and void when a new Administration comes into power at Athens. The Allies and America, therefore, refuse to recognize Constantine, not only on the ground that he was an enemy to them during the war, not only because they cannot trust him, not only because he refuses to recognize the obligations of Greece incurred under the reign of King Alexander, but also because Constantine and his Government have violated the Greek Constitution and because every obligation now incurred by Greece may be declared not binding by another Greek Administration on Constitutional grounds.

#### CONSTANTINE'S PRO-GERMANISM

We now come to a brief consideration of facts dealing with the contention of the Allies and of the anti-Royalist Greeks that Constantine was, and is, pro-German. The royalist Greeks maintain that Greece was not bound to go to the assistance of Serbia in 1915; that the Treaty of Defensive Alliance with the Serbs had lapsed because it did not foresee the event of an attack upon Serbia by States outside of the Balkans. The question of whether Greece was bound to assist Serbia in the event of an attack upon her by other than Balkan enemies has been long debated. The foremost international authorities declare that the treaty placed an obligation upon Greece to assist Serbia when in 1915 the Austrians, and

in 1916 the Bulgarians, invaded Serbian territory.

The pro-Germanism of Constantine can be shown even if the Greco-Serbian Treaty be said not to have required of Greece to assist Serbia against Austria and Bulgaria. Serbia was an ally of Greece in any case. There might well be a dispute as to whether Greece was obliged to attack the Austro-Bulgarians. There could be no argument to justify Constantine's greater respect to the Germans and Bulgarians than to the ally of Greece-Serbia. On Jan. 26, 1916, the Constantinist Minister of War issued an order to the Greek commander in Macedonia to retreat and permit the Bulgars and Germans to enter Greek territory unopposed. "These measures shall be kept strictly secret," wrote the Minister of War, Mr. Yanakitsas. In accordance with this secret order, the strongest fort in Macedonia, which held the Germans and Bulgars at bay, was surrendered to Germans on May 14, 1916, without resistance, and made the Allies' position in Macedonia very precarious.

That Constantine was in constant touch with the German Government during the war and that he betrayed the movements of the allied armies in Macedonia will be made manifest from the following secret radio telegrams exchanged between Athens and Berlin via Sofia and Constantinople. On Dec. 1, 1915, the Minister of Greece to Berlin, now Minister of War, Mr. Theotokis, informed Constantine that the Kaiser advanced him a loan of 40,000,000 marks. In another secret radio telegram of Mr. Theotokis from Berlin to Constantine, dated Dec. 16, 1915, Mr. Theotokis informed his royal master:

Von Jagow made known to me that the exchange of views between the Imperial Government and the General Staff continues and that in all probability General Falkenhayn will arrive tomorrow in Berlin, which will permit Von Jagow to continue with him the study of my demands.

In a radio telegram dated Jan. 8, 1916, Mr. Theotokis transmitted the following information to Constantine:

Supplementing my telegram of Jan 4 (17), I have the honor to bring to the knowledge of Your Majesty that General Falkenhayn informs me that the action against the troops of the Entente may be taken on the following conditions: (1) Our troops guarding the frontiers shall retire on the whole frontier from Lake Prespa to a place where the boundary touches the Mesta, northeast of Cavalla. (2) All our other troops shall retire beyond the line of Ekaterini, as far as to the southern shore of Lake Prespa. (3) Greece shall bind herself not to admit or tolerate debarkations of the Entente either in the Gulf of Cavalla or in the Bay of Ekaterini and, if necessary, to prevent them by force. (4) His Majesty, the King of the Hellenes, shall take the engagement toward His Majesty, the Emperor of Germany, that no public officer, soldier or inhabitant will be employed on the part of the Royal Government in hostile acts against the German troops and their allies. (5) Greece shall consent to the use of the (Xanthi), Drama, Serres and (Doiran) railway by Germany and her allies.

#### BETRAYAL OF THE ALLIES

The Greek White Book contains hundreds of secret radio telegrams exchanged between Constantine and Berlin, from which the following things appear to be true:

First, Constantine was negotiating secretly with Germany, in spite of the fact that according to the Greek Constitution only the responsible Ministers have the right to negotiate with foreign powers; second, Constantine was receiving moneys from Germany; third, he was urgently inviting the Germans to attack the Allies at Saloniki, and fourth, he had accepted the terms of Falkenhayn which required that the Greek troops be withdrawn without the knowledge of the Allies from certain strategic points in Macedonia, in order to give the Germans a strategic advantage over the Allies.

Such was the attitude of Constantine during the most critical period of the allied struggle. By contrast, when in 1916 the Serbians, allies of Greece, asked Constantine's permission to escape before the onslaught of Bulgarians and Germans into Greek territory, Constantine informed the Serbians that he would oppose their passage through Greek territory by

force of arms. Again, when in 1916 the reorganized Serbian forces asked Constantine to be allowed to use the Greek railroad line Athens-Saloniki in order to avoid the German submarines, Constantine refused permission. To the Allies and Serbia, Constantine offered resistance; to the Germans and Bulgarians, he opened the Greek frontiers, surrendered the Greek stronghold, Fort Rupel, and even sent secret radio telegrams advising the Kaiser to launch an attack upon the Allies at Saloniki.

These facts are well known to the world. Only the Greek people have not been allowed to know them. In the face of such a downright pro-German policy, is it any wonder that neither France nor Great Britain nor the United States can honor Constantine with recognition? Can the traitor of yesterday be trusted to be a friend and an ally tomorrow?

The Allies have no quarrel with the Greek people. The Greeks fought gallantly on their side and refused to be bought off by the gold marks of Baron von Schenk, or by the intrigues

of Constantine and his consort. The Allies are waiting for the awakening of the Greeks to oust Constantine from Greece. And the ousting is not far distant. Today, three-fourths of the Hellenic race desire to put an end to all royalty in Greece. Constantine has cost Greece altogether too much. And although the Greeks are united in the supreme effort to finish their job with the Turks, they will turn their attention to settling accounts with Constantine as soon as the Turkish danger is eliminated. For some time now, while the guns are roaring on the plains of Asia Minor, a gigantic movement has been silently on foot to overthrow royalty in Greece and to establish a republican form of government in its place. The Allies and the United States cannot disgrace themselves by strengthening the hands of Constantine. To recognize him would be to help him against the progressive forces of Hellenism. To help Greece against the Turks on the one hand, and to refuse recognition to Constantine on the other, is the only sound and honorable policy for the Allies and the United States.

## THOSE WHO DIED IN BATTLE

THE great majority of the heroes of many nations who fell on the blood-stained fields of France will rest forever in the land where they fell. The British dead occupy vast and well-kept cemeteries under the sunny skies of France. Canada has planted maples around the graves of her soldiers. America has identified and classified her 50,000 dead; some thousands of these have been removed and brought home, but the majority lie under the plain white crosses which mark their last resting places. France, to satisfy longing hearts, has already transferred 800,000 of her own dead from the scarred battlefields, many of them to quiet villages or town cemeteries where the bereaved families reside. The French Government has paid all transportation costs in 30,000 cases. Only 20,000 bodies have been removed at the expense of the families. The others have been re-

interred in army cemeteries. The work of identification and removal has been gigantic. The bodies are carried in special trains bearing the Tricolor tied with crêpe. Deep sympathy and respect are shown by the French population as the long files of wagons bearing the fallen pass through the busy towns and peaceful hamlets.

German soldiers to the number of 475,000 fell on the soil of France. These German graves are also being opened and the bodies taken to special God's Acres, where they are reinterred with all honors due to a fallen enemy. When requested, the bodies are shipped to Germany. So far there has been little success in obtaining reciprocal action in the case of the 25,000 French who died in German prison camps or in Russia. Berlin's explanation is that Germany's transportation facilities will not permit of this for another six months.

# THE CALIPHATE OF ISLAM

BY CLAIR PRICE

*Emir Feisal, the British choice for King of Mesopotamia, disclaims any desire on the part of his father or himself to wrest the supreme power of the Moslem Church from the Turks—How this threatens to upset the whole British plan for Arabia*

ARAB events have taken an exceedingly interesting turn in the tentative election of the Emir Feisal as King of Irak, or Mesopotamia, as it is known in the West. His election by the Provisional Council at Bagdad, subject to ratification by the National Assembly, which is yet to meet, indicates that the British authorities have committed themselves to the Arab program known as Sherifianism. And the British adoption of Sherifianism is a turn of events which is of the highest interest to all students of Arab and Moslem affairs.

Its repercussion on the rest of the Moslem world is strikingly illuminated by a conversation with the Emir which is reported to have been had aboard the P. and O. steamer Malwa during Feisal's return from London to Mecca last Winter. Moslem sources in London have just made the interview public, explaining that it was withheld as long as Feisal remained in Mecca and was released only upon his departure from Mecca for Basra on June 15 to present himself at Bagdad as a candidate for the throne of Irak. The manifesto from Mecca which the interview forecasts has, of course, not been forthcoming, but there is no reasonable cause to doubt the authenticity of the interview.

According to the announcement in London, Feisal was told by M. Kaderbhoy, an Indian Moslem leader, who was one of his fellow-passengers aboard the Malwa, that Indian Mos-

lems had not been able to forget the fact that his father, King Hussein I. of the Hedjaz, had revolted against the Sultan-Caliph during the war. In reply to this, Kaderbhoy says, Feisal snapped away the cigarette he was smoking, remarked that his father was responsible to Allah for his actions, and walked away. Later Feisal returned and explained that his father's action had been directed not against the Sultan-Caliph, to whom he had always been faithful, but against the Committee of Union and Progress, who had drawn the Sultan-Caliph into the war on Germany's side. Kaderbhoy says that Feisal went on to say that, immediately upon his arrival at Mecca, he would cause a manifesto to be issued in his father's and his own name, declaring that they recognized the Turkish Sultan as the Caliph of Islam and that neither of them sought the Caliphate.

## MOSLEMS BOYCOTTING HUSSEIN

In view of the fact that Indian Moslems are the driving force of Islam and that Feisal's father is far and away the most prominent possibility in the field if one is to envisage a transfer of the Caliphate the interview is of the highest interest as illuminating Islam's attitude toward the Sherifian program. Further evidence of Islam's attitude is gleaned from the boycott which Moslems have adopted toward Hussein, a boycott which has gone to the quite un-

precedented length of stopping the pilgrimage to Mecca on the ground that Hussein's ability to guard the holy places is dependent on a British, and hence a non-Moslem, subsidy. In fact, Winston Churchill, British Colonial Secretary, said in his statement of June 14 to the House of Commons: "We are giving aid to the Sherif of Mecca (Hussein), whose finances have been grievously affected by the interruption of pilgrimage." In view of the fact that the pilgrimage to Mecca is one of the very foundation stones of Islam, the severity of Islam's attitude toward the family of the Sherif may be imagined.

France's attitude toward Feisal's coronation at Bagdad may also be imagined when it is remembered that General Gouraud drove the Emir out of Damascus last year. But the Colonial Office has not been dealing with an easy situation in the Arab country, and a very curious mix-up lies back of Churchill's announcement on June 14 that "if the people and Assembly of Irak choose Feisal as their head he will receive the countenance and support of Great Britain." In that announcement the Colonial Office definitely adopted the Sherifian program, and its adoption may at least be welcomed as the first evidence of a clear policy in Arab affairs; for the war left the newly liberated Arab countries in such a mix-up as has rarely been equaled.

Before the war the Arab countries between Libya and the Persian Gulf were theoretically under Turkish sovereignty, but the Government of India had long been in treaty relations with a number of chiefs around the Persian Gulf, chief among them the powerful Emir of Nejd, Ibn Saud, whose territory extends from Bahrain Bay on the Gulf all the way across the great Arabian Peninsula to the now independent Kingdom of the Hedjaz. Ibn Saud's Wahabite sect of Moslems has represented Islam at its purest ever since early in the nineteenth century. On the Red Sea Coast of the Arabian Peninsula the

KING HUSSEIN OF THE HEDJAZ  
*Sherif of Mecca and Custodian of the Holy  
 Cities, hitherto supposed to be a  
 candidate for the Caliphate*

Foreign Office, which has been supreme in Cairo ever since British troops broke Arabi Pasha at Tel-el-Kebir in 1888, maintained touch with the Grand Sherif of Mecca through the British Agency at Jeddah, the port of Mecca; and the Grand Sherif possessed an important legal qualification for the Caliphate, should the possession of the Caliphate ever fall into question, in that he was a direct descendant of the prophet; at the same time he possessed an important disqualification in that he had no powerful standing which would enable him alone to guard the holy places.

There were then (and there are still, for that matter) two independent

military organizations within the British Empire, the War Office in London and the Commander in Chief, Indian Army, at Simla. Before the war they divided the Ottoman Empire for intelligence purposes, the War Office's sphere running north of a line drawn from Basra to Akaba, at the head of the Gulf of Akaba off the Red Sea, and Simla's sphere run-

ning south over the Arabian Peninsula proper. This arrangement had to be disregarded during the war, when Simla, at London's demand, launched its Mesopotamian campaign north from Basra. Simla later surrendered control of the Mesopotamian campaign to London, but the Government of India retained political control. At the same time the War Office was directing the Egyptian drive across the little Sinai Desert into Palestine, with the Foreign Office in political control.

Thus two independent British departments conducted political negotiations with the Arabs during the war, the Government of India through its chief political officer at Bagdad and the Foreign Office through the British Residency in Cairo. Each had a separate program for the Arabs, and under the stress of fighting it was impossible to attempt to harmonize the two until the war was over. The Government of India's program envisaged a new British Arabian Government with its seat at the ancient Arab capital of Bagdad, a program which was built on Ibn Saud, the powerful Emir of Nejd, who had long been in receipt of a Government of India subsidy. The Foreign Office proposed a far more inclusive British Arabia pivoting on Mecca, with provincial capitals at Bagdad and Damascus, where the Grand Sherif's two sons, the Emirs Abdullah and Feisal, respectively, were to rule. At that time it was, of course, the British expectation that the Turkish peace terms—which were afterward written into the Treaty of Sevres—would be imposed on the Turkish Sultan-Caliph, and, relying on a heavy Foreign Office subsidy, the Grand Sherif of Mecca was induced to proclaim his independence as King Hussein I. of the Hedjaz. At the same time the installation of Abdullah and Feisal on the thrones of Bagdad and Damascus was to strengthen his house, and the breaking of the Turkish Sultan-Caliph at the end of the war was to

find the powerful House of Hussein at Mecca in full official conformity with all the qualifications of the Caliphate. This use of the Grand Sherif of Mecca, a use which was first made by the Foreign Office during the war, is the program known as Sherifianism.

When the Turkish armistice was signed on the night of Oct. 31, 1918, there were probably few Arab leaders in Syria and Mesopotamia who did not favor the return of the Caliphate to Mecca. With Feisal commanding very strong support at Damascus, where he had been actually set up, Sherifianism seemed on the high road to success. But the French broke Feisal in Damascus, and far to the south in the Arabian Peninsula Ibn Saud, reopening his old war with the Hedjaz, would have captured Mecca had he not preferred to withhold his forces. (In London, where the Foreign Office and the India Office do not lie down together, this obscure war amid the sun-scorched rocks of the Arabian Peninsula was hailed as a great India Office victory.) Sherifianism now began losing its momentum and the conviction began gaining ground that the House of Hussein had no strength by which to stand except its Foreign Office subsidy.

#### CONFLICT OF THE CALIPHATE

Events in Turkey soon began weakening still further the Sherifian program. With the growth of the Turkish Nationalist Government at Angora, it became apparent that Islam would not accept the breaking of its Turkish Caliph. Far from being willing to transfer its Caliphate to the former Grand Sherif of Mecca, Islam now began a determined boycott of the former Sherif as a traitor, and, faced with the most serious crisis in its thirteen centuries of history, it has thrown itself into a desperate effort to maintain its Turkish Caliph in Constantinople.

The result is that the Arabs are compromised in the eyes of other

Moslems, and Sherifianism became for a time a white elephant on Britain's hands. In the meantime, Arab restlessness under the curious inter-departmental mixup which the war brought about in their countries, increased to such a degree that the Arabs in Mesopotamia broke into a bitter revolt last year against Government of India rule. The Mesopotamia rebellion of 1920 confronted Great Britain with a war which would have focused British attention as the Boer War did, had not British attention wearied of wars. It was worthy of note in that traditional Arab military formations were abandoned for the first time, and British punitive columns marching to the relief of isolated garrisons found themselves confronted with six, eight and ten lines of barbed wire, and British attacks were followed with repeated counter-attacks. A month after the rebellion began, Bagdad had been isolated and was digging in; four garrisons had been invested between Bagdad and the sea; the Basra-Bagdad line had been cut in half a dozen places and the Bagdad-Kermanshah line into Persia had been severed. The result was an outburst from the war-sickened British taxpayer which caused Sir Percy Cox's hasty return to Bagdad to set up the promised Arab Government. On his arrival he organized the present Provisional Council and announced that elections would shortly be held for the National Assembly.

As soon as the rebellion had been put down the British Government took steps to straighten out its inter-departmental mixup in the Arab countries. Early this year both the Foreign Office and the Government of India were dispossessed, and the entire Arab region from Egypt to Persia, including Palestine and Mesopotamia, but excluding the French areas in Syria, was handed over to the new Middle East Department of the Colonial Office, with Winston Churchill as the new Colonial Secretary. Churchill's first move was to summon all his advisers in the Arab

country to a conference at Cairo, where two possibilities confronted him in the creation of a new British policy. One possibility was the adoption of the Foreign Office's Sherifian program, which has seemed to a number of outside observers to lack every essential of a durable regime. The other possibility was the adoption of the Government of India's protege, the Emir Ibn Saud of Nejd, as the first of a number of local Arab rulers—a line of procedure which would seem to conform more closely to reality.

From Cairo Churchill proceeded to Jerusalem, where the appearance of the Emir Abdullah afforded a clue to the choice which would ultimately be made. Abdullah was installed, with a Jewish adviser furnished by the Palestine Administration, as ruler of Trans-Jordania, where he stands astride the Hedjaz railway in order to contain the French within the Hauran until the Haifa-Akaba canal is begun and completed. Churchill's conference with Abdullah in Jerusalem, however, could hardly have been interpreted as more than a clue, for the Trans-Jordania situation is purely a local one and probably far from permanent. It was not until Churchill had returned to London and on June 14 made his momentous an-

nouncement of Near Eastern policy to the House of Commons that the Colonial Office's choice became generally known. In this announcement he declared that the Colonial Office had adopted the Sherifian program: That Feisal was to be backed for the throne of Irak, and that Ibn Saud was to be pacified with a subsidy of £60,000 a year, together with a lump sum of £20,000, which is the cost of a single battalion of infantry. "This subsidy," he continued, "will be paid monthly in arrear, contingent on the maintenance of peace and order externally. It must be understood that the granting of this subsidy gives the chief the power to establish that order on which control depends. We shall pay only in so far as good behavior is assured. If injury is done, a deduction will be made from the subsidy of the aggressor and will be handed over as compensation to the victim."

To many students of Arab and Moslem affairs it would seem that Islam's boycott of the former Sherif and its vigorous rally to the defense of its Turkish Caliph in Constantinople had killed Sherifianism. Whether the Colonial Office is able to revive it remains to be seen. Its attempt to do so must prove one of the most fascinating episodes in contemporary Islam.

## OVER 50,000 GERMAN OFFICERS KILLED IN THE WAR

IN the Franco-Prussian War the entire German Army had only about 2,000 officers killed. In the World War, out of her total death roll of 1,808,545, Germany lost 52,006 of her best officers. These authoritative figures were published in a pamphlet by Lieut. Gen. von Altrock, "Concerning the Dead of the German Officers' Corps," which appeared in July, 1921. Nearly 25 per cent. of the active officers participating in the conflict are on the

death list. Among the dead are 167 Generals, one Field Marshal, two "General Obersts," eight Commanding Generals, fifteen Lieutenant Generals, forty-nine Major Generals, 1,516 staff officers, 107 Colonels, 145 Lieutenant Colonels, 740 Majors, 3,376 Captains, 1,199 First Lieutenants, 6,715 Lieutenants and 2,256 Ensigns. For every thirty-four German non-commissioned officers and privates killed, one army officer perished.

# CREATING AN INDEPENDENT SYRIA

ADDRESS BY GENERAL GOURAUD

*General Gouraud, commander of the French forces in Syria, delivered this important speech at Damascus on June 21, 1921, outlining the whole French scheme for that region of Asia Minor, a scheme which clashes in some respects with British Plans*

**G**ENTLEMEN: The first step taken by France for the establishment of harmony and national liberty in your midst was the creation of autonomous States with the object and result of satisfying particularist desires and providing a framework for the harmonious association of all. Experience has proved this to be the way to prevent differences—those differences which enrich the national life—from becoming antagonisms. Think of the example of Switzerland, where populations of differing religions and languages unite in brotherly co-operation to maintain a federation which rests on a common sentiment. For several centuries new cantons acceded freely, because the Federal form enabled them to join the association without abandoning their own character, and so enlarged the Swiss Confederation. Consider also the United States.

These considerations, and these examples by which they are justified, led me to create the autonomous States of Syria last year. \* \* \* But I have never ceased to hold that these States ought to be linked together, and that they ought, thus associated, to constitute that independent Syria which France has always wished to create.

I will now examine the double problem which you and I have to solve. We must, on the one hand,

complete and make more liberal the organization of the States, and, on the other, we must establish the Federal link. The organization of the States will not necessarily be the same everywhere; it may develop in a slightly different fashion at Damascus, at Aleppo and Latakia, according to the more or less rapid progress of the country. I do not mention Lebanon here among the Federated States, for special traditions will have to develop it separately in a less close and purely economic association with the Syrian Confederation until such time as it may decide to join on its own initiative.

In spite of the possible differences between the organization of the States it is nevertheless plain that they must, by a common regulation applicable to all, be provided with a representative body, the powers of which, as a basis, must be capable of enlargement.

Let us consider how this rule may be applied to the State of Damascus. You have been accustomed to a representative body, the General Council of the Vilayet, which can be reconstituted at once on a broader basis. In order ~~thus to reconstitute it~~ it is enough to take a census so that it may be possible to determine the number of electors of your future representative assembly. This Council will be called the Government Council and

must rest upon a franchise which, although at first it will be planned on the same basis, must be far wider than that which elected the former General Council of the Vilayet. The decree for the census is now being prepared in Damascus, and at the same time I am going to have a decree drafted fixing the qualifications for electing the Government Council and the powers which this Council will have at first. From the beginning it will be the Council's duty to express its views on the budget and the taxes and upon the laws and decrees which the Government contemplates; the Government will not be entitled to reach a decision in these matters without having heard the views of the Council.

All that I now want to do is to make a beginning and show you the path which is open to you. But in order to help your Government and myself to open it to you I am going to sum-

mon a certain number of your notables to meet here until the census is completed—that is to say, pending the elections—a nominated and provisional Government Council, which henceforth will have the same powers as the elected Councils will have later on, and which will help your Government to propose to me the reforms which cannot be delayed: for example, that of an administrative commission designed to help the Government. In the same way we shall have to revive and extend the Councils of Cazas and Sanjaks without delay, recalling that these organs of local liberty, modest as they appear to be, are the most perfect instrument for the control of the administration by the nation, and the best training school for the nation in self-government.

Such must be the beginning of the internal liberties of your State; for, I repeat, nothing is in question here but a beginning; the future will depend upon yourselves and upon the Council of your representatives, whose activities will increase both by the enlargement of the number of questions on which it will have deliberative powers and by the widening of the franchise upon which it will be elected.

And now, how will the federation which I have just proclaimed to you find its expression and organization?

Even before I can have an organization arising from the representation of the people of the States I want to give this federation a provisional existence and provisional organs. I am going to invite the Governments of Damascus and Aleppo each to appoint five delegates, who will constitute the first Federal Council, summoned to sit alternately at Damascus and Aleppo, in order to maintain an equal balance between the South and the North. The President of the Federal Council will be elected by the Council for one year, and will be chosen alternately from among the representatives of Damascus and those of Aleppo. The Fed-

GENERAL GOURAUD  
*Commander-in-Chief of the French Forces in Syria.*

eral Council will itself choose and nominate the men from among whom it wishes to see appointed the Directors General of the necessary common services; one entrusted with the preparation of a common budget, that is to say, schemes for joint receipts and the application of these receipts, to be submitted to the Federal Council; and one for public works, who will have to say what works for the common benefit ought to be executed at the expense of the joint budget on the territory of each State, and to control their execution; and, finally, a Directory General of Wakfs.

I would emphasize the fact that the joint budget will not draw upon any of the resources over which the autonomous States at present have control. \* \* \* Only experience can determine the number of joint Directors General when the Federal Council consists of members appointed by Government Councils, themselves the outcome of the elections which will take place directly after the census.

I venture to hope that what I have said will make you feel that the mandatory power is frankly setting you on the path toward complete self-government for the country. If you consider the words in which I have just explained my intentions to you you will see that it is indeed the path of liberty which is opened to you, and my intentions will immediately be stated in constitutional declarations which may later be modified, as regards the organization of the federation, by the advice and then by the decisions of the Federal representative body springing from the Councils of State; that is to say, in the second degree, from your votes.

History is rich in examples of the part played by France as the missionary of liberty; and, speaking only of the East and of Syria, where can geographical or historical reasons be found to cause France to wish for anything in these parts except that moral ascendancy and economic cooperation which act only with the

consent of those who benefit by them? For centuries France has never sought direct military or political responsibilities in the East; with the consent of the inhabitants she assured for herself activities in this area deep-rooted enough to give her complete satisfaction in exercising her great traditional influence within the Ottoman Empire, the maintenance and improvement of which she desired as long as that was possible, for the benefit of the people which it embraced. The mad policy which dragged the Ottoman Empire into the war did not, moreover, affect our wish to resume our old friendly relations with Turkey in any way. This is proved by the generous convention which France agreed to in London last March, immediately after the brilliant success in the capture of Aintab. It is true that the Angora extremists refused to ratify this convention, and if they persist we are ready, as before, to resume the struggle and bring it to a victorious conclusion; but we may hope that the advice of enlightened patriots will finally carry it.

France, obliged by Turkey, who was led astray by Germany, to intervene in Syria, has accepted the task of helping the young independent nation which has to evolve here and guiding it by her advice. She will not fail. I believe that no further hindrances will arise, and that Damascus will not suffer further from the fomenters of the troubles which formerly compromised her future and delayed the liberal intentions of France for a year. The time seems to have come to efface the memory of those evil days, the recurrence of which your wisdom and our vigilance will prevent. It has been resolved that a general amnesty shall be granted to those whom the Damascus Council of War condemned in August, 1920, with the exception of those guilty of crimes under the common law.

(Translated from *L'Europe, Nouvelle*,  
July 16, 1921.)

# WHY WE DID NOT DECLARE WAR ON TURKEY

BY FRANK JEWETT

*An interesting bit of diplomatic history, never before published, centring about Mr. Henry Morgenthau's secret mission to Constantinople for the purpose of getting Turkey to sign a separate peace with the Allies—Why he went no farther than Gibraltar*

THERE have been some expressions of surprise and some of regret that the United States did not declare war on Turkey at the time she declared war on Germany. It has been said that this and that particular interest was at work to prevent the declaration. The failure to declare war was doubtless due to many reasons. Among them was the military reason urged by the French and British military leaders, that it would be unwise to divert any part of the American troops from the main attack in Europe; there might have been military disadvantages in being at war with a country which was not to be included in the zone of American operations.

Another reason was that the Germans were extremely anxious to have the United States declare war on Turkey, because the adherence of Turkey to the Central Powers was not whole-souled, and they feared that Turkey might be persuaded by America to withdraw from the war. They felt that their hold on Turkey would be stronger if the United States were to declare war. Of course, it was natural for the United States to do the opposite of what Germany wished. Doubtless, too, the Administration was influenced by the advice of those who argued that the United States had gone into the war because of specific provocations, and that it was the policy of the country

to declare war only on provocation unless a distinct military benefit could be anticipated.

Some have given as one of the reasons for the failure to declare war on Turkey the personal influence of those interested in philanthropies in Turkey. If personal influences of any sort are to be considered, it is safe to say that the influence of Former Turkish Ambassador Henry Morgenthau counted the most. He was aware of the German feeling mentioned above, and the purpose back of Mr. Morgenthau's position was the belief that he could bring about a separate peace with Turkey and thus the victory over Germany would be hastened more by this means than by a declaration of war.

The story of Mr. Morgenthau's part in an attempt at separate peace negotiations with Turkey constitutes one of the most interesting bits of recent diplomatic history. It is said that the project of a separate peace with Turkey was broached by Mr. Morgenthau to Mr. Balfour at a reception in New York while the latter was visiting this country as a special ambassador. This was in April, 1917. Mr. Balfour fell in heartily with the project and made an appointment to discuss the matter more at length the next morning. During this discussion Mr. Morgenthau used the fact of his intimate relations with Enver Pasha, Talaat Pasha and the

other leaders of the Ottoman administration. He had evidences of their confidence in him, and Mr. Balfour became quite enthusiastic. The plan, as Mr. Morgenthau had worked it out, was for him to go to Egypt and thence up to the advanced British lines in Palestine. Enver Pasha was to come to Palestine on the Turkish side, and the two were to meet between the opposing lines for a frank discussion of the situation. Mr. Morgenthau was to dangle the prospect of generous loans to Turkey in case it broke away from the alliance with Germany, and was to urge the cogent reasons why it would be better for Turkey to abandon the war under the terms that Mr. Morgenthau would be able to offer. The latter counted also upon his own personal influence.

Mr. Balfour cabled the plan to the British Foreign Office, where it aroused consternation, as it was entirely at variance with the British plans for the overthrow of the Ottoman Empire, the acquisition of Mesopotamia and the liberation of Palestine. Nevertheless, Mr. Balfour was plenipotentiary, and the British Foreign Office was not able to veto the plan.

Of course, negotiations with the Turks at Constantinople were necessary, and it is said that Mr. Elkus, who was then American Ambassador at the Turkish capital, interviewed Djavid Bey, and that before he left Constantinople at the end of May, 1917, he had succeeded in arranging the matter so far as the Turkish part was concerned. It will be remembered that Mr. Elkus was taken ill with typhus fever after the United States entered the war and that he remained in Constantinople for some time after diplomatic relations were broken with Turkey. The Turkish Government did its best to prevent the rupture of diplomatic relations with the United States, but the Germans became alarmed over the great hold that Mr. Elkus was obtaining and insisted that relations be broken.

The arrangements were then com-

pleted in America to have the attempt on Mr. Morgenthau's part carried out. The Turkish Secretary of the Embassy at Constantinople, who, by the way, was an American, came out with Mr. Elkus, and was to meet Mr. Morgenthau at Gibraltar and was to accompany him into Egypt, to act as interpreter to the negotiations with Enver Pasha. Gossip has it that Haim Effendi, the Grand Rabbi at Constantinople, was also scheduled to play a part in the negotiations, coming to America and accompanying Mr. Morgenthau to Egypt and then to the British front lines in Palestine. It may be that his name has been connected with the plan only because he was on intimate terms both with the Young Turks and also with Mr. Morgenthau, and because he attempted to come to America in the Spring of 1917. In any case, he got as far only as Holland, where the British prevented his proceeding further.

Mr. Morgenthau set out from New York via Gibraltar with his son-in-law, Mr. Wertheimer, and Major Felix Frankfurter, in July, 1917. It was reported in the press that they were on a mission to distribute alms to the Jews in Egypt.

Meanwhile the news had begun to leak out at London, and naturally came to the ears of Professor Weitzmann, the leader of the Zionist movement, who has recently been to the United States to stir up interest in Zionism. He realized at once that a separate peace with Turkey would put an end to the Zionist hopes for Palestine. He was able to exert a powerful influence in the British Foreign Office, but was told that inasmuch as Mr. Balfour had agreed to the Morgenthau plan, they could not interfere with it. They suggested that he intercept Mr. Morgenthau at Gibraltar and persuade him to abandon the plan. There are those who say that his credentials gave him a semi-official position and that he was able to indicate the attitude of the British Foreign Office toward the plan.

Mr. Weitzmann was fitted out with the necessary papers to speed him through France and Spain, and had to make the trip from Cherbourg to Gibraltar in automobiles. At Gibraltar

(© Underwood & Underwood)

HENRY A. MORGENTHAU

*Former United States Ambassador to Turkey*

he found the Constantinople Embassy interpreter also awaiting Mr. Morgenthau, but the interpreter was not there to stop Mr. Morgenthau. The interpreter expected to embark on the same steamer and go on to Egypt with the commission.

At Gibraltar was waiting also Mr. Weil, who represented the French Government and had been sent to arrange the details of Mr. Morgenthau's plan from the French point of view.

Naturally, if Mr. Morgenthau should discuss terms with Enver Pasha, he would want to know what the French were demanding or willing to concede. Mr. Weil was a Hebrew who had been director of the Government tobacco monopoly at Constantinople. It has been figured out that Mr. Morgenthau, Mr. Weitzmann and Mr. Weil, all Jews, representing the United States, Great Britain and France, respectively, must have used the German language in their conferences at Gibraltar, because it was the only language that they had in common, Mr. Weil not knowing English and Mr. Morgenthau not being familiar with French.

Just what arguments Mr. Weitzmann used in his talks with Mr. Morgenthau upon the arrival of the latter at Gibraltar, it is not easy to conjecture; because Mr. Morgenthau was not at all favorably disposed toward Zionism, and the possibility of his plan's interfering with the formation of a Jewish State in Palestine would not impress him greatly. It is said that Mr. Weitzmann first obtained the aid of Major Frankfurter, who is an ardent Zionist, and that then the two of them succeeded in dissuading Mr. Morgenthau from continuing with his project. In any case, the result was that the entire party went to Paris to talk the matter over with various and sundry persons of importance, and finally the project was postponed. America, however, had been kept from declaring war upon Turkey, and as time went on the need for declaring war appeared to grow less and less.

If those who regret that the United States did not declare war upon Turkey wish a reason for the failure, Mr. Morgenthau's plan for a separate peace furnishes a sufficient one.

# DEMOCRATIC CZAR AND PEASANT PREMIER

BY CONSTANTINE STEPHANOVE\*

Professor in the University of Sofia

*How Stambolisky, leader of the powerful agrarian party in Bulgaria, accepted the kingship of young Prince Boris—His methods in crushing communism and putting everybody to work—Some of the mistakes the new Government has made*

IN many European countries, particularly in those of the Central Powers, the internal condition of things since the Autumn of 1918 has been, and continues to be, revolutionary and warlike. Germany, Austria, Hungary, Turkey—of the Entente ex-enemies—and Jugoslavia, Poland, Greece, Rumania, and the new Baltic States—of the allied nations—still find themselves in a state of intense political and, in some cases, military turmoil. Rumania's invasion of Hungary and Poland's war on Soviet Russia are still comparatively recent. Turkey and Greece, even now, are locked in deadly conflict in Asia Minor.

"Bulgaria is the only country in Central and Southeastern Europe which I have just gone through that is not at war with somebody," I was recently told by an English writer who had come to the East as correspondent of one of the big London papers. And yet the impression one gets from the outside world is that the country is being torn by internal dissensions, swept by all sorts of revolutions, harassed by armed Macedonian and Thracian bands. According to the foreign press, Sofia has been time and again attacked, sacked and destroyed by reactionary forces. The land has been declared to be now a Bolshevist Soviet, now an Agrarian Republic; reports have been spread that it had been invaded,

dismembered and gobbled up by rapacious neighbors. King Boris is represented as dancing to the fiddle of all this variety of regimes. He has been repeatedly reported abroad as having become the "first citizen" of a new Balkan republic. And if Lloyd George betrayed his ignorance of the Teschen region, why should Georges Clemenceau know more about a particular State in the forlorn Balkan Peninsula? Hence his whisper to his Secretary, Mr. Tardieu, at the Paris Peace Conference: "Bulgaria—is she a republic or a monarchy?"

---

\*Professor Stephanove was born in Macedonia, graduated from the American Collegiate Institute of Samokov, Bulgaria, and came over to America and worked his way through Yale University, receiving his Master's Degree about 1901. After pursuing graduate studies in Berlin and Paris he returned to Macedonia and was thrown into prison by the Turkish authorities on suspicion of being a spy. The British Government obtained his release. He visited the United States during the St. Louis Exposition, and on his return to Bulgaria accepted the chair of English Language and Literature in the University of Sofia, which he has filled with distinction ever since. In the Summer of 1915 Professor Stephanove was sent to London by the Bulgarian Government to try to get Great Britain to recognize Bulgaria's rights in Macedonia under her treaties of 1912 with Greece and Serbia, as a preliminary to Bulgaria's coming into the World War on the side of the Allies. He asked Sir Edward Grey to send at least two divisions of British troops into Macedonia as a guarantee against Turkish attack, but his request was refused, and Bulgaria eventually joined the Central Powers. In 1917 the Bulgarian Government sent him to Switzerland to get in touch with allied representatives and pave the way for peace, and later he was one of the delegates appointed to help negotiate the Bulgarian Peace Treaty, but France vetoed him on account of his previous activities in Switzerland. His fellow-countrymen regard him as one of the ablest men in Bulgaria and the best qualified to speak on Balkan affairs.—EDDOR.

"A monarchy, sir," was the answer, delivered only after hesitation.

The poor Bulgarian, after reading all these various versions of the state of things in his country, if he has any wits left, and if he has any Irish humor in him, feels like cabling abroad, as Mark Twain once did from Paris to his friends racked with anxiety at home: "The reports of my death have been greatly exaggerated."

The truth is that Bulgaria is still a monarchy, which form of government she has stubbornly clung to from time immemorial, especially ever since her new existence, commencing from 1878—a regime with which even Mr. Alexander Stambolisky, her present Premier, known as the most dangerous enemy of monarchies, has seen fit not to meddle. This change in the mind of the uncompromising leader of the Agrarian

Party, which, prior to its coming into power, professed to be more republican than any other republican Government in existence, is the most remarkable phenomenon in the history of party politics in Bulgaria.

When in September, 1918, Stambolisky, the "ex-convict" of the fatal Radoslavoff regime, had got the best of old Czar Ferdinand and had caused his speedy expulsion from the country, the youthful new King, son and successor to the throne of his ill-fated father, called the sturdy farmer Premier to his palace and bluntly asked him:

"Do the people want a republic? If they do, tell them that in that case I, too, am a republican, which right no man can deny me, for I am Bulgarian born, Bulgarian bred, and Bulgarian christened."

The Premier, deeply impressed, but non-committal, closed the interview. He at once left the palace, however, and drove to the party's council, where a hot and stormy discussion ensued. Shortly afterward the same "chunky," broad-shouldered, stern and awe-inspiring spokesman of the people returned to the boy King, reported his action, and said:

"The people want no change of government with you in the palace."

#### BULGARIA'S YOUNG KING

Czar Boris's tact, frankness, fearlessness and patriotism, manifested in those critical moments, acted magically not only upon the Agrarians, but upon all parties, even the Communistic wing of the Socialist faction. Already loved by the people as heir apparent, he now became their idol as their Czar, and his popularity has been increasing ever since. Today he is generally recognized as the most popular of the young monarchs on the Continent.

At the General Peasant Congress held in Sofia in February last, when some one questioned Premier Stambolisky about his republican principles and asked what had become of them, he quickly silenced the inter-

COMPULSORY RESEARCH WORK

*University graduates in philology and history doing excavation work at the Church of St. George, Sofia, where valuable archaeological discoveries have been made.*

pelator by saying: "Gentlemen, you couldn't have a better republican government than that which the country enjoys today with Czar Boris at the head." In a similar manner Mr. Stambolisky has silenced all attacks in the National Assembly bearing on the question of the Agrarian Party's desertion of its republican standard.

Fortunately for the country, young Boris's democratic bent of mind, his nobility of character, his sincerity and plain dealing and his scrupulous adherence to the provisions of the Constitution have won him the favor not only of his people, but also of all discerning foreigners who have visited the country, and particularly those brought into close contact with him, such as the members of the diplomatic staffs, the various international committees sent for the regulation of the provisions of the Neuilly Treaty, the Reparation Committee, &c. Through them Czar Boris has been able to win the good will of their respective Governments. He has formed close personal ties with many influential foreign personages. And, what is no less important, he has gained the press and public

opinion outside of Bulgaria also. Articles that have appeared in leading newspapers and magazines have described him in flattering terms. His popularity has been spreading, particularly in England, France, Italy, and even in the United States. It was only the other day that Governor Miller of New York sent to the amiable Bulgar ruler the four beautifully bound volumes of the "Birds and Flowers of New York State," a gift of the Brooklyn National Library, with the dedication signed by him: "To His Majesty, Boris III., King of the Bulgarians, with the good will of the People of the State of New York."

England's sympathy for the young Bulgarian Czar is largely due to her traditional respect for a democratic and truly constitutional ruler, such as she finds him to be. That was proved in May last when Serbia, Rumania and Greece, on the plausible pretext of applying the sanctions upon "unyielding," "disobedient" and "band-infested" Bulgaria, secretly decided to rush into Sofia and put an end once for all to the "brigand State." France was the

BULGARIAN LABOR SERVICE GANG, WITH THEIR INSTRUCTOR, WEARING THEIR NEW REGULATION SUMMER HATS.

first to sound the alarm and send forth her warning to Belgrade, the Yugoslav capital, whence the directions for the intended *fait accompli* had issued. Italy, the United States and Great Britain followed suit. The English Premier's prompt admonition to the conspiring Balkan States, to the effect that any such rash move on their part "would be highly disapproved by the great Entente Powers, and the transgressors would be held responsible for any fresh disturbance of the Balkan and European peace," acted like a cold douche upon the heated Balkan atmosphere.

Those were terrible times for the Bulgarians, who were daily expecting to see their land seized by their hostile neighbors. The moment for such an adventure was most propitious, and a Serbian statesman ejaculated: "Now or never! Such opportunities come to nations once in a thousand years." And the Bulgars remembered the words of Mr.

Spalaikovitch, Serbian delegate at the framing of the Bucharest Treaty, 1919, who declared in the very faces of the Bulgarian representatives: "Remember, we will never be satisfied until we have stuck our dagger into the very heart of Sofia."

#### NEED OF STANDING ARMY

Had such an event taken place, not so much Serbia, Greece and Rumania would have been to blame as the framers of the Bulgarian Peace Treaty. As has been often pointed out in European and American journals, owing to internal discontent, the Governments of these States, particularly of Greece and Serbia, would always snap at an opportunity to divert home opinion to some foreign subject, especially toward Bulgaria, a conflict and even a war with which country would always be popular.

Among the other peace clauses, that one providing for the abolition

of Bulgaria's standing army has been considered a blunder by all versed in Balkan matters. By this arrangement Bulgaria was rendered defenseless and exposed to both local and outside dangers, for it made her an easy prey to greedy neighbors, whose appetites at present have grown keener by virtue of their triple and quadruple territorial enlargement, as compared with Bulgaria. The country was thus weakened, and offered a great temptation to political and military adventures which in South-eastern Europe pass for patriotic exploits. Premier Stambolisky repeatedly entreated the Entente's Supreme Council to modify that clause of the treaty so as to allow Bulgaria to retain at least the military organization in vogue in peace time; this, he pleaded, was indispensable not only for her own protection at home and against eventual aggression from without, but indirectly to Balkan and European peace. The great powers, however, showed themselves for a long time deaf to his words.

#### STAMBOLISKY FACES A CRISIS

The first occasion when the Entente representatives saw the serious mistake of the measure was on Dec. 24, 1919, when the extreme Socialist or Communist Party, aided and abetted by Russian Soviet agents shipped into the country with the Russian refugees who were fleeing from Lenin's terror, almost caused the overthrow of the Government and the introduction of a Bolshevik form of Government. It was known that money and even arms and ammunition had been supplied to the Communists by the Russian emissaries, and that night drills of Communist bands had been taking place in the suburbs of Sofia itself. A general strike of all labor organizations, including the postal clerks and railroad hands, was to herald the revolution which was to usher into the country a Soviet Government.

The situation was most critical. Premier Stambolisky was new in of-

fice; his Cabinet was composed of inexperienced village schoolmasters and peasant farmers, and he had only a shattered military force for defense; furthermore, a young and untried ruler was at the head of the State. The strike was boldly proclaimed with big and high sounding headlines printed on flaring red placards. December 24, 1919, will long be remembered by Sofians. People had no confidence in the new Government, whose real strength and effectiveness were still unknown. No grown-up person laid his head on his pillow on the eve of that day. The Government sent out an order that all citizens remain within doors under pain of being shot dead.

Early the next morning, when the phalanxes of the working masses commenced marching in the streets in long processions, with ugly determination in their faces, almost everybody concluded that the days of the Government were over and that Bolshevism was about to become supreme in the country. But scarcely two hours had elapsed after the first shout of "Long live the Commune!" was heard, when something miraculous happened. Stambolisky, the idol of the peasant folk, the intrepid leader of the Agrarian Party and the savior of the country after the army debacle at the Macedonian front a year before, now had to show his mettle once again. He appeared on the balcony of the Foreign Ministry, and in a clear and resolute voice asked, or rather ordered, the vast throng to disperse. His words were drowned by fierce cries from thousands of throats. At that moment there dashed from all sides groups of armed men, in village garb—it was Stambolisky's trusted military force—drafted from the various agrarian organizations and gotten into shape and readiness for just such an emergency. With the aid of the local police force and the small military garrison the Communists were surrounded. In a short time the ring-leaders were arrested, the throngs

dispersed, and the streets cleared. By 10 o'clock in the morning the capital was again in safe hands, and Stambolisky was absolute master of the situation. So completely crushed was the Bolshevist attempt to overthrow the Government that most of the shops of the capital were opened in the afternoon.

What the result would have been had not the Premier been so provident and fearless is easy to imagine. It soon became patent that Lenin's agents in Rumania, Jugoslavia, Greece, Turkey and other places were planning for a general coup in the Balkans, which would open the way to the Red armies of Soviet Russia. The repeated bomb explosions by Bolshevist adepts in the capitals of the Balkan States were in harmony with this plan.

To all foreign diplomats it now became plain how urgent it was for defenseless Bulgaria to be provided with an adequate military force, if only for the protection of the Entente's highways in the centre of the Balkans from a sudden swoop of the Red army down the Danube or the Black Sea.

By this exploit Mr. Stambolisky won his spurs as a statesman. Since that date the Supreme Council has been very favorably disposed toward him. His cordial reception in England, France and Italy since that time is clear proof of that. Thanks to the implicit confidence the Governments of these three great nations have in the Bulgarian peasant Premier, Bulgaria's position has been enormously strengthened, not only abroad, but also at home. This has enhanced the prestige of the Agrarian Government, rendered the crown of King Boris more stable and freed the people from the fear of foreign invasion. When Stambolisky returned from his so-called "hundred day" tour abroad, he told the national representatives at the assembly the truth when he said:

Gentlemen, I am glad to report to you that during my visit abroad I was able to win to Bulgaria the strongest men of England, France, Italy and other countries.

We have broken the ring of calumnies, falsehood and intrigues with which our unhappy country has been for a long time blackened and stifled. Once more we have regained the confidence of the great democracies of the world. Our future is guaranteed. All we have to do now is to set to work, give ourselves to honest labor and production. In this lies the salvation of our land.

### "COMPULSORY LABOR"

If we wished to sum up in a single word the program of the Agrarian Government, which is an exceedingly complex affair, perhaps the most complex in the history of the country—no other Bulgarian National Assembly ever dealt with so many bills—that word is *work, work, work*, which in the language of the English Premier is, produce, produce, produce. The difference between the two Prime Ministers in this respect is that the British Chief is unable to impose his "key to relieve the present economic distress in England," while the Bulgarian leader, as soon as he took the reins of Government in his hands, set all State machinery in motion for the promulgation of his long-conceived measures for making his people resume work, in order to enlarge the labor capacity of the country and increase production. With this main idea in view Premier Stambolisky worked out his now world-famous system of compulsory labor service.

When his project was made public, it was received with jeers and scathing criticism by all the parties of the opposition, on the ground that it violated the Constitution and was against the traditional spirit of the Bulgarian people. Bulgaria's neighbors, too, raised a hue and cry on learning of it, and filed repeated protests against its application, arguing that the so-called compulsory labor service was but a disguise for the old compulsory military service. The International Commission stationed in Sofia was instructed to investigate and call the attention of the Bulgarian Government to the suspicions of the Serbians, Rumanians and Greeks.

Stambolisky, with his wonted imperturbability, informed the members of the committee and formally notified their respective Governments that his bill had no other but a cultural, useful and practical aim in view, and that its working and application could be watched easily and controlled by the Entente agents. On the contrary, he argued, the Entente powers should give Bulgaria the greatest encouragement for the realization of such a noble project, and to her efforts to increase general productivity in the land by inducing all of its citizens of both sexes to contribute their personal share to that end. The arguments of the peasant chief were so plausible that no serious opposition was encountered from abroad.

It was during those discussions that Professor Golder of Stanford University visited Sofia, where he remained for a week. At the meeting accorded him in the Foreign Ministry, Premier Stambolisky, questioned on the subject by the American professor, entered into a detailed description and analysis of the bill, speaking of it with enthusiasm. He said in part:

This is the greatest bill ever devised by a Parliament. I am proud that small Bulgaria initiated it, and I am prouder that it originated with us, the Agrarians. It is the greatest measure we are adopting to raise the country from its terrible economic distress, financial bankruptcy and national demoralization. Work—that is the panacea for our frightfully upset state. We have been called to account by some of our Entente friends, and I suspect some opposition to its application in certain quarters at home; but I am resolved to see it through, for I am sure no good, honest and sensible man can be against such a humane and beneficial program. However, should the European Governments try to hinder us in its realization, then we shall turn to the United States, yes, to working America, for redress.

#### LABOR SYSTEM EFFECTIVE

Happily, Premier Stambolisky had no occasion to appeal to America. His system has been in operation now for over six months, though the bill passed the National Assembly on June 5, 1920. The keen observer of its working, no matter how pessimis-

tically inclined, cannot help being convinced of the great results thus far obtained, though this is but its virgin trial. The Government had made practically no preliminary preparations for its application. It had provided no trained staff of supervisors and teachers. There was a lack of the necessary implements, apparatus and machinery for its effective operation. There existed no real organization for the purpose. But, as one of the Ministers expressed it, "All we want now is to get started. We are fully aware of the fact that all the regular Labor Service recruits, to the number of 23,000 people, and all those of the temporary labor service—a grand total of 600,000 people—could not all be properly employed in this first trial."

This defect was most clearly seen during the School Labor Week, when all school boys and girls from 8 years up, and all the university students to the number of 6,000, were called out to perform their labor obligation. It was plain from the very beginning that it was a physical impossibility to utilize the efforts of over half a million youngsters in the short interval of one week without due preparation in advance. Still, taking the lowest average of their usefulness at 20 levs per day (the ordinary labor wage is 100 levs per day), that would yield some ten millions of levs earned per day, or some hundred millions of levs for the ten days' labor done for the State, the district or the commune, at the minimum.

The character of the work done varied with different localities. Within a week all the school buildings throughout the country were cleaned and whitewashed, the windows washed, the premises cleared, plots dug, trimmed and planted, school apparatus polished, books and pamphlets sewed or bound, and many other little offices performed. The grown-up pupils, besides, planted trees, did a good deal of digging and excavation work under the supervision of their classical teachers, and

various other kinds of heavier manual labor. The 6,000 university students, men and women, did almost the same kind of work, only more effectively, as their younger brothers and sisters of the lower grades. Extensive excavations were made by them with far better results. The girl students were sent to hospitals to help in mending, sewing, cleaning, &c.

Throughout the country, contrary to expectations, the labor week was welcomed with enthusiasm, songs and merrymaking. The young people took pride in going to work and returning home with tools, with shovels and brooms on their shoulders, and singing:

We're jolly, jolly *trudovaks*,  
 We gladly help our Land  
 With picks and hoes and father's axe,  
 And cheer to beat the band.

Whatever arguments or objections there might be brought out against the system, it was plain to everybody that, at the worst, it was a recreation week for all; many of the teachers and professors admitted that that was the first real holiday respite they had had for years. It was a forced rest for many overworked people, for scholar and master, apprentice, clerk or official.

The regular *trudovaks* are being called in their respective districts, and are employed in the repair of public buildings, schools, churches, &c., that were injured during recent wars. Parks, highways, village roads, public fountains are being repaired or newly made; weeding of vegetable gardens and of sown fields is done by large gangs, and other urgent work is being performed by the labor service recruits. Here and there some grumbling is heard, but in general the allotted task is being accomplished with good humor, jokes and songs. It is sufficient to say that within a short period the country roads, particularly the village communications, were repaired and the school houses put in order. The country folk are elated over the fa-

cilities rendered them. In many places the *trudovaks* have of their own accord prolonged the limit of service in order to complete the work on a public building or highway. The villagers would often remark, "It should have been done long ago."

This is the brightest feature of the internal situation in Bulgaria. The Bulgarian is proverbially industrious and thrifty. Work is his traditional heirloom. Work and thrift have been extolled by Bulgarian folksong and sung by Bulgarian poets from earliest days. One of the well known Bulgarian proverbs runs: "The reason why the wolf's neck is strong is because he does the job himself."

#### THE CABINET'S MISTAKES

Outside of this useful measure, however, the Agrarian party has done very little to be proud of. The mistakes and blunders the present cabinet has made are many, and are mainly due to lack of trained and efficient men. Its greatest mistake lies in the fact that it tries to do all things by men from its own organization or party—that is, mainly by untrained peasants. Because of this shortsightedness and narrow-mindedness, the financial and economic problems of the country have been badly bungled and mismanaged. Legislation has done enormous injury both to local and foreign trade. Excessive taxation on capital and real estate, and indiscriminate persecution of the wealthy by favoring the rural class, have tended to drive capital out of the country and gold out of the market. Commerce has been hindered rather than facilitated by the new tariff laws. The evil results from narrow partisan enactments are everywhere in evidence.

In the course of a year the value of the lev has dwindled 100 per cent. and that in a land richly blessed by Providence with a highly fertile soil, rich mineral resources, vast forests—a land more ideally distributed among its inhabitants than any other in the

world. Its tobacco is famous all over the world, while its rose industry is unique upon the planet.

The Government itself has seen the evil working of some of its measures, and is already taking steps to remedy them. It is abolishing the consortium, which functioned very detrimentally to the country's interests. The Bulgarian people, properly led, can accomplish miracles. And the Premier is right when he says that Bulgaria's greatness lies in her peace achievements rather than in her military

pro prowess. In cultural progress and achievement she can successfully compete with her older neighbors. Her Vasoff is the greatest poet in Southeastern Europe; her Morphova is the prima donna at the Prague Opera; her Raitcheff was a leading star at the Petrograd Theatre prior to the Bolshevist regime, her Michailoff is leading portrait painter in Berlin, her Nikoloff is the most popular sculptor in Rome. The high standard of education prevailing in Bulgaria is well known.

## STATEMENT FROM THE RUMANIAN MINISTER

*To the Editor of Current History:*

In the July number of your magazine Theodore Vladimiroff takes issue with my article on "Rumania in the New Europe," published in CURRENT HISTORY for May. An analysis of Mr. Vladimiroff's assertions will, by divesting them of their emotional trappings, reduce them to the following statements of substantial and relevant fact:

1. That conditions in Rumania are not perfect.

2. That the effort of the Rumanian Government to transform the land system of the country in accordance with the spirit of modern democracy does not accomplish the desired results overnight.

3. That Rumania, while granting full political and civil rights to all native residents regardless of race and creed, reserves the right to regulate the naturalization of immigrants.

4. That the Rumanian press is allowed full freedom in criticising the Rumanian Government.

No impartial reader of Mr. Vladimiroff's letter will maintain that there is anything particularly and specifically discreditable to Rumania in these charges. Conditions in Rumania, exhausted and partly devastated by years of war and an interlude of an exceptionally ruthless foreign domination, fall short of an ideal standard; but in that respect, at least, Rumania does not stand alone. Only a hopelessly hopeful Utopian would expect that a system of landholding that has lived through many centuries can be changed overnight. The great initial step is taken, the execution of the law is in progress and the Rumanian land reform is

an instance of peaceful evolution toward a fuller democracy that may serve as an example to other nations. After all, an "oligarchy" which yields up its established privilege for the sake of justice and national betterment is doing fairly well in this age of class bitter-endism. As to the regulation of the conditions under which citizenship will be granted to immigrants, Americans will be the last people in the world to question the right of any State to do so.

It is plain that the real grievance behind Mr. Vladimiroff's somewhat heated denunciations is not what Rumania is today, but what she did in 1913. In that year Rumania interceded in behalf of Serbia and Greece, then treacherously attacked by their ally Bulgaria, and decided the conflict in the former's favor. That by checking the hypertrophied ambition of Bulgaria, Rumania rendered a service to Europe has been brought home rather forcibly by Bulgaria's rôle in the World War.

Possibly Mr. Vladimiroff would be satisfied by a readjustment of Southeastern European frontiers that would protect the racial minorities of Transylvania by turning them over to Bulgaria. These minorities, however, might be less enthusiastic after consulting the Greeks and Serbs of Macedonia, who are acquainted with Bulgarian methods at close range.

ANTOINE BIBESCO,

Rumanian Minister.

Rumanian Legation, 1,607 Twenty-third Street, N. W., Washington, D. C., Aug. 8, 1921.

# JAPAN'S HOSTILITY TO FOREIGNERS

BY CECIL BATTINE

*Drastic laws, sternly enforced, limit the liberties of aliens in Japan—California's restrictions mild by comparison—Chief points of difference between the two countries*

This article is by a Major of the British Army and was originally written—at greater length—for the Fortnightly Review of London. The part here given is reproduced by special permission of the American publisher of the Fortnightly Review, Barr Ferree. Major Battine's summary of Japanese laws against foreigners—notably the fact that the authorities forbid immigration of laborers from China and Korea "because it degrades their own labor"—is of especial significance as bearing upon the California situation.—EDITOR CURRENT HISTORY.

**E**ARLY in the European War Japan had shown a disposition to profit by the troubles of the world. Although it cannot be alleged that her rulers failed in loyal co-operation within the terms of their commitment to the Allies, yet, in fact, the Japanese Army struck but one blow, and that was to seize the German port of Kiao-chau in Shantung for Japan. There was a considerable sympathy for Germany even when war flamed out, which increased through 1916 and the Spring of 1917, and which found expression in remarkably outspoken press campaigns, for the Japanese press, especially in wartime, is well under the control of the Cabinet. From 1915 onward Japanese diplomacy strove energetically to obtain preponderating authority in China, where revolution and civil war gave both excuse and occasion for intervention while other powers were preoccupied. The Peace Conference in Paris achieved very little in harmonizing Japanese aims with the policy of her allies in the Far East, and ever since military preparations have been pushed forward on a scale which it would be futile to ignore.

Twenty years ago the Japanese Army, in peace, numbered 150,000 of all ranks, including 8,500 officers.

After the Manchurian War the establishment was raised to 250,000, and it has recently been augmented to 275,000 officers and men. The Japanese military code provides for seven years' service with the colors and the first echelon of the reserve, and ten years in the second line. Thus Japan will soon be able to call out one and a half million field troops fully trained, besides considerable trained reserves of older men, and several classes of untrained youths in case of a prolonged war. The complementary and auxiliary services of the army, which is reckoned at thirty-three field divisions in peace, are organized on a liberal scale and fitted with all the latest technical improvements. In proportion to its resources, no country in the world is so well prepared to wage war on land at short notice and with such formidable numbers. The Japanese Navy already includes ten capital ships in commission, ninety destroyers and forty submarines, besides other less important vessels. These ships are manned by 80,000 highly trained officers and sailors. In construction, or planned, in addition, are fifteen capital ships and sixty submarines.

Among the three or four questions which are pending between Japan and the United States are those of

the Island of Yap, the Japanese immigration in California, the evacuation of Shantung, and the open door in China. The interests of the United States differ in no essential particular from those of England, France and Belgium. Belgium is interested in the open door in China; France is interested in the question of the open door in China and in the protection of Indo-China; and Great Britain is interested in everything, not only on her own account, but through Canada, Australia and New Zealand.

The question of Yap is entirely a commercial one. It is merely a cable landing, and is of as much importance to the Dutch East Indies as it is to Great Britain. It is a desire to keep another country from controlling the commercial cable to the detriment of commercial interests. The same interest inspired Germany to lay her cables—to be independent of possible British commercial censorship. The United States is very much in earnest about the Yap question, and it is not so much strategic and military as it is commercial. The United States is opposed to the dismemberment of China, and interested in its division into spheres of influence. China cannot be dominated by Japan, because China will ultimately absorb the Japanese if they try. China is on the map to stay, and she will be backed by the United States in this endeavor.

#### PREPARING FOR WAR

Japan is feverishly preparing for war. She is purchasing war material in nearly every country in the world. This may mean very much or very little. For instance, she may wish to have on hand what she needs before the proposition comes for disarmament. Or she may wish to make herself more worth while for England to renew the Treaty of Alliance. Or she may be preparing for eventualities to enable her to satisfy her ambitions in Asia through being strong enough not to be dictated to, should

her interests require that her policy run counter to that of other countries. Under any circumstances Japan is justified in strengthening her military position without aiming at any particular country.

The question of the Japanese in California is really only a side issue. Australia, Canada and New Zealand are much more firm and drastic in their exclusion of Japanese than the State of California. Under the American form of government forty-eight States are federated into a union. Each State makes its own laws and these are sometimes in conflict with those of the Federal Government, in which case they are annulled by the Supreme Court. The various States do not always respect the treaty agreements of the United States in laws which they pass, but they ultimately have to do so. This is the penalty America pays for local self-government. To show how little there is in the Japanese contention about discrimination against foreigners, Baron Goto stated that "Japan is willing to put a further check on emigration to America and is willing to meet America more than half way should the gradual elimination of the Japanese population be desired." The trouble with the question is, America has accepted "the gentlemen's agreement" to restrict emigration and Japan has lived up to it, but, nevertheless, the Japanese population of California has increased from 30,000 to nearly 100,000 in the last few years through evasion of both the good intentions of the United States and of Japan. California is greatly alarmed and some solution must be arrived at.

Japanese irritation is, perhaps, exaggerated, as any one who is familiar with the restrictions imposed by the Japanese on all foreigners will readily see. This is important on account of the plea of "racial equality" which the Japanese threatened to make at the Peace Conference, and will continue to make in the League of Nations, much to the disturbance

of Australia, New Zealand, Canada, the Dutch East Indies, and French Indo-China, however much the Governments of Great Britain, France and Holland may appear to be indifferent to it. The following is a list of Japanese discriminations against all foreigners:

#### LAWS AGAINST FOREIGNERS

Foreign labor immigration into Japan is forbidden by Imperial Ordinance No. 352, dated July 28, 1899; foreigners cannot own land in Japan as individuals; they cannot engage in agriculture in Japan; they cannot sell either fruits or vegetables in Japan if they raise them; they cannot engage in the fishing business in Japanese waters.

Foreign doctors of medicine cannot engage in the practice of their profession except in missionary hospitals (foreign doctors who were practicing medicine in Japan before this law was passed are excepted) unless they pass a medical examination in the Japanese language, both written and oral, before a board composed of Japanese doctors. (This does not apply to foreign dentists.) Quack doctors, dealers in charms, doctors of ancient Chinese medicine, are numerous in Japan. Foreigners cannot become owners of ships flying the Japanese national flag, and all executive interest they can attain is subordinated by law to Japanese control. Foreigners cannot become shareholders in Japanese national banks, the Bank of Japan, or the agricultural and industrial banks. The articles of some private companies exclude foreigners from membership. Foreigners cannot, as individuals, engage in mining; they cannot become members, shareholders or brokers of various Exchanges nor members of Japanese Chambers of Commerce; they cannot engage in the emigration business, either as individuals or as shareholders in emigration societies or companies; they cannot hold any public office and can-

not become members of the Japanese bar.

Foreigners do not enjoy the franchise; foreign commercial juridical persons are recognized by law, but private non-commercial corporate bodies are not, except in virtue of a special treaty or convention. Foreign life insurance companies cannot write insurance in Japan unless a large per cent. of the money collected is left in the country. The laws of Japan also permit rebates being given by Japanese steamship companies on all goods imported or exported by Japanese merchants. This system is being practiced as a means to undersell foreign merchants.

The real issue, however, is much deeper. Japan aims at a Monroe Doctrine which shall exclude foreign powers from exercising any political control in the Far East. At the present minute she feels that the United States stands in her way, whereas America is merely standing for the open door and against the grab game which is going on in Europe and Africa, and which America feels should not be carried on in Asia. America would willingly join with Japan and the rest of the world in a doctrine of League of Nations in Asia, but not for the exclusive benefit of Japan in exploiting that region. Japan has overflowed into Formosa, Korea, Manchuria, the Hawaiian Islands, and California, under the pretext of finding room for her overcrowded population, which is increasing rapidly. On the other hand, if the Japanese used modern methods of cultivation of unproductive lands on hillsides and by irrigation, five-sixths of the land surface of the country could be cultivated, and she could support from three to four times her present population. For the cost of a couple of battleships she could reclaim land in the territory which she now absolutely controls for her surplus population.

Intense hostility to all foreigners is now evident everywhere in Japan, but it is being very carefully cultivated against Americans. This irrita-

tion has the effect of making the Japanese workmen and smaller merchants forget their own troubles, but may be carried too far by inflaming the Oriental mind beyond control, especially if some sharp crisis should occur in the relations of Japan and America. A severe economic crisis in Japan, which cannot be averted owing to overproduction and the general readjustment which is going on in the world, may produce so much unrest in the Japanese population that a war might easily be a diversion from local troubles. The policies of America are direct and open. America asks nothing but the right to trade on equal terms without having to suffer from the closing of legitimate markets by exploitation for the benefit of any one country. At bottom, Japan really represents the attitude of America, which is that of a policeman trying to maintain the *status quo*.

#### DEGRADING JAPANESE LABOR

A peculiar part of Japan's claim for consideration of her subjects in California is that Japan herself forbids the immigration into her borders of Korean and Chinese laborers because it degrades her own labor. The Japanese claim that Korean and Chinese laborers lower the standard of living for the Japanese, but they are not willing to concede that Japanese labor does the same thing for American labor. As a matter of real fact, the serious issue between Japan and America is neither the immigration question in California nor the Yap cable question. The fundamental questions lie deeper. The United States, in her policy in the Adriatic, has appeared to stand in the way of the Italian grab game in Dalmatia, and Japan regards it that the United States is solely responsible for Japan's not being able to work her will in Asia since the armistice. As a matter of fact, America has been hauling chestnuts out of the fire for all the Allies as against any one particular ally, and is managing to interfere with the selfish interests of

each ally in turn, thereby making herself very unpopular. As she is not herself, however, trying to grab anything, and is not looking for compensations, it may be that in time the Allies will recognize America's relative disinterestedness.

The Japanese have, of course, their side to the question. Without denying altogether the generous and magnanimous motives of American foreign policy, they assert and point to modern instances to confirm their contention that the American Government, like that of other democracies, is subject to pressure of public opinion, capable of being aroused by press propaganda, by incorrect appreciation of the facts, and by interested parties. Washington has been known to act in an extremely high-handed, not to say incorrect, manner under the pressure of electioneering exigency. The fact that America at this moment is the base and arsenal of the Sinn Fein party in Ireland is assuredly not overlooked in Japan. The Japanese claim as much right to a predominant position on the Asiatic shores of the North Pacific as the Americans claim on their side of that ocean. As a military power ruled by aristocracy, there is unquestionably latent distrust of the United States system of government, not unmingled with the feeling that the Japanese should gain something from their patriotic sacrifices, even though American citizens shrink from that view. No doubt the Japanese also greatly underrate both the military power, economic strength and patriotism of the rival nation. Unquestionably, too, the floods of oratory which proclaimed the "passing of the trident" from British to American hands, the organization of an American navy "second to none in the world," have given birth to an idea that, if a war is to be expected, it had better come soon, while America is relatively war weary and Japan fresh, and while American preparations are still inadequate to the task. Doubtless the exposed condition of American possessions within easy reach of Japan is a temptation

to bring about an early settlement of international differences.

Certainly there are moderating and even pacifist influences at work in Japan, and the former include the most capable and influential of her statesmen, but the strength of the

militant party cannot be ignored, and events might play into its hands, as in Europe, 1914, if diplomacy were mishandled, or if unexpected events suddenly roused national jealousies and passion. Forewarned is forearmed in such cases.

## WHAT BROKE RUSSIA TO PIECES

BY JOHN SPARGO

*Evidence showing that all the small States which have split off from Russia did so only because they were forced to it by Bolshevik misrule—Under the original and valid revolution they all expressed a desire for close federal union*

IT is a mistake to suppose, as so many writers upon this phase of the Russian revolution have done, that the propaganda of separatism among the various nationalities of Russia carried on through the Summer of 1917 by the Bolsheviks, and their propaganda of desertion and revolt among the soldiers, had no other motive than bringing the war to an end; that they were extreme pacifists and haters of war to whom any means of compelling Russia to abandon the war and to make peace seemed justifiable.

When it suited their purpose, the Bolsheviks were always ready to denounce as a libel the charge that they wanted anything of the kind. We must therefore regard both forms of propaganda as sabotage, having for its aim the destruction and overthrow of the Provisional Government, and as part of the same comprehensive policy which led the Bolsheviks to propagate sabotage in the factories and upon the railroads at the same time. Their aim was to cripple the

democratic Revolutionary Government at every point, even though they were perfectly well aware that in so doing they were incurring the risk of destroying the machinery, political and economic, upon which they would have to rely when they seized the reins of government, as they all along intended to do.

Kerensky realized this, as he afterward told the present writer, and set himself to the task of defeating the *saboteurs*. The conferences of workers convened to consider the seriousness of the decline in production had this ultimate object in view. At the great national conference held in Moscow in August the position of the various nationalities in Russia and their relation to Great Russia under the new condition brought about by the revolution were also thoroughly discussed. At that important gathering it was made manifest that there was no considerable demand for separation from Russia in any of the border provinces from the Gulf of

Finland to the shores of the Caspian Sea.

The representatives of Esthonia, Latvia, Ukraina, White Russia, Georgia and other Transcaucasian districts testified, with hardly an exception, that what they wanted was not separation from Russia, but a generous autonomy in a federative Russian Republic. The Provisional Government had provided for the spokesmen of the various nationalities a free and open platform for the exposition of their views. In the absence of any evidence of a boycott of the conference by influential political groups, surely the views expressed at the conference must be taken as authentic interpretations of the prevailing opinion. It is well worth while to take note of some of the declarations made at the conference.

Speaking for the Mussulman representatives, Toptchibashev, in an address of great eloquence and power, declared that the Mussulmans would give full and unqualified support to the Provisional Government, "although we are not yet everywhere recognized as full-fledged citizens." Answering the direct questions submitted by Kerensky to the non-Russian nationalities, he said that the Mussulmans were "at one time with revolutionary democracy," and that they stood for the revolutionary program of peace without annexations or contributions, on a basis of self-determination of nationalities, adding: "In the Constituent Assembly the Mussulmans will defend the principle of Federalism for the border lands. For the present the Mussulmans deem it necessary to inaugurate national and cultural home rule."

At the same conference, Tcheidze, the Georgian Socialist, read a declaration of principles pledging loyalty to the Provisional Government and to the Russian revolution. He was supported by Tchkhenskeli, another Georgian representative, who said: "The nations of Transcaucasia have

never made a single move toward secession, nor do they contemplate any in the future." He supported, on behalf of the Georgians, the following program, submitted by Tcheidze:

On the national question, the Provisional Government must issue a declaration recognizing the full right to self-determination for all nationalities, to be confirmed by the people's Constituent Assembly. We must issue a decree granting equal rights to the non-Russian nationalities in the use of their own languages, and extend civil and political rights to schools, to the courts, and so on. We must form a council to deal with national problems, in which the representatives of all the nationalities of Russia will participate.

#### SENTIMENT IN BALTIC STATES

On behalf of the Letts, Zahlit said that the Lettish people were ready to make any necessary sacrifice to maintain liberty, "upholding the Provisional Government in all its democratic undertakings without any superfluous discussion." He further declared: "Not only do the Letts not desire to secede from Russia, but they do not even care to have any border line between the two territories. The Letts strive to unite the territory inhabited by them, which they regard as an autonomous part of the whole." On behalf of the Esthonians, Piip declared that "it has always been the fondest dream of the Esthonians that Esthonia become autonomous, united to all Russia by federation. The fulfillment of this hope is what Esthonians expect from the Constituent Assembly."

The spokesman of the Lithuanians, Yarnushkevitch, endorsed the position taken by the representatives of the Georgians, the Mussulmans, the Letts and the Esthonians. In this he was acting in strict harmony with the well-established policies and programs of the principal Democratic and Socialist Parties of Lithuania, influenced by the strength of the revolutionary movement in Russia in 1905. There was, for example, a great national Lithuanian congress at Vilna, in November, 1905, which was

attended by more than 2,000 delegates. This congress, by an enormous majority, voted for Lithuanian autonomy within a federative Russian union. At about the same time, or shortly thereafter, the Democratic Party of Lithuania adopted a demand, not for separation from Russia, but for "large democratic autonomy" within the Russian Empire. The party, in order the better to renounce any suggestion of separatism, changed its name to the Party of Democratic Lithuanians. In 1905 the Lithuanian Social Democratic Party abandoned its demand for a Lithuanian Constituent Assembly, and adopted in place of it a demand for an all-Russian Constituent Assembly. In 1907 it joined with the Russian Social Democratic Party. A very similar movement took place among the Lettish Democrats and Socialists. The former declared that for them to "separate themselves from Russia would be equivalent to suicide," while the latter denounced separatism as the reactionary tendency of the barons and the clericals. Finally, the Ukrainian Social Democrats specifically repudiated holding separatist aims, contending that culturally and economically the Ukraine was welded to Russia.

Such facts as the foregoing, which are entirely typical of a great mass of easily accessible evidence, afford the best possible answer to the suggestion that the pro-Russian speeches delivered at the Moscow conference of 1917 were part of an "inspired" propaganda. That could not be alleged of the acts of the Lithuanian and Lettish political parties already cited. Nor could it be reasonably alleged of the strong desire for unity with Great Russia expressed at the sessions of the Esthonian Council, which was convened in July, 1917, for the purpose of organizing the local Government of Esthonia upon the basis of full Esthonian autonomy, in accordance with the decision of the Provisional Government. There was an absolute absence of anything like

separatism in that national representative body of Esthonians.

It may then be accepted as an incontestable fact that prior to the Bolshevik counter-revolution, despite the labored efforts of German and Austrian military agents and Bolshevik agitators, there was very little desire for separation from Russia in any of the border provinces. Throughout the period of the régime of the Provisional Government, representatives of all the nationalities were loyally working with the Provisional Government toward the ideal of a federal State.

In September, 1917, a conference of representatives of various nationalities in Russia was held at Kiev. That conference was presided over by Professor Grushevsky, one of the most radical of the Ukrainian Nationalists. It was attended by delegations of Esthonians, Letts, Lithuanians, Jews, Ukrainians, Cossacks, Georgians and Tartars. Its demand as ultimately formulated was:

Russia must become a democratic Federal Republic. There must be formed a council of representatives of nationalities which is to co-operate with the Provisional Government. The Russian delegation to the future Conference of Peace should include representatives of such nationalities whose interests are immediately involved in questions to be decided by the conference. The Russian Army is to be reorganized in the form of national units. National legislatures are to be convoked in order to establish the mutual relations between the members of the Federation and the Federal organs.

#### FEDERATION UNDER SOVIETS

Even after the Bolshevik coup d'état there was for some time no perceptible movement among the border peoples looking to separation from Russia. Two weeks after that event, in its declaration of Nov. 20, 1917, the Ukrainian Rada proclaimed that its purpose was to remain united with Russia. The declaration said:

And we, the Ukrainian Central Rada, by your will, for the sake of creating order in our country, and for the sake of saving the whole of Russia, announce that henceforth

the Ukraine becomes the Ukrainian National Republic. Without separating from the Russian Republic, we take our stand firmly on our lands, that with our strength we may hold the whole of Russia and that the whole Russian Republic may become a federation of free and equal peoples. \* \* \* Having authority and power in our native land, we will defend the rights won by the revolution, not only in our own lands, but in all Russia as well.

These quotations make it clear that the Ukrainians were not contemplating separation and complete independence from Russia when they set up their republic, but national autonomy within a federative Russian Republic. They were, in the first place, emancipating themselves from the rule of the Bolsheviki and establishing a sort of disinfected and quarantined area. In the second place, they were giving form and reality to the old ideal of cultural, political and administrative autonomy, creating a sovereign State to be a member of a Federal Union of States like our own.

Immediately after the elections to the Constituent Assembly were held, at the end of 1917, while the Bolsheviki were in control of the governmental machinery, a commission of elected members was created to formulate the fundamental constitutional laws to be submitted to the Constituent Assembly. Among the most active and influential members of the commission were Mr. Poska, who later became the Estonian Minister for Foreign Affairs, and Professor Avaloff, who was subsequently Minister to France from Georgia. The commission agreed upon the following formula, which was presented to the first and only meeting of the Constituent Assembly, on Jan. 18, 1918: "The Russian State is hereby proclaimed to be a Russian democratic Federal Republic which unites in insoluble union peoples and territories which are to be sovereign within limits established by the Federal Constitution."

The manner in which the so-called Independent State of Transcaucasia

was brought into existence and the attitude of the local population upon the question of separation merit our attention. At the Trebizond Conference, in March, 1918, Turkey—undoubtedly acting as Germany's vassal—demanded recognition of the Brest-Litovsk treaty and the establishment of Transcaucasia as an independent State. The people of Transcaucasia had no choice in the matter at all. There were no Russian bayonets to protect them against Turkey.

Two weeks before the Trebizond Conference the whole matter was thrashed out in the Seim, the Transcaucasian Parliament. Out of 112 delegates in this popular representative body, 106 voted for unity with Russia in a federative republic, and there was only one vote for the complete independence of Transcaucasia. The members of the Seim were divided into representatives of political parties and representatives of the three non-partisan nationalist groups. The representatives of all the political parties and groups voted unanimously for unity with Russia. The representatives of the three nationalist groups—Mussulmans, Armenians and Georgians—with the exception of one member of the Georgian group, voted unanimously for the same resolution. It is quite evident that separation was forced upon Transcaucasia. M. Jordania, one of the Georgian Deputies, explained that although the Georgians would prefer autonomy within a federated Russian republic to complete independence, they would prefer the latter to union with Turkey, either with autonomy or without it. "If we only had a choice left between secession and federation, we would be in favor of federation," he declared. On behalf of the Mussulmans, Khan Khoysky asserted that the question of separation and independence never existed for the people of Transcaucasia until the Bolsheviki, by their destruction of Russian democracy, made isolation inevitable. Another Moslem Deputy, M. Agaiev, declared: "There is no other

way for the restoration of a Russia of free peoples except federation."

The authentic representatives of the Russian nationalities made it perfectly plain that there was no great desire for separation from Russia, either in the years immediately preceding the war, during the war itself, or after the revolution of March, 1917. There was among the Letts, the Estonians, the Lithuanians, the White Russians, the Georgians, the Rumanians, the Cossacks and the Tartars a pronounced desire for autonomy, and that desire was favored by the great majority of Russian Demo-

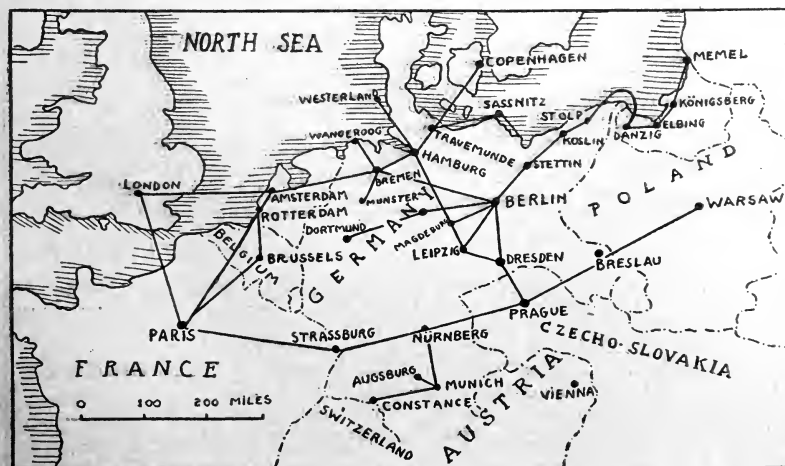

crats and naturally became a fundamental principle of the policy of revolutionary Russia.

The conclusion is unavoidable. No political party or representative body that can be regarded as an authentic exponent of any one of the nationalities occupying the border provinces of Russia ever demanded separation from Russia until the cumulative evils of the Bolshevik régime drove them to it. On the other hand, every such party and representative body, without exception, demanded a great federative all-Russian republic, with complete autonomy for the component parts.

## GERMANY'S STRIDES IN AVIATION

GERMANY, one of the foremost nations of the world today in respect to aerial development, has the honor of being the first to publish an aerial Bradshaw—a substantial pamphlet of nearly a hundred pages—filled with aerial time-tables as definite as those of any railway guide. There are fourteen pages of regular daily departures and arrivals at towns within Germany. It is impressive to see the rows of figures giving the schedules, when one realizes that these are for the trackless deserts of the air. The long-distance services, by arrangement with the various surrounding countries, extend to Amsterdam, Brussels, Paris and London, on the west; to Copenhagen on the north; to Prague and Warsaw, on the east, and to the lost Ger-

man territories of Memel and Danzig on the northeast. Airplanes loaded with German newspapers leave Berlin every morning for these former dominions, which it is Germany's intention to keep constantly in touch with Deutschtum. Hydroplanes serve the same purpose for Schleswig. These planes are waiting at Hamburg for the train deliveries, and immediately after the mail is transferred they leave for the Island of Sylt, off the coast of Schleswig, the residents of which can thus read the opinions of their German compatriots at home on the issues of the day. Among the advertisements in the aerial Bradshaw is one in which the Hamburg-American Line offers to send passengers or goods to any town in Germany.

## DISARMAMENT

—De Notenkraker, Amsterdam

UNCLE SAM: "Do you also find it a bit too heavy? Well, let us see if we can both unload some."

A thrill of hope was felt by a burdened world, when it was announced on July 10 that President Harding had sent out a call to Great Britain, France, Italy and Japan to join a conference on disarmament. The invitation elicited prompt and enthusiastic acceptances from the first three nations named, and a little later Japan also accepted, although with qualifications.

## A RACE FOR HIS LIFE

—New York Evening Mail

Added to the other horrors in Russia under Soviet rule is that of famine, which is afflicting the sorely tried people to an extent unknown in modern times, except perhaps in China. Appalling stories are told of the population in nine or ten provinces leaving their homes in a panic-stricken exodus westward, driven by the terror of starvation and also by the fear of Divine vengeance upon the country for the sins and atheism of the present rulers. The famine has affected upward of 20,000,000 people. What is now happening in Central Russia is said to be a repetition on a gigantic scale of the flight of the French peasant population before the German invaders. The roads leading westward are crowded with miserable fugitives, whose wagons are piled high with household goods, children and the aged, drawn by skeleton horses and oxen with bones showing through their skins. Beneath a sky of steel gray the fields are parched and the wheat withered on its stalk. Since March no rain has fallen.

Maxim Gorky, the eminent Russian writer, has appealed for help to Secretary Hoover, United States Secretary of Commerce, who has promised aid from charitable organizations, but has made a condition that all American prisoners in Russia be first released. Offers of help are also pouring in from other sources.

# THE COMMUNIST INTERNATIONAL: HOW IT STANDS

*Refusal of the third Moscow conference to modify the "twenty-one articles" has emphasized the split in the labor movement of the world—Lenin stands with the extremists in demanding uncompromising tactics outside of Russia—Itemized survey of the present status of communism in all countries*

**D**ISHARMONY among the Socialist and Communist forces of the world for an indefinite period was assured when the third congress of the Third (Communist) International, held in Moscow, from June 23 to July 12, 1921, voted to stand by the famous Twenty-one Articles of Faith adopted by the second congress, held in the Russian capital a year ago. There was a four-day debate over the mooted points, and Nikolai Lenin, the Bolshevik Premier of Russia, was obliged to come to the aid of Leon Trotzky, G. Zinoviev and Karl Radek when they found themselves hard pressed by delegates supporting modification of the Communist program in the interest of international unity.

The Twenty-one Points, which were printed in full in the January number of *CURRENT HISTORY*, insist, among other things, upon the carrying on of illegal, as well as legal, propaganda for the overthrow of so-called capitalist Governments, the adoption of the name "Communist," and the expulsion of such "notorious opportunists" as Morris Hillquit, Karl Kautsky, Jean Longuet, Felipe Turati and Ramsay MacDonald from their respective Socialist Parties in the United States, Germany, France, Italy and England. The result of the promulgation of this program last year was the division of the Socialist armies in nearly every country where such organizations existed. France was the only large country where the partisans of the Moscow program succeeded in getting possession of the main party machinery and appeared to be in a majority.

The bitterness evoked by the internal party fights over the Communist program had reacted to the disadvantage of the pres-

tige abroad of the Soviet Government of Russia, as its influence was held responsible for the adoption of such an extreme platform, and many moderate Socialists who had been enthusiastic in their defense of the Soviet régime became rather lukewarm when they saw that the Russian leaders of the Third International were not at all inclined to practice the toleration they demanded for themselves. Consequently, there was a good-sized minority among the 500 delegates to the third congress favoring the abatement of some of the more offensive points, in the hope of bringing into line the sympathizers with the general Communist program who could not swallow the Twenty-one Articles of Faith. But the Bolshevik steam roller was too powerful, and the minority was flattened out.

In explaining the apparent inconsistency of the Russian Communists, who were insisting upon absolutely uncompromising tactics by the other Communist and Socialist Parties of the world, while at home they, under the guidance of Lenin, were making all kinds of modifications of their program in order to remain in power, Trotzky, as quoted in the cable reports, remarked that it was permissible to make reforms in a country where the proletariat was already in power, but that it could not be allowed in countries where the Communists were still struggling for control. Lenin's support of the extreme program for foreign consumption was said to have been won by a promise on the part of Zinoviev, Trotzky, Radek, Bukharin et al. not to oppose his internal program of conciliation and concessions.

In addressing the Congress upon this matter of concessions Lenin said Soviet Russia was using the breathing spell ob-

tained by negotiations with foreign nations for the purpose of rebuilding her own industries, and that in the meantime the Communists must use this same breathing spell to prepare a revolution against all capitalistic countries. He added that he could not promise anybody any liberty or any democracy, because all the reactionaries were using those slogans. Lenin also declared war must be continued upon the Mensheviks and the Social Revolutionaries. His speech was loudly applauded, and a resolution was passed approving his position.

President Zinoviev's victory was made complete by being authorized by the Congress to inform the Italian Socialist Party that it could not be readmitted to the Third International until it expelled Signor Serrati and his comrades. The delegates of the Communist Labor Party of Germany heard their party condemned to unite at once with the regular United Communist Party of Germany and to drop its open warfare against all parliamentary activities. A program of world-wide propaganda, worked out by Karl Radek, was adopted by the Congress and made binding upon all affiliated parties, despite the objections of some delegates who, while agreeing with its general principles, thought these could not be applied to their own countries. Zinoviev was unanimously re-elected President of the Executive Committee.

Among the Americans present were William D. Haywood, the I. W. W. leader who left this country last Spring with a twenty-year sentence for violation of the Espionage act hanging over his head; Ella Reaves Bloor, a veteran Socialist agitator and Left Wing leader, and Jack Crosby, a marine worker and a member of the Executive Committee of the Third International. Haywood was made the object of a demonstration by the delegates. He was in Moscow to attend the first convention of the International Council of Trade Unions (the economic annex of the Third International), which began on July 3 with 200 delegates and lasted a fortnight. A congress of Communist Young People's Societies, with 150 delegates, was also held in Moscow in July. The Communist Women's International closed a five-day congress on June 18 by electing Clara Zetkin, the veteran German Communist member of the Reichstag, as

President of the organization. The eighty-seven women delegates were said to have come from twenty-eight countries.

The extent to which the radical labor forces of the world have been divided by the World War and by the agitation of the Russian Communists is shown by the fact that there are now three so-called international political labor organizations, viz., the Third International, the Second International (the remnant of the pre-war Socialist International) and the International Working Group of Socialist Parties (the so-called Two-and-a-half International organized in Vienna last February); there are two contending revolutionary trade union internationals, viz., the Moscow body, with possibly 10,000,000 adherents, and the International Federation of Trade Unions, with headquarters in Amsterdam and an affiliated membership of about 27,000,000; and there are two Young People's Internationals, viz., the Communist organization and the Young Workers' International, organized in Amsterdam last May. Then there are many powerful labor bodies—such as the American Federation of Labor—which are not affiliated with any of the international groups.

The status of the political and economic labor organizations in most of the principal countries in relation to their international affiliations may be summed up as follows:

UNITED STATES—Both the Socialist Party of America and the American Federation of Labor, at their June conventions, rejected affiliation with any of the existing Internationals. The two underground Communist groups, obeying an order from the Executive Committee of the Third International, have united in the Communist Party of America, which, of course, accepts the twenty-one articles. At a meeting held in Toledo in June another Communist Party, composed of elements favoring open political agitation and rejecting the illegal part of the Moscow program, was organized. In July an organization called the American Labor Alliance was started in Brooklyn, presumably to act for the Communists in carrying on open propaganda. The small Socialist Labor Party holds aloof from all Internationals. The Industrial Workers of the World are in the Moscow Trade Union International.

MEXICO—While there is a great deal of

radical labor agitation in Mexico, with many of the members of the Chamber of Deputies calling themselves Socialists, the movement is greatly confused and the line of demarkation between legal and illegal agitators is hard to find. The regular Mexican Federation of Labor, headed by Luis Morones, is lined up with the American Federation of Labor in the Pan-American Federation of Labor, while a small group of extremists belongs to the I. W. W. There is a Labor Party, which generally supports President Obregon; a Socialist Party, headed by Salvador Alvarado, ex-Governor of Yucatan, and a Communist Party, but the international stand of none of these is clearly defined, although the Communists are vociferous in their applause of Moscow tactics and there has been considerable talk about Bolshevik money being spent in Mexico. On July 22 it was reported that the State of Yucatan had been selected by the Communist International as headquarters for propaganda in Latin America.

ARGENTINA—The Socialist Party has left the Second International and refused to affiliate with the Third, while the Communist Party accepts the Moscow program. The larger of the two wings of the labor union movement is affiliated with Amsterdam and the other is made up mostly of semi-anarchistic elements.

CHILE—The Socialist Party has decided to affiliate with Moscow. It won its first seat in the Chamber of Deputies in the March elections.

URUGUAY—The Socialist Party is affiliated with Moscow.

GREAT BRITAIN—The British Labor Party remains affiliated with the Second International, while its radical advance guard, the Independent Labor Party, has rejected both the Second and the Third and decided to adhere to the Vienna International. A tiny faction of the I. L. P. has split off and joined the British Communist Party, which accepts the Moscow program. When a motion to allow the Communist Party to affiliate with the Labor Party was made at the Labor Party's June convention, it was defeated by a vote of 4,115,000 to 224,000. The Scottish Trades Union congress held last April voted by a narrow margin for affiliation with the Moscow organization, but the British trade union or-

ganization, as a whole, has never seriously considered leaving the Amsterdam group.

CANADA—The main trade union body is affiliated with the Amsterdam International. The political groups are independent.

SOUTH AFRICA—The extreme elements of the political labor movement in the Union of South Africa have united in a Communist Party, which accepts the Twenty-one Points, while the moderate elements remain in the Labor Party. The Cape Federation of Labor Unions supports the Moscow program.

AUSTRALIA—There is a tiny group called the Communist Party, but the bulk of the workers are sticking to the Labor Party and the regular trade unions, although Moscow claims thousands of followers among the rank and file.

RUSSIA—The Communist Party (Bolshevik) forms the backbone of the Third International, while the Social Revolutionary Party and the Social Democratic Labor Party (Menshevik) belong to the Vienna International. The Russian trade unions, with some 6,000,000 members, head the International Council of Trade Unions. Similar party lines are drawn in the various Soviet republics under the rule of Moscow, such as the Ukraine, Azerbaijan, Georgia and Armenia.

FINLAND—Neither the Finnish Socialist Party, with 80 of the 200 Deputies in the Chamber, nor the Trade Union Federation is affiliated with any of the international organizations, but there is an illegal Communist Party adhering to Moscow.

LATVIA—The Latvian Social Democratic Party supports the Vienna International, while the Communist Party, which is being attacked by the Government, takes its orders from Moscow.

LITHUANIA—The Socialist Party is affiliated with Vienna.

POLAND—The Polish Socialist Party, embracing in its membership Joseph Pilsudski, President of the republic, is reported to have decided to leave the Second International and to apply for admission to the Vienna group. It has become so nationalistic as to lose many of its prominent officials to the Polish Communist Party, which adheres to Moscow. The bulk of the Polish trade unions support Amsterdam,

but there is a strong minority favoring Moscow.

**SCANDINAVIA**—When the March convention of the Left Wing Swedish Socialist Party voted, 173 to 34, to accept the Moscow program and change its name to Communist Party, the dissenters left the meeting and organized the Independent Swedish Socialist Party, to be affiliated with the Vienna organization. The regular Swedish Socialist Party, headed by Hjalmar Branting and constituting a power in the political life of the country, remains in the Second International. The Left Wing secessionists from the Swedish trade union movement have voted to join the International Council of Trade Unions. In Norway the majority of the old Labor Party has accepted the Moscow program, with the exception of the paragraph calling for a change of name, and has declared itself a section of the Third International. The minority group has organized itself into the Social Democratic Party, which embraces most of the Labor members of Parliament. The Danish Socialist Party, which has almost attained control of the Government, stays in the Second International, while a tiny Communist group and the diminutive Left Wing of the trade unions have decided to join the Third.

**GERMANY**—The Social Democratic Party (generally called the Majority Socialists), with 108 Deputies in the Reichstag and several members in the Cabinet, belongs to the Second International. The Independent Social Democratic Party, with 61 Deputies, adheres to the Vienna International, and the United Communist Party, which, following the split in the Independent Party last October had 24 Deputies, but which lost several of them as a result of the abortive revolt promoted by it last March, is affiliated with Moscow. The Communist Labor Party, a small group of anti-parliamentary extremists which was admitted to the Third International as a "sympathizing" member last Winter over the protest of the United Communist Party, has withdrawn from the Moscow body as the result of the decision by the third congress calling for its union with the United Communists. In announcing its defiance of the Moscow edict the Communist Labor Party denounced the Third International as a "reformist body."

The General German Federation of Labor, with about 8,500,000 members, belongs to the Amsterdam International, while some comparatively small labor groups are lined up with Moscow, the Christian Labor Union International and the International Syndicalists.

**SPAIN**—Following its decision at its April convention, by a vote of 8,808 to 6,025, not to accept the Moscow program, the Spanish Socialist Party, with its six Deputies, has been unaffiliated with any of the Internationals. Many of the supporters of Moscow have joined in the Communist Party of Spain. The General Union of Workingmen is affiliated with Amsterdam, while the other labor bodies are more or less anarchistic, and the Syndicate of Metal Workers voted to adhere to Moscow.

**BELGIUM**—The powerful Belgian Labor Party, with 620,000 members, many Deputies in the Chamber and four members in the Cabinet, belongs to the Second International. A tiny group of Communists, headed by M. Jacquemotte, seceded from the party in May and decided to organize a Communist Party in competition with a small party of that name founded last year and recognized by Moscow. The Belgian labor unions are affiliated with Amsterdam—excepting the Christian groups.

**HOLLAND**—The Dutch Social Democratic Labor Party decided at its 1921 convention by an overwhelming vote to remain in the Second International. The Communist Party, whose strength is insignificant, is affiliated with Moscow. The Dutch labor unions are divided among Socialist, independent and Christian organizations, with the first-named affiliated with Amsterdam and the last named with the Christian Labor Union International.

**LUXEMBURG**—This tiny Grand Duchy also enjoys the luxury of a divided labor movement, having a regular Social Democratic Party and a Communist Party, the latter supporting the Moscow program.

**PALESTINE**—Even in the Holy Land have the seeds of Communist division borne fruit, for there is a Communist Party of Palestine formed of extremist elements of Paale Zion, the old Jewish Socialist organization which is not "revolutionary" enough for the Moscow group, but supports the Vienna International.

# RUSSIA SCOURGED BY FAMINE

*Tragic situation caused by famine in the Volga Basin and by the Bolshevik economic policy, which had prevented the accumulation of surplus foodstuffs—Epidemic of cholera and vast exodus of stricken people—Maxim Gorky's appeal, and Mr. Hoover's prompt and practical response*

[PERIOD ENDED AUG. 10, 1921]

**T**HE people of Russia, whose fate has been more tragic than that of any other European people, now face famine in its most cruel form. Not until toward the end of June did the world learn of this new affliction of a nation which has already suffered much. The Bolshevik official organ, Pravda, stated in its issue of June 26 that "as a result of the drought and the crop failure, famine is raging among a population numbering about 25,000,000." The famine territory embraces the Provinces of Ufa, Tzaritzin, Saratov, Samara, Simbirsk, Viatka, Perm, Kazan and the Northern Caucasus—in other words, the formerly rich and fertile land of the Volga Basin. The dispatches indicate that the catastrophe is much greater in view of the fact that a considerable area of agricultural land in Russia has not been sown at all, owing either to the lack of seed or to the peasants' resentment of the Government's requisition policy. Where there is any surplus of foodstuffs the ruin of the transportation service makes its distribution impossible.

This news, bad enough in itself, was given to the world with a sensational accompaniment of wild inventions and fantastic legends which turned the disaster into a chapter of the Apocalypse. The peasants, starving, desperate and furious, were reported to be leaving their famine-stricken villages by the thousands, and to be marching on Moscow, which was digging trenches and throwing up fortifications to repel the anticipated onslaught. The peasants were said to be looting, rioting and burning as they went. Other stories told of a mysterious Czar of India who had arisen, and who would feed the famished multitude if it could get to him, and of how a vast exodus had started toward the East, the like of which had never been seen since the days of the great migrations. All these tales, if weighed in the balance of the Soviet Gov-

ernment's subsequent official statement, were pure inventions. The facts as given in this statement were as follows:

The commission of the Central Executive Committee for Aid of the Hungry has recognized a state of famine in ten provinces, including Astrakhan, Tzaritzin, Saratov, the German (Volga) Commune, Samara, Simbirsk, the Tartar and Tchuvask territories, as well as districts of Ufa, Viatka and other places in that region. In these provinces on account of the prolonged drought the harvest has been completely destroyed and will give only 10 or 15 per cent. of normal. In some districts of these provinces the bad harvest affects only some cereals.

The population of the ten provinces is about 18,000,000 people. Feeding the rural population according to the lowest standard—that is, half the ordinary consumption, and not including animals—calls for 41,000,000 poods of wheat. (A pood is equal to about thirty-six pounds.) For the city population the need is 17,000,000 poods. To sow fields in localities where the crop is absolutely lost there is needed before the 15th of September 15,000,000 poods of wheat.

In view of the absence of exact information as to the extent of the harvest of other districts of Russia it is as yet impossible to estimate the quantity of wheat which can be furnished by Russia herself. In the stricken provinces there are no reserves of wheat and the gifts of other provinces can be only limited.

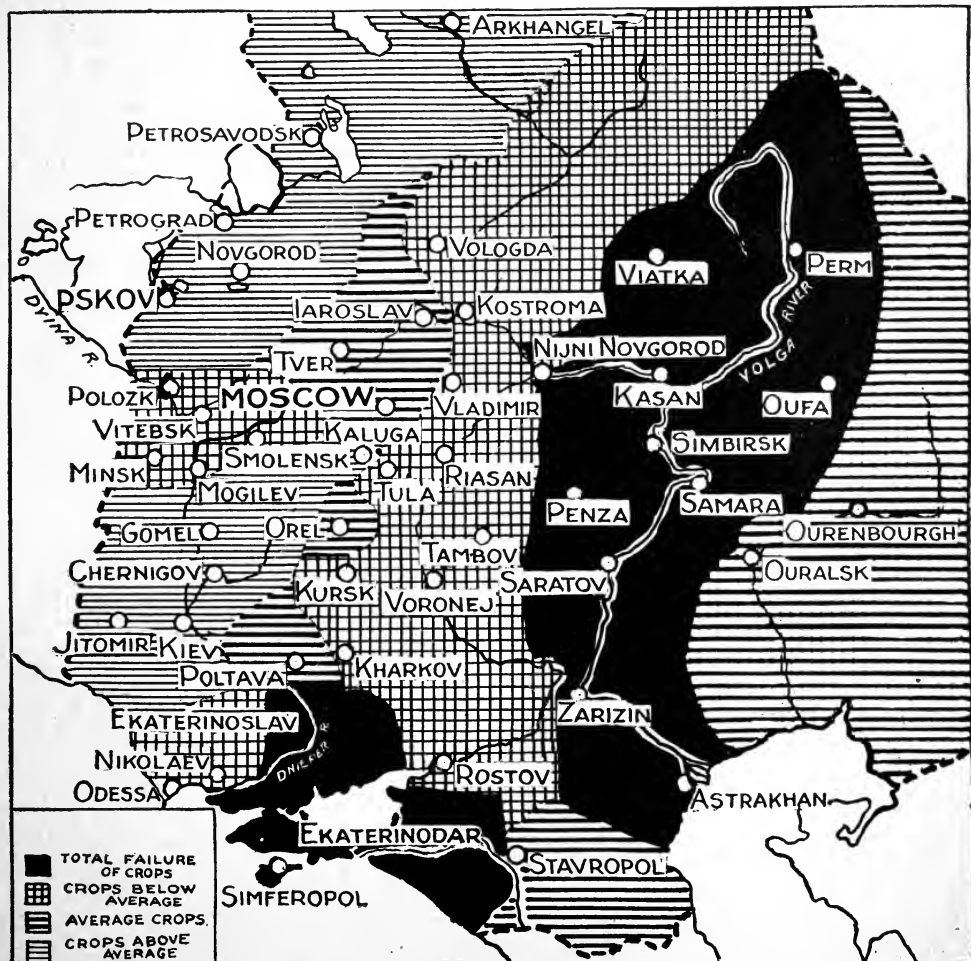

The misery is great in these districts, but nowhere are there the excesses and violences of which the West European and American press spread false news. In certain localities where complete absence of food places the population in a hopeless position great numbers of the population are seeking to migrate, with the help of the Soviet authorities, into more favored districts of the republic; but this migration of hungry peoples has taken no form menacing social security or public order.

The disaster is intensified by the appearance of cholera, with all the horrors which cholera has always brought to Russia in its visitations. The fact that there had already occurred nearly 50,000 cases of this dread epidemic between January and July, of which 24,000 appeared in June and 7,000

cases were concentrated in the province of Saratov (Southeastern Russia), came as a surprise to many abroad, though the anti-Bolshevist foreign press had printed from time to time reports of the outbreak of cholera and other epidemics. The marching multitudes who left their homes by thousands on the eastern trek to the Caucasus and the Khirgiz steppes spread the disease over many districts. The calm and matter of fact statement of Tchitcherin and Rykov concerning the migration of these famishing, epidemic-ridden multitudes contained no word to describe the long processions of people moving along the eastern roads, carrying what few effects they could transport, dropping with weakness due to long hunger, or falling smitten with lightning cholera, which disposes of its victim within

a few hours. Only those who have lived through a cholera epidemic in Russia can realize the full extent of the tragedy; only such can know the meaning of towns that have not been cleaned out for years, market places piled high with rotting refuse, peasants so ignorant and superstitious that they refuse to submit themselves or their children to vaccination, attack the doctors who seek to give them medicine, hide their sick and bury them secretly, and indulge in superstitious rites by incantation and otherwise to ward off the disease. As it has been in the past, so it is in the present; the medical forces of the Soviet Republic have had and are having the same heart-breaking struggle with the medieval, panicstricken multitude.

The Soviet leaders, faced with the inroads

MAP OF THE RUSSIAN FAMINE REGION, WITH DETAILS OF LOCAL CONDITIONS IN EACH DISTRICT, BASED ON AN OFFICIAL REPORT

of these two grim horsemen—Famine and Pestilence—have been bending every energy to combat them. Besides the Executive Committee of the Soviets, which at once gave up all its normal work to aid in fighting the twin scourges, a special Famine Relief Committee, made up of sixty-three members, was formed from all parties, the communists even being in the minority. Noted Mensheviks and Social Revolutionaries rallied to work shoulder to shoulder with the men whom they believed responsible for all the woes of Russia. The Soviet statement above referred to admitted unreservedly that all classes, even those who belonged to the hated bourgeoisie and aristocrats under the Czar, were making every sacrifice, straining every effort to save the country. The very exiles in Paris and other capitals, inveterate enemies of the Bolshevik leaders, sent out appeals to the whole world to save their torn and struggling country.

Only two appeals were sent to the outside world from Russia. One of these was made by the Archbishop Tikhon, head of the Orthodox Greek Church in Russia. In a short but eloquent telegram on July 11 to the Archbishop of Canterbury and York the Patriarch said:

Fearful famine in Russia. Greatest part must die of hunger. In those regions which ordinarily produce most foodstuffs all grain now annihilated by drought. Epidemics following in wake of famine. Immediate help large scale imperative. Populace deserting fields and houses, and running eastward, crying, "Bread!" Send immediately foods and medicines. May God help us!

Another voice was raised—that of the great Russian author, Pieshkov (Maxim Gorky)—which may be said to have reverberated throughout the world. In the name of the great Russian authors of other days, Gorky on July 13 sent an appeal to Gerhard Hauptmann, Anatole France and Blasco Ibáñez on behalf of the millions of Russians threatened with destruction. In words corroded with bitterness Gorky asked the world to prove that it still cherished ideals of humanitarianism, faith in which had been so shaken by the "damnable war and its victors' unmercifulness toward the vanquished." Gorky's appeal, psychologically interesting, read as follows:

Moscow, July 13.

To All Honest People:

The corn-growing steppes are smitten by

crop failure, caused by the drought. The calamity threatens starvation to millions of Russian people. Think of the Russian people's exhaustion by the war and revolution, which considerably reduced its resistance to disease and its physical endurance. Gloomy days have come to the country of Tolstoy, Dostoyevsky, Menelleyev, Pavlov, Mussergsky, Glinka and other world-prized men, and I venture to trust that the cultured European and American people, understanding the tragedy of the Russian people, will immediately succor with bread and medicines.

If humanitarian ideas and feelings—faith in whose social import was so shaken by the damnable war and its victors' unmercifulness toward the vanquished—if faith in the creative force of these ideas and feelings, I say, must and can be restored, Russia's misfortune offers humanitarians a splendid opportunity to demonstrate the vitality of humanitarianism. I think particularly warm sympathy in succoring the Russian people must be shown by those who, during the ignominious war, so passionately preached fratricidal hatred, thereby withering the educational efficacy of ideas evolved by mankind in the most arduous labors and so lightly killed by stupidity and cupidity. People who understand the words of agonizing pain will forgive the involuntary bitterness of my words.

I ask all honest European and American people for prompt aid to the Russian people. Give bread and medicine.

MAXIM GORKY.

Another appeal sent directly to Herbert Hoover, United States Secretary of Commerce and head of the Relief Administration, received an immediate, sympathetic, yet businesslike reply. Mr. Hoover's vast organization, which is still tremendously active in feeding the starving children and peoples of the countries devastated by the war, was ready to help Russia. But first of all the Soviet Government must free all Americans confined in Soviet prisons: this preliminary was essential. Secondly, Mr. Hoover laid down certain conditions to insure the freedom and independence of the Relief Administration, once it entered Russia. The Soviet Government must give a direct official statement to the Relief Administration representative in Riga that help was needed and desired; that the representatives of the organization should then be given full liberty to come and go and move freely about Russia; that they should be allowed to organize local committees without Soviet interference; that they should be afforded free transportation for supplies; that they should receive free

housing, fuel and equipment; that the Government rations must be continued to the sick despite the importation of food by the committee; that the members of the committee should have in all directions full liberty, without Soviet interference of any kind. The committee, on its part, promised to distribute aid to all sects and classes impartially, and to refrain scrupulously from every kind of anti-Soviet propaganda. Walter Lyman Brown, European director of the American Relief Administration, then in London, was to be sent to arrange these matters with the Soviet authorities.

On receipt of this offer Gorky at once sent a grateful acknowledgment, stating, however, that the Soviet Government itself must give the final decision on the terms laid down. Subsequently Gorky forwarded a note signed by Kamenev, as Chairman of the All-Russian Central Executive Committee for Helping the Famine Stricken Populations, in which he stated that the Soviet Government found the proposals acceptable as a preliminary basis, and urged that Director Brown be sent at once to Riga with full powers to fix the precise conditions "on which this association will begin immediate realization of its humane intention to guarantee the feeding, medical treatment and clothing of a million children and invalids." On receipt of this reply, Mr. Hoover at once notified Mr. Brown to proceed from London to Riga, and to take all necessary steps, instructing him, however, to see that all American prisoners "are out of Russia before negotiations for relief are begun with the Soviet authorities." Word came from Riga, shortly before these pages went to press, that the Moscow Government had freed all American citizens held in its prisons, and that the negotiations were proceeding. Mr. Hoover made it plain in all his statements that he was acting in close touch with Secretary of State Hughes.

The Third Congress of the International adjourned on July 20, after re-electing M. Zinoviev

Chairman of the Executive Committee. The Soviet newspapers, in summing up the work of this Congress, contrasted the tone of these later sessions with that of the First and Second Congresses, where the hopes of the Russian leaders for world revolution ran high. The speeches and resolutions of the Third Congress showed a decided movement away from extreme radicalism, admitted that the world revolution was progressing but slowly, and advocated that the Communist Party should "go slow." The utterances of Lenin, Trotzky and other Bolshevik leaders, however, showed plainly that their revolutionary purpose had by no means been abandoned. The Executive Committee of the International on Aug. 2 sent to The Daily Herald of London a long and fiery appeal to all the workers of the world to come to Russia's aid, declaring that the Entente capitalistic countries were all in league to utilize Russia's new calamities for the purpose of reorganizing the counter-revolution on Russian soil, and that the proletariat would take

THE SHADED AREA INDICATES THE CHIEF FAMINE REGION AND ITS LOCATION WITH REGARD TO THE REST OF RUSSIA

measures to make all such efforts abortive. Special appeals to the German Government were not enthusiastically received by the German leaders, but later reports indicated that something would be done, despite Germany's own difficulties. Foodstuffs already being sent by Germany or other countries in the way of trade via Petrograd were to be used wholly for the hungry populations of the former capital and Moscow. In marked contrast with Soviet Russia, the new republic of the Far East at Chita, Siberia, was reported to be living in

plenty. The Siberian situation had undergone no definite change. The new provisional Anti-Bolshevist Government which took over Vladivostok a few weeks ago was still in power, enjoying, it was said, the tacit support of the Japanese. Word came on Aug. 6 that the new Government had annulled the concessions granted by Soviet Russia to the American financier, W. B. Vanderlip, declaring that Kamchatka was a part of the maritime province of which Vladivostok was the capital, and that Moscow had no right to dispose of it.

## NO MENACE IN THE ANGLO-JAPANESE ALLIANCE

To the Editor of Current History:

I am a firm believer in viewing international affairs with clear eyes and alert mind; there is no benefit to any nation in ignoring actual facts, however unpalatable; but I am an equally firm believer that every statement with regard to international questions should be made with meticulous precision. Therefore, I am writing to protest against the basic premise of Mr. Koehn's article on the Anglo-Japanese Alliance in your issue for August.

The second article of that alliance, as it now stands by the adjustment of 1911, says: "If, by reason of *unprovoked attack or aggressive action* on the part of any power or powers, either high contracting party is involved in war, \* \* \* the other high contracting party shall at once come to the assistance of its ally," &c. Under the term, "unprovoked attack or aggression," Japan was bound to aid Great Britain in 1914, when Germany, by invading Belgium, indirectly attacked her guarantor. Under these same terms, Great Britain would have to join Japan in a war

against the United States only if we were the aggressors, and only then if there were no adequate provocation. I am aware that the question here would be the construction placed by Great Britain upon the Japanese action which seemed to us sufficient cause for war; but, on the other hand, we should not involve ourselves in a war with Japan unless the necessity were beyond all cavil.

I am not a champion of the Anglo-Japanese Alliance; its usefulness may be outworn, and it may be neither wise nor politic to continue it under present world conditions. I am not an expert on problems of power in the Pacific; but I am one of the many among the reading public who are weary of even the less sensational sorts of loose thinking and loose writing on international topics, feeling that, in the present oversensitive state of mind of all peoples, there is no field of publicity which should be kept so scrupulously free from all suggestion of exaggeration or misrepresentation.

MARY K. ALLEN.

# JAPAN'S FEAR OF THE ARMS CONFERENCE

*National danger seen by many Japanese in the coming discussions at Washington—Opinion in Japan divided between suspicion of the Western powers and desire to curtail the ruinous armament expense—What Japan most desires*

[PERIOD ENDED AUG. 10, 1921]

JAPAN has accepted President Harding's invitation to participate in the Washington conference for reduction of naval armament and the clearing up of troublesome problems in the Pacific, but it is an acceptance with reservations. It is tied down to the condition that the subjects to be discussed shall be previously sifted and agreed upon, and that subjects already settled, or which concern solely a given nation, should be excluded from the deliberations.

Meanwhile both the Government and the press of Japan seem to be in a kind of panic over the coming conference. The conservative elements profess to see a national danger in it, due to an apprehended domination of the Anglo-Saxon races, aimed at checking Japan's political and economic advance in Asia, and particularly in Siberia. The liberal elements, on the other hand, declare that Japan should enter the conference fearlessly, and should frankly state exactly what it is that Japan is working for and needs in the Far East, and then fight to obtain approval for her legitimate intentions, though opposing no just claims set forth by the Western powers. All factions seem agreed that Japan is facing a crisis, to handle which successfully will require statesmanship of a high order. Members of the Privy Council show distrust of a possible Anglo-American coalition. A basis for such a view is found in the fact that the Anglo-Japanese Treaty was not promptly renewed by the Imperial Conference in London, largely owing to Dominion opposition to the clauses which seemed to be directed against the United States. This distrust is sharpened by the ominous fact that China has been invited to participate in the Washington conference. The Japanese Government naturally scents some danger to its policies on the mainland of Asia.

The Nichi Nichi stated late in July that the Government was earnestly seeking a settlement of the Shantung controversy with China, and that the problem of evacuation of Siberia had already been attacked. M. Matsushima, Attaché of the Foreign Office, had left for Chita, the capital of the Far Eastern republic, on July 15, to begin negotiations to this end. In view of China's firm and continued refusal to negotiate with Japan over the Shantung issue, it is difficult to see what can be accomplished along this line. Not long ago Dr. Wellington Koo, China's representative on the Council of the League of Nations, cabled back to Peking asking what the Government's desire was as regards Shantung. The answer was that it was still intended to appeal the whole case to the League of Nations next year. Japan has repeatedly expressed her willingness to give back Shantung to Chinese sovereignty, on the condition, however, that she be allowed to retain all the economic advantages and concessions which she took over from Germany. This China refuses to accept, holding that she never accepted the Japanese settlement incorporated in the peace treaty. As for Siberia, it has been the Japanese contention throughout that they cannot evacuate their forces so long as the unsettled conditions endanger the lives of Japan's nationals in the Maritime Province. Japan still holds Saghalien.

As for Japan's naval program, the Nichi Nichi declares that the nation's whole armament problem is merely relative to that of the United States, and that if the latter country consents to curtail its program Japan will follow suit. If, however, the United States continues building, Japan cannot allow herself to be so far outstripped. Prominent Japanese point out that the United States is increasing its fleet units in

the Pacific, and that it has constructed fortifications at Hawaii, the Philippines and Guam.

Sir Charles Eliot, the British Ambassador to Tokio, had a conference with Foreign Minister Uchida on Aug. 5 over the preliminary negotiations for the conference. At this time the trend of Japanese public opinion was already veering in favor of the conference, which, it was pointed out by various publicists, might prove an epoch-making short cut to peace and understanding in the Pacific, and enable Japan to divert the vast sums now being expended on naval armament to commercial development in Asia. A forecast of the Japanese view as to the line the discussion would take was made by the Osaka Mainichi Shimbun. The Japanese are ready, it said, to dismantle their fortification in the Pacific if the United States does the same; but they are resolved to press on for the right of Japanese nationals to migrate, with the guarantee of the freedom of labor and protection. Australia and New Zealand are hostile to both these aspirations.

When the Japanese exclusion question came up in the United States Congress on July 22 it was decided to discuss the "gentleman's agreement" concluded with Japan in 1908, in view of official information that Japan was not observing this agreement, in so far as Hawaii was concerned. Hawaii, it was declared, was being flooded by Japanese immigrants.

Eminent Japanese continue their efforts to gain for their country what they term a better understanding. The views of Count Soyeshima, as expressed in the Diplomatic Review, were summarized by the Japan Chronicle on June 2. He complains that four anti-Japanese Korean associations in the United States, all of which he names, are being backed by influential Americans, by Senators, university doctors, &c.; that American propaganda on the Shantung dispute is extremely active in favor of China, and that American public feeling is hostile to Japan both in regard to the Japanese occupation of Siberia and the "temporary" occupation of Saghalien. The issue created by California's legislation had sharpened Japanese resentment. These grievances, however, could have been settled diplomatically, he adds, had the Japanese Gov-

ernment not shown great lack of diplomatic efficiency.

Mr. G. Katsuda, a member of the Japanese House of Peers and Chairman of the Assembly of Kobe, while passing through New York on a tour of the world, published on July 24 a review of the prevailing situation from the viewpoint of the Japanese business man. Mr. Katsuda repudiated energetically the belief that Japan cherished imperialistic designs of conquest on the Asiatic continent, and declared that, on the contrary, Japan had conceived deep distrust of the imperialistic designs of the western nations which were exploiting a large part of Asia, including China, and that her whole desire had been to gain protection; thus he explained the fortifying of Japan's position in Pacific waters, undertaken "in order to escape the unfortunate fate of her neighbors in Asia." Mr. Katsuda admitted that Japan's methods in China had often been "crude and harsh during the last few years, though probably less so than those of England in Persia or France in some of her black colonies, where enforced military service has been required of subject peoples"; but Japan's methods, he asserted, were now becoming much more liberal, in knowledge of the fact that "no nation can afford to defy the public opinion of the world."

Our real field of interest [he continued] is the economic one. We wish to have free access to the resources of China, Manchuria and Eastern Siberia, and also free and uninterrupted channels of trade constantly in operation between these countries and ours. \* \* \* The terrific density of our population compels us to choose one at least of two alternatives—territorial expansion or industrial development. \* \* \* To expand territorially is against the most enlightened public opinion of the world today. On the other hand, if we are to develop ourselves industrially only, we must be supplied with raw materials and must not be constantly subject to interferences on the part of other nations in securing them.

Mr. Katsuda then pointed out the extreme demoralization prevailing in China, with a Government corrupt and incapable, pitifully impotent before the triumphant power of the Tuchuns, and declared that as long as this chaos continued Japan had the right to secure and hold "a partial control of a few positions on the Continent to insure an unrestricted flow of commerce."

The Japanese Government, while anxious-

ly looking abroad for a strengthening of the national position, had to cope also with unfavorable economic conditions at home. Unrest and strikes were increasing in the shipyards, steel works and engineering plants, and the strikers were demanding higher wages and the recognition of their unions. Some 25,000 workers were on strike at the end of July. The ship strikers at Kobe, according to Tokio dispatches of Aug. 1,

had won consent to the establishment of workmen's committees, an eight-hour working day and workmen's pensions. Other shipyard concerns were expected to follow suit. The old war between labor and capital, which for so long has been fought in the West, is only beginning in Japan, but it is already formidable, and there are signs that the Government is not at all certain of the best way to cope with it.

## CHINA—THE SICK MAN OF THE FAR EAST

*The situation one of political and financial chaos, which the Canton republic would cure by overthrowing the Peking Government—China prepares to plead her case before the Washington conference*

THE Republic of China, aged 10 years, is very sick and with a malady so complex that the most skilled foreign specialists are beginning to despair of ever curing it. One specialist declares that the main seat of the republic's troubles lies in extraterritoriality and in general foreign interference. Another places it in the military despotism of the Tuchuns, or Military Governors, which leaves the Peking Government only a shadow of authority. Still another blames the Canton rebels for the whole muddle. Mr. Lennox Simpson, adviser to the Chinese Government, who has been sent to London to tilt against the renewal of the Anglo-Japanese alliance, puts much of the blame on the existence of this alliance, under cover of which Japan has got her economic and political stranglehold on China. This, with the incredible fact that China has no customs revenue, all but a small percentage of which is held by foreign powers in mortmain, to his mind, explains most of the chaos prevailing in China today.

China is virtually a bankrupt nation, its Treasury looted by the Tuchuns to pay their private mercenary armies, its domestic loans dishonored, its Government officials, especially its teachers in school and college, unpaid. The foreign consortium to help China financially is encountering a

strong current of Chinese opposition; Chinese bankers—the only hopeful sign—are combining to help the Government only on the basis of irreproachable security. Politically Peking still holds out against the Japanese in the matter of Shantung, campaigns against Japan abroad, combats the renewance of the Anglo-Japanese alliance, and prepares, with the greatest eagerness, to present its case against extraterritoriality and against Japanese encroachments at the new conference on armament reduction called by President Harding. Dr. Sun Yat-sen, meanwhile, the newly elected President of the rebel Canton republic, declares that the whole trouble in China is due to the Peking Government, which he denounces as usurping, unconstitutional, criminally weak, and unspeakably corrupt. The Northern and Southern forces are again at war in the Kwangsi Province. What will be the outcome of this chaos? The President of the China Society declared recently in London that the Chinese Republic was a failure. The Chinese diplomats replied by pointing out that no republic was ever established without disorder, and that it takes more than ten years to gain stability. The Chinese Legation at London issued a statement on July 18, which said in part:

In the graver statements which have been

made about political unrest in China, little knowledge is shown of the very great handicaps which the Chinese people have necessarily to overcome before complete reform of the administration is accomplished. It is a historical fact, easy of verification, that no nation has erected a new system of government on new ideas, and owing its existence to new forces, in less than two decades. There are the cases of the great Republics of the United States and France, which in the first dozen years or so of their political experience under an entirely new form of government encountered many of the difficult problems confronting China at present. The Chinese people rely largely on the sympathy and friendship of Western peoples for their progress and for the solution of their difficulties, and expressions of views precipitately taken or of opinions hurriedly formed not only unnecessarily discourage them in their admittedly difficult task of building up a stable republic, but are hardly conducive to the cause of general enlightenment.

The Legation further declared that the charge of apathy was without foundation. Innumerable telegraphic and cable messages had been received from Chinese organizations, protesting against the renewal of the Anglo-Japanese alliance, and insisting on China's rights. This was proof, declared the statement, "that the public mind of China has been sorely distressed," and that if the whole deplorable muddle is clarified by the Dominion Conference in London and by the Washington Conference in the Fall, it will bring much-needed relief to an intolerable situation.

There is no doubt that the new republic set up in Canton by Dr. Sun Yat-sen, ably supported by the veteran Dr. Wu Ting-fang, and by Mr. Tang Shao-yi, respectively Minister of Foreign Affairs and Minister of Finance in the new Cabinet, and both men of European training, is the Peking Government's most formidable opponent. Chinese opinion is much divided over the personality of Dr. Sun, in whom some see a dreamer and visionary of high but Utopian ideals, who will lead his followers to destruction, while others have the very highest regard for his practical abilities. All, it seems, are at one in granting to him the possession of the purest patriotism.

Dr. Sun has recently sent an appeal to President Harding for permission to have his Government represented at the Washington conference, and seized the opportunity to launch into a new denunciation of the Peking Government, which he declared did not represent the Chinese people. The chances of his overturning that Government seem slight at present, as the funds of the Canton Government are lower, perhaps, than those even of Peking, owing chiefly to the fact that it has been deprived by the foreign powers of its share of the already small fraction of the customs revenues formerly allotted to it.

The failure of the Banque Industrielle de Chine is having an unfortunate effect on French credit and prestige in China, and is strengthening the position of the Chinese banking group organized in opposition to the consortium. This banking group has established headquarters in Peking and Shanghai. Its maximum financial strength is estimated at about \$600,000,000. This group has begun to make loans to the Government, though only on the strongest security, and furnished the money—about two and a half million dollars—necessary for the construction of the new giant mint at Shanghai. The group is taking care to keep its silver deposits—virtually sub-Treasuries—in places of safety at Shanghai, Hankow and Tientsin, where it can snap its fingers at the greedy Tuchuns.

The famine is past. Over 600,000 people have been saved from starvation by the work of the Red Cross. Employment has been given to many needy families in the construction of new roads, payment being made in food. More than 74,000 thus employed built a total of 903 miles of road, one effect of which is expected to be the minimizing of the danger of future famines.

A noteworthy attempt by the Government to facilitate communications is the long-projected aerial mail service, which early in July was placed in full operation as far as Tsinanfu, and was expected soon to extend to Shanghai. The Tuchuns of Chihli and Kiangsu were already raising obstructions to further their own control.

# A STRONG CHINA— AMERICA'S BEST INSURANCE

*To the Editor of Current History:*

An article in the August issue of **CURRENT HISTORY** from the pen of George L. Koehn contains this significant paragraph:

We see Japan increasing her army from 1,500,000 to 4,000,000 men. We see her spending huge sums in a gigantic naval program. It is very questionable whether she will join the great powers in an agreement to reduce armaments. She is frantically exploiting the raw materials of China for purposes of her own self-sufficiency. She is preparing her people for the coming war. America realizes that Japan's vast preparations are directed against her and feels only too keenly the menace of the Anglo-Japanese Alliance.

Only one statement of Mr. Koehn as quoted above is subject to criticism or contradiction. Unfortunately, America does not realize that Japan's vast preparations are directed against her. The greatest failing of the American people and the American Government has ever been that they refuse to sense either diplomatic or military conspiracies aimed at their well-being until after they have become accomplished facts. One glance at Japan's military and naval estimates covering recent years should send a shudder of apprehension up America's back. Here are the figures:

1914 Army appropriation.....	\$49,000,000
1920 Army appropriation.....	205,000,000
1921 For military aviation alone.....	200,000,000
1914 Naval appropriation.....	46,000,000
1921 Naval appropriation.....	235,000,000

A Japanese military author, Mr. Tasukava, supplements these figures with a recent volume in which he goes so far as to outline Japan's probable campaign against the United States, visioning Japanese army corps in control of the Philippines, Hawaii and the States of the Pacific Coast. Is the American legislator interested in this menace steadily creeping closer to our island possessions and our Pacific Coast? He is not. Will America be warned by the fate of China? She will not.

Few Americans have taken the trouble to review the history of the Orient since Japan emerged from her Asiatic seclusion and assumed the rôle of a world power. Had they

done so there would be far less smug complaisance on America's part in viewing conditions in the East today. Korea knows the worth of the Japanese word and the bite of the Japanese sword. China cringes from the flash of Japanese guns and winces at the deceitful voice of Japanese diplomacy, while she wallows in the cesspool of disintegration dug for her by Japan and polluted with the vilest intrigue ever practiced by a nation aspiring to be classed among civilized powers. The United States of America and the great powers of Europe, especially England, must take shame in their unhallowed part in the Japanese rape of China. Europe may swallow her shame, England may attempt to save her face by the excuse of war's expediency. There is no great menace to Europe in the present attitude of Japan, but America, with the Japanese sword already pointing out across the Pacific, will be more than culpably negligent if she heed not the warning in the western sky.

On Aug. 24, 1914, Count Okuma of Japan, in a message to the people of the United States, said Japan "had no thought of depriving China or other peoples of anything which they possess." In September of the same year Japanese troops were landed in Shantung Province under the fictitious and highly fantastic assertion that it was necessary for Japan to take over the German-controlled railroad there. These Japanese troops promptly and needlessly, from a military standpoint, proceeded to violate Chinese neutrality by overrunning the country, taking what they desired, maltreating the Chinese inhabitants and extending their lines of military occupation far beyond any necessity connected with the railroad. In Shantung Japan followed the same shameless tactics toward the Chinese inhabitants that she used against the defenseless Koreans when she thrust her piratical crew upon that unoffending country. These were the actions of a country which, according to her leading statesman, "had no thought of

depriving China or other peoples of anything they possessed."

Is a country which is guilty of such tactics, a country which is today undermining morale and Chinese politics by bribery, by debauchery of officials, by the reintroduction of opium where the people have made a valiant fight to abolish its horrors, a country which is feverishly increasing its military and naval forces, to be trusted by the great, rich, resourceful, non-military nation on the other rim of the Pacific? China is non-military. China is rich in natural resources. China has 400,000,000 inhabitants, while Japan has less than 100,000,000, yet Japan is tearing China to pieces. Is there any reason that, to serve her own ends, Japan would hesitate to tear America to pieces? There is not.

If the American people continue to wallow in their ignorance of Asiatic affairs; if American Congresses, always more interested in local elections than in vital world problems, continue to ignore America's problem in the Pacific; if American Administrations continue their childlike trust in the smiling, diplomatic front of Japan, the time may come when, having overrun China, Japan will feel herself strong enough to carry out her design of drifting eastward across the Pacific.

But, suppose the American people force their political rulers to heed the warnings flashing from out the Western sky. What then? Must the nation be beggared in order to meet the tremendous military expenses necessary to combat this threatened invasion? Must our hard-earned dollars be thrown into great armaments and vast armies and navies? Must we spend our entire substance upon insurance against attack from Japan? Most certainly not. There is absolutely no need for increasing our military and naval forces beyond their present size. In fact, by taking out the only reasonable and rational insurance against attack from Japan we will be able materially to reduce our expenditures for national defense.

America's greatest insurance against Japan's proposed absorption of her island possessions in the Pacific and domination of the western confines of the American Continent will be found in China.

Today China is making a valiant struggle to fit herself for admission to the society of world powers. She is emerging from her age-long sleep and is attempting to construct a modern Government along democratic lines. Hampered though she is by intrigue and dissension fostered from without, China is making headway as a republic. Her patriotic statesmen, especially in the south, where President Sun Yat-sen is holding his own against China's enemies within and without, are building an enlightened popular Government and gaining power. Japan has seen the handwriting on the wall and is making every effort to hold down this growing movement toward modernization. Japan sees what it would be well for America to see, that a strong, upstanding, commercially and militarily competent China will mean the end of Japanese imperialism.

Here, then, is America's insurance for the future. Let the American people and the American Government assist China in her laudable effort to construct a self-reliant Government. Let America develop Chinese trade; let her assist Chinese industries and Chinese development; let her, if necessary, advance the amount required to train and maintain a Chinese army equal to that of Japan. It would be far better employed than some of the loans recently made to European Governments, and it could be secured by bonds as gilt-edged as anything we have in the shape of security from the beggared lands across the Atlantic. Let the United States of America indicate her boasted friendship for China, her devotion to the cause of democracy, by something more tangible than empty words, and she will find in a strong, peaceful, prosperous China, freed from the debasing intrigue and influence of Japan, her own insurance for the future.

Japan will never turn her eyes across the Pacific when there is a strong China on her flank friendly to America. The friendship, the development, the strengthening of China should be America's first thought today. In that lies peace, the retrenchment of armament in the United States, the expansion of trade in the Pacific and America's everlasting insurance against attack from the West.

RICHARD HATTON.

3, 1921.

# GERMANY'S SEPARATE PEACE WITH CHINA

*Text of the treaty which China has made with the German Government in place of the Versailles pact—Germans regain their property in China on favorable terms—China takes the opportunity to abolish extra-territorial courts*

CHINA, having refused to sign the Treaty of Versailles, has made a separate peace with Germany, and the ratifications were exchanged on July 1, 1921. The text of the treaty and related documents is published in full below. The allied powers have by no means bestowed their full approval on this treaty, because it provides for the return of property owned by Germany in China before the war; the French press, especially, contends that the properties, according to the provisions of the Versailles Treaty, must be delivered to the Reparation Commission.

It was on March 14, 1917, that the Chinese Government broke off diplomatic relations with the German Government, and on Aug. 14 of the same year it declared war. The armistice came; the sessions of the Peace Conference at Paris dragged along, and finally the bulky Treaty of Peace with Germany was signed by all the allied and associated powers and by Germany at Versailles. But China did not sign. The solution found by the President of the Chinese Republic was to end the state of war officially by decree. This he did on Sept. 15, 1919. The decree was not officially communicated to the German Government. Its chief effects were to remove the disabilities to which the Germans in China had been subject during the war. The prohibition of trade with the enemy, however, was not lifted, and China maintained the sequestration of German property in China and continued the process of liquidation. No legal basis remained, however, for mutual relations, as all previous treaties had been annulled when the state of war began. It became apparent both to Germany and to China that a special treaty was necessary to liquidate the effects of the war and to lay a foundation for future relations. A German commission was sent to Peking, negotiations were begun, and on May 20,

1921, the conventions published herewith were signed by the plenipotentiaries of both nations in Peking.

The whole series of documents was published in the German White Book, from which source they have been translated for CURRENT HISTORY. It will be seen that they fall into five main groups:

1. Germany's preliminary declaration regarding the liquidation of the war, and China's acknowledgment of this declaration.

2. The covering note of the German plenipotentiary, confirming Germany's inability to acknowledge anew the Versailles Treaty, in view of hopes for future revision, and sanctioning China's use of certain treaty rights.

3. The German-Chinese agreement establishing future relations between the two countries, and dealing with diplomatic agents, customs and taxes, the freedom of movement of the nationals of either country in the other country and the jurisdiction to which they would be subject. Herein lies innocently concealed one of the most drastic new policies of the Chinese Government. The provision making the alien nations subject to the jurisdiction of the local courts means that China had abolished the principle of extraterritoriality, under which foreign aliens in China have been placed under the protection of their respective Consuls and tried for crimes and offenses by special courts, non-Chinese, or only partly Chinese.

4. A German supplementary note, covering Chinese goods and property in China, war compensation charges to be paid to China, and the special engagement of Germany to pay China \$4,000,000 in cash and Chinese railway bonds to cover these costs and to release for return the German property either liquidated or not still held by China. In this supplementary note Germany asks a certain number of questions regarding the working of the new ruling against extraterritoriality, all directed to ascertaining exactly what the rights of German nationals and German advocates will be in the courts newly established by China to deal with all cases alike.

5. The reply of the Chinese Foreign Minister, pledging his Government to cease all further liquidation of German property, and in consideration of the sum to be paid by Germany in cash and bonds, to return the receipts of the liquidated property and the balance of unliquidated property still in its possession. This

note also answers the German queries regarding the working of the new régime opposed to extraterritoriality.

If the Treaty of Versailles is examined, it will be seen that this treatment of the German property in China differs from that laid down under Article 133 of that Treaty. The Chinese terms are much more favorable for Germany and for German-Chinese firms. China, following the example of the Allies, had liquidated about 1,200,000 taels worth of German property to cover war damages; the value of the sequestered German property still held by her is estimated as at least ten times that amount. This property has been regarded by the Chinese Government as security for her war reparations claims, which have been estimated to exceed the total value of the property held. By the new agreement, China ceases all further liquidation, and releases all property still held on payment of a sum estimated as one-half the value, this sum to be regarded as partial payment of the reparations charges still to be fully determined by the Chinese financial experts. Both this arrangement and the new ruling of China against extraterritoriality may yet be productive of trouble with the entente powers.

The text of the various Treaty documents follows:

#### (1) GERMANY'S PRELIMINARY DECLARATION

The undersigned, duly authorized plenipotentiary of the Government of the German Realm, has the honor to make the following communication to the Minister of Foreign Affairs of the Chinese Republic in the name of his Government:

The Government of the German Realm, guided by the desire to restore relations of friendship and commerce between Germany and China, and in consideration of the fact that such relations, in accordance with the general rules of international law, must be based upon the principles of complete equality and absolute reciprocity; and

Whereas, the President of the Chinese Republic issued a decree on Sept. 15, 1919, concerning the restoration of peace with Germany, Germany engages to fulfill the obligations toward China which arise from Articles 128 to 134 of the Treaty of Versailles of June 28, 1919, which came into force on Jan. 10, 1920;

Further, Germany states that she has been compelled by the circumstances of the war and by the Treaty of Versailles to abandon all her rights, claims and privileges which she acquired by her treaty with China of March 6, 1898, as well as by all other agreements regarding the Province of Shantung, and so is deprived of the possibility of returning them to China;

Germany also formally declares that she will agree to the abolition of consular jurisdiction in China, that she will abandon in China's favor all rights which the German Government possesses over the "Glacis" attaching to the German Embassy in Peking, admitting that the said ground must be understood to be included in the term "public property" in the first paragraph of Article 130 of the Treaty of Versailles, and that she is prepared to repay to the Chinese Government the cost of internment German military persons in the various internment camps in China.

*Peking, May 20, 1921.*

VON BORCH.

[Mr. W. W. Yen, Minister of Foreign Affairs of the Chinese Republic, on the same date acknowledged receipt of the above agreement, which his note reproduces textually.]

#### (2) THE GERMAN COVERING LETTER

*Peking, May 20, 1921.*

Your Excellency:

In accordance with the instructions of my Government, I have the honor of repeating my statement to you that the German Government cannot now make a renewed declaration acknowledging the Treaty of Versailles, since such a step would amount to free acceptance of that treaty on its part and would prejudice the question of future revision; but it will raise no objections to China making use of certain other treaty rights, beyond those contained in Articles 128 to 134, if these rights should appear to be of advantage to the country in their present form, or, if the treaty should be revised, in their revised form.

VON BORCH.

#### (3) THE GERMAN-CHINESE PEACE TREATY

The Government of the German Realm and the Government of the Chinese Republic, guided by the desire to restore relations of friendship and commerce by means of an agreement between the two countries, taking the declaration of the German Realm of today's date as a basis and acknowledging that the only means of maintaining friendly relations between the peoples is the application of the principles of respect for territorial sovereignty, of equality and reciprocity, have accordingly appointed as their plenipotentiaries:

The Government of the German Realm: Mr. H. von Borch, Consul General;

The Government of the Chinese Republic: Mr. W. W. Yen, Minister of Foreign Affairs.

The plenipotentiaries, having communicated to one another their full powers found in good and due form, have agreed upon the following stipulations:

*Art. 1*—Both High Contracting Parties shall have the mutual right to send duly accredited diplomatic representatives who, on the principle of reciprocity, shall enjoy the privileges and immunities in the country of their sojourn which are granted by international law.

*Art. 2*—The two high contracting parties mutually accord to one another the right to appoint Consuls, Vice Consuls and Consular Agents in all places where the Consulate or

Vice Consulate of another nation is established, and these shall be treated with the respect and consideration which are accorded to officials of the same rank of other nations.

Art. 3.—Nationals of either republic in the territory of the other shall be at liberty, in accordance with the laws and ordinances of the land, to travel, to settle, and to carry on commerce or industry in all places where the nationals of any other State may do so.

They shall be subject to the jurisdiction of the local courts as regards both their persons and their property; they shall be required to conform to the laws of the land of sojourn. They shall not pay higher taxes, imposts, or levies than native citizens.

Art. 4.—Both higher contracting parties acknowledge that all questions of customs shall be determined by each solely through internal legislation. But no higher tariff shall be imposed upon raw materials or manufactured goods originating in either of the two republics or any other country, on import, export, or transport, than those paid by native citizens.

Art. 5.—The declaration of the German realm of today's date and the terms of the present agreement shall serve as a basis in negotiating the final treaty.

Art. 6.—The present agreement shall be written in German, Chinese and French; in case of differences in the interpretation, the French text shall be authoritative.

Art. 7.—The present agreement shall be ratified as soon as possible and shall come into force on the day on which the two Governments announce to one another that ratification has taken place.

Done in two copies at Peking on May 20, 1921, corresponding to the twentieth day of the fifth month of the tenth year of the Chinese Republic.

W. W. YEN,  
VON BORCH.

#### (4) GERMAN SUPPLEMENTARY NOTE

Peking, May 20, 1921.

Your Excellency:

The undersigned has the honor of making the following statement to your Excellency on behalf of the German Government, with the object of elucidating further the text of the German declaration and that of the German Chinese agreement:

Tariffs on Chinese Goods in Germany—The customs regulation contained in Article 4 of the agreement, by which the import, export, and transport dues of both countries are not to exceed those paid by nationals of the country itself, does not prevent China from making use of the privilege given to her by Article 264 of the Treaty of Versailles.\*

Compensation for Damages—The willingness expressed in the German declaration to pay to China the expenses of the various internment camps is to be understood in the sense that Germany is prepared to make this payment in addition to reparation in accordance with the principles of the Treaty of Versailles.

The German Government engages to make a partial payment to the Chinese Government of

\$4,000,000 in cash and the rest in Tientsin-Puku and Hukuang railway bonds on the Chinese demands for war damages reparation to a total amount which shall be agreed upon, being half the receipts from the liquidated property of Germans in China, and half the value of the sequestered property.

Chinese Property in Germany—Chinese movable and immovable property in Germany will be restored after the ratification of the agreement.

Chinese Students in Germany—The German Government will gladly give all possible assistance to Chinese students in Germany to enable them to be admitted to schools and to receive practical training.

The undersigned would also be grateful to the Minister for information on the following points:

1. Future Guarantees for German Property—Can the Chinese Government promise to accord full protection to Germans in the peaceful pursuit of their occupations and not to sequester their property again, except in accordance with the generally accepted principles of international law or the provisions of Chinese law?

2. Legal Guarantees—Will all cases of German litigation in China be dealt with by the newly established courts, with the right of appeal, and will the proceedings be conducted correctly? May German barristers and interpreters who are officially admitted to the courts give legal assistance for the duration of the case?

3. Cases Before the Mixed Courts—What procedure does the Chinese Government contemplate for cases before the Mixed Courts in which Germans are actively or passively involved?

4. Chinese Regulations Concerning Trade with the Enemy—Will all such regulations cease to hold good on the day of the ratification of the agreement?

5. Regulation of Chinese German Obligations—Does the Chinese Government intend to take part in the general clearing office contemplated in Article 296 of the Versailles Treaty?

VON BORCH.

#### (5) THE CHINESE REPLY

Peking, May 20, 1921.

Sir: I have the honor to acknowledge your kind communication in which, with the object of elucidating further the text of the German

\*Germany undertakes that goods which are of the produce or manufacture of any one of the allied or associated States imported into German territory, from whatsoever place arriving, shall not be subjected to other or higher duties or charges (including internal charges) than those to which the like goods the produce or manufacture of any other such State or of any other foreign country are subject.

Germany will not maintain or impose any prohibition or restriction on the importation into German territory of any goods which are of the produce or manufacture of the territories of any one of the allied or associated States, from whatsoever place arriving, which shall not equally extend to the importation of the like goods which are of the produce or manufacture of any other such State or of any other foreign country.

declaration and that of the Chinese-German Agreement, you make the following statement:

[Text quoted of four statements made in above note.]

To the questions which you ask I have the honor to reply as follows:

1. Future guarantees for the property of Chinese and Germans: The Chinese Government promises to accord full protection to Germans in the peaceful pursuit of their occupations and not to sequester their property again except in accordance with the generally accepted principles of international law, or the provisions of Chinese law, on condition that the German Government observes a similar line of conduct toward the Chinese living in Germany.

2. Legal guarantees: German cases of litigation in China will all be dealt with by the newly established courts, with the right of appeal, and in accordance with the new laws, and correct procedure will be followed. German barristers and interpreters who are officially admitted to the courts may give legal assistance for the duration of the case.

3. Cases before the Mixed Courts: Regarding proceedings before the Mixed Courts in which Germans are actively or passively involved, China will in future seek to find a solution which will be just to all parties.

4. Chinese regulations concerning trade with the enemy: All such regulations will automatically cease to hold good on the day of the ratification of the Agreement.

The German trade marks formerly registered with the Marine Customs Office will acquire validity again through renewed registration with

the Marine Customs Office by the original owners.

Until the autonomous customs regulations are generally applied German imports will pay customs dues in accordance with the general customs regulations.

5. Regulation of Chinese German obligations: It is not the intention of the Chinese Government to take part in the general clearing office contemplated in Article 296 of the Versailles Treaty.

The Chinese Government engages, in view of the above declaration of the German Government, by which it undertakes the obligation of making a partial payment to the Chinese Government on the demand for war damages reparation, to cease all liquidation of German property with the signing of the treaty, and in return for the receipt of the above sum paid for reparation to give back to the owners the receipts from liquidation as well as the property retained after the ratification of the German-Chinese Agreement.

The above settlement involves the decision of the question mentioned in Paragraph 2 of Article 133 of the Versailles Treaty, of the liquidation, sequestration and seizure of German property.

The competent Chinese authorities will negotiate separately with the German Asiatic Bank and the Ching-Hsing mines concerning the procedure to be adopted.

The immovable property of the German Asiatic Bank in Peking and Hankow which has not yet been liquidated will, however, in accordance with the above-mentioned procedure, be restored to the owners.

W. W. YEN.

## THE EX-KAISER'S FORTUNE

THE dispute between the former Kaiser and the local municipality of Doorn over the question of taxes has centred the eyes of the world on his ex-Majesty's income. First of all, William filed an appeal for complete exemption. Assessed on an income of 350,000 florins, he protested, declaring that his income was only 150,000 florins. The municipality then placed on him the burden of proof, declaring that it was impossible for the ex-monarch to live in his present style and to maintain such an establishment as his house and large staff of servants on the income declared. Deputies of the Province of Utrecht, members of the aristocracy, supported William in his contention, though it was generally understood that the latter had large deposits in the Amsterdam Bank in the name of his majordomo.

A documented history of the Hohenzollerns, compiled under the auspices of the

Majority Socialist Party by Kur Heinig, was published meanwhile in Berlin. Heinig, after years of study of the imperial archives, declares that the Kaiser was one of the thriftiest of monarchs, and amassed by successful speculation and private enterprise a large fortune, estimated at over \$12,000,000. Stock-market speculations, investments in the Hamburg-American Line and the German Electric Company, personal loans to the Krupps, \$2,000,000 invested in mortgages on Berlin homes, 6,000,000 marks in German war bonds, the income from fifteen estates producing half a million quarts of brandy for public sale—all, it seems, was grist for the Kaiser's financial mill. It is further declared that when the Kaiser fled he took with him fifty-three vans of furniture, 1,000 silver plates, 300 gilt service plates and a solid silver service for 100 guests. Heinig's statements will not be overlooked by the Doorn burghers.

# GERMANY'S BUSINESS RECOVERY

*Hugo Stinnes dominates the strenuous campaign for foreign trade, which is fast recovering Germany's antebellum business in South America and the Far East—Reparation Commission reports progress toward the first payment*

[PERIOD ENDED AUG. 15, 1921]

**M**IDSUMMER was marked by a real business revival in Germany, despite the hot weather and the dire predictions of economic ruin voiced in Berlin in connection with the possibility of losing part of Upper Silesia and the likelihood of indefinite continuation of the sanctions along the Rhine. So far as the French Government is concerned, Premier Briand has said that, unless the Supreme Court at Leipsic functions more effectively in punishing German war criminals, there can be no thought of evacuating the Rhine zone. [Both Upper Silesia and the Leipsic trials are treated elsewhere in this issue of CURRENT HISTORY.]

All through the period there were reports of big profits by German industrial concerns and stories of trade expansion abroad, especially in South America and the Far East, where Germany is strenuously trying to regain her pre-war business. Owing to the low exchange value of the mark, it is easy for German manufacturers to underbid their American and British competitors. Data compiled by American consular agents show that during the last few months Latin-American buyers have been rapidly increasing their orders for goods "made in Germany."

Hugo Stinnes, Germany's leading industrialist, plays a large rôle in the campaign for foreign trade through his ever-growing lines of freight steamers and his reaching out after profitable enterprises all over the world. Since being ousted from the Board of Directors of the Hamburg-American Line for opening a steamship service to South America in competition with that company, Herr Stinnes has intensified his shipping activities. On Aug. 10 William B. Ryan, Vice President of the United American Lines, the Harriman concern operating in connection with the Hamburg-American Line, arrived in Buenos

Aires with Richard Peltzer, a Director of the latter company, on a tour of inspection of South American ports. It was generally believed that they were laying plans to meet the rate war instituted some time before by Herr Stinnes.

The steel and iron industry showed great improvement, but the textile business led all the rest, with the result that the number of unemployed persons and their dependents drawing allowances from the Government fell from an average of 742,000 in June to 657,000 in July. The cost of living, however, increased materially. The minimum necessary to support a family of four in Berlin rose from 285 marks per week in May to 324 in July. An advance of about 40 per cent. in the price of bread in Berlin, bringing it up to 7 marks for a two-pound loaf, was scheduled for Aug. 15, coincidental with the lifting of the restrictions on dealing in bread, except for a certain rationed quantity. The index figure for wholesale prices of foodstuffs was 963 in July, against 896 in June, and 924 in January last. Demonstrations against high prices were reported from various parts of Germany. Hamburg's shipping traffic in July amounted to about 60 per cent. of what it was in July, 1913, the tonnage of the vessels entering the port being 873,588, against 688,444 in June.

That Germany might complete on schedule time the actual cash payment of the 1,000,000,000 gold marks due not later than Aug. 31, under the final reparation terms, was indicated by a statement of the Reparation Commission in Paris on Aug. 11, that since July 1 Germany had paid off five of the twenty \$10,000,000 three-months' notes issued on May 30, making a total of seven thus redeemed. On the same day the Berlin Vorwärts positively announced that they would all be paid off on time. Of this first billion in gold marks, Belgium was to get

850,000,000, according to a statement made by the Reparation Commission on Aug. 3. This decision was revised on Aug. 13 by the Interallied Finance Conference so as to give 600,000,000 marks to Great Britain on account of occupation costs, and let the balance go to Belgium on her priority account of 2,500,000,000 marks. The Reparation Commission notified Germany that within the next six months 29,400 additional horses, 130,000 sheep and 175,000 horned cattle must be delivered under the treaty terms.

At a meeting of the Supreme Council held Aug. 13 it was agreed that if Germany completed the payment of the 1,000,000,000 gold marks on time the economic penalties would be lifted on Sept. 15. The matter of withdrawing the troops occupying Düsseldorf, Duisburg and Ruhrort was put over to the next meeting of the Supreme Council at the suggestion of Premier Briand. In discussing the lifting of the economic barrier along the Rhine, Louis Loucheur, Minister of the Devastated Regions of France, said that France demanded in return that the German boycott of French goods cease.

It was reported from Paris on Aug. 5 that the Reparation Commission had decided that the United States Government would have to negotiate directly with Germany regarding payment for the upkeep of the American Army on the Rhine, because the United States is not a signer of the Peace Treaty. This upkeep so far amounts to almost \$300,000,000. Informal pourparlers between Ellis Loring Dresel, the American Commissioner in Berlin, and Dr. Rosen, the German Foreign Minister, were held during the period, and it was understood that there would be no great difficulty in working out the terms of a formal peace between the United States and Germany after proclamation of a state of peace by President Harding.

On July 23 the Interallied Military Control Commission reported that the Bavarian Home Guards, which were formally disbanded on June 30 under pressure from the Allies and the German Socialists, had turned in 170,000 of the 250,000 rifles admitted to have been in their possession. On Aug. 11 Vorwärts declared that the work of disbanding the so-called self-defense organizations in Upper Silesia and along the Silesian border would soon be accomplished.

Nevertheless, impartial observers in Germany have no doubt that hundreds of thousands of good rifles have been concealed by the reactionary farmers and some of the urban bourgeoisie for eventual use, either in a monarchist coup d'état or in putting down a Bolshevik revolt. On the other hand, there is said to be plenty of hand grenades and revolvers in the possession of the Communist organizations, although the costly failure of the Red uprising last March has put a damper on the fiery young rebels who imagined Germany was ripe for a Soviet revolution.

There was much talk of what the reactionary Junker and big business parties were going to do to Dr. Wirth and his Government if he should turn the tax screw too hard to suit them. The latest reports indicated that, with the status quo likely to be maintained in Upper Silesia for some time owing to the Supreme Council's decision to submit the whole Upper Silesian problem to the League of Nations for settlement, the Reichstag, when it reassembles early in September, will accept the Chancellor's plan for raising some 80,000,000,000 paper marks a year by taxation. This sum is to be divided about equally between the masses and the classes, despite Socialist threats to wreck the Cabinet unless drastic levies are made upon the property held by war profiteers and other wealthy persons.

The trend toward eventual consolidation of the Majority Socialist Party and the Independent Socialist Party continued to become more marked. Unless the Majority Socialists take too moderate a stand at their September convention in Goerlitz, it seems as if shortly there would be only one German Socialist Party, facing the reaction represented by the Nationalists and the bulk of the People's Party, while the Democrats and a large fraction of the Centrists occupy a middle position, and the handful of Communists oppose everybody.

On Aug. 11 there was an official celebration of the second anniversary of the coming into effect of the Constitution of Republican Germany.

Revised figures on Germany's losses in the World War given out in Berlin on July 27 put the killed at 1,792,368 and the wounded at 4,246,874, with 200,000 men still reported missing. [See the somewhat different estimate printed on Page 985.]

# FRUITS OF THE BRITISH IMPERIAL CONFERENCE

*Definitely settled that the various Dominions shall have a voice in the foreign policy of the Empire—Principle of separate Dominion navies also adopted—Collapse of British Government's housing enterprise—Other English affairs*

[PERIOD ENDED AUG. 15, 1921]

THE public mind in England has been principally concerned with the Silesian and disarmament problems, balanced, respectively, on the brighter side by the prospect of a working accord with France, the call of a conference in Washington by President Harding, and a general feeling of relief at the hopeful trend of Irish affairs. Unquestionably a clearing is discernible of the political, financial and industrial skies.

Meetings of the Imperial Conference of Colonial Premiers continued into August, but little was officially given out concerning the proceedings, and that little was sometimes delayed. Thus the address of A. J. Balfour on the League of Nations before the conference on July 8 was not published until the 12th. Mr. Balfour said:

If the League were to dissolve, a new peace treaty would have to be framed and new machinery would have to be devised to carry out the duties with which the League has been entrusted. The most serious difference between the League as it was planned and the League as it exists is the absence of America and Russia.

The final meeting of the conference took place on Aug. 5. The feeling prevailed among the members that the gathering had been successful. From an authoritative source some important results were disclosed. An agreement had been reached defining and settling the constitutional position of the different parts of the empire in giving advice to Downing Street on foreign affairs. Thus, according to the statement:

It is now agreed as a part of the Constitution that the British foreign policy must be representative of all the democracies in the empire, so that the empire speaks with one voice. The foreign policy of the empire is to be determined by a conference of Prime Ministers, but when this conference is not in session the foreign policy must be carried on

by the British Government, subject to such consultation with the Dominion Governments by cable or otherwise as is possible. The home Government, when the conference is not in session, might therefore be described as managing director for the empire democracies in foreign affairs.

All the Dominion Premiers and Mr. Lloyd George were willing to go to the United States immediately for a preliminary conference on disarmament, but as the suggestion was not taken up by the United States Government the proposed Washington conference in November was regarded as holding the field.

A third subject of deliberation, as supplemental to the principle of co-operation with the United States, was the position of the British Empire as a bridge or link between the European and white races and the Asiatic races. As against the idea that the Anglo-Saxon races combined in a common interest might safeguard the world's peace, the view of the conference, it was said, was that greater hope for the peace of the world lay in the character of the British Empire. Thus:

It was argued that in India there are innumerable Asiatic subjects of the Crown, while the empire, too, has long been in friendly association with Japan, and that these facts point the way to a truer conception of world amity than could be found in a more marked division of the races. The British Empire, acting as a link between Europe and Asia, co-operating in world affairs with the United States and wielding influence through friendly comradeship in the Far East, would be the greatest promise of world peace.

After a full discussion on Pacific questions in relation to naval defense and the renewal of the Anglo-Japanese Treaty, the conference agreed that the needed co-operation with the United States in world affairs should be the first principle of British

policy. The discussion of Pacific questions and of the Anglo-Japanese alliance, therefore, was postponed until after the Washington conference on disarmament. The Imperial Conference, it is understood, reaffirmed the principle of separate dominion navies and coastal defense, with a policy of imperial co-ordination in time of need.

A sensation in British political circles was the resignation from the Cabinet on July 14 of Dr. Christopher Addison, Minister without portfolio and former Minister of Health. Dr. Addison was responsible for the housing schemes which the Government once supported with enthusiasm. In a long letter to the Prime Minister, with whom Dr. Addison had been on terms of close friendship, the former Minister contended that the precipitate abandonment of his plans on the ground of financial necessity was not true economy, but a betrayal of solemn pledges to the people, and, however much one may allow for justifiable necessity, he did not think that "the Government could safely rest on shifting opportunism, to the neglect of conviction." To this Mr. Lloyd George, in "bitter-sweet" brevity, replied: "The financial situation has forced us to cry 'Halt' in the development of your housing plans. Time will be given to the new Minister of Health to put these schemes on a more businesslike footing."

When the subject was brought up in the House of Commons on the 15th, in juxtaposition with the Government policy in the Middle East, it was characterized as an ironic jest that they were unable to keep the housing pledge to the country on account of financial stringency, while asking for more millions for Mesopotamia to carry out a project to which, as Mr. Asquith said, they were committed by no pledge.

On July 14 the War Office issued a statement regarding reduction in the Territorial Army. For the future the number of battalions required to furnish the infantry

brigades was definitely fixed at 168. This would permit allotment of 12 battalions to each of the 14 divisions and give a total peace establishment of 4,704 officers and 114,240 men of other ranks. Before the war the infantry brigades comprised 208 battalions, and of these 40 were required for coast defense and lines of communication. Now coast defense was entrusted entirely to the Royal Garrison Artillery and the Royal Engineers, due to reduction of the danger of invasion to a minimum. This reduction saves £390,000 a year.

Decontrol of the railroads, fixed for Aug. 15, moved the Minister of Transport to introduce a bill in the House of Commons on Aug. 7 to obtain greater efficiency and economy of operation as well as that normal extension of transportation facilities which war demands had prevented. The most striking feature of the bill was the regrouping of British railway lines into six large systems, each serving a given area. The companies assigned to each group were left to arrange their own plans of amalgamation, provided an agreement was reached by June 30, 1922. Other clauses provided for a new rate tribunal, the settlement of wages, and the Government offer of £60,000,000 to settle claims for compensation in respect to Government control. The bill passed its third reading in the House of Commons on Aug. 9.

That the Throne had not escaped the prevailing financial stress was made evident in a bill introduced in the House of Commons on Aug. 10 to provide money to meet a heavy deficit in the King's household budget. Mr. Austen Chamberlain explained that although the King had cut out all unnecessary expense, the increased cost of the royal household compelled him to seek assistance, since the Government was unwilling that he should further reduce the ceremonial state associated with the traditions of the British throne.

# CANADA AND OTHER BRITISH DOMINIONS

*Installation of Lord Byng at Quebec as Governor General of Canada amid elaborate ceremonies—Canada's award of \$300,000,000 as her share of German indemnities—Land settlement in Australia—British rule in Egypt*

[PERIOD ENDED AUG. 15, 1921]

**B**ARON BYNG of Vimy, Canada's new Governor General, a favorite war hero, arrived in Quebec on Aug. 11 and was greeted at the wharf with impressive demonstrations of popular enthusiasm. He was welcomed officially by Justice Anglin, the Acting Administrator, who headed a party including members of the Federal Cabinet, Provincial Premier Taschereau, and members of the Provincial Government. Accompanied by Premier Arthur Meighen, Lord and Lady Byng were escorted to the Provincial legislative building by a troop of cavalry through flag-bedecked streets lined with cheering multitudes. In this building the new Governor General took the oath of office amid impressive ceremonies. Then, after a day's social program, he departed for Ottawa to assume his new duties.

Canada's share of the \$30,000,000,000 of German reparation money was fixed by the Imperial Conference on July 15 at \$300,000,000. This is 4.5 per cent. of the 22 per cent. allotted to Great Britain, and amounts to about one-eighth of the Canadian national debt.

A farmers' Government with a clear majority over all other groups, singly or in combination, now rules the Province of Alberta. In a Legislature of 61 members the farmers have 39, the Liberals 14, the Independents 4 and the Labor Party 4. It had been generally thought that the Liberal Government, under the Premiership of Hon. Charles Stewart, would be returned to power by a small majority. The result was an all-around surprise. The Conservative Party, which was not very strong in the former House, but was the only opposition to the Government, was completely wiped out in the elections of July 18. The former Government was regarded as one quite friendly to the farmers and as worthy of

their support in many respects; but, as in Ontario, the farmers, after many years of work in co-operative buying and selling, had determined to organize for political purposes and to dissociate themselves entirely from the old political parties. Their organization was a revelation to most politicians not connected with it. Subsequent to their victory the farmer members-elect chose as their preference for premier Herbert Greenfield of Westlock, who was not a candidate in the elections, but is Vice President of the United Farmers of Alberta. Greenfield is the embodiment of the type of settler made by the West. He is 52 years of age and came to Canada from his native country, England, in 1892. For some years he engaged in farming in the Province of Ontario, and then homesteaded in the West, where he has since remained. From the inception of the political branch of the United Farmers of Alberta he has been an active worker, and his gifts as a student of politics and a master of homely phrasing have made him a leader among his fellows. One of his first declarations as to policy was that he would select as Attorney General a man who was in complete sympathy with the Prohibition act and would fearlessly enforce it in the Province. The new development in Alberta is expected to have an important influence on the larger sphere of Dominion politics.

Hon. Arthur Meighen, Premier of Canada, who arrived home on Aug. 7 from the Imperial Conference at London, was accorded fine receptions in Halifax and Ottawa. The Premier, who is a strong supporter of the Washington disarmament conference, has voiced his conviction of the real value of imperial conferences and his satisfaction with the results of the one just closed.

**AUSTRALIA**—Every effort is being made by Australia to attract white settlers to help build up the country. Today it is one of the richest and emptiest lands in the world. Queensland, for instance, more than three times the size of France, and several times larger than Great Britain and Ireland, has a population of only about one person to every square mile, though it has actually room for twelve or fourteen million people. Australia possesses a million acres containing barely a single white man.

The States and the Commonwealth are now co-ordinating their immigration work. Sir Joseph Carruthers, the former Premier, announces a comprehensive colonization scheme for Australia, and the creation of a fund of £30,000,000 jointly backed by Great Britain and Australia, to be raised as required and to be used in the settlement of unoccupied land. He advocates the slogan of "A million farmers and a million farms" for Australia.

Premier Hughes on July 15 in London issued an emphatic denial of rumors that Australia intended to sell the Commonwealth Government line of steamers. He said the line had proved of great value in fostering trade with Great Britain and had earned a substantial profit, proving that a Government could conduct such ventures as well and economically as private enterprise.

Wireless authorities, checking Australia's position on world maps by radio with standard time clocks at Lyons, France, say there is an error of perhaps 100 yards in the indicated position of all Australian north and south lines.

**NEW ZEALAND**—W. S. Massey, Premier of New Zealand, at a banquet given to him in London on July 14, declared in favor of "empire preference" in tariffs. If one country, he said, closed its doors to the products of another which adhered to a policy of free trade, the latter would be placed at a serious disadvantage. Recently a country with which Britain does a large trade had increased its customs duties upon everything which it could produce itself. He would be surprised if something were not done to protect the interests of those who had been affected by that customs increase. He suggested that countries of the empire should give preference one to the other within the empire. Meat, wool and

sugar, he said in conclusion, the empire could grow for itself, and it would soon be able to do the same with cotton. Thus, the United States' high tariffs help to bring closer together the States of the British Empire, increasing a tendency to trade with each other as freely as the forty-eight States of the American Union, whose policy has been called the greatest experiment in free trade the world has ever seen.

Natives of the former German island of Samoa, now held under mandate by New Zealand, have drafted a petition asking that the Government of the island be transferred from New Zealand to Great Britain. The Samoans are dissatisfied because they were not consulted as to the disposition of their territory, and European settlers are discontented owing to the drastic prohibition regulations. The petition was withdrawn temporarily, but the New Zealand Foreign Secretary expected it to be renewed.

**EGYPT**.—A dispute has arisen between British shippers and the United States Shipping Board lines for the transportation of cotton from Egypt. The board charged that discrimination was used against its vessels, even when the American bids were materially lower. The American position was that other nations must give every proper opportunity to ships which fly the Stars and Stripes, or else run the risk of encountering retaliatory measures. It was reported on July 28 that the Shipping Board had delivered an ultimatum that unless fair treatment was accorded its ships it would "declare an open market" and inaugurate a freight war. Conferences were held in London, and the British lines on Aug. 4 agreed to allocate to the Shipping Board 50 per cent. of the shipments to American vessels direct from Alexandria to the United States, but refused to assent to the participation of Shipping Board vessels in the indirect movement of Egyptian cotton from England to the United States. The Board insisted that American vessels were entitled to carry at least half the cotton brought from Egypt to the United States by way of British ports. This produced a deadlock, and on Aug. 9 it was reported that negotiations had been broken off. The Egyptian cotton crop amounts to about 665,000 tons, about 37 per cent. of which comes to the United States.

Lord Milner's scheme of independence for Egypt has evidently fallen through, and Great Britain intends to remain in control at least for the present on account of the disturbances in Cairo and Alexandria, in which a number of Europeans were killed, as related in **CURRENT HISTORY** for July. Minister Winston Spencer Churchill, Secretary of State for the Colonies, in a speech at Manchester, officially announced that Great Britain had definitely decided upon maintaining troops in Egypt and retaining

military control for a considerable time to come. Meanwhile the Egyptian delegation, headed by the Premier, arrived in London on July 11, and began conferences to negotiate a treaty regarding the future status of the country. Zaglul Pasha, the Egyptian extremist, who has been the bitterest opponent of Great Britain, and who has clamored for immediate absolute independence, is said to have lost much of his popularity; one of his principal supporters, Prince Aziz Hassan, a cousin of the former Khedive, was deported early in July.

## SPAIN'S MOROCCAN REVERSES

*Berber tribes seriously set back Spain's colonial rule by inflicting defeats comparable to Italy's at Adowa, under a master mind alleged to be a young Moor, Abd-el-Krin*

[PERIOD ENDED AUG. 15, 1921]

ONLY a few miles south of the coast of Spain, in full view of the Mediterranean traffic that passes through the Strait of Gibraltar, is a strip of African soil, averaging only three modern cannon shots deep, which Spain has been trying to subdue for over 500 years. This littoral, extending from the Atlantic to the confines of Algeria, is inhabited by Moslem tribes of varied origin, called at different periods of history by various names. Chief among them are the Berbers. Although possessing the suppleness and dignity of the Arabs, in many cases their giant stature and blond appearance belie their supposed tropical origin. They are supposed by anthropologists to have in their veins the blood of Norse Vikings, who are known to have been shipwrecked on the coast at about the time the Empire of Rome fell, and of Gaiseric's Vandals.

They thrice conquered Spain and were thrice pursued across the strait between the Pillars of Hercules—the guardian rocks of Gibraltar and Ceuta. In attempting to subdue them in the mountains, which were always their ultimate refuge, Spain through the centuries suffered many reverses. But so have the Sultans of Morocco, who have attempted to do the same thing, for the Berbers would acknowledge neither the au-

thority of Madrid nor that of Fez, or of the other capitals, Mequinez, Marakesh or Rabat. Successive Kings and Sultans have passed away in trying to make them do so.

Since 1859, however, when Spain invaded the littoral in force, there has been a sort of armed neutrality; but now, after all these years, the invader has suffered a defeat which can be compared only to the disaster which overtook England at Khartum in 1885 or Italy at Adowa in 1896.

In order to understand the military catastrophe some attention must be paid to the political setting in which the tragedy took place. Germany's objection to the Franco-British agreement in 1905, which gave Great Britain a free hand in Egypt and France in Morocco, brought about the Algeiras conference of 1906. This practically confirmed the French claim to that part of Morocco controlled by the Sultan as a protectorate. A year later the Sultan Mulai Yusef signed a treaty at Fez accepting the protection of France. But this agreement conflicted with Spain's historic claims to the littoral, the Rif coast. So France and Spain got together, and at Madrid, Nov. 27, 1912, signed a treaty by which France acknowledged the right of Spain to exercise her "protection" over a zone embracing the Ceuta peninsula (all but the northwestern corner, which had

been designated as an international zone at Algeciras), and the littoral, averaging sixty miles deep, extending eastward to the frontier of the French colony of Algeria. Spain, on her side, acknowledged the protectorate of France over a zone to the south also extending from the Atlantic to the colony of Algeria. By agreements with the Sultan each zone was to be administered by a High Commissioner acting under the nominal authority of the Sultan's Caliph.

During the great war little attempt was made to administer these zones, but at its close France sent General Lyautey as her High Commissioner and General Poeymirau as the commander of 30,000 men. Spain sent General Domaso Berenguer as High Commissioner and General Silvestre in command of 50,000 men.

In January, 1920, it was decided in both Paris and Madrid that the pacification of the two zones should begin. By September the various expeditions under General Poeymirau reported success. Those under General Silvestre could not report the same. So General Silvestre marched on. Leaving strong detachments at Ceuta, Larache and Melilla, he finally invested and captured the strongholds of Sidi-Driss and Tafer Sit, but the country was not subdued. When Winter came he had established more than a dozen posts, but with few trustworthy and no impregnable lines of communication.

Last Spring that bird of ill-omen, El Raisulo, crossed over from the French zone and prepared to make trouble among the peaceful valley people south of Tangier. At about thirty-five miles from that city he was surprised by an army of about 15,000 Spanish troops and native levies and forced to accept a siege in a mountain fortress. While the siege was favorably progressing a Spanish column with native levies was sent to open the coast road from Melilla to Alhucemas, with the idea of making the latter a point of departure for an expedition into the interior.

El Raisuli has been in many tight places, but this time his fate seemed sealed. He was about to capitulate when a mutiny breaking out among the native troops on the Melilla-Alhucemas road, followed by a formidable descent of the Berber tribes from the Rif Mountains on Spanish posts and lines of communications, caused the siege to be raised. El Raisuli thus again

escaped. What had happened to release him is the story of the Spanish disaster.

General Silvestre, with the co-operation of General Barrerd, who was operating on the Larache side, and General Berenguer, on the Tetuan side, was preparing for the occupation of Alhucemas and its surrounding country as soon as the coast road should offer safe communication by land from Melilla. Several positions had already been established, when in May the mutiny occurred, and one after another the Spanish posts became isolated from Melilla, Larache and Tetuan by similar revolts of the native levies.

On July 20 Madrid received the first news of the initial defeat which within forty-eight hours developed into a disaster so stupendous as to wipe out nearly all the interior posts with over 5,000 casualties and a loss of nearly 2,000 square miles. The news caused 2,000 troops to be sent from Ceuta to Melilla and a warship from San Sebastian, and the fall of the Allende-Salazar Ministry, probably to be succeeded by one formed by former Premier Maura. After the mutiny in May the High Commissioner at Melilla had asked for a division, but, as was pointed out in the August CURRENT HISTORY, the Minister of War, on account of the unpopularity of the Moroccan campaign, dared not send it.

The news received on the 20th at Madrid told how General Silvestre had heard that the Ayguaren post was being attacked by the Kabyles, and had gone to attempt its rescue with the Alcantara Regiment, composed of Spaniards, some batteries of artillery and several units formed by native troops organized as a column of reinforcements. The column almost immediately found itself surrounded by superior forces, very well entrenched, and after a bloody combat the General gave orders to withdraw. The two positions of Ayguaren and Anuen were abandoned and a disorderly retreat began. At a certain point in the retreat the General and his entire staff committed suicide.

General Silvestre was a great friend of King Alfonso and one of his aides de camp. He had seen nearly all his service in Morocco, and before the occupation of the Spanish zone had served at Casablanca as chief on the Spanish National Police, and was commander of the Spanish sector.

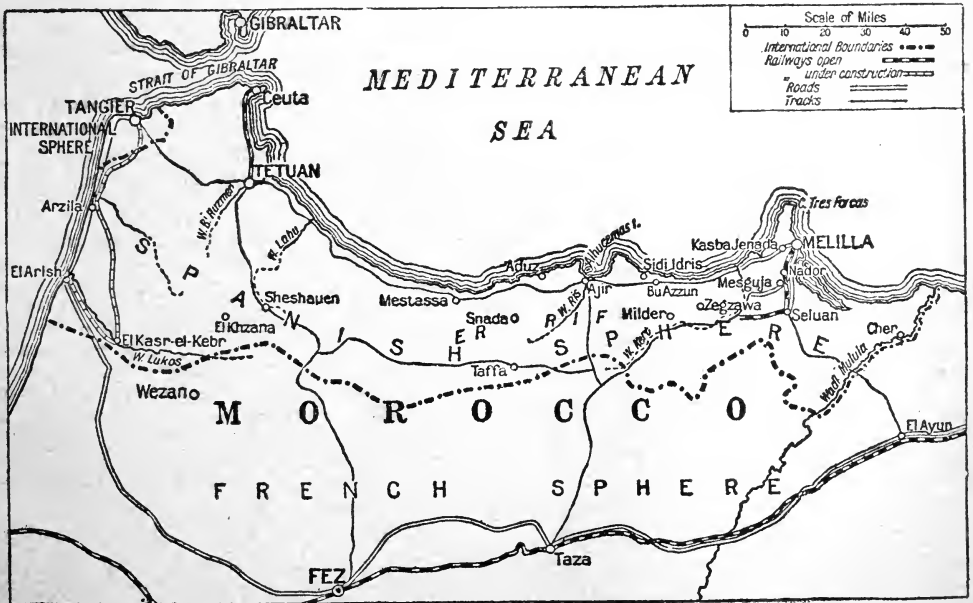

The Madrid papers are filled with stories of heroic Spanish officers, like the cavalry commander Colonel Primo-Rivera, who led 400 horsemen repeatedly against an ambushed enemy until all his troopers were slain. A warship attempted to cover the retreat from Sidi-Dris, but without avail. Nador surrendered and its garrison was slain to a man. Two Spanish Generals, Sanjuero and Navarro, were taken prisoner in the Mount Arruit district, after nearly all their men had been slain. Some Madrid papers are accusing German firms of having supplied the Moors with rifles and ammunition; the German-language press there replies by accusing the French.

There is no doubt that the tribesmen are well supplied with modern arms and munitions and are instructed how to use them, and have also been trained, to a certain extent, in modern strategy and tactics; nor is there any doubt that the successive mutinies which broke out at post after post, so as to invite the neighboring detachments of the enemy to attack, had been prearranged.

The whole affair indicates some master mind. At first it was thought that El Rai-

suli was the man. But this Moorish bandit is as much an enemy of the Berbers as he is of Spain, as he is of the Sultan himself. Besides, from his mountain retreat subsequently he made an offer to pacify the Spanish zone provided he be made the Caliph-Sultan of the territory. If his offer should be accepted it will bring him into armed contact with the real leader of the master stroke against Spain. According to Melilla advices, via Buenos Aires, this is Abd-el-Krin, a youthful picturesque Moor educated in Spain. La Nacion of Buenos Aires, quoting its Melilla correspondent, gives the antecedents of the alleged phenomenal military genius as follows:

Before the war Abd-el-Krin, then faithful to Spain, was employed in the Office of Native Affairs in Melilla—a post equivalent to that of Supreme Judge of the Moors. When the war broke out, the young, energetic Moor became active in favor of the Germans, whereupon France protested, and Spain, in observance of neutrality, interned him. Later Abd-el-Krin escaped from prison, crippling one leg in so doing, and swore vengeance on the Spaniards, and especially on General Silvestre, whom he hated to the death. He appealed to religious fanaticism, and raised an army of 20,000 men.

SCENE OF SPAIN'S CURIOUS DEFEAT ON THE RIF COAST

Under the direction of the Spanish High Commissioner, General Domaso Berenguer, and with the approval of the Sultan's Caliph, some Spanish soldiers and native auxiliaries were repairing the road between Melilla and Alhucemas. To the west, a few miles northwest of Sheshauen, El Raisuli was being besieged under the direction of General Silvestre. A mutiny of auxiliaries at the former place, followed by an attack by the Rif tribes and the capture of three guns, cut off two Spanish columns sent out from Melilla, isolated Melilla, raised the siege against the arch-bandit, El Raisuli, and scattered the besiegers.

# FRANCE IN THE ROLE OF HAMLET

*The Briand Government, torn between conflicting motives, has been halting between two opposing policies regarding Germany—The Entente in peril for a time—New promise seen in the movement to favor Germany economically*

[PERIOD ENDED AUG. 15, 1921]

**D**ESPITE all the gloom and pessimism in France today, despite the low-water mark of the French Treasury, the insufficiency of the national revenue, even with increased taxation, to cover the outgo, and the grave fears for the future in case Germany does not pay, there is some evidence that France is getting on her feet again. Reconstruction work in the devastated areas is progressing, finances are far from hopeless. M. Paul Doumer, the Minister of Finance, in his report on the budget for 1922, pointed out that the financial disaster caused by the war was not as great as had been believed; he estimated it at 240,000,000,000 francs—a vast sum, but considerably below the 400,000,000,000 estimated by some experts as a minimum figure. The total debt is 264,341,000,000 francs; of this amount some 35,000,000,000 francs is owed abroad, over 15,000,000,000 francs being due to the United States. The budget for the coming year can be balanced, M. Doumer is confident, by drastically cutting down Government waste and expense and by raising certain taxes. Other financial experts, notably M. François Marsal, the former Minister of Finance, opposed M. Doumer's suggestion to increase the revenues by further taxation, and declared that the whole financial and economic future depended on Germany's being made to pay. The great expense involved in keeping up so large an army, M. Marsal argued, must be reduced, and this could not be done until Germany had disarmed.

That Germany must both pay and disarm has become a French axiom, but the national French feeling still runs strongly counter to French disarmament. In all public speeches made by President Millerand, by Premier Briand and by other leaders of the Government the note of national security is sounded again and again. The French papers welter in reports of Ger-

many's hatred and fever for revenge, of Germany's insolence and determination to balk France of her pound of flesh. With amazement and grief France has seen her great ally, England, back the claims of Germany to Upper Silesia, thus bringing on another of the many crises with which Anglo-French relations have for many months been starved. Vehemently President Millerand declared at the naval celebration in Havre on July 25 that alike on land and on sea France desired only to secure her future safety, and that a strong fleet, even as a strong army, was necessary for the execution of her undeviating policy.

This maritime fête at Havre brought out some interesting facts, notably that France is becoming again a great maritime nation. Despite the chaotic conditions prevailing after the war, which necessarily reacted on shipping, France's merchant fleet has already made good beyond the losses caused by the war. On July 1, 1914, its tonnage had stood at 2,400,000; in the near future it will reach a total of 4,000,000 tons. The Temps says:

In former days foreign shipping companies drove us out of our own harbors. Today the flag of France is hoisted by French lines over the docks of Hamburg. At Antwerp French companies rank only second in importance. It is from Antwerp that the Moroccan liners of the Transatlantic Company sail as well as French steamers for the Far East and India chartered by the Messageries Line.

As for French harbors, through the active aid of the French Chamber of Commerce, such important ports as Marseilles, Havre, Bordeaux, Rouen and Dunkerque will be able, declares the Temps, to compete with any of the great harbors of the world, when the 1909 and 1917 programs are completed.

Although by every possible means, with fleet and army, by force and diplomacy, France is determined to guarantee herself

against future aggression, even at the cost of being called imperialistic, she is faced with problems which would discourage any but the strongest hearts. President Millerand and Premier Briand, who have shown remarkable harmony since Briand took the Premiership, are steering a perilous course. France's whole policy—the maintenance of her forces in the Ruhr, the continuance of a tariff régime there barring the region from the rest of Germany, the fostering of a strong Poland, all at the economic expense of Germany—has run absolutely counter to Lloyd George's policy, which is directed toward the economic strengthening of Germany.

Security! That is the word which epitomizes the whole French ambition. But combined with this, and almost in opposition to it, are the French financial and economic needs. Germany must pay, but if she is so weakened by the French policy as to be unable to pay, where will France be then? There are evidences that a certain body of opinion is arising in France which leans toward the English tendency. Philippe Millet, a well-known political writer, in an article published in one of the Paris papers on July 14, took this line of argument, and strong in knowledge of facts presented to him by American and British officials, and even by members of the Rhineland High Commission, declared that if France wanted Germany to be placed in a position where she could pay, the economic barrier of the Ruhr must be abandoned.

It is exactly this problem which the Franco-German commission appointed to carry on the negotiations for an economic agreement begun by M. Loucheur, French Minister for the devastated area, and Dr. Walter Rathenau early in June at Wiesbaden, was called upon to solve. The news that an agreement had been reached came to Paris toward the middle of July, after the adjournment of Parliament, the Nationalist majority of which has been consistently opposed to all concessions to Germany. The importance of this agreement for France's future relations with Germany cannot be overestimated, for in it France at last consents to receive payment in kind. Any Frenchman who has suffered war damage will notify a duly constituted board regarding his needs.

German producers will be called on to send the goods needed, and in return are to receive bonds to be liquidated in marks by the German Government, which will also probably tax the producers. In this way Germany will be paying reparations, but without a ruinous outlay of cash.

Above all, this agreement, if accepted, will stop the flooding of the Rhineland with French goods, on the one hand, and the boycott of French goods by Germany on the other; France will promise to cease commercial penetration, Germany to abandon her boycott. If this agreement is executed, it is obvious that it will do much to lay solid economic foundations for the future between the erstwhile enemies. The French military occupation will continue provisionally, but it is believed that France will withdraw her soldiers as soon as she perceives that Germany means to pay her, in kind, if not in cash, and gains assurance that Germany is not arming secretly for revenge.

The latest reef which has thrust its head out of the troubled international waters is the Silesian situation. In the month under review it seemed to threaten shipwreck to the Anglo-French Entente. Briand's desire to send reinforcements to the disturbed Silesian area was disapproved by Lloyd George, but he finally consented to join in a note to the German Government notifying the latter that it must give its consent to the passage of reinforcements across Germany if at any time they should become necessary. The main conflict, however, was over the question of what part of the Upper Silesian territory should be allotted to Germany, and what part to Poland. Here again the English view that Germany must be aided, not crushed economically, came to the fore. Here Briand held firm, realizing that French sentiment was irreconcilably opposed to the British scheme of giving most of the rich mining districts to Germany. It was announced from Paris on Aug. 13 that the Premiers, in despair of coming to an agreement, had referred the whole question to the Council of the League of Nations. [See the brief article on Upper Silesia elsewhere in these pages.]

The income tax, from which the Government hoped to find considerable resources to tide it over while awaiting German payments, is proving disappointing in its re-

sults. In 1919 only half a million people declared their incomes, in 1920 only a slightly larger number. This year again only 500,000 have declared their incomes. Half of these, furthermore, have returned figures so small that the revenue will be little or nothing. The Ministry of Finance is planning to increase its personnel of inspectors and to trace down the delinquents. Meanwhile the budget estimate has fallen short by 2,500,000 francs.

Despite the drought, which in France has been almost continuous since last Autumn, the French wheat crop for the present year is the best that the country has had since the period before the war. The former product was about 90,000,000 quintals. This year's wheat totals 80,000,000. The wine harvest is large and of exceptionally fine quality.

The foundation stone of the new library at Rheims, which will take the place of the

library destroyed by the Germans, was laid on July 21. The funds were donated by the Carnegie Foundation for International Peace. The President of the Foundation, Dr. Nicholas Murray Butler, President of Columbia University, made the presentation speech, after a short address by Mr. Myron T. Herrick, the American Ambassador. Dr. Butler declared that this ceremony proved again that "the human mind cannot be broken by force, and that even the greatest machinery of destruction can no longer destroy what is best and most significant in human life." This building, he said, was the first of many which would be erected between the Vosges and the sea to testify to the irrepressible power of the peoples devoted to liberty and progress. By this endowment, the Carnegie Foundation, he added, had wished "to express the conviction that France in 1914 was the victim of a cruel, premeditated, and unprovoked attack."

## HOLLAND'S INTERNATIONAL RELATIONS

[PERIOD ENDED AUG. 15, 1921]

GERMANY was expected to be represented at The Hague Congress on International Law to be held at the Carnegie Peace Palace at the end of August. Geheimraths Niemeyer, Dove and Katz were expected to attend. Meanwhile the League of Nations is rapidly making preparations for the organization of the Court of International Justice, 41 nations having signed the statute of the court. Brazil has named Elihu Root for one of the Judges and Chile has nominated Lord Finlay.

The Rotterdam Chamber of Commerce has petitioned the States General to reject a bill for the increase of the tariff on imports, as they deem it a danger to national commerce. The Third International Free Trade Congress will be opened at Amsterdam on Sept. 13.

Holland would like to take part in the Disarmament Conference. With a population of 59,000,000 subjects in the Dutch Indies, she feels that she has a voice in

Pacific questions, especially as the colonies are open to international trade without preference tariffs of any kind. A scheme of naval defense proposes forty submarines and fifty destroyers and larger vessels for the East Indian fleet. Should the powers, especially Japan, agree to disarm, Holland would be spared this burden. Holland is now the sixth sea power, with a tonnage of more than 2,000,000, or 736,000 tons more than she possessed in 1914.

The Dutch Cabinet crisis was settled on July 27, Premier Ruys de Beerenbrouck having reconstructed the Ministry with Burgomaster de Geer of Arnheim holding the portfolio of Finance and M. Van Dyk, former Chief of the Topographic Institute, at the head of the War and Navy Department. The American Minister, William Phillips, returned to The Hague on July 26, but made no further attempt to get a footing for the Standard Oil Company in the Djambi East Indian fields.

# ITALY'S INTERNAL PROBLEMS

*Growth in prestige and power of the new Italian Cabinet, headed by Signor Bonomi—Last echoes of the Fiume controversy in the problem of Porto Baros—The Fascisti stirred anew by rise of a hostile league*

THE Italian Chamber adjourned on Aug. 6, after which the President of the Council, Signor Bonomi, and the Minister of Foreign Affairs, Marchese della Torretta, immediately departed for Paris to attend the sittings of the Supreme Council, where, as has been reported by the semi-official journals of Rome and confirmed by those of Paris, the Marchese exercised a strong influence in preventing an imminent breach between the British and French Premiers on the Silesian and Turko-Grecian problems.

The Chamber, under the auspices of the Bonomi Ministry, had been in session at Montecitorio since July 18. In spite of the dismal predictions made by both Nationalist and Socialist extremists, it continued to gain in prestige and in both legislative and popular strength. The exposition of the Government program showed three main features: (1) The Adriatic question, provision being made for an honorable observance of all treaties; (2) economic problems, beginning with reforms in many departments of public service, and including a more equitable relationship between capital and labor, not only in industry, but in agriculture as well, and (3) the problem of public order, including the disarmament of all citizens not legally authorized to bear arms.

The session had not proceeded far before it became evident that Signor Bonomi would turn to the Right for the execution of his foreign policy and to the Left for the execution of his home policy. He was credited with the intention of satisfying the Conservatives and Nationalists in foreign policy and keeping the Socialists quiet by stern repression of the Fascisti agitation. Although the session was far from calm—cries of the Socialists for the repression of the Fascisti were met by cries from the latter for the observance of the laws, so that their work would be unnecessary, and on one occasion thirty-five Socialists almost caused bloodshed by voting against honor-

ing Italy's "unknown dead soldier"—nevertheless, on July 23, the Government received the largest vote of confidence given to any Government since the famous vote of April 28, 1919, which enthusiastically sent Orlando and Sonnino back to the Peace Conference, from which they had withdrawn on the publication of President Wilson's memorandum advising the Italian people in regard to the Pact of London and Fiume.

This last unfortunate question has again come up, this time in regard to the nationality of Porto Baros, the most eastern harbor of Fiume. According to the Treaty of Rapallo, this part of the boundary was left to be determined by subsequent Italo-Yugoslav negotiations. Because the preceding Foreign Minister decided that the harbor, lying across the river, which geographically divides the new State of Fiume from Jugoslavia, should go to the latter country, the Ministry of which he was a member was rebuked and resigned. The Italian delegates at Belgrade, now working under the direction of his successor, the Marchese della Torretta, are understood to be trying to have the Jugoslavs accept political rights at Porto Baros and to have its commercial administration go to Fiume. To foster this solution Signor Zanella, the leader of the autonomists of Fiume, went to Belgrade on Aug. 8.

According to the Treaty of Rapallo, if the delegates do not reach a decision in regard to the Fiume-Yugoslav boundary, the question will go for arbitration to the President of the Swiss Republic, whose decision will be final. But what makes the question so difficult is the fact that the late Giolitti Government, in attempting to oust Gabriele d'Annunzio, declared, either specifically or by suggestion, that Porto Baros was in no way involved. This was a point strongly insisted on in the Senate on July 20 by General Caviglia, who bore the mandate of the Giolitti Government to negotiate with the poet-leader, and had reassured him to that effect. But d'Annunzio continued to reply

that, although the text of the treaty implied that the boundary would be fixed to the east of Porto Baros, a note verbale assured the Jugoslavs that it was to be fixed in the west.

Signor de Nicola, President of the Chamber, had by Aug. 1 succeeded in bringing about a truce between the Socialist and Fascismo Deputies, and the Ministry of the Interior had put into effect certain effective measures outside Montecitorio, when suddenly a new organization made its appearance called the Arditi del Popolo, whose program is the defeat of Fascismo violence, just as the Fascismo program is the defeat of Socialist violence. This new anti-Fascisti Fascismo, which grew into being among violent anarchist and communist elements, sought to gain moral support from the public after the killing by the Fascisti of

one of the sons of the Hon. Lucy Beckett, daughter of the second Baron Grimthorpe, and the wounding of two others. The mother and sons were fired upon by mistake while proceeding in an automobile to Viterbo, contrary to all warning, on July 13. Both the Government and Fascismo organizations showed their horror of the deed and made every possible reparation, the offenders, to the number of five, giving themselves up to the police.

It seemed that the effect of the tragedy would be to modify overt acts on the part of the Fascisti, when the rise of the Arditi del Popolo, with its avowed purpose of putting into active effect the Third International, caused the Fascisti to realize that, in spite of accidents, mistakes and the killing of tourists, there was still work for them to do, unless the Government itself should take the Arditi del Popolo in hand.

## PORTUGAL'S NEW CHAMBER

[PERIOD ENDED AUG. 15, 1921]

**A**LTHOUGH the Republic of Portugal has only about the area of the State of Connecticut and a population equal to that of New York City, it was the middle of the month before the exact figures of the great national election of July 10 were known in Lisbon, so the celebration over the results and the welcome to Rear Admiral Charles F. Hughes, United States Navy, and his squadron became mingled.

The election constituted the new Chamber as follows:

Government Party.....	65
Democrats .....	57
Monarchists .....	5
Catholics .....	2
Other groups .....	5

Among prominent men not returned are Senhores Bernardino Machado, Domingues dos Santos and Paiva Gomes, respectively

Premier, Minister of Labor and Minister of the Colonies in the last Cabinet.

Senhor Barros Queiros, the present Premier, formed a Liberal Government after the revolutionary movement at the end of May. Parliament was dissolved, however, before the new Ministry had presented itself, on the ground that for two years it had failed to pass a budget or any important laws.

The new Chamber convened July 25. The Premier welcomed the presence of monarchists in Parliament, observing that a strong republic should also be tolerant; his program includes economy in administration, reorganization of public service, taxation reform, introduction of a general income tax, the conversion of the total internal debt, and the issue of a loan for the consolidation of the floating debt.

# POLITICAL DEVELOPMENTS IN SCANDINAVIA

*Reactions against machinations of Russian Communists are manifest in Norwegian and Swedish Parliamentary campaigns—Denmark's King makes a life-saving record on his visit to Greenland and other outlying dominions*

[PERIOD ENDED AUG. 15, 1921]

THE unearthing of the Bolshevist plot to take possession of Finland and the northernmost parts of the Scandinavian countries in order to turn these regions into a Soviet republic has had a powerful effect on the political situation in both Sweden and Norway. The excellent work of the Swedish and Norwegian police systems in balking this movement has put a quietus on the frantic cries of revolution in the ranks of labor and caused a reaction against the leaders who have attempted for the last few months to turn the labor parties to Bolshevism. This victory over the machinations of Moscow has an important bearing on the Parliamentary elections to be held this Autumn, and for which both countries are preparing.

The formation of a Soviet republic, to include Far Körelen, the Murman coast, Northern Finland, Northern Norway and Northern Sweden clear down to the Umea regions, was the plan disclosed by the captured documents. The promoter of the conspiracy was believed to be the exiled Hungarian communist Bela Kun, who was arrested at Lemberg on his arrival there from the Moscow communist congress by the Polish authorities. All Northern Europe was stirred by the unveiling of this plot and the arrest of its leaders, including the well-known Finnish communists Niemi, Jacobson-Heikkinen and Paulin. The scheme was recently traced by the Swedish authorities to the Finnish (Finlander) Bolshevist leader, Gyllings.

The direct implication of Lenin and Trotzky in the plot has not yet been demonstrated. The relations between Soviet Russia and the Scandinavian countries—especially Finland—are not very cordial. Tchitcherin recently sent a note to both the Swedish and Finnish Governments protesting against

their conference called for the neutralization of the Aland archipelago without notifying Russia, and insisting on being invited. Tchitcherin said that so long as the Alands remain simply a Finnish province the Soviet has no occasion to intervene, but that if the international position of the islands is changed in any way Russia must be heard.

NORWAY—As in most other countries there has been considerable unrest in Norway since the end of the war. All efforts, however, of a small minority of communist elements in the Norwegian Labor Party to develop a revolutionary spirit have utterly failed. Large numbers of the working classes left the old party and formed a new organization—the Social Democratic Party—openly opposed to the Soviet views and methods, and urging adherence to the old and lawful parliamentary methods in attempts to solve the social problem. The new party, undoubtedly in the majority, is steadily growing; it gained new strength through the detection of the Bolshevist plot. All precautions are being taken to prevent recurrence of similar political machinations, and the responsible political leaders of the country have no longer any fear that Bolshevism can make any serious headway among the inhabitants. This impression is confirmed by the decisive victory of the community in suppressing the great strike.

Parliamentary elections are held in Norway every third year and the next will come in October of this year. There are three main political parties—the Rights (Höire), the Lefts (Venstre) and the Social-Democrats (Socialisterne). The Rights constitute the conservative element in Norway's political life, working for the preservation of the present social order and the maintenance of private initiative in all branches of

business, though lending a willing ear to all timely reforms that do not endanger the finances of the Government. Its adherents may be characterized as moderate progressives, and are found chiefly in the cities, among all classes of urban inhabitants.

The Lefts constitute the liberal—in some respects even a radical—element in the nation's political life. They are mainly an agricultural party, supported by the rural districts and working for the advancement of agricultural demands and interests. The chief distinction between the Lefts and the Rights is found in the position of each regarding the scope of necessary social reforms, the financial policy of the Government, the language question and the problem of prohibition. In the two matters named first the Lefts are inclined to go further than the Rights. In the language question the Lefts are friendly to the movement for introducing as the single, lawful, written language the "New Norse" (*Landsmaal*), more or less artificially formed by the amalgamation of various rural dialects; whereas the Rights are guarding the interests of the present book-language (named *Riksmål* by Björnsterne Björnson), the origin of which is found in districts where the influence of the Danish tongue has been more marked. The Lefts are in favor of the present system of absolute prohibition, whereas the Rights have outlined a policy for public control, as in Sweden, the State Treasury to reap the benefits of the sale.

The Socialist party, as mentioned above, is divided into two groups. The Communist group adheres to the Third International and the noted Moscow theses; the Social-Democratic group (frequently referred to as the "Right-Socialists") aims at establishing a new order of society, but through parliamentary methods.

Besides these main political parties there are minor groups, such as the Liberal Lefts, collaborating with the Rights during later years; the Labor-Democrats, ranking in their four views somewhere between the Social-Democrats and the Lefts; and, finally, the Association of Agriculturists. Only recently has the latter been turned into a political organization. Its leading purpose is advancement of the farmer's interests, and its political ideas are generally believed to be not far from those of the Rights.

No single party obtained an absolute ma-

ajority at the elections in 1918. The 126 seats of the *Storthing* (Parliament) were divided as follows:

Lefts .....	51
Rights .....	40
Socialists .....	18
Liberal Lefts .....	10
Labor-Democrats .....	3
Association of Agriculturists.....	3
Independent .....	1

The new electoral method to be used this Fall will increase the number of seats in the *Storthing* from 126 to 150. The Socialist seats, however, will be reduced by the split creating the Social-Democratic Party.

When the *Storthing* elected in 1918 convened, a Government of the Lefts had been in power six years. As the Lefts still constituted the largest parliamentary group, the old Cabinet lasted until its overthrow in the Summer of 1920, when the other groups in the *Storthing* combined against it in the debate on an interior political question. Mr. Gunnar Knudsen, the "strong old man" of the Lefts, had to retire at the head of his Cabinet. The new Cabinet was formed of Rights and Liberal Lefts under the leadership of Mr. Otto B. Halvorsen.

Exactly one year later, this Cabinet has been overthrown by an alliance on a question of no political significance. Apparently, however, the Socialists gladly lent a helping hand to defeat the Halvorsen Cabinet because of the manner in which the Government handled the recent strike situation; also the Lefts seem to have grown more and more impatient with the rule of the conservative elements. Mr. Blehr of the Lefts, for many years prominent in parliamentary life, formed in a few days the present Cabinet, which consists exclusively of Lefts and has as its Foreign Minister the prominent specialist on international law, Dr. Arnold Raestad.

The present political issues are economic questions, especially those concerning commercial treaties with France and other wine-producing countries. The French treaty, which provides for unlimited importation of French wines and brandies up to 14 per cent. alcohol, is being eagerly discussed, particularly in the prohibition press, and the debate on it in the *Storthing* is awaited impatiently. The Lefts, as a prohibition party, will find it difficult to sanction heavy imports of liquor. Meanwhile,

new commercial treaties are being negotiated with Spain and Portugal, and the Government will have to use the utmost tact and sagacity in handling all these questions.

The most important social event of the month was the celebration of the silver wedding anniversary of King Haakon VII. and Queen Maud on July 22. The press was unanimous in its greetings to the King and Queen, who are very popular. In the morning, deputations from the Cabinet and Storting presented gifts. Later, Prime Minister Blehr and his wife, the President of the Storting, Gunnar Knudsen, and the President of the Shipping Society presented a gift from the nation of 500,000 kroner, with the request that the King and Queen themselves determine to what use the money should be put. Other gifts were made by the municipality of Christiania, by the British subjects in Norway, and by the Norwegian colony in London. King George and Queen Mary of Britain and Queen Alexandra also sent handsome gifts. Members of the royal household presented a painting of Crown Prince Olaf, the only child of the Norwegian sovereigns. Prince Olaf is admired as a viking type, in his fondness for athletics and outdoor sports. When he became of age on his eighteenth birthday, July 2, the King introduced him to the Cabinet Council, to participate in its proceedings, though without a vote.

Captain Roald Amundsen, in Seattle, received notification from Christiania, on July 19, that the Storting had voted him an additional 500,000 kroner to continue his quest for the North Pole, which was delayed last year when his power-schooner, the Maud, lost a propeller in the ice at Cape Serdze, Siberia.

DENMARK—The event of the Danish month was the visit of King Christian X. and Queen Alexandrine to their outlying dominions, the Faroe Islands, Iceland and Greenland, the Danish press teeming with descriptions of the distinctive festivities for the royal visitors which took place in each region. The women of Iceland presented to Queen Alexandrine, the first queen to visit their remote island, a handsome Icelandic national costume. After an uneventful journey from Reykjavik, Iceland, across Denmark Strait, the sunlight showed

the rocky west coast of Greenland against fantastically colored clouds, to the first royal eyes that ever beheld that country. Off Godthaab the vessel overtook a lone Eskimo in his kayak. As this was the first of his Greenland subjects he met, the King had the kayakman hoisted on board, and presented him with a rifle. The royal

(Bain News Service)

#### PRINCE OLAF OF NORWAY

*The Norwegian heir apparent has become very popular on account of his athletic prowess*

vessel—called the Island—reached Godthaab the night of July 9. In the firth, hemmed in with snow-clad mountains, a great fleet of kayaks and larger boats rowed out to greet the King; the natives in these boats included many women in the vari-colored costume characteristic of Greenland, with short trousers and high skin boots.

The next day the King and Queen were received on shore by Bishop Ostfeldt, who had come from Copenhagen for the occasion, a number of local clergymen and officials, and crowds of Eskimos. Mr. Rasmussen, the Arctic explorer, also was present. After church service in the morning, the people made festival, the Greenland huntsman, Iver Mathaeussen, interpreting the words of their Majesties to the gathering. The King was presented with a kayak and the Queen with a splendid eiderskin blanket. The gifts bestowed by the King were very practical, including many rifles. Later the party left for Northern Greenland, where

the sovereigns visited Mr. Porsild's farthest north station for scientific research. On the return voyage the expedition rescued the crew and passengers of a wrecked steamer, the *Bele*, which had on board two Danish Bishops—Ostenfeld and Ludwigs—and a number of scientific men. Part of the cargo was recoverable, but some of the equipment for Knud Rasmussen's new Arctic expedition was lost. Shortly after leaving the *Bele*, the King's ship sighted Rasmussen's vessel, *Sökongen*, and took the explorer and his wife aboard.

SWEDEN—At the September elections of members of the Second Chamber of the Riksdag, Swedish women will vote under the new electoral law, which then becomes operative. The extension of the franchise to women over 25 years old, and to all persons irrespective of former tax payment restrictions, is expected to increase the num-

ber of voters by 165 per cent. \* \* \* The recent success of the Community Aid organization in Norway and Denmark in protecting the public in labor disputes has induced the formation of a like organization in Sweden, which has received considerable support from all classes.

Sweden's quarantine restrictions on trade with the Soviet, necessitated by the insanitary conditions in Petrograd, have caused the Soviet, in a huff, to order its commercial delegates in Stockholm to refuse the transport of goods on any Swedish ship to or from Russia. Swedish shipping circles are not taking the action seriously. More important is the fact that German competition is causing a trade and industrial slump, which is felt by both skilled and unskilled workers all over Sweden. The difference in standards of living and wage costs between the two countries is severely felt in Swedish plants.

## FAILURE OF THE BALTIC LEAGUE

*Helsingfors Conference ends without results, after an open threat by Moscow  
—Repatriation of Lettish Red Guard soldiers from Russia*

THE relations of the small Baltic States bordering on the vast and demoralized territory of Soviet Russia are very much like those of cat and mouse. Conscious of their peril of being swallowed up, these States have long been trying to effect a union, not merely economic but political. Month after month the negotiations have dragged on and always, for some mysterious reason, have ended fruitlessly. Fear of incurring the resentment of Bolshevik Russia has undoubtedly been one of the main causes for these failures, of which the Helsingfors Conference, which ended without result on July 28, is the most recent example. Preliminary economic discussions were held at Riga in the middle of July, which resulted in the signing of a full alliance between Esthonia and Latvia and a close economic accord between Latvia and Lithuania. This, however, was but part of an ambitious scheme for the formation of a Baltic League, closely compacted, aimed to constitute a solid defensive and offensive blow—an aspiration which the

Baltic States have cherished for two years.

The Helsingfors Conference opened on July 25, already under the serious handicap of Soviet displeasure. The Moscow Government went so far as to send duplicate notes to Reval and Riga, announcing that it would regard the projected alliance as a *casus belli*. The situation was discussed in detail by the assembled delegates, consisting of M. Holsti, the Finnish Foreign Minister, M. Meierowicz, now the Lettish Premier, M. Piip, Foreign Minister of Esthonia, and M. Dombiski, Vice Minister for Foreign Affairs for Poland. The deliberations were kept secret. On July 28 the conference adjourned without forming the projected alliance or arranging for a military convention. An official announcement was issued, stating that another conference would be held later in Warsaw. Behind this new failure towered the ominous shadow of Russia. [See also page 1005.]

FINLAND—Finland has been the sponsor and one of the main movers of Baltic

union. Her own relations with Soviet Russia have been by no means settled by the Finnish-Russian peace treaty, and she maintains close guard over her frontier. All people who cross the Finnish border from Russia are closely examined and subjected to quarantine at Terijoki, the former brilliant watering place, to which so many of St. Petersburg's inhabitants took flight during the heat of Summer. Peter the Great's former capital is distant only an hour and a half. Up to the rickety little bridge across the Systerback puff the dilapidated Russian trains which bring refugees from Russia. With contemptuous smiles, the Finnish engineers pull them across.

Down through the straggling wooden village the refugees are then taken to the quarantine station among the fir trees, where they are examined, fumigated, and finally housed in the neighboring villas, which form a sort of hospital colony. This quarantine station, established in 1918, and originally planned to hold 400 people, has now been expanded to take care of 800. All who come out of Russia, many of them in a filthy condition, have to spend fourteen days there, the only exception being in the case of official delegates, who are carefully chosen by the Moscow Government, and who invariably receive a clean bill of health. A new station has now been established at Kellomaki, a few miles to the east, to receive the Finnish citizens who are being returned by Russia under the terms of the Finnish-Russian treaty.

LATVIA—Like the Finns, the Letts are receiving back across the Russian border the hordes of Lettish war prisoners returned according to the Lett-Russian treaty. Day after day these repatriated Letts, hungry, ragged and miserable, have been pouring over the frontier. Many are undesirable, many not Letts at all, but Jews; some are Russians who had opted for Lettish nationality. The only Letts sent back who received a hearty welcome were those who formerly served as guards in the Red Army.

The repatriation of these former Bolshevik soldiers has a truly dramatic quality. Latvia has long suffered under the charge that the bloody work of the Bolshevik leaders was distributed between Chinese and

Lettish mercenaries. After the fall of the Lettish capital, Riga, many of these Lettish soldiers, driven by hunger and despair, had joined the Red Army. Some 20,000 of them fell on different fronts. After the Bolsheviks evacuated Riga, nearly 4,000 Letts made terms with the legitimate Government, and remained in their home land. About 2,500 remained in Trotzky's service. After these Red Lettish soldiers began to witness the repatriation of their compatriots from Russia, they also desired to return, but their appeals to the Moscow Government met with a cold response, as the Bolshevik leaders were by no means anxious to lose these sturdy fighters from their army. Furthermore, the Lettish Government itself, knowing that these Letts had been Communists, was by no means anxious to have them back.

Moved finally by their earnest pleas and by their insistent declarations that they had abjured Bolshevism, the Riga Government decided to grant their petition. After a long period of anxious waiting they finally received their passports and were transported to Moscow; there they demanded and received clothing decent enough to go home in. These former Red Guards had so turned against the Bolsheviks that when propaganda agents went to the station from which they were departing and tried to preach to them the pure communist doctrine, the Letts hissed them and gave them rough treatment. It was with demonstrations of the greatest joy that these exiles got back on Lettish soil.

The policy of the new Lettish Cabinet, headed by M. Meierowics, has been to work for friendly relations with the Entente, with Germany and Russia, and with all neighboring States. A concordat with the Vatican was arranged in July. M. Meierowics admitted that this policy was difficult of realization in the case of Russia, but declared that his Government was doing all it could to improve at least the economic relations between the two countries. The army was being reduced as far as consistent with the national security, the budget was being cut, and the finances, according to M. Kalnin, Finance Minister under the new Government, were improving progressively with industrial conditions. [For the Vilna controversy see Poland.]

# POLAND'S TROUBLES WITH RUSSIA

*War reopened on the Lithuanian and White Russian border—Protest of the Ukraine National Committee against Petlura's activities on Polish soil—Moscow's drastic demands*

[PERIOD ENDED AUG. 15, 1921]

THE new Republic of Poland, according to official surveys of the economic situation made by M. Witos, the Polish Premier, is making a remarkable record in its efforts to overcome the many handicaps caused by the war, the German occupation, and the Russian Bolshevik invasion. The Government is doing everything in its power to help the farmer and producer, and to develop Polish resources. Trade is increasing in ratio with the increase of Poland's commercial and political contacts with the Western world. The depreciation of the Polish mark still remains a cause for anxiety to the Polish Government, but the Diet and the Minister of Finance are giving constant attention to this problem. The exchange value of Polish currency, it is expected, will automatically become regulated with the steady growth of favorable trade conditions.

The dispute with Lithuania over the Vilna area has become more and more embittered since the failure of the joint conference at Brussels under the auspices of the League of Nations several months ago. When it became apparent that the two parties could not agree, M. Hymans, as representative of the League Council, proposed a compromise whereby the Vilna district should become a canton in a Lithuanian Federation on the Swiss pattern, this federation, however, to be closely associated with the Polish Republic by the formation of a joint council and the conclusion of a defensive military alliance. This scheme met with scant enthusiasm from both parties, the Lithuanians especially showing opposition. The League Council, however, still trying to bring about a settlement, sent the Warsaw Government a request to regulate the position of the irregular forces of General Zeligowski, the Polish General who had cut loose from the Polish Army, and, following the example of d'Annunzio in Fiume, had occupied the Vilna territory

by force. Meanwhile, the Council sent an invitation to both Governments to meet again in conference at Brussels on July 25. The invitation was accepted by Poland; the Kovno Government, however, declined in diplomatic language to attend, thus protracting still further the effort to bring about peace between the Vilna Poles and the Kovno Lithuanians and White Russians.

The tense situation thus left outstanding became worse with the resignation of the Polish Deputies from the Kovno Diet as the result of their receiving rough treatment at the hands of their fellow-Deputies for having appealed to the League of Nations to secure better treatment for the Polish minority in Lithuania. The Lithuanians, on their part, lived in constant apprehension of a new raid by Zeligowski or some other anti-Lithuanian General. These smoldering resentments led to a new conflict in July, when Lithuanian and White Russian elements, encouraged, it was said, by the failure of Korfanty's Polish insurrection in the plebiscite area of Upper Silesia, reopened hostilities in the Vilna sector. The Ruthenian mission in Berlin declared that the entire peasant population, incensed by the arbitrary acts of Zeligowski, was in revolt.

Poland also found herself involved in diplomatic troubles with her southeastern neighbor, the Ukraine, over the presence of the former Ukrainian anti-Bolshevik General, Petlura, with whom Poland had allied herself in the ill-starred campaign against the Soviets in 1920, which almost lost Poland her capital to the invading Muscovite armies. M. Marcotun, President of the National Ukrainian Committee, which assumes to represent the real Government of the Ukraine, despite the claims of the Soviet régime established there, on July 14 sent to the Polish Government and the Entente powers a bitter protest against the alleged preparations of Petlura on Polish soil to invade the Ukraine anew in the coming Fall. The Ukrainian

protest specified exactly the locations where Petlura's divisions were billeted, and asserted that the Polish Government was supporting them with subsidies and tolerating their impressing of Ukrainian elements now domiciled in these Polish areas into their military organization.

Not only the Ukrainians, but the Soviet leaders, it appeared, were incensed at Poland's toleration of Petlura. The Soviet grievances, however, were by no means confined to this. The Moscow leaders in July addressed to the Warsaw Government a note on the whole subject of anti-Bolshevist organizations in Poland, which was said to be one of the most emphatic diplomatic expressions ever sent by one Government to another in time of peace. One Warsaw newspaper compared it with the Austrian ultimatum to Serbia, which started the World War. In this note the Soviet Government, through M. Tchitcherin, the Bolshevik Foreign Minister, accused Poland of encouraging not only Petlura, but also Boris Savinkov—an anti-Bolshevist plotter who has been for some time established in Warsaw—and others to foment insurrec-

tions in Russia. Various other charges were made tending to show that Poland had violated the letter and the spirit of the Riga Peace Treaty. Tchitcherin demanded the expulsion of all anti-Bolshevist organizations still on Polish soil on the demand of a mixed commission, whose business it would be to identify all offenders—Poles or otherwise. In the case of Polish officials punishment was demanded.

Poland answered all these charges by a detailed attempt at refutation, and with counter-charges against Russia. She declared that the Bolshevik leaders were training Polish Communist agitators in Russia, and were encouraging Ruthenian and White Russian attacks upon the Polish border. The Polish Foreign Minister, M. Skirmunt, based his charges on official documents, and concluded by declaring that so far as anti-Bolshevist organizations in Polish territory were concerned, Poland insisted on her right to grant refuge to as many persons of Russian origin as she saw fit. At latest accounts the two Governments were seeking to effect an understanding.

## THE GREEK TRIUMPH IN TURKEY

*How Constantine's armies, despite all allied warnings, recovered from their former defeats and broke the power of the forces of Kemal—Constantinople the prize at stake—Allies now declare neutrality*

[PERIOD ENDED AUG. 15, 1921]

CONTRARY to the solemn admonitions of the Chancelleries of England, France and Italy, delivered to Greece at the London Near East Conference in March; contrary to the subsequent warnings of the French military experts and the apparent materialization of these warnings in April, Greece has since then, on the battlefield between July 11 and Aug. 1, convincingly shown that she is able to take care of herself and has made definite progress toward executing the Treaty of Sèvres and making Asia Minor safe for its non-Moslem population and for the civilization of the West.

Even had the armies of the enigmatical

Constantine been defeated, the attitude of the Entente Chancelleries would not have been particularly praiseworthy; but with a victorious Greece they can with difficulty preserve their face before an intelligent world. Their last effort to do so had much the appearance of making a virtue of necessity. At Paris, on Aug. 10, the Supreme Council made a scrap of paper of the Sèvres Treaty, declared that Greece and the Turkish Nationalists were engaged in a private war, and proclaimed the neutrality of England, France, Italy, and even of Japan. The British Prime Minister took occasion to observe that this neutrality would be of about as much use to the An-

gora Government as that of the United States had been to the Berlin Government before this country entered the war. The two resolutions adopted by the Supreme Council, which were intended to establish the disinterested status of the Allies, read as follows:

1. The allied Governments decide to maintain an attitude of strict neutrality in the Greco-Turkish war. They are agreed not to intervene in the conflict with assistance of any kind, either by supplying troops, or arms, or credit. But this decision does not affect the liberty of private trade under existing international law.

2. While reserving the possibility of offering their mediation, the allied Governments consider the hour has not arrived when an operation of this kind can yield any results.

The steps which led toward this extraordinary proclamation are perfectly obvious. Being unable, on account of the revolt of the Turkish Nationalists, to execute the Sèvres Treaty themselves, and unwilling that the Greece of Constantine should do so, the Allies at the London Conference offered a modification of the treaty which Greece declined to accept; after the military check to Greece in April, they offered mediation on her behalf; again Greece declined, and again she sought a decision by force of arms, this time to be crowned with success. Faced with this triumph the Allies felt constrained to declare neutrality.

With curious feelings they must now contemplate the text of the Greek note politely declining their mediation on June 25. A salient passage of this note, as drafted by M. Baltazzi, the Greek Foreign Minister, is given herewith:

By defending the traditional aspirations of Hellenism, dating back many centuries, and the rights recognized as her own by the Treaty of Sèvres, in compensation of her sacrifices during the great war, Greece has the conviction that she is defending at the same time the rights of the civilized world in the Eastern Mediterranean and the Straits, and, fully alive to the importance of her two-fold mission, she has, by an extreme effort of all her moral and physical resources, reached the point of being able to impose the decisions taken in common accord with the Allies which originally induced her to proceed to the military occupation of Asia Minor, and which, as regards the sacrifices imposed on Greece, are a direct emanation of the solidarity created by the alliance of which the treaty was a solemn expression.

This conception of her duty led Greece to

make all the sacrifices demanded of her until the conclusion of peace, and to consent to undertake with her own resources after peace was concluded a fresh war against the Turks, who are endeavoring, by a process diametrically opposed to good faith and to international obligations, to evade the application of the treaty.

By devoting herself whole-heartedly and with ardent faith to the necessary preparations for action which the military requirements dictated, Greece is faced with a situation in which military considerations alone must guide her conduct and her decisions. For these imperative reasons, and notwithstanding its ardent desire to conform to the counsels of its Allies, the Royal Greek Government is unable to accede to the proposals.

Starting from a line which was approximately that from which General Pápoulas started last March, General Polymenakos began his offensive. Unlike the strategy of his predecessor, his was a thoroughly synchronized movement. Simultaneously three movements were made: the first along the line Pazerkeuy-Ismid; the second in the direction of Yenishahr, thirty odd miles east of Brusa; the third in the direction of Ainegeul, twenty-four miles south-east of Brusa. When these movements had sufficiently developed, a concentrated attack was made on Kutahia, which broke the enemy's centre along the Bagdad railway line, Eskishehr-Afium Karahissar, and opened the way to these objectives.

Between July 11 and Aug. 1 the Greeks had recaptured all the old objectives taken in March and relinquished in April, and had gone beyond them. In the North they were threatening the Ismid Peninsula, in the centre they had preceded fifty miles east from Eskishehr, over the railway in the direction of Angora, with the Kemalists attempting to block the way at Sivrihissar, fifteen miles beyond; in the South they were controlling the Bagdad line from Afium to the foothills of the Taurus.

In that time, even with due attention paid to the qualifying communiqués from Angora, the Turks lost between 11,000 and 15,000 in killed and wounded and between 6,000 and 8,000 in prisoners; the Greek loss was 7,500 in killed and wounded and 2,000 in prisoners. In the Greek dispatches the number of Turkish desertions is placed at 10,000; the Angora dispatches admit an equal number of wounded. The contrast tells its own story.

The boast of Athens, however, that the entire force of Mustapha Kemal had been reduced to 50,000 men cannot be confirmed even by the Greek figures denoting the enemy's casualties. It may be true, however, if the 50,000 refers to those troops now in formation and under the control of the Angora headquarters staff, without taking into account the many undisciplined detachments wandering about the country south of Angora.

We are told that Constantine and cold steel, for both of which the Turks have a horror, did the business. Remembering Constantine at Saloniki in November, 1912, it is easy to believe this. But what about the Greek morale, which suffered such a shock last April? One of the many proclamations issued by the Greek commanders on the eve of the offensive, in this instance emanating from General Metaxas, the commander of one of the attacking corps, indicates that both the traditional hatred of the Turks and the inspiration of Constantine's personality were invoked to bring about a revival:

Officers and Soldiers: The great and sacred

moment of combat has arrived. We shall begin the offensive. You know well the enemy who is facing you. It is the one over whom you have been victorious so often at Sarantaporon, Jannitza, Manolissa, Bizani, Sardis, Philadelphia, Axar, Baloukesser, Brusa and Adrianople. The decisive blow must now be struck, and be assured that in this new combat all Greeks follow you with gratitude in their hearts and tears in their eyes. Our crowned and glorious King, chief of our glorious army, is leading you. His eagle regard is fixed upon you. Our country from one end to the other follows with sacred, palpitating emotions the exploits of her sons. Forward! Be generous to the vanquished, gentle and kind to the unarmed inhabitants; give them an evidence of Greek humanity that they may be grateful. Future generations will celebrate your courage; history will speak of your strength. Forward, with the help of God, under the command of our glorious King; onward to where your country's voice calls you! I ask you all to cheer for our country, for our King, and for our valiant army.

Under such inspiring words the Greeks went "again to the battle" and produced almost another Vittorio Veneto from what had been almost another Caporetto. The obstacles against achieving a complete Vit-

SCENE OF THE GREEK ARMY'S SUCCESSES IN ASIA MINOR

The strategy of General Polymenakos on July 12 was different from that of General Papoulas on March 24, although their fronts were practically identical—from the Mumanich Mountains south to Ushak and thence southwest to Alashehr. Papoulas allowed his left wing to advance and lose contact with his centre; a costly retreat ensued. Polymenakos synchronized his advance; a decisive victory followed.

torio Veneto, however, are obvious: The field opened to the Turkish retreat is almost infinite; the Greek transportation service is finite. Besides this, the further the Greeks pursue their initial victory, the more "difficult" will become the Allies diplomatically—but the further the Turks retreat, the more amenable will Mustapha Kemal find the allied leaders.

Behind the words of both the Greeks and the Nationalist Turks, however, there is one concealed stake for which both are fighting, and the Allies are exerting every artifice known to diplomacy to keep it from their possession. That stake is Constantinople. In the oyster of the Near East it is the pearl, and the shell is Asia Minor. Neither of the two peoples who are shedding their blood at this moment will be content to receive the shell instead of the pearl. Angora has already proclaimed this fact; Athens is now beginning to hint at it.

There was consternation in Angora when the Greek successes were confirmed; there was surprise in Paris; there was ill-concealed satisfaction in London; in Rome the papers reviewed the relations between Italy and Greece to show how common interests bound them to reciprocal favors in the Levant. And while the heads of these Governments continued to watch events with folded arms and ironical visage, the National Bank of Athens, in which London bankers have large interests, loaned the Government of Constantine 150,000,000 gold drachmas, and a formidable memorial, signed by some of the big men of England, was sent to the Greek Minister at London. The memorialists state:

We have been indisputably informed that as soon as armed pressure is removed from the Turks, it is their deliberate intention to exterminate every Armenian and Christian—man, woman and child. We find with amazement that statesmen representing the so-called Christian powers view this tragic ending of a historic Christian people as "inevitable." \* \* \*

The Greek armies offer the one hope of deliverance for the Armenians and the other Christian peoples, which with shameless treachery the so-called Christian powers are preparing to hand over again to the Turk. We have observed with hot indignation the attempts of the allied powers to intervene for the purpose of checking the advance of the Greek hosts of liberation. \* \* \*

We therefore beg to assure you, and through you your fellow-countrymen, that in your purpose of liberation you have our warmest moral support. We profoundly deplore the apparent readiness of the British Government to sacrifice to lower political expediencies in India and elsewhere the highest interests of humanity and religion. We put on record our opinion that in this respect the British Government does not represent the vast majority of the British people.

The Greek Minister replied to this as follows:

The Greeks went to Asia Minor under a mandate from the great powers to enforce, if necessary, respect for an international pledge to which the great powers had set their signatures, and which was subscribed also by the Greeks and Turks. The object of the pledge was to liberate forever non-Moslem communities under the rule of the Turk. That no other guarantee of liberation for these peoples could be secured than that of eradication of all Turkish dominion over, or administration of, the territories inhabited by these populations, is manifest from the long history of cruel oppression of every race which has come under the yoke of the Turks ever since that people left their Asiatic birthplace to impose the law of the sword.

But before the decisive end of the Turko-Greek conflict there will always be displayed, in more or less materialistic form, the bogey of Bolshevism. Angora has constantly informed the Greeks through propaganda that this danger existed, and has just as constantly told the Allies that it did not exist. So far the Grand Parliament at Angora has merely ratified the treaties with Moscow which refer to the eastern frontier of Turkey, and various dispatches have made it clear that the Commissioners of Kemal are having a hard time with Lenin, whose friendship for the Turks has by no means been convincingly demonstrated. All rumors that Russia is sending several army divisions under the former Czarist General Brussilov to aid the Turks bear their own contradiction on their face, in the amazing ignorance that they display of all geographical considerations. There is, furthermore, good evidence now existing that this gallant conqueror of the Austrians from Pinsk to the Rumanian frontier in 1916 died from a Bolshevik bullet wound—followed by a Bolshevik operation—in a Moscow hospital in December, 1918.

# FRANCE'S PLANS FOR SYRIA

[PERIOD ENDED AUG. 15, 1921]

THE French High Commissioner for Syria, General Gouraud, made an important declaration at Damascus in regard to the administration of that mandate. The territory will be divided into six autonomous districts, each with different Governments organized in accordance with the local exigencies of race, language, industry, and customs, all without customs frontiers, and, in all of them, the Syrian pound of 100 piastres of 20 French centimes each, would take the place of the Turkish and Egyptian pounds, as respectively used or introduced during the occupation of the territory by the Egyptian Expeditionary Force. Only in the military area in the northeast would the French exercise full colonial control.

The High Commissioner spoke of the modified terms of the Treaty of Sèvres reached at the London Near East Conference last March as accomplished facts, declaring that France would ignore the faithlessness of Turkey, but that if the Nationalists at Angora refused to keep their pledges, France would then be prepared to resume hostilities. Making no

reference to the Turko-Grecian conflict, he continued:

The hesitation of France in carrying out her good intentions toward Syria was caused by reasons beyond her control. The first step toward unity and national independence will be the creation of different independent federal States. Each of these, while satisfying the special wishes and requirements of its own people in internal administration, will be linked to other States, on the same principle as prevails in Switzerland and the United States of America.

The success of the principle there augurs well for its introduction into Syria. The organization of the respective States may differ, but the basis of government will be a Representative Council, whose duties and powers will develop from day to day. As regards the State of Syria, including Damascus, Hama, Homs, Hauran, a Representative Council will replace the Vilayet Council. The members will, for the time being, be nominated by the Government, pending a general census, when the people will elect representatives. Local representation will also be given, the districts forming the nucleus for training the people in self-government. The same organization will be established in the State of Aleppo. Each council will elect five members to meet alternately at Damascus and Aleppo.

# ENGLAND DESPAIRS OF PERSIA

[PERIOD ENDED AUG. 15, 1921]

JOHN L. CALDWELL, for seven years American Minister to Persia until he resigned last May, arrived in New York on Aug. 6 and confirmed the story of the Teheran coup d'état in February which repudiated the Anglo-Persian Treaty and opened the way to the treaty with Soviet Russia. The 5,000 Cossacks who brought about the coup, he believes, are in Teheran for good, and whatever relations the Persian Government may establish with Moscow, their presence will continue to be a protection against Persia going Bolshevik, which, indeed, would be against all Persian culture and religion. He added that "the newly appointed Minister to the United States, Mirza Hussein Khan, is 36 years old and an Oxford graduate. He speaks English perfectly, and is one of the brightest men in Persia."

Mr. Caldwell's opinion of Persia's future, freed from the Anglo-Persian Treaty and in cordial relations with Moscow, is more optimistic than that expressed by the British Foreign Minister, Marquis Curzon, in the House of Lords on July 26, when he declared that "the Persian Government has deliberately rejected the chance of recovering its fortunes with British aid \* \* \* it has fallen back on the game of playing off one foreign country against another, and now seems not unwilling to accept the caresses of the Soviet Government—caresses which generally end in strangling those to whom they are applied."

The Marquis, therefore, viewed the situation "with a feeling of disappointment and almost of despair," and had to confess that all his own efforts and those of the British Government had been "largely in vain."

Nor did he see any encouragement to persevere. But he warned Persia, as an old friend, that the chief sufferer would be Persia herself. Finally he declared that "all the forces of corruption, selfishness and intrigue" were being arrayed against Mr. Armitage Smith, who was trying to reorganize the Persian finances.

There is a striking resemblance between the experiences of this Mr. Smith and those

of the American, W. Morgan Shuster, who actually succeeded, as Treasurer General, in placing Persian finances upon a firm basis in 1911, with the important difference that the forces arrayed against the British financier are chiefly native, while those which succeeded in ousting the American were from abroad—from Downing Street, acting on behalf of St. Petersburg.

## BEGINNING LOUVAIN'S NEW LIBRARY

THE cornerstone of the new library of the University of Louvain, planned as a gift of the American people to the people of Belgium, was laid with elaborate ceremony on July 28. King Albert, Cardinal Mercier, former President Poincaré of France and Premier Carton de Wiart of Belgium delivered addresses, and a letter was read from President Harding. Cardinal Mercier blessed the site and Nicholas Murray Butler of New York laid the cornerstone. The building is to cost \$1,000,000 and will be completed in 1925. Across the entire front are to be sunk great letters

reading "Furore Teutonica Diruta, Dono Americano Restituta"—Destroyed by Teutonic Fury, Restored by America's Gift. The new library is not being erected on the site of the one burned by the Germans, but on the Place du Peuple, the highest elevation of the city. It will be one of the most beautiful structures of the kind in the world, and will constitute another of the many new ties which the war has created between Belgium and the United States. The design is by Whitney Warren, the American architect.

DESIGN FOR THE BEAUTIFUL LIBRARY AT LOUVAIN, BELGIUM, TO BE BUILT BY AMERICANS IN PLACE OF THE ONE DESTROYED BY THE GERMANS. WARREN & WETMORE, ARCHITECTS

# HUNGARY, AUSTRIA, CZECHOSLOVAKIA

*Sensational indictment of Count Karolyi for alleged treasonable relations with France and Italy—Austria's new appeal for financial assistance—Foreshadowing of an economic rapprochement between the Czechs and Hungarians*

**H**UNGARY continues to be agitated by political storms. The sensational revelations by Prince Windischgraetz regarding revolutionary propaganda by Count Karolyi, and his alleged treasonable relations with France during the war, threw the Hungarian Parliament into a turmoil. In 1908, Karolyi and his adherents communicated with both France and Italy, which action, according to Prince Windischgraetz, prevented an honorable peace with the Entente powers, and led to the Piave disaster, as Count Karolyi had revealed military plans to the enemy powers. The Prince substantiated his accusations by reading the official records of a session of the French Senate, in which one Senator read letters written by Count Karolyi to Government authorities regarding favorable action to French interests. The Prince also asserted that the French Government used Count Karolyi only as a spy, and that it had no confidence in him because of his radical tendencies and alleged relations with the Soviet Government.

The speech caused enormous indignation in the Assembly, and the Premier called upon Prince Windischgraetz to submit his evidence to the courts. The Prince did so, and an indictment is now pending.

Another sensation was caused by Finance Minister Hegedüs. His defense against repeated attacks for his alleged failure to restore financial stability was that the Hungarian crown had trebled in value in consequence of his financial policy. Then destructive elements, who care little for the prosperity of the country, caused the crown to drop on the Zürich Exchange by purposely spreading false and exaggerated rumors of a new coup by King Charles to be attempted on Aug. 20, and also by publishing the falsehood that the Allies had subjected Hungary to a nine hundred billion reparation levy. This naturally caused depreciation of the Hungarian crown, as the na-

tional wealth is estimated at but six hundred billions. Since then the crown has again rallied and gained several points in a few days.

The cession of the three western counties to Austria has become an imminent problem. The Hungarian Government was notified by the Allied Council that evacuation of the military must begin on Aug. 10 and be concluded by Aug. 27. In order to prevent clashes between contending factions, Austria was ordered at the same time to keep soldiers away from the vicinity of the border. In the same note the Allies promised immediate restoration to Hungary of the coal mines around the city of Pecs, now under Yugoslav control.

The decision of the Danube commission under Arbitrator W. D. Hines and the allotment of shipping facilities represent a total loss of 1,400,000 tons in barges and 100,000 horsepower in tugs. Although exacting further sacrifices of Hungary, this caused little surprise. It is eagerly expected that navigation will begin on a larger scale. Hungary will be in a position to export in all directions, especially to the Balkans, largely offsetting the heavy loss suffered in tonnage.

Ratification of the peace treaty with Hungary was exchanged with the French Foreign Office on July 26. Praznovsky, the Hungarian Minister to France, promised that Hungary would execute the treaty in good faith, and hoped that the bordering States would also show their good-will and protect the rights of racial minorities.

Ex-Premier Friedrich, who was criminally prosecuted for his alleged participation in the plot that led to the murder of Count Tisza, was allowed to go free. The State's attorney almost apologized for his long detention and declared that the charges had proved wholly unfounded. Friedrich, upon his release, received great ovations. He publicly declared that he would in time ex-

pose the interests behind the charges preferred against him. He is strongly anti-Horthy and is expected to wage bitter war against the present Government.

New clues were discovered to the smuggling of highly colored news to the Vienna expatriates, tending to discredit whatever had happened in Hungary since the elimination of the Bolsheviki. Several contributors to the daily press and writers with good names were arrested.

Disarmament of Hungary has been begun since the arrival in the country of an allied committee in the latter part of July. There are Italian, French, English and Japanese experts on this committee.

An agreement had been reached between the Hungarian Government and the Soviet, whereby all Hungarian war prisoners will be released by the end of the year. In exchange the Hungarian Government will permit 400 communists, sentenced to imprisonment, to proceed to Russia.

AUSTRIA—Austria has appealed to the allied Supreme Council, which met in Paris on Aug. 8, for immediate financial aid on the ground that the international scheme for her rehabilitation has thus far failed to function. Dr. Maximilian Bach, Austrian Minister to London, stated that his nation faces a critical situation owing to the failure to obtain loans. This, he said, was due to the American policy of granting no further credits to Europe unless authorized by Congress. He added:

When in May the Financial Commission of the League of Nations worked out the plan for the financial reconstruction of Austria, it confidently expected that an immediate loan would be given to Austria in advance. No bankers are now willing to make any advances until definite word is heard from America.

Austria seems to have been informed that the United States withheld its consent to a postponement of the paying of Austria's debts for twenty years. In consequence the value of the Austrian crown again decreased, and now 1,000 crowns are the equivalent of one American dollar. A committee of seven from the Chamber of Commerce at Washington, headed by President Defrees, arrived in Vienna July 22, to gather economic and financial information. They were received by President Hainisch.

The desire to incorporate three counties

of West Hungary into Austria is agitating Austrian political circles. It is held by many, including former Minister of Foreign Affairs Count Czernin, that despite the edict by the allied Supreme Council, the matter should be settled in a friendly manner with Hungary and some concessions made to the latter State in order to avoid an eternally troublesome problem between the two countries.

CZECHOSLOVAKIA—Czechoslovakia desires to maintain the equilibrium of Central Europe if her interests are not in conflict with any settlement that may be reached, especially in her relations to Hungary. The frequent parleys at Marienbad between Dr. Benesh and Count Bánffy, Foreign Ministers of Czechoslovakia and Hungary, respectively, in regard to a commercial treaty between the two countries are promising to bear fruit.

This indicates a rapprochement, both of an economic and political nature, between the two countries. This is so much more significant because hitherto, on both sides, stiffness was manifest in their dealings and unwillingness to concede anything because of the enmity that ensued upon the division of the territory of Hungary. Both Foreign Ministers now speak in a tone of friendliness and point out that the two countries are economically interdependent and that politics should be forgotten when it comes to the great question, to live or not to live.

In a speech Dr. Benesh declared:

History teaches us that we and the Magyars cannot live in permanent opposition and hostility to each other. Our task for the future is a simple one, namely, we must as speedily as possible resume our interrupted connections with Hungary regarding means of communication, railway, post, telegraph, telephone. We must without delay arrive at an agreement on the question of the Danube and transport by water. We must come to an agreement regarding the supply of various articles indispensable for us and for Hungary. There is really no reason, after the ratification of the Peace Treaty, why we should not commence work on these questions. People are always talking of the consolidation of Central Europe and of the restoration of normal conditions of economic life. This is the only way which leads to the goal.

Count Bánffy had spoken along similar lines in the clubrooms of the Christian National bloc, upon his temporary return from

Marienbad, emphasizing that, however painful the mutilation of Hungary might feel, economic reconstruction must not be kept in abeyance for political reasons.

The Czechs seem to value highly an economic reconciliation with Hungary, as shown in the speeches of leading politicians, such as Tusar, President of the Social-Democrats and now Minister to Germany, and Smeral, somewhat more radical in his socialism.

Some of the members of the Nationalist Party, supporting Czech supremacy and disinclined to listen to any arguments on the part of the Slovaks to gain autonomous rights, left the party and aligned themselves with the People's Party, at Trencsén. This ends the factional war between the Túróc-Szt-Márton and Rózsahely Slovaks. From the viewpoint of the Slovak autonomists a

decisive point was thus gained, and the Nationalistic paper *Robotnicke Noviny* satirically remarks that the two factions were drawn together because of the general depression and their dislike for the Czechs.

The Nationalist-Socialists have presented a bill in the Prague Assembly to make Hapsburg propaganda a crime. According to its provisions, any Hapsburg apprehended on Czechoslovak territory will be criminally proceeded against, and, in case of repetition, will be sentenced to death.

The American Relief Administration announced on Aug. 5 that the feeding of children conducted for two years would be discontinued within 60 days. The Hoover organization on its withdrawal will leave the work to the Czech Club Welfare Commission, organized by the American Relief Administration.

## LEAGUE OF NATIONS TO DECIDE THE SILESIAN TANGLE

IRRECONCILABLE differences of view between the British and French Premiers as to what should be done with Upper Silesia led to a decision of non-possimus at the meeting of the Interallied Supreme Council, which opened in Paris on Aug. 8, 1921, and to the referring of the whole controversy to the Council of the League of Nations.

This deadlock and passing of responsibility to the League, it was realized by all the Premiers, might have serious consequences in view of the tenseness of the situation in Upper Silesia, where the French apprehended a new attack by the Germans, under General Hofer, on the still menacing Poles. The French Government on July 17 had demanded of Germany that she disarm all the German bands on the border, whose demobilization it declared to be mere camouflage, and that she consent to the transportation across Germany of French reinforcements. Germany in reply insisted that these demands should be made, not by France alone, but by all the Allies collectively.

A vigorous and at times heated exchange of notes between France and Great Britain finally culminated in a joint note demanding

Germany's consent to the transportation of reinforcements in case the allied Governments found it necessary to send additional forces.

But though Lloyd George, who was opposed to the French desire for reinforcements, had yielded on this, he seized the opportunity to insist on an interallied meeting, which France, despite repeated requests, had persistently avoided, to reach a final settlement of this complex and dangerous problem.

At the sessions in Paris, M. Briand, though opposed by both the British and Italian Premiers, fought valiantly to secure the rich industrial region in Southeast Silesia for France's protégé, Poland. The vexed question of boundaries, however, which the plebiscite, by its extraordinarily commingled vote, had served only to confuse still more, could not be settled in view of radical differences of opinion, and at the last moment Lloyd George, to avoid an open rupture of the Entente, proposed that the whole dispute be referred to the League Council—a suggestion which the French Premier, despairing of a solution and no less anxious to avoid a rupture, found himself compelled to accept.

# RUMANIA AND JUGOSLAVIA

[PERIOD ENDED AUG. 15, 1921]

**P**REMIER PASHITCH of Jugoslavia, the Foreign Ministers of Rumania and Czechoslovakia, respectively, M. Take Jonescu and Dr. Benesh, met in Marienbad, Bohemia, during the first week in August, for the purpose of outlining the work of the military and commercial conventions provided for in the treaties of the Little Entente. The Rumanian-Jugoslav Treaty, signed June 8, it has been authoritatively learned, provides against an attack from Bulgaria as well as from Hungary, which latter country is the chief concern of the other treaties.

Take Jonescu has made a public statement showing that the Rumanian-Jugoslav Treaty does not provide for intervention as between the Greeks and the Turks, although it might be invoked should there be a Bulgarian attempt to upset the present Bulgaro-Greek frontier.

Urged on by the complaints of Greece, of Jugoslavia, and possibly of Rumania, the Interallied Military Commission sent an abrupt demand to Bulgaria on Aug. 6 to demobilize her old army and form a volunteer army of not over 12,000 men by Oct. 1, in accordance with the terms of the Treaty of Neuilly. In its reply the Sofia Government declared that the conscripted force was lower than the prescribed 12,000, and that a volunteer army was against the principle of the nation's laws, which even provided for enforced labor.

In reply to interrogations made by the Ministers of France, Great Britain and Italy at Sofia on July 20, the Bulgarian Premier, M. Stambolisky, replied that neither of the Bulgar missions sent to Moscow and to Angora was official, and that in regard to the allied fears of a Bulgar invasion of Thrace, he had taken every measure to maintain order on that frontier and to prevent Bulgar irregulars from crossing it.

Parallel with the treaty decisions regarding free traffic on the Rhine (delivered on Jan. 8) and on the Elbe (delivered on June 14), the decision on the Danube was delivered by the arbitrator, Walker D. Hines, on Aug. 2.

The Danube negotiations were by far the most complicated and important of all. The most difficult question related to the seizure of more than 600,000 tons of barges and 48,000 horse power in tugs by Serbia, Rumania and France in the last days of the war. The issue hinged on whether this was private property and thus immune from seizure under international law.

Mr. Hines decided that the greater part of this shipping was being used by the Austro-Hungarian War Ministry for military purposes, and therefore was not entitled to immunity. A few of these boats were being operated by private owners, and, therefore, Mr. Hines decided that these must be given up.

A complicated question was how much of the former Austrian shipping facilities should be ceded to the allied nations on the Danube to meet their traffic needs. Mr. Hines had to take into consideration not only the changes the war had made in Europe's political map, but also the changes in the economic map. More than 1,400,000 tons of barges and 100,000 horse power in tugs were involved.

Mr. Hines decided that the legitimate needs of Jugoslavia and Rumania are fully met by the fleets they own and by the seizures which have been confirmed. He held that Germany, Austria and Hungary should cede 70,000 horse power in tugs to Czechoslovakia for its Danube freight traffic.

The German peace treaty provides that the German Government shall pay private owners for the amount of shipping ceded; but, strangely enough, under the Austrian and Hungarian terms, the nations receiving the shipping are to pay the original private owners. Therefore, Mr. Hines will begin in Vienna on Aug. 22 a series of hearings to fix these values.

In concluding his report Mr. Hines pointed out that if the nations on the Danube would dispense with red tape and really try to facilitate river traffic, delays could be avoided and 200,000 tons could be added to the shipping facilities of the river without any capital expenditure. On the average

Danube trip he estimated that four days are needlessly lost in present conditions.

It is learned from Belgrade that the assassination at Delnice, Croatia, on July 21 of M. Drashkovitch, the Yugoslav Minister of the Interior, was not due to any discon-

tent over the new Constitution, but was incited by the repressive measures which the victim had employed against the communists. The murderer was a Bosnian communist and not a Moslem of Bosnia, as was reported at the time.

## MEXICO'S EFFORTS FOR RECOGNITION

*Congress begins to discuss revision of Article 27 of the Constitution, which nationalizes oil wells—Obregon urges that it be made non-retroactive, while the Supreme Court considers 150 protests against its application—Recognition by Japan and Spain—Prosperity with enforced law and order*

[PERIOD ENDED AUG. 15, 1921]

CONSIDERATION of Article 27 of the Mexican Constitution, nationalizing petroleum deposits, began in the Mexican Congress on Aug. 8, giving rise to expectations of early recognition by the United States; for the chief point of difference between the two Governments lies in the interpretation given to that article. A committee of the Liberal Constitutionalist majority in the Chamber of Deputies voted in favor of immediate settlement of the oil controversy and requested the co-operation of President Obregon, who urged that in the bill defining the scope of Article 27 it should be distinctly stated that the provisions in it were not retroactive.

Meanwhile the Mexican Supreme Court began consideration of more than 150 protests against the application of Article 27 which have been filed with the Court since 1918 by petroleum companies. The Court's decision relative to these protests, it was expected, would have a direct bearing on the controversy, even in advance of legislation by Congress.

Regarding the export tax on oil, which became effective on July 1, and against which the Association of Producers of Petroleum protested, members of Congress held that the cry of confiscation was absurd. In practically all contracts for marketing oil, they said, it is provided that any increase in taxes shall be borne by the purchaser. Thus the consumer pays, not the companies who proclaim that they are

facing ruin and clamor for Government intervention. The Standard Oil and allied companies and the Mexican Petroleum Company are the ones chiefly concerned. They organized a shut-down of the wells to force Obregon to rescind the export tax increase. Mexicans assert that the purpose was to cut off a chief source of revenue and make it difficult to pay the soldiers, so that the army might start a revolution. Other important companies refused to take part in the shut-down.

Withdrawal of the American warships which visited Tampico in July [See CURRENT HISTORY for August, Page 894] produced a good impression in Mexico and was followed by the despatch of two thousand Government troops under General Guadalupe y Sanchez from Vera Cruz for the oil region from Tuxpan to Tampico to guard property and keep order in view of the ten thousand laborers thrown out of employment by the shut-downs. The President declared he would make every effort to enforce indemnification by the companies. Article 123 of the Constitution provides for an indemnity of three months' pay to employes dismissed without sufficient cause.

On July 18 the Mexican Petroleum Bureau issued a circular announcing a reduction of 10 per cent. of the valuation on crude oil as a basis for taxation. There was a great shift of exports owing to the oil tax and the subsequent shut-downs. First, all the companies increased shipments at a rapid

rate to get the oil out of the country before July 1, raising the exports for June to 17,581,971 barrels, an increase of more than 3,500,000. In July shipments fell to about one-fifth of those for June, and it was estimated they would be still less for August.

General Calles, Secretary of the Interior, said that if the Washington Administration did not obstruct the Mexican Government it would prove its sincerity to the world. The attempt to exact a signed protocol from Mexico in return for recognition, he declared, was the work of a prominent American politician who knew that the President had no authority to sign such a document. If he did so Congress would impeach him, anarchy would follow, and the next step would force intervention. One or two of the oil companies, Señor Calles said, are also actively working for intervention, not only in the United States but through hired agents in Mexico.

Despite these obstacles, it was announced on July 21 that both Spain and Japan had recognized the Obregon Government in autograph letters. Count Adolf Montgelas, who for some time has been in charge of German affairs in Mexico, instructed by Berlin, called on the Mexican Foreign Secretary on Aug. 8 and announced that Germany would formally recognize President Obregon as soon as arrangements were made for the presentation of his credentials. That Mexico expects finally to obtain recognition from the United States is evident from her purchase in July of the McVeagh house at 2,829 Sixteenth Street, Washington, for use as an embassy. She has also purchased a fine building in Belgrave Square, London, for a legation at a cost of £15,000.

Two oil wells in the Amatlan district were brought into operation on July 19 and immediately caught fire from the boilers. The flames spread to other wells and caused damage estimated at \$7,000,000. A force of more than a thousand laborers was organized to fight the fire under direction of the Secretary of War, finally checking it. Cornelius Ferris Jr., American Consul at Mexico City, reported on July 15 that oil production in Mexico had increased from 10,345 barrels in 1901 to 163,540,000 barrels in 1920. Old wells are beginning to give out, but a comparatively small portion of the Mexican oil area has been exploited. The area extends

along the Gulf of Mexico to the Isthmus of Tehuantepec and Tabasco. [See also "Mexico and the United States," Page 969.]

President Obregon on July 13 issued a proclamation inviting the Governments of all countries whose nationals say they have suffered damage through the Mexican revolution to establish a permanent International Claims Commission to undertake immediately a study of the claims. The invitation was sent to Washington and to Mexican Legations in European and Asiatic countries.

Conditions in Mexico are improving daily. The Obregon Government is mustering out the national army in all the Central and in some of the Southern States of the republic. The Generals and high officers receive tracts of land on which to place a colony of former revolutionary soldiers. Each man gets fifteen or more acres of land to work as his own, and grain and farm implements are supplied. The only difficult problem is the rush to the cities. Mexico City, for instance, has increased more than 100 per cent. in six years, from less than 500,000 to well over a million. The traffic congestion is so serious that it is proposed to build underground passages at twenty of the principal street crossings to accommodate pedestrians, the cost to be covered by rentals from various concessions which are to be located underground.

There are approximately 30,000 Americans in Mexico, of whom 8,000 live in the capital. The latter number represents a decrease of 65 per cent. from pre-revolutionary days. Americans outnumber all other foreigners—with the exception of Spaniards—and many more are now going to Mexico to start business enterprises. To emphasize its prosperity, Mexico has opened an interesting exhibition in Los Angeles of all the nation's most important products and manufactures.

On Sept. 12 Mexico will begin the celebration of her hundredth anniversary of independence from Spain. A centennial exposition will be held in the National Legislative Palace, a building costing \$5,000,000 and occupying two city blocks, the largest structure in Latin America. All American manufacturers and exporters have been invited to exhibit their wares under its roof. The exhibits will enter free of consular fees, duties and freight and will be fully

insured. The exposition officials are Mexicans and the enterprise is a private undertaking, but has Government backing.

Decrees enforcing drastic economies went into effect on Aug. 1. They included a reduction of 10 per cent. in all Federal salaries except those of less than 3 pesos daily. The reduction applies to military and civil employes alike. By July 10 the army had already been reduced to 81,000 officers and men, including all branches of the service. It was announced that the reducing process would be continued until a minimum of 50,000 is obtained. While other nations talk of disarmament, Mexico is effecting it.

An order was issued on July 26 dispensing with the necessity for passports in a forty-mile zone along the international boundary. The order stipulates that persons must have lived within the zone for one year before becoming entitled to the privilege. Four days later President Harding issued an executive order permitting citizens of Mexico to enter the United States through border ports without presenting to the control officers any travel document, provided that such persons have been residents of the forty-mile zone for one year or more.

General Manuel Pelaez, returning from the United States, arrived in Mexico City on July 13 only to find that his second in command of the troops in Tamaulipas, General Daniel Martinez Herrera, had revolted on that day and with less than 200 men was

endeavoring to gain recruits from the idle oil workers. Pelaez immediately disavowed Herrera's action and announced himself in complete harmony with President Obregon. He charged that the revolt was inspired by the oil companies to occur simultaneously with the presence of American warships at Tampico and to force an immediate landing of marines. General Sanchez had a brief encounter with the forces of General Herrera on July 16, after which the latter surrendered unconditionally.

A long-standing personal quarrel between two high military officers, both well known in the United States, ended in a tragic encounter in the streets of Mexico City on Aug. 8. General José Allesio Robles, driving an automobile, was shot dead by General Jacinto Trevino, who was in another machine with four companions. Trevino surrendered voluntarily to the police, stating that he had shot in self-defense after Robles had fired at him. Robles, however, was found dead with his hands on the wheel of his machine when the crowd rushed up after the shooting. Trevino was one of the best-known Generals under Carranza and was Secretary of Commerce and Industry in President de la Huerta's Cabinet. Robles was a follower of Victoriano Huerta, while his brothers were Carranzists. One of the brothers is Minister to Spain and another is owner of the *Democrata*, the second largest paper in Mexico City.

## A PLEA FOR THE BRIGHT SIDE

*To the Editor of Current History:*

Admiration for your valued magazine, which has been coming to me during my two years in China, is tempered by the feeling that it is, in its selection of material, its comment and exposition, consistently pessimistic and ultimately depressing. Documents and facts cannot be questioned, of course, but as careful a review of the world's doings as a busy life here affords convinces me that there are facts and evidences coming from other sources that are not so universally drab and disheartening as those you select for emphasis. Horrible cartoons are plentiful, but why omit those which portray humanity's hope and buoyancy?

There are facts enough here in Kwantung to plunge any observer into the depths if he does not open his eyes to other great living currents and dominant achievements that are in this marvelously vital moment making for better things.

I am not pleading for the vapid optimism of a seed catalogue, nor the irresponsible allurements of *The House Beautiful* or the travel maganizes, but the muse of *CURRENT HISTORY* certainly should see through her tears some of the light of this great present age. Are you quite fair to us, your readers—or are you really hopeless?

JOHN C. GRIGGS.

*Canton Christian College, Canton, China, June 23, 1921.*

# CENTRAL AMERICAN AFFAIRS

*The new Union's Constituent Assembly working on its Constitution, Nicaragua and Costa Rica sending unofficial observers—Panama still unwilling to abide by the White award on the Costa Rican boundary decision—Menacing unpopularity of Nicaragua's Government*

[PERIOD ENDED AUG. 15, 1921]

**T**HE Central American Constituent Assembly, consisting of representatives from Salvador, Guatemala and Honduras, met in Tegucigalpa on July 20 to perfect a federal constitution and arrange for its signing on Sept. 15, the centenary of Central American independence. Nicaragua and Costa Rica sent unofficial observers to represent them, neither State having finally joined the federation. Costa Rica, however, is withdrawing its legations in foreign countries, as if in preparation for their replacement by Federal officials. The Costa Rican Congress remained hostile to the scheme.

**COSTA RICA**—France, in a note received at San José on Aug. 6, protests against the imposition by Costa Rica of a high tariff on French merchandise as prejudicial to trade. To help establish credits in the United States, Costa Rica in July sent coupons from Government bonds amounting to \$500,000 to New York to be collected as they fall due.

Guatemala also is trying to stabilize foreign exchange by exporting gold coin. Its withdrawal has caused a shortage of currency which the Government met by putting in circulation 70,000,000 nickel coins. A brief revolt headed by General Isidro Valdez was suppressed on Aug. 6.

**NICARAGUA**—Diego Chamorro recently succeeded his uncle as President of Nicaragua after an election which the Liberal Party declares was fixed so as to keep the Presidency in the family. The uncle, Emiliano Chamorro, went to Washington as Minister, and on his way north was stoned by the populace in Guatemala City. The Chamorro Government is said to be extremely unpopular and to depend on the support of United States marines in Managua. An American coterie of bankers is also declared to be exploiting the country, having a strangle hold on agriculture and

owning the national railway. The finances are administered by a High Commission consisting of one representative of the Nicaraguan Government, one representing the American State Department and one American employe of the bondholders. The Nicaraguan Government is always outvoted when any difference of opinion arises. The monopoly of the bankers, it is charged, prevents other American firms from entering the field.

**SALVADOR**—A grave economic crisis has overtaken Salvador, owing to the decline in the prices of her products. Coffee is not worth the cost of moving. The mines are closed, throwing thousands of miners out of work. Except for exports of sugar and a small amount of hennequen, foreign trade has almost stopped. Martial law is in force, but robberies are increasing. Salvador has the highest import duties in Latin America, amounting on an average to 125 per cent. Insurance companies are canceling policies, and banks are calling all loans and refusing to accept silver on deposit.

**PANAMA**—Further efforts were made by Panama in July and August to have her boundary dispute with Costa Rica settled in some other way than by the decision Secretary Hughes imposed upon her to accept the award of Chief Justice White. In a note sent to the State Department on July 25 Dr. Narciso Garay, Panama's Foreign Minister, who came to Washington to try to settle the dispute, asked the United States to submit to The Hague Permanent Court the question whether the White award was within the terms of the arbitration so as to make it valid against Panama. Secretary Hughes refused.

Dr. Garay on July 30 sent another note to the State Department calling Secretary Hughes's attention to the fact that both Panama and Costa Rica were bound by

treaty to submit their differences to arbitration—said treaty being that of Versailles. No reply, apparently, was made to this note. Panama earlier had appealed to Argentina to exert her good offices in the boundary dispute, but the State Department found it out and sent a communication to the Argentine Government indicating that the United States had become responsible by treaty for Panama's fulfillment of her international obligations and could not admit intervention by outsiders. Thereupon Argentina gravely informed Panama that she was not able to lend the good offices requested.

Panama on Aug. 9 appealed to Chief Justice Taft, objecting to suggestions by Costa Rica that he name two Commissioners to mark out the boundary in dispute on the ground that the convention of 1910 had lapsed through Panama's rejection of the White award, and that it could not be "revived to make it produce juridical effects in detriment to Panama." Such appointment of Commissioners, Dr. Garay said,

would be a "direct attack against the sovereignty of Panama to which the Hon. Chief Justice Taft most assuredly would not be a party."

Costa Rica named Luis Matamoras as its member of the engineer commission to mark the boundary, but Panama declined to name one, and it was stated in Washington that the United States might have to use force to effect a settlement.

CANAL ZONE—Washington on Aug. 5 gave out figures showing a total of 11,599,214 tons of commercial cargo carried through the Panama Canal during the last fiscal year, or 23½ per cent. more than in any previous year, while the tolls amounted to \$11,276,890, or 32½ per cent. above previous records. American vessels carried 45 per cent. of the total and British 32 per cent., Japanese being a bad third with 7 per cent. The total number of ships passing through the canal was 2,892, of which 1,212 were American, 970 British, 140 Norwegian and 136 Japanese.

## WEST INDIAN TRADE CRISIS

*Fordney tariff bill is declared likely to cause alienation of Latin America from the United States—Customs union between British West Indies and Canada—Cuba driven by financial stress to seek American loan.*

[PERIOD ENDED AUG. 15, 1921]

THE West Indies, so largely dependent on the United States for their trade, owing to their proximity, have been stirred to protest by the provisions of the Fordney tariff bill. Jamaica is alarmed at the proposed duty on cocoanuts and bananas and the Government has been asked to make representations to Washington in the matter.

Cuba sent a special mission from Havana to protest before the Senate Committee against the sugar and tobacco provisions of the Fordney bill. The members arrived on Aug. 7 and gave out interviews showing that the two principal industries of the island would be practically ruined if the bill became a law. Herbert S. Rubens, former counsel of the Cuban Patriots, sent a

letter to the Senate Finance Committee declaring that the proposed tariff of 2 cents a pound on raw sugar would ruin the island politically and financially and would be likely to lead to another American intervention or to enforced annexation. This would probably increase the antagonism Latin America feels for the United States.

Both Cuba and Bermuda are endeavoring to halt liquor smuggling into the United States. Orders were issued in Havana to search all vessels leaving port and confiscate liquor not shown on the manifest. Bermuda's colonial legislature passed a law fining any one shipping intoxicants to American ports £25 for a first and £50 for a second offense. Bermuda remains wet, but the Government

will not permit rum running. The seizure of a British vessel beyond the three-mile limit without protest from London against the action of the United States revenue officials is said to have hastened the passage of the law in Bermuda. Porto Ricans, although under American rule, are more independent, meeting violation of the prohibition regulations by the lightest possible fines and sentences.

An executive order was promulgated on July 30 in Washington providing that citizens of Bermuda, the Bahamas, Newfoundland and other British Islands, as well as Canada and the French Islands of St. Pierre and Miquelon, may enter the United States without passports, identity cards, or permits.

**JAMAICA**—In connection with the proposed establishment of Port Royal as a naval station on account of the strategic position of Jamaica in the Caribbean Sea, it was announced in Kingston on Aug. 5 that provision was being made to coal and victual British ships, especially those passing through the Panama Canal, thus making Kingston a rival of Cristobal in the Canal Zone.

The resolution introduced in the United States Senate inquiring whether Great Britain would consider ceding the West Indies was publicly resented in the Jamaica Legislature on Aug. 4. At the same time a motion favoring federation with Canada was voted down. Steps were later taken to send a deputation to London to urge the necessity of a wider measure of representative government for Jamaica.

A Canadian naval squadron, with the cruiser *Aurora* as flagship, received a cordial welcome at Kingston on July 14. It left four days later, homeward bound by way of the Bahamas.

Announcement was made at Kingston on July 28 that the colonies of the British West Indies had decided upon a uniform customs tariff, giving preference to Canadian goods, principally flour. Canada will give preference in return to West Indian products, principally sugar and oranges.

Meanwhile the trade crisis in Jamaica is acute. Money was voted to aid the sugar industry, but is said to be inadequate. Sugar estates are laying off a large percentage of employes, and those retained will have their pay cut 20 per cent. The rum trade is in a

critical position, prohibition in America having been followed by the imposition of a duty of £500 a puncheon on the English market.

**PORTO RICO**—E. Mont Riley, new appointee as Governor of Porto Rico, was inaugurated on July 30 and made a speech in which he advised against the movement for the independence of the island and urged advocacy of Statehood. As a result Antonio R. Barcelo resigned as head of the Unionist Party, which has an independence plank in its platform.

**CUBA**—The Cuban Congress met on July 18 and began consideration of means to relieve the financial situation. A deficit of \$45,000,000 is estimated in the Government budget, and a loan of \$50,000,000 was suggested by the mixed legislative committee, which holds over during the recess of Congress. The loan was favored by General Crowder, but only as an absolute necessity. His report on conditions in Cuba, received in Washington early in August, was very discouraging about the prospects of Government stability and the financial situation in Cuba. At the same time he pointed out that Cuba must have money if she is to survive, and therefore recommended that the State Department approve a loan, with a strong reservation by which American interests would supervise the use of the money.

Señor Gelabert, Cuban Secretary of Finance, came to Washington to urge the State Department to approve the proposed loan. Secretary Hughes reserved his decision. President Zayas in a message to Congress suggested that a commission of three be appointed to disburse the proceeds when received.

The Cuban Government threatens to extend Government control over house rents as a public utility. Unless rents in Havana and the larger cities were cut it was said there would be wholesale evictions and demonstrations against profiteering landlords. On the theory that high rents might cause an infraction of public order it was argued the Government might step in to regulate rents. A petition for lower rents was presented to President Zayas by a large crowd on Aug. 10, and the President, speaking from a balcony of the National Palace, promised that if the municipality of Havana did not act promptly he would inaugurate remedial measures by decree.

HAITI—The United States Senate on July 27 adopted a resolution providing for an investigation of American occupation and administration of Haiti and Santo Domingo. At the same time an organization was formed in New York called the Haiti and Santo Domingo Independence Society to expose and correct American maladministration. Ernest Angell, its attorney, was authorized to appear before the Senate committee and demand the punishment of Americans guilty of atrocities. Oswald Garrison Villard, publisher, and Horace Knowles, former Minister to Santo Domingo, on Aug. 3 gave the committee an outline of the charges, describing intervention as the blackest chapter in American history in the Caribbean.

The body of Harris Lipschitz, a naturalized American who was murdered in Haiti, was expected at New York, accompanied by the widow and the daughter, Representative Isaac Sigel announced. He had heard from the former that natives were seizing the land held by her late husband. Previous to the murder, Lipschitz had charged that certain American marine officers were inciting the natives against him and that he expected to be assassinated.

SANTO DOMINGO—In pursuance of the resolutions passed at the enormous mass meeting of Dominicans in June against the conditions of withdrawal sought to be im-

posed by the United States, including a new issue of 8 per cent. bonds, which some claim will work out at about 14 per cent., the Dominicans organized a "Junta of Electoral Abstention" to express their disapproval. The American authorities promulgated an electoral law, and on July 14 issued a decree ordering elections on Aug. 13. The Junta thereupon issued an appeal denouncing the American proclamation of June 14 as hypocritical, because it summoned the Dominican people to surrender their sovereignty and their finances to American hands. They protest against the decree ordering the elections, warn against any one becoming a candidate or an elector and against any local officials acting as registrars of election or in any way assisting it. The appeal is signed with the names of more than threescore prominent Dominicans.

Charges that American marines sent to Santo Domingo committed murders, terrorized the people and burned their homes were presented to the Senate Investigating Committee by Horace G. Knowles, adviser and assistant to the Dominican National Commission, in a report made public on Aug. 14. He said that the marines' presence was an act of war, that private rights were invaded and personal and corporate property destroyed. The administration of the military government, he asserted, was incompetent, wasteful and extravagant.

## FILM CENSORSHIP IN INDIA

THE censorship of films in the United States is almost exclusively moral, the object being to eliminate anything which, in the opinion of the censors, may poison the moral conscience of the public. A similar censorship has been established in far-off India, whose dark-skinned masses flock to the picture houses with keen interest.

From the report of the Calcutta Board of Censors, published early in July, on the workings of the Cinematograph act in Bengal, it appears that the board from April to December of last year examined 4,256 films, refused certificates to fourteen, and caused alterations to be made in nine. Though the board explains that it has kept four principles in mind—moral, racial, religious and political—it is quite apparent that the censorship has been guided mainly

by racial and political considerations. The most serious criticism made by the board is that 99 per cent. of the films portray the characters of white people; that the villain and the villainess carry their wicked deeds through most of the picture, and that "this does not tend to uplift the prestige of the British race in India."

Even so-called propaganda films, whose purpose is reformatory, come under the ban, for, in order to accentuate the evil against which they are preaching, they exaggerate its effects. In a prohibition film, for example, white men and white women are shown in an exaggerated condition of drunkenness. "Such scenes shown to an illiterate Indian audience can have no other effect than to lower the prestige of the white woman and the white race in general."

# TRADE RIVALRY IN SOUTH AMERICA

*Many American concerns, underbidden by both German and Belgian agents, close their South American offices—Harriman vs. Stinnes in keen competition—A dangerous Tacna-Arica episode pending settlement of the dispute*

[PERIOD ENDED AUG. 15, 1921]

GERMAN and Belgian agents are underselling American goods in South American countries at prices ranging from 20 to 75 per cent. less, and many American concerns were closing their South American offices, according to reports made public in Washington on Aug. 1. American goods in Argentine warehouses are being disposed of slowly or returned to the United States. Extreme depression occurred in Brazil, and five important American houses were closing their offices in Rio. Peruvian importers were withdrawing from the market, and the import trade in Chile was very dull, people buying only necessary commodities.

Commander Fernandez of the Argentine Navy, in The New York Evening Post, writes that the Fordney bill will do much harm to commerce with the United States. "Therefore," he says, "our commerce will turn again to Europe, and very promptly we will say farewell to America. After such great efforts have been made to strengthen our common relationship, it is a pitiable thing that American commerce loses a market like this for want of tact and a well-conducted commercial policy."

ARGENTINA—Keen competition has been inaugurated in Argentina by Hugo Stinnes, the German financier, and American trade represented by the Harriman interests. War is on because of the break between Stinnes and the Hamburg-American Company, due to the operation by Stinnes of a fleet of ships between Germany and South America in competition with the Hamburg-American vessels. There are six steamers in the service under the Harriman-Hamburg agreement, four of them belonging to the United American Lines, Inc., and flying the American flag. Stinnes has six ships in operation. Both plan to add others, and both are competing with Dutch and Scandinavian companies. William B. Ryan, representing the Harriman interests,

arrived at Buenos Aires on Aug. 10, and Karl Deters of the Stinnes forces was expected.

Meanwhile Mr. Stinnes was reported to have twelve outfits boring for oil near Buenos Aires, and the Standard Oil Company also had exploring parties out.

Argentina some months ago began tentative efforts to learn the feasibility of a short-term loan for \$50,000,000 in the United States. American bankers wanted 8½ per cent., and the loan was declared off early in August.

President Irigoyen, on July 13, in a special message to Congress recommended an increase of exports and a cutting down of imports to adjust the adverse exchange situation, dollars at one time rising more than 50 per cent. above par.

Negotiations for the exchange of wool valued at \$30,000,000 for locomotives and railway material were begun by the Government with German and Belgian banking houses.

President Irigoyen is at odds with Congress. He failed to apply the provisions of the Homestead law enacted last year and Congress asked an explanation. He replied in a sharp message on Aug. 3 that he did not recognize the right of Congress to question his motives. This provoked a storm. The Conservatives, the Socialists and eight members of the Radical Party left the Chamber, blocking all business for lack of a quorum. Political observers see in the situation indication of a combination to defeat President Irigoyen for another term at the election which takes place next March.

Laurence Ginnell, on Aug. 5, requested to be received by the Argentine Foreign Minister as "special envoy of the Government of the Irish republic to the Governments and peoples of South America," his credentials being signed by de Valera.

Dr. José A. Cortejarena, founder and publisher of the Razon, the largest after-

noon newspaper in South America, died at Rosario de la Frontera on July 25.

**BOLIVIA**—Five engineers, representing the Ulen Contracting Company of New York, have gone to Bolivia to construct a line to link up the railroad systems of Bolivia and Argentina, giving the former a connection with the Atlantic. It will be 128 miles long and will shorten the time between New York and Buenos Aires, by way of the Panama Canal and Chile, by two or three days. Work will start in January and the road is to be completed in five years.

**BRAZIL**—A new steamship record between New York and Rio de Janeiro was made on Aug. 8, when the Munson liner American Legion arrived after a voyage of twelve days and twenty hours. Her arrival was made the occasion of festivities by the American colony.

Already there are preparations for the Presidential election, which will take place on March 1, 1922. The Government candidate is Dr. Arthur Bernardon, while the opposition candidate is Dr. Nilo Pecanha, who did so much to induce Brazil to join the Allies in the war.

Work in newspaper offices in Rio Janeiro between the hours of 8 o'clock Sunday morning and 8 o'clock Monday morning is prohibited under the provisions of a municipal ordinance adopted on July 20. As a consequence Sunday afternoon and Monday morning newspapers were discontinued.

**CHILE**—The Chilean Cabinet resigned on July 25, after the Senate had voted disapproval of a decree granting rate increases and certain other concessions to an English railroad transporting nitrate from the Tarapaca Province. The Council of State decided that it would be necessary for the concession to be approved by Congress. President Alessandri confided the organization of a new Cabinet to Hector Trancibia Laso, Radical Senator for Antofagasta. Ernesto Barros Jarpa, a Liberal, was chosen Foreign Minister.

Senator Malaquias Concha, founder of the Chilean Labor Party and one of the most prominent political figures of Chile, died on Aug. 5, aged 62. By his death Chile loses her foremost social economist.

**COLOMBIA**—The Colombian Congress met on July 20. It was announced that the

Conservatives would name General Pedro nel Espina, former Colombian Minister to the United States, as a candidate for President at the elections next year.

**ECUADOR**—The Ecuadorean Congress opened on Aug. 10. José Julian Andrade was elected President of the Senate and Juan Martinez Mera President of the Chamber of Deputies.

Arrest of an Indian chieftain in the province of Chimborazo resulted in a general rising of Indians in that province which spread terror among the inhabitants for more than a week.

**PARAGUAY**—Several thousand Mennonites from the United States and Canada are about to settle in Paraguay. They are conscientious objectors to military service and had considerable trouble during the war on account of the draft laws. Fred Engan, a Minnesotan Mennonite, went to Paraguay some months ago to consider the proposed settlement. Paraguay passed a law on July 22 exempting sons of the Mennonites from military service and granting them concessions of 5,000 square miles for colonization. They can import agricultural implements duty free for ten years.

**PERU**—An American mission to the centennial celebration of Peru's independence arrived in Callao July 22 on board a special naval squadron composed of the battleships Arizona, Oklahoma and Nevada. The mission was headed by Albert Douglas of Washington, who had the rank of Ambassador Extraordinary for the occasion. The celebration had been preceded by commemoration of the anniversary of the battle of Arica between the Peruvians and the Chileans, and a memorial was presented to President Leguia in which he was asked to grant parliamentary representation from the "unredeemed" provinces of Tacna and Arica. A statue to José de San Martín, liberator of Peru, was unveiled on July 24.

National spirit was running high on July 28, the actual date of the centennial, and a grand banquet was given at Lima at which the American delegates were conspicuous. Mr. Douglas was the principal speaker. He touched on the Tacna-Arica controversy and was quoted as saying that Peru did not forget, nor would she forget, that "in her hour of trial and spoliation she had not only the sympathy but the approval and respect" of the United States.

This made a sensation all over South America. The Nacion of Buenos Aires declared the words indicative of a deep-laid policy. The Peruvian papers were delighted and the Chilean press was furious. Santiago inquired of Washington what it meant, and Washington asked Mr. Douglas to explain. He cabled back on Aug. 5 that, though he had expressed American friendship for Peru, he had shown no partiality between the two countries. The American Legation in Santiago communicated this to the Chilean Government, and the incident was closed.

Reports were current on Aug. 11 that the Chilean Foreign Department was endeavoring to settle the Tacna-Arica dispute by direct negotiations with Peru. The Peruvian Government, in accord with Great Britain, has requested the Swiss Federal Tribunal to act as arbiter in a dispute concerning boundaries of certain petroleum wells in Peru belonging to an English company, and Switzerland has consented to act. The Reparation Commission of the League of Nations, after hearing the arguments of the Peruvian delegate, Commander Aubrey, unanimously decided that Peru was legally entitled to the German ships seized by her during the war, and that the Allies had no right of requisition over them.

A revolt broke out in Iquitos, capital of the Department of Loreto, among the Government troops shortly before Aug. 13. The uprising was caused by failure to pay the troops for six months. Iquitos is eighteen

days' travel from Lima. The unpaid mutineers had seized £23,000 in cash held by the Peru and London Bank. Cash contributions were also levied on commercial houses, the radio station was occupied and a censorship established. The Government authorities had ordered a battalion of Federal troops from Lima to restore order, and the Governments of Colombia and Brazil had been asked to blockade the river to prevent the revolutionaries from escaping.

Census figures given out on Aug. 13 showed the population of Lima and the Callao district to be 280,000. The largest foreign element consists of Japanese, who total 4,600; Chinese come next with 4,400.

URUGUAY—A loan of \$7,500,000 Uruguayan bonds, to run for twenty-five years at 8 per cent., was floated in New York on Aug. 8 at a price of 98½. The bonds were all sold the same day, the issue being oversubscribed. The money, it is understood, will be used to establish a telephone system.

VENEZUELA—Rumors were in circulation in Willemstad on Aug. 5 that General Penaloza, the notorious Venezuelan rebel leader, had invaded the Venezuelan State of Tachira.

The Admiralty Division of the British Law Courts on July 29 ordered the steamship Barrier, formerly a British gunboat, forfeited to the Crown for being equipped to start a revolution against President Gomez, dictator of Venezuela.

## LENDING \$5,000,000 TO LIBERIA

SECRETARY HUGHES, in a letter to President Harding on July 29, 1921, gave his opinion that the United States was morally bound to extend a credit of \$5,000,000 to Liberia in accord with an agreement entered into between the two Governments on Sept. 12, 1918. Several other countries have unexpended balances of credits, but Secretary Mellon did not think it necessary to advance any more money on them. The President of Liberia came to Washington

to get the money, and President Harding transmitted Secretary Hughes's letter to the Senate on Aug. 1, urging the moral obligation of the country. If Congress refused to sanction the loan, it was stated in diplomatic circles, the result would be to lower American prestige and hurt American trade, as British and French interests are ready to lend money to Liberia to get an entering wedge for a railway to the interior.

# THE CHILEAN PRESIDENT'S ATTACK ON GRAFT

**W**HEN the Chilean people last year elected for their President Don Arturo Alessandri, a triumph for democratic ideals was obtained in a country where class domination has ever been an ingrained tradition. Immediately after assuming office the new President published a program promising reform in almost every branch of the public service and greater protection for the people against the much-abused power of the aristocrats, the plutocrats, and the bureaucrats.

At the time of the election—or rather on the occasion of the revision of the voting in August, 1920—the leaders of all parties, including the rich men of good family who had hitherto held the destinies of the nation in their hands, showed a high degree of patriotism and good-will when they proclaimed the triumph of the people's candidate by a narrow majority; but that the President has encountered tremendous and almost heart-breaking opposition on the part of the bureaucracy, whose inveterate grafting proclivities are well-nigh impossible to eradicate, is conclusively shown in the following free translation of an open letter addressed by him this year to an unnamed Deputy who had solicited political preferment as remuneration for his aid at the time of the election. This letter, which is a document of notable value in a matter that concerns every citizen in all the American republics, follows herewith:

Esteemed friend: I beg to acknowledge receipt of your letter dated —, and in reply I have to say that I am truly grateful for the efforts and sacrifices you have made on my behalf. I shall never forget them, but I ask you to believe me when I say that it never occurred to me that the hope of obtaining a Government post was the moving factor of your activity.

I have plunged into an honest and loyal campaign for the vindication of principles and ideals. I have received a solemn mandate from the nation to carry out a program of reform vital to its prosperity and greatness. If I had ever thought that my friends carried me to the Presidency of the Republic only to be an agent or distributor of public appointments I should not have made the immense sacrifices and gigantic efforts required by the campaign, but would have re-

mained quietly at home; and it will not be surprising if, some day, I am led to adopt this resolution, seeing that my conviction grows continually that it is impossible to govern this country and at the same time work for the public interests. Nothing is thought of but official preferment, and obstacles are placed in the way of good government because every Deputy or Senator from whom the appointment he desires is withheld considers himself justified in taking offense and in abandoning the public business which duty and patriotism demand should have his closest attention. Under this system the President of the Republic is a mere puppet, tool, or intermediary of the will of others, although he is responsible for the acts of the Government and of the functionaries whom he nominates.

I do not accept this situation, nor does it conform with the standards and doctrines of a party founded for the very purpose of strengthening the influence of the Executive and supporting the constitutional prerogatives of the President of the Republic. In conformity with these standards, and in view of inevitable party disagreements, let us consent to allow the Government to settle these matters and to make, once and for all, the necessary appointments, without consulting anybody, thus putting an end to the shameful spectacle which has been apparent in the matter of the selection of Governors and other high officials, and which has been censured by the public opinion of the whole country.

I have learned with much regret of the letter you addressed to one of my secretaries, and I herewith warn you that if you propose to bring about a ministerial crisis on account of this trivial matter I shall publish the facts of the case, ask for a vote of confidence in the Chamber of Deputies, and assume the responsibility of my procedure before the country, as I am determined not to accept the resignation of any member of the Government if inspired by the private interests of parties or individuals. Any such procedure would imply senseless relaxation of parliamentary rule, and I will resist it, regardless of personal interests—fighting for the re-establishment of those doctrines which cost President Balmaceda his life.

ARTURO ALESSANDRI.

The effect of this letter, published in all the newspapers of the country, was magical, and it is realized on all sides that the President has struck a blow at corruption in the public services which may have a far-reaching and beneficent effect.

# THE DEATH OF CARUSO

**E**NRICO CARUSO, a humble Neapolitan mechanic's son, who became the greatest operatic tenor of his time, died in Naples on Aug. 2, 1921, at the age of 48 years. The direct cause was an abscess beneath the liver, supposed to have been due to poison remaining from the pleurisy which had brought him to death's door in New York. The news of his death caused universal grief throughout Italy and the rest of the world. King Victor Emmanuel ordered special obsequies in the royal basilica of San Francesco di Paola, a famous church in Naples resembling the Pantheon at Rome. The ceremony in the crowded edifice, buried in flowers, with 400 singers in a specially constructed choir, was solemn.

Caruso had begun singing when he was still a boy in Naples, where he belonged to a local choir. His father, however, had no faith in his singing future, and apprenticed him to a mechanical engineer. This work he hated, and aspired to become a mechanical draftsman. When his mother died, Caruso, then only 15, left his father's house forever, to devote himself to art. He picked up a meagre livelihood by private singing. At 18 he was called to do his service in the army. One of his officers, Major Nagliati, was impressed by his marvelous voice, and found a singing master for him. After a few years' study, he

made his debut in a new opera at the Teatro Nuovo, Naples. Local jealousies made this first venture a failure. The future opera star was undiscouraged, and soon afterward appeared with notable success in "La Bohème" in the Teatro Lirico at Milan (1898). His brilliant career then began. He sang in all the large Italian cities, and in most of the capitals of the world. The late Maurice Grau made the contract to bring him to America, but it was Grau's successor, Heinrich Conried, who introduced him to this country, where he soon became a national celebrity.

Caruso left a fortune estimated at about 30,000,000 lire, which at the normal pre-war rate of exchange would represent approximately \$6,000,000; at the actual rate prevailing, however, it equals only \$1,263,000. He enjoyed a large income in the United States from royalties on Victrola records, which he made under an exclusive contract. His first records for the United States were made in 1911, and his contract was to have expired only in 1935. His total income from this source since 1906 has been estimated at about \$1,500,000. His regular royalty from records alone each year was about \$150,000. About 160 records were created by his matchless voice, some thirty of which had not yet been released at the time of his death.

## MR. HOOVER'S REPORT ON BELGIAN RELIEF

**T**HE final report of the Committee for Relief to Belgium was made public on July 16, 1921. The Chairman of the committee, Herbert Hoover, who signed the report, stated that \$1,300,000,000 had been expended for food and clothing in Belgium during the six years from September, 1914, to September, 1920. Help had been given to 10,000,000 people. The administrative cost of the work accomplished was only .42 of 1 per cent. of the funds handled. Profits on outside operations more than paid all the board's overhead expenses. The report contained a full survey of the conditions under which the committee worked, and of the devotion of the people who worked under it, many of whom drew no pay. The report says in part:

No set of accounts or figures can reflect

the intense anxiety, the patience and skill required of the 55,000 volunteers who toiled in this complex agency, defending 10,000,000 lives. Inspired with humane sympathy for these people, who, having no responsibility for the war, suffered most from its hardships and barbarities, they labored that this service might be done efficiently and with economy. It is to their unflagging devotion that we are now able to publish exact figures of accountability for funds and to trace each ton of food from the place of purchase to the ultimate consumer among the civil population of the invaded regions. Surrounded by terror and suffering, this multitude had but little concern for the bookkeepers in the back rooms of the 4,000 branch offices of the relief organization. It was of the utmost concern, however, to those in official direction not only that the work might be effectively performed and presented to the world, but that our honor and the honor of our country in this trusteeship should never be challenged.

# BUSINESS AT THE UP-TURN

*A brief survey of the causes that are gradually overcoming the forces of depression—Firm grasp of credits by the banks a stabilizing influence—Labor's loss of faith in Bolshevism an important element—Some interesting figures*

TO a great extent, an extent much greater indeed than business men themselves generally realize, the condition of business is a reflection of the country's state of mind. There is a feeling that the turn has come, that things are to change for the better and, behold, they do so change; business starts ahead with renewed vigor, an atmosphere of optimism becomes as discernible to the senses as the tonic quality which characterizes the first Spring breezes.

In just the same way, at the very peak of business expansion and activity, unexplainable apprehension suddenly dulls the zest and keenness of industrial enterprise; new ventures are held in abeyance, commitments are curtailed, the sails of industry are trimmed, first slowly and then with feverish haste, and the craft loses headway, misses stays and comes to a shuddering halt.

Behind these states of mind are sound economic reasons, but those who can discern and appreciate them are few compared to those who only sense them; and even the latter do not sense them until the work of these causative forces is almost completed, and the turn, so-called, either from the peak of prosperity or the trough of depression, is close at hand.

The United States is at such a turn today, a turn from the violent business disturbance which began in May of last year to a steady, if slow, advance along the path of renewed prosperity. This is the opinion of those especially endowed among the business leaders who base their judgments upon a study of economic conditions, and reassurance is lent to their view by the fact that business in general is beginning to evidence that quickening of interest and renewal of optimism which always mark the shift from a long term of falling prices and slackening business to a resumption of so-called normal times.

That the changes which have taken place and are daily taking place in the business world have not been more widely recognized is not surprising. On the contrary, it would have been an occasion for surprise had they been more generally or sooner appreciated. There have been adequate reasons for this. In the first place, business's long illness, so to speak, has chanced to terminate in the midsummer period, which, even in times of unusual prosperity, is always marked by dullness. The crisis has been reached and successfully passed at a time when the small evidences which disclose this condition, at best difficult of discernment, are doubly obscured by the seasonal depression which has gripped all industry.

Then, too, business in general has been actually misled by its failure rightly to understand the credit situation, which, so far from being an obstruction in the path of business resumption, as so many believe, has actually been the means of smoothing the path along which industry must progress to renewed prosperity.

Not a few, but many, firms will complain today that lines of credit to which they believe their positions entitle them are withheld by the banks, and they point to this as a paramount cause of their continued stagnation. There was insufficient credit some time ago, and some complaints of this sort were doubtless justified then. They are not so at present, nor is there any shortage of credit. For those who are entitled to it there is credit in abundance. The change that has come about is that there is no longer credit for the mere asking.

On the authority of a great New York banker it may be said that the banks have never before in their history been in possession of such comprehensive credit information as they have at present. They

know the standing of their clients and customers as they have never known it before, and they thus are enabled to employ the credit at their disposal in conformity to a program designed to promote the national welfare rather than the less important fortunes of individuals.

In a recent confidential chat, this banker, whose name, for obvious reasons, may not be mentioned here, said:

"The honest banker will be the first to admit that the credit situation has not always been handled wisely, especially just after the conclusion of the great war. Numerous mistakes, and costly ones, were made then, but it is due the banker to appreciate that most of these were made with honesty of purpose. The first great essential seemed to be that a panic, like those which previously came upon us periodically, should be avoided."

#### HOW A PANIC WAS AVOIDED

To insure against this the banks strained their resources to the utmost to take care of the business world. There was small inclination, and less time, to inquire closely into the merits of each individual case. The prime object was that failures should be avoided, for it was realized that business was like a house of cards, and that one collapse might wreck the whole structure. Concerns whose inflated inventories, unwise commitments and inadequate capital, thinly spread over too wide fields of ambitious venture, made them deserving of sympathy, perhaps, but certainly not of continued support, were enabled to keep going, themselves not realizing that ultimate collapse was inevitable, because the banks had not time to gain an intimate knowledge of their affairs and so erred upon the side of general safety.

The plan was effective. Those who follow the statements of the number and volume of failures, as they are reported from time to time, will recall that few failures, and these of no especial significance, occurred in this period under consideration. But, if they were slow in these critical times to act upon it, the banks, nevertheless, were busily engaged in acquiring the information which now gives them complete control of the credit situation. Today they know the concerns which are deserving of help and

which ones proper help will enable to readjust their affairs upon the basis which a renewal of prosperity demands. And, too, they know the firms which are beyond help. To these latter undeserved assistance will not longer be extended, and to the former the credit which they need will be forthcoming only upon the assurance that they will conduct themselves in a manner which will guarantee their future self-sufficiency.

In plain words, those in control of the credit situation have taken it upon themselves to see that inventories shall be written down to a point where profits shall be made on real values only and that the inevitable losses shall be taken where heavy investments have been made in plants and equipment at inflated prices. What is aimed at is an evening, a balancing of the processes of liquidation.

Much of the trouble with business today lies in the fact that the course of liquidation in various branches of industry has not been harmonious. In some branches it has progressed to a point below what we are accustomed to think of as normal. In other branches it has shown only a trifling reduction from the peaks reached at the height of inflation. A chief obstacle in the way of a general revival of business has been this maladjustment among the prices of important commodities.

It is apparent, at once, that such a condition occasions hardships for those concerns which have liquidated the most. The purchasing power of the owners and employes is curtailed, and so the hardship which the least liquidated business thus thought to escape is passed on to them. The circle is completed with poor business for all and prosperity for none. Equal liquidation on the part of all branches of industry would put all upon a level footing. Buying power would return to normal, for it makes, at least in this respect, no difference upon what price level business is conducted so long as the price level is relatively equal for all.

The Harvard University Committee on Economic Research recently completed a study of this subject, the results of which are well illustrated in the accompanying Table A. The column of index numbers consists of relative numbers based on those of 1913 equaling 100.

The average of these index numbers is

## INEQUALITIES OF PRICE CHANGES

TABLE A.

Commodity.	Unit.	Price in 1913.	Price July, 1921.	Index No.
Corn, No. 2 mixed, Chicago.....	Bushel	\$ .59	\$ .625	106
Wheat, No. 1 Northern Spring, Chicago.....	Bushel	.90	1.4075	156
Flour, straight Winter.....	Barrel	4.52	6.50	144
Cotton, middling upland, spot, New Orleans.....	Pound	.127	.1188	94
Wool, clean basis, Boston, Ohio fine delaine and Ohio ¼ blood.....	Pound	.55	.62	113
Tobacco, Burley red, common, short, Louisville.....	Pound	.09	.07	78
Sugar, 96 degree centrifugal, duty paid, New York.....	Pound	.035	.0438	125
Cattle, fair to choice native steers, Chicago.....	100 lbs.	8.18	8.10	99
Hogs, good merchantable, pigs and rough stock excluded, Chicago.....	100 lbs.	8.49	9.40	111
Pig iron, basic, Valley furnace.....	Gr. ton	15.11	19.00	126
Steel billets, open hearth, Pittsburgh.....	Gr. ton	27.00	33.00	122
Copper, electrolytic, early delivery, New York.....	Pound	.1575	.1238	79
Lead, pig, early delivery, New York.....	Pound	.044	.0455	103
Tin, New York.....	Pound	.449	.2775	62
Zinc, prime Western, early delivery, St. Louis.....	Pound	.058	.0425	73
Coal, bituminous, run of mine, f. o. b. mine, Fairmount, W. Va.....	Gr. ton	1.04	2.40	231
Coke, furnace, Connellsville, at oven, prompt shipment....	Net ton	2.38	2.85	120
Petroleum, crude, at well, Pennsylvania.....	Barrel	2.39	2.25	94
Cotton goods: Brown sheetings 4-yard, standard prints, staple ginghams, New York.....	Yard	.061	.101	166
Silk, Shinshiu, No. 1, New York.....	Pound	3.65	5.90	162
Rubber, Para, up-river fine, New York.....	Pound	.93	.165	18
Hides, green salted packers', No. 1 heavy native steers, Chicago.....	Pound	.1825	.13	71
Calfskins, No. 1, Chicago.....	Pound	.20	.18	90
Leather, scoured oak backs, medium weight, New York.....	Pound	.45	.55	122
Brick, Hudson River, common, New York.....	1,000	6.88	15.00	218
Lumber, hemlock, Pennsylvania, base pr.....	1,000 ft.	24.04	38.80	161

117, so that the degree by which these various commodities have been liquidated may be measured by a comparison of the specific index numbers with 117. Corn, for instance, is selling below the general average, and so has undergone undue liquidation in comparison with the general liquidation of the twenty-six commodities considered, although it is still selling for 6 per cent. more than it brought in 1913. Wheat, on the other hand, is above its 1913 price by 56 per cent. and well above the general average considered. Most striking, of course, is the showing made by rubber, for as much can now be bought for 18 cents as a dollar would have purchased in 1913. At the opposite end of the balance is coal, the price of which has increased 131 per cent.

The study accompanying this table in the Harvard circular calls attention to the fact that of the commodities considered "the great majority are either raw materials or agricultural products; only a very few are finished manufactured goods. If a larger number of the latter class were considered the dislocation of individual commodity price levels would undoubtedly appear

greater than it is in the case of the twenty-six commodities here considered."

## DISLOCATION OF PRICES

The point of the whole matter lies in the fact that, in what are called normal times (here considered to be 1913), commodities bear a definite exchange relation, one to another, although this fact is seldom thought of in such simple fashion, and these relations, subject, of course, to moderate fluctuations, are fairly constant. In 1913, for instance, a ton of bituminous coal at a West Virginia mine cost about the same as a pound of rubber in New York. Today it takes more than thirteen pounds of rubber to equal in value a similar ton of coal. Most of us deal neither in coal nor rubber, and certainly none of us ever exchanged a pound of rubber for a ton of coal by actually handing over a parcel containing the rubber and receiving in return the 2,240 pounds of coal. Yet, in effect, that is just what all of us are doing all the time, and dislocations in these exchange relations affect every one of us, the more so as we are dependent for our livelihood upon any one of these individual products. The rubber

dealer, for instance, and the thousands of persons dependent upon branches of the rubber industry for their wages or dividends, are under a severe handicap at the present moment and must remain so until liquidation in other lines more closely approaches the liquidation which has occurred in their own. In the case of rubber, of course, there have been contributing causes other than liquidation which have brought the price so far below other prices and so far below the level which obtained before the war. In consequence, it is not to be expected, or even desired, in fact, that other commodities should experience the same shrinkage in value which rubber has suffered. The distinction is one of degree only, however, and it is none the less desirable that all prices should move harmoniously from level to level.

It is this condition which those in command of the credit situation are trying to bring about. They have ready assistance for those concerns which will adjust their business to new conditions and seek profits upon a level where business can be done. But credit for fresh speculation or for the further withholding from the markets of speculative stocks which have so far proved a disappointment is not to be had. It is a proper use of credit and one which, were the fact only universally recognized, cannot retard the resumption of business activity but must, on the other hand, be of prime assistance to it.

Much is heard, too, of high interest rates, and the idea seems prevalent among many who should know better that the bankers fix the rates in accordance with their own desires based on some arbitrary notion that loans, should earn such-and-such a rate of interest. Interest rates, actually, are highly competitive, and no banker, however powerful, has the ability to fix them above their market value. They vary considerably in different localities and to different persons, but in every case the law of supply and demand, the supply of money or credit and the need for it, determines the interest rate. Thus a big organization with banking affiliations in several cities places its loans where it receives the best terms, and the banker who would keep his funds at work cannot arbitrarily fix a rate which will be cut under by his neighbor in another bank or another city.

But it is not rates so much as control of credits which is harrowing those businesses not yet ready to admit that they will have to take their losses and readjust their operations. Nevertheless, persistent adherence by the banks to this new program is having its result, and it may be said that price stabilization is not far ahead. The period of general liquidation of the raw material markets in the United States is pretty well over. Irregularities exist, but these are due to conditions of supply and demand in specific lines and are an evidence of normality. Wholesale prices, too, have been generally deflated, and the tendency to get in line is evident now in those businesses which have most vigorously resisted the general trend heretofore.

#### SITUATION CLEARING UP

What, then, is the outlook for business? Certainly it can be only for the better. Harmony in liquidation will result in quickened trading upon any price level, and harmony we are on the road to attaining. For the immediate future much depends upon the crops. The farmer has undergone greater liquidation, perhaps, than any other branch of industry. He bought and planted and cultivated in the era of high prices, and he reaped when prices were falling rapidly. He has taken his loss, and he does not purpose to take more if it can be avoided. Forecasts are not for bumper crops, and it is as well that they are not. Smaller crops this year will enable the agriculturist to move some of the surplus stock of the preceding year, and there is every reason to believe that the farmer will come into the market again this year with purchasing power adequate to meet his needs. He will buy, but he will buy carefully, and, it is needless to say, only at price levels in keeping with the level of his own returns. He should be and will be a great factor for stabilization, for the farmer represents approximately half the population of the country, and if half the people enter the market their presence will be felt throughout all industry.

Abroad the situation seems also to be clearing up somewhat, though there, too, improvement is slow and not too readily to be recognized. A study of conditions abroad made by the National City Bank of New

York justifies the statement that the outlook is better than at any time since the war, and has improved very much in recent months. There has been a steady improvement in physical conditions, the bank finds. All over Europe conditions are better and the greatest gain of all has been in the spirit of industry and social order.

The revolutionary spirit is fast disappearing, says the bank in summary of its finding. The revolutionary element has had its day; it made the most of the confusion following the war, of Government management in industry, Government doles, and the vague though generous sentiment for a new order of society. The people are tired of agitation and of being "fed up" on idealistic theories, conceived without any working knowledge of real conditions. Government management of industry is everywhere

discredited, and the people are turning back with a feeling of relief to the old ways and methods by which they know how to get things done.

Perhaps the greatest influence of all has been that which has come from the calamitous failure of the Socialist revolution in Russia. A knowledge of conditions in Russia pervades all Europe. The labor organizations have not trusted to newspaper information, but have sent delegations of their own to Russia to learn the truth, and the reports have satisfied them that however much they may be dissatisfied with what they call the capitalist management of industry they have nothing to gain by exchanging it for the state of things existing in Russia. This information has had a far-reaching effect upon the temper and policies of organized labor. It has tended to restore

the authority of the old leaders, which for a time was shaken by the more aggressive and radical aspirants for power who came to the front. This change is a fundamental one. It is the most important thing that could have happened for the improvement of the situation, because no recovery could take place unless the stability of society was assured. It affords a basis for credit and encouragement to enterprise.

#### IMPROVEMENT IN EUROPE

In France the railroads have been completely restored, as well as the highways and the canals, while the farming land is 98 per cent. restored to crop-bearing condition, although probably not fully to the pre-war state of cultivation. The industrial districts of France are restored to more than 50 per cent. of pre-war capacity.

Best of all, conditions are quiet; wages and prices have been on the downward scale, but there has been no serious labor trouble for some time. This is the more gratifying in view of the fact that the housing situation in France is still very bad. By the hundreds of thousands persons are living under improvised shelters, and this lack of home comforts, of which the French as a race are especially appreciative, has been anything but a harmonizing factor. The housing program is being pushed with all effort, however. A corollary of this effort has been the attempt of the Government to restore conditions necessary to a revival of industry, so that as swiftly as possible the people may become self-supporting. Much is left to be desired in the condition of French trade and home finances, but even here improvement is to be seen. A balance of exports over imports of 410,487,000 francs was reported for the first five months of this year, the first favorable balance which French trade has experienced in recent years. The national budget is not yet balanced, and revenues for the present year are not equaling the hopeful estimates which were made at the beginning of the year. Nevertheless, the paper money circulation has not increased in the last year, which would indicate that the deficit

has been made up out of savings of the people, although not out of the current revenues of the Government.

In England there has been also a general clearing up of the labor situation. The general strike, which was threatened in April, has been successfully prevented. The mining situation has apparently been solved. Much was dreaded from this situation, for the miners were insistent upon nationalization of their industry and the pooling of all the mining districts, with other radical changes which it was thought would be dangerous in the extreme to the country. The return to work of these men at reduced wages is, therefore, of the utmost importance. Wage reductions have been accepted as well in other fields, and, while there is considerable unemployment and poor trade, there is, nevertheless, the beginning of that feeling of optimism which, it was stated earlier in this article, usually precedes a turn for the better.

The political situation throughout Europe is somewhat more encouraging also. The passing of the Silesian crisis and the misunderstanding resulting from it between France and England, which seemed ever-growing in bitterness, must be recorded as a tremendous gain. Even the attempt at a solution of the Irish question, uncertain as it still is at this writing, is a move for the general good.

Less encouraging is the foreign trade showing, especially of the United States, and yet it is apparent that the record volume to which our trade expanded after the war could not have been maintained in a world which, outside of this nation, is strained as to resources, to phrase it mildly. The accompanying Table B shows the total value of merchandise imported and exported from and to each of the principal countries in June last and in the twelve-month period ended June last, compared with the corresponding periods of the preceding year. The figures are the official figures of the Bureau of Foreign and Domestic Commerce, Department of Commerce.
